The Catholic War Veterans of the United States of America will hold their 25th annual convention in Chicago during the week beginning August 15. Elaborate preparations have been made to make this silver anniversary the largest convention ever held by this organization. It is anticipated that the exetnsive program planned will attract more than 7,000 members of the Catholic War Veterans and its auxiliaries. I assure them all a warm welcome from our great, hospitable city of Chicago.

The convention committee has set up an agenda calling for a full schedule of committee meetings that will study and prepare resolutions for action by the entire body. Hundreds of resolutions have already been received covering many phases of American life including "Veterans Affairs," "Youth Welfare," "Catholic Action," "Americanism," "Membership," and many other subjects in which an organization of war veterans is vitally interested.

At various times throughout the convention, prominent Americans are scheduled to address joint sessions of the Catholic War Veterans and its auxiliaries. These men, all outstanding in their particular field, will bring to the Catholic War Veterans and through them to all veterans and Americans messages on "National Secuitry," "Veterans Affairs," "International Relations" and other vital subjects.

Although the convention will have many serious aspects, varied and interesting recreational events have been arranged for the members of the organization, their wives and families. On Tuesday evening preceding the convention, Comiskey Park will hold Catholic War Veterans night with a baseball game between the Chicago White Sox and the Detroit Tigers to be followed by a fireworks display. On the following day a golf tournament will be held at the Acacia Country Club, and at noon a band concert will take place at State and Madison Streets in downtown Chicago. Throughout the week there will be other interesting activities and ceremonies including a parade on Friday evening, and on Saturday morning a Pontifical High Mass will be celebrated by His Eminence, Cardinal Meyer, archbishop of Chicago. Closing events of the week-long gathering will include a banquet on Saturday evening to be followed by the convention ball.

The Catholic War Veterans of the United States came into existence in the year 1935 when it was founded by a former Army chaplain, the Right Reverend Monsignor Edward J. Higgins, LL.D., of Astoria, Long Island, N.Y. Recognizing a need for a militant veterans organization composed of Catholic men and women who served their country in time of war, Monsignor Higgins founded an organization that has grown throughout the years and now has posts in more than 40 States.

Over the past quarter of a century the Catholic War Veterans has been been a bulwark against many of the tyrannical "isms" that constantly threaten our country and its freedoms. Since its beginning the Catholic War Veterans have brought their greatest force against the evils of communism and its insidious designs to destroy Christianity and create a godless world. For the 25 years that this organization has been in existence it has steadfastly supported and protected the traditions that have made America the great country that it is.

As well as fighing relentlessly against communism the Catholic War Veterans have been active on other fronts sponsoring such programs as "Americanism," "Catholic Action," "Leadership," "Membership," and "Veterans Affairs." In addition, through its publications and other media of communication this organization has encouraged active civil defense programs, educational activities, and youth programs as well as the establishment of scholarships.

In the field of veterans' affairs the Catholic War Veterans has always exerted its influence. Each year the organization has sponsored or lent its support to legislation that would be beneficial to veterans, their widows, or dependents. Through welfare and rehabilitation officers located throughout the country it has assisted countless veterans in obtaining benefits under the laws of the Veterans' Administration. The Catholic War Veterans have maintainued a strong and active hospital program giving comfort to our thousands of hospitalized veterans. These and many other programs stand as a tribute to the Catholic War Veterans on this, its 25th anniversary.

The Catholic War Veterans have received the acclamation of numerous Government agencies, business groups and patriotic, veteran and fraternal organizations. It has the approbation of the present Pope, John XXIII, and all Popes from the date of the founding of the organization. It has been lauded by every President of the United States and by numerous legislators and other statesmen.

Article II, section 1 of its constitution best describes the aims and purposes of this great organization:

"This organization of Catholic War Veterans is established to promote zeal and devotion for God, for country, and for home:

"(a) For God: To promote through aggressive organized Catholic action a greater love, honor, and service to God; an understanding and application of the teachings of Christ in our everyday life; recognizing the wisdom of the church in all matters of faith and morals.

"(b) For country: Through a more vivid understanding of the Constitution of the United States of America and through active participation in the promotion of its ideals of life, liberty, and the pursuit of happiness, to develop a more zealous citizenship; to encourage morality in government, labor, management, economic, social, fraternal, and all other phases of American life; to combat aggressively the forces which tend to impair the efficiency and permanency of our free institution.

"(c) For home: To promote the realization that the family is the basic unit of society; to aid in the development of an enlightened patriotic American youth; to assist all veterans and widows and dependents of deceased veterans.

"(d) These objectives are encouraged without regard to race, creed, or color."

As they celebrate this silver jubilee, the Catholic War Veterans can look back upon a history of accomplishment and to the future with a feeling of confidence.

I am sure all their many friends join in wishing for them the best convention in their history and continued success in working for their high ideals.

Seaton Is Acclaimed for Conservation Achievements

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, August 16, 1960

Mr. WILEY. Mr. President, the preservation, conservation, and best utilization of our natural resources is an absolute must—if these resources are to be ample to serve the generations of the future.

To accomplish such a broad-scope task, however, requires great efforts and support from individuals, organizations, as well as local, State, and Federal Governments—in their appropriate roles.

Consequently, the Nation can be particularly proud of the role of Secretary of the Interior Fred Seaton in providing sound, realistic leadership for such a constructive, creative program.

In recognition of his outstanding services, the Secretary was recently cited by one of the foremost conservation groups in the country for "distinguished and courageous service rendered in the conservation and management of the country's natural resources."

Recently, the Conservation News, published by the National Wildlife Federation, contained an article on the citation to the Secretary. I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SEATON IS ACCLAIMED FOR CONSERVATION ACHIEVEMENTS

Secretary of the Interior Fred A. Seaton was cited June 20 by many of the Nation's foremost conservation groups for distinguished and courageous service rendered in the conservation and management of the country's natural resources.

Seaton, principal speaker at the annual banquet of the Western Association of State Game and Fish Commissioners, was given a distinguished conservation service award in a surprise ceremony by 15 major organizations representing official agencies, societies, and millions of outdoor enthusiasts and conservationists.

A spokesman for the groups said that this is the first time they have jointly honored a Cabinet member for conservation achievement and service. He said they were pleased to be able to honor Seaton in the West where much of the public lands administered by the Interior Department are located.

Citing Seaton were the Western Association of State Game and Fish Commissioners, International Association of Game, Fish and Conservation Commissioners, Boone and Crockett Club, Izaak Walton League of America, National Audubon Society, National Parks Association, National Rifle Association of America, National Wildlife Federation, Natural Resources Council of America, North American Wildlife Foundation, Sierra Club, Sport Fishing Institute, American Forestry Association, Wilderness Society, and the Wildlife Management Institute.

Bordering the large scroll presented Seaton are scenes depicting conservation issues in which he has taken part since becoming Interior Secretary in 1956. The presentation was made by Dr. Ira N. Gabrielson, president of the Wildlife Management Institute, and former chief of the U.S. Fish and Wildlife Service. Claude D. Kelley, president of the National Wildlife Federation, also participated in the presentation.

Seaton's conservation and natural resources management accomplishments cited on the scroll were actions in which he:

"Protected Federal wildlife refuges from unwise exploitation; maintained the famous Tule Lake and Lower Klamath National Wildlife Refuges (California and Oregon); advocated and actively worked for the establishment of the Arctic Wildlife Range (Alaska); blocked encroachment upon the Wichita Mountains National Wildlife Refuge (Oklahoma); dedicated all duck stamp funds to the acquisition of waterfowl lands; and

"Aggressively pushed toward completion the Mission 66 national parks program; acted forthrightly to prevent inundation of the world famous Rainbow Bridge National Monument (Utah); prevented encroachment upon the Kennesaw Mountain National Battlefield Park (Ga.); established the new Virgin Islands National Park; and

"Insisted that the salmon runs of the Columbia River and tributaries be perpetuated; promoted strengthening and broadening of the Federal Fish and Wildlife Coordination Act; directed that recreational needs be planned as an integral part of all future reclamation projects; took the lead in plans to set aside and preserve seashore and lakefront areas for public use; supported wilderness preservation; and

"Took steps to require unauthorized occupants of public lands along the Lower Colorado River to recognize Federal authority to control and regulate such occupancy; and issued orders to provide public access to unappropriated public domain lands for recreational uses."

Address of Rear Adm. Beverly M. Coleman, Manassas Battlefield, Manassas, Va.

EXTENSION OF REMARKS
OF
HON. HARRY FLOOD BYRD
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Tuesday, August 16, 1960

Mr. BYRD of Virginia. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address made by Rear Adm. Beverly M. Coleman at the annual exercise in commemoration of the First Battle of Manassas, Manassas battlefield, July 16, 1960.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

REMARKS OF BEVERLY M. COLEMAN AT THE ANNUAL EXERCISE IN COMMEMORATION OF THE FIRST BATTLE OF MANASSAS, MANASSAS BATTLEFIELD, JULY 16, 1960

WHY THEY FOUGHT

I. Introduction

Madam Chairman, ladies of the UDC, honored guests, and fellow visitors to this historic site, we have met today in commemoration of the military engagement here enacted nearly 100 years ago. For these annual meetings we are indebted to the District of Columbia chapters of the United Daughters of the Confederacy, of which Mrs. Imes, our chairman, is division president, and it is these kind ladies and others like them who have kept alive over the century an interest in the study and commemoration of the Civil War that have largely furnished the inspiration which will bring about the interesting happenings awaiting us in the coming 4 years.

II. The centennial

If there are any who regard such memorial exercises as but efforts to keep alive a past better forgotten, let me for a moment address myself directly to them. The U.S. Congress has seen fit to create a National Civil War Centennial Commission. Such action was warmly approved by the President, and the Commission has as its chairman Maj. Gen. Ulysses S. Grant III, and as vice chairman, former Gov. WILLIAM M. TUCK, of Virginia.

The stated objective of this National Commission is that:

"This study must be based on a broad knowledge of the underlying facts. From the ingenuity and resourcefulness with which an unprepared people met the challenge of the first truly modern war, much can be learned. It goes without saying that where fables and legends have obscured the real truth, the truth must be made clear. We are not preparing to commemorate a romantic myth; we are making ready to look closer at a chapter of our own history, and the chapter must be accurate."

Our wisdom will be extended if we approach our studies in the activities of the coming centennial with clear, unbiased, and objective minds, giving credit where it is due, acknowledging brave and patriotic deeds of all who performed them, understanding fairly the motives of the actors in the great conflict, and in the spirit of the Civil War, characterized by an unknown author as "the last war between gentlemen."

III. First Manassas—Baptism of fire

The tactical operations of this First Battle of Manassas are too well know to need dis-

cussion here. But one aspect of the encounter merits notice. Most of those who later served as commanders of high rank in the eastern armies of both sides were active participants in this engagement. In the South, as of course in the North, many of the early leaders of units large and small had served as officers in the regular army of the United States. And a number were veterans of the battles and campaigns of the Mexican War. But first Manassas furnished the initial experience in Civil War combat for many in all ranks who thereafter continued to serve their respective sides.

In the northern Army were McDowell in full command; Burnside, who in 1862 led the Army of the Potomac at Fredericksburg; Sherman, whose Armies of the Tennessee, the Cumberland, and the Ohio marched through Georgia in 1864; and David Hunter, who ravaged the Shenandoah Valley in 1864. Also participating were Howard, Franklin, Porter, Tyler, and Heintzelman, all of whom later became distinguished commanders of high rank, and the able Artillerists Griffin and Ricketts, whose batteries performed so magnificently in taking their close-in position on Henry Hill in the very teeth of Jackson's brigade.

With the southern forces were General Beauregard and Gen. Joseph E. Johnston, the latter senior by a few days but permitting the former to carry out plans he had already formulated for the engagement. In lower echelons of rank were Longstreet and Jackson, who became General Lee's corps commanders when the Army of Northern Virginia was formed later. Others were Ewell and A. P. Hill, both promoted to corps command under General Lee in the reorganization which followed the death of Jackson in 1863. Jeb Stuart led the 1st Virginia Cavalry Regiment. Also taking part were Jubal Early, Kirby-Smith, Wade Hampton and his legion, Bee, Bartow, and Nathan G. Evans, the last named assigned the duty of holding the Stone Bridge over Bull Run at the left end of the Confederate line.

Evans' small force of half a brigade was the first to come under fire in the morning when Tyler approached the bridge with a brigade of Federal regulars. Shortly thereafter Evans received word the Union main body was executing a flanking movement and crossing the run at Sudley Ford on his left. Leaving four companies to hold off or delay Tyler, he quickly moved the remainder of his command to Mathews Hill where he engaged and drove back Burnsides' brigade forming the Union advance. Evans' delaying actions gave time for Bee and Bartow to come to his assistance and they together slowed the enemy column long enough for Jackson to take the main holding position of the day. This early decision of Evans has been termed "the quickest and coolest bit of military thinking done in this battle."

And a private in the ranks of the 1st Virginia Cavalry who subsequently rendered substantial service to his beloved commander, Jeb Stuart, wrote years later:

"When the bugle sounded on the morning of the 21st, in counting off, I was No. 1 in the first set of fours and rode at the head of the squadron that day. Nothing afterwards occurred in my military career that gives me more satisfaction to remember."

His name was John S. Mosby.

IV. Why they fought

It is not difficult to understand the point of view of the young men of the North who took up arms. Since early childhood they had been taught to love and be ready to defend their country. The immortal words of Nathan Hale in the Revolutionary War, "I only regret that I have but one life to lose for my country," and the inspiring toast of Stephen Decatur, "Our country • • • may she always be in the right; but our country, right or wrong," were well known to them. And they, like the young men of the South, were aroused by the vacuous oratorical platitudes of many hack politicians, fire-eating fanatics, and rabble-housing newspaper editors, too many of whom were quite willing to expose others to the hazards of warfare but were reluctant so to subject themselves. And so these young men marched off to fight for a cause in which they believed, and they acquitted themselves with honor and distinction.

Many persons who have never stopped to consider the influences which motivated those who fought for the Confederacy are quite willing to acknowledge their clearly demonstrated soldierly qualities, but regard them as misguided individuals who fought for reasons which they did not comprehend or in which they did not believe. But a limited understanding of human nature and an elementary knowledge of the historical happenings of the years immediately preceding the outbreak of the war should enable one readily to discern the truth on this point.

Toward whom does man entertain the strongest feelings of affection and obligation? Toward those to whom he is most closely bound by ties of blood and kinship. Next in order come his friends and neighbors. It is those whom he regards as his "people." One sees this clearly in General Lee's resignation of his commission in the Federal Army with the words, "Save in defense of my native State, I never desire again to draw my sword." Perhaps the fundamental difference lay in the fact that in the more thickly settled northern areas this feeling of "neighborliness" extended beyond State boundaries and drew emphasis to the meaning of the term "country," while in the more sparsely settled South the term "one's people" related more to the fellow citizens of one's State. Thus, with equal belief in the justice of his cause, one fought for his "country" and the other for his "State."

But there were two things that particularly aroused the ire of the people of the South: The overbearing attitude of many too-zealous crusaders and the falsely pious air of a number of the hypocrites in the north.

Harsh criticism by missionary spirits who do not or will not understand one's problem, and who are not themselves faced with the same problem, is strongly resented by any normal human being. On January 27, 1843, the Anti-Slavery Society in the north adopted a resolution declaring that "The compact which exists between the North and the South is a covenant with death and an agreement with hell." In February 1859, the New York State Anti-Slavery Convention met in Albany with addresses by Wendell Phillips and William Lloyd Garrison in support of a doctrine of the independence of States and an advocacy of disunion.

In October 1859, the fanatical John Brown undertook at Harpers Ferry to bring about an uprising of the slaves which, had it been successful, would have resulted in the murder of untold numbers of southern people. In the North, Henry Ward Beecher, Henry David Thoreau, and Ralph Waldo Emerson outdid themselves in eulogizing John Brown, Emerson going so far as to term Brown "the new saint awaiting his martyrdom, and who, if he shall suffer, will make the gallows glorious like the cross."

And then there was the hypocricy of many New Englanders who were so deeply disturbed about colored slavery in the South but evidenced little concern over white slavery in their own States, where children of tender years toiled in the textile mills from early morning until night under conditions highly injurious to health and with slight interest of their masters in their welfare. An Englishwoman in 1829 addressed an American audience in terms of reproach: "In your manufacturing districts you have children worked for 12 hours a day and • • • you will soon have them as in England, worked to death." Child labor was practically unregulated until after the Civil War. A few laws had been passed, but they remained on the statute books as so many dead letters. The inevitable result of this lack of regulation was not only that very young children were worked, but they worked long hours, overtime, and at night. Even in Lowell, Mass., where conditions were particularly favorable, little mites of 10 were on duty neraly 14 hours a day, and then did household tasks and went to evening school. A special report of the committee of the Massachusetts Legislature in 1866 disclosed witnesses from New Bedford and Fall River testified that in both places children of 7 were employed. In answer to the question: "Is there any limit on the part of the employers as to the age when they take children?" the reply was, "They'll take them at any age they can get them, if the are old enough to stand—I guess the youngest is about 7. There are some that's younger, but very little."

Few colored children in the South were treated in a manner approaching the inhumanness of many of these mill owners, and it ill behooved those intellectuals of the North to overlook shortcomings at home while bitterly denouncing persons elsewhere. The view of many southerners on this point was well expressed in the Book of Matthew:

"Thou hypocrite, first cast out the beam out of thine own eye; and then thou shalt see clearly to cast out the mote out of thy brother's eye."

The better minds of the South recognized the moral wrong and harm of slavery and hoped, in time, to be able to overcome their hotheads at home and to moderate and ultimately eliminate this practice in a gradual and peaceful manner. But even theye were embittered by the action of those crusaders in the North who castigated them indiscriminately and seemed bent upon applying the torch and the sword.

The well-intentioned of both sides suffered from the acts of the fire-eaters in their midst, described by a northern officer and writer as:

"The shrill, rabid, tongue-lashing, notoriety-craving, and woe-breeding demagogues, whether born in the Northland or the Southland, who, by their rancorous, malignant speech, kindled the fires of our war. Read what appeared almost daily in the Southern press, consult the files of Congress, and mark the provoking, snarling poison-barbed language in the proceedings of Abolition conventions."

But when the die was cast, there was but one course open to them—they must go with their people. And so they did. In Virginia, her highest ranking military son, Robert E. Lee, declined the command of the Federal Armies to go with his State, writing his sister: "The whole South is in a state of revolution, into which Virginia, after a long struggle, has been drawn, and though I recognize no necessity for this state of things, and would have forborne and pleaded to the end for redress of grievances, real or supposed, yet in my own person I had to meet the question, whether I should take part against my native State." He was joined by many brother officers who entertained similar views. And countless numbers of her civilian sons who had opposed secession quickly enlisted as privates in the ranks of her forces, among them John S. Mosby, who wrote, "Virginia went out of the Union by force of arms and I went with her." These, with thousands of others, were impelled by the feeling that, regardless of personal views on any other points, they must stand by their people. And this they did for 4 long and hard years.

Those soldiers of the North and the South who fought because of a patriotic feeling of duty and obligation to their country, their State, or their people were the better men

referred to by the English philosopher, John Stuart Mill, thus:

"War is an ugly thing, but not the ugliest of things; the decayed and degraded state of moral and patriotic feeling which thinks nothing worth a war is worse * * * A man who has nothing which he cares about more than his personal safety is a miserable creature who has no chance of being free, unless made and kept so by the exertions of better men than himself."

And our Nation as it exists today can survive only so long as the people of each succeeding generation subscribe to that same point of view.

V. Conclusion

May we enter upon the coming observance of the centennial with a sincere desire to learn the lessons to be derived therefrom and in the spirit displayed at Appomattox by General Grant in his generous terms of surrender and prompt provision of rations to the Confederate troops, by the Union bands which there played "Auld Lang Syne," and by General Chamberlain commanding the V Corps assigned to receive the arms and colors of Lee's men, who, as General Gordon, at the head of the Confederate column, approached with downcast eyes and the feeling that the lines of soldiers in blue, standing at "order arms," were gloating over the spectacle, directed the sounding of a bugle call which brought the whole Federal line from right to left to "carry arms," the marching salute. General Chamberlain described that which followed:

"Gordon catches the sound of shifting arms, looks up and, taking the meaning, wheels superbly, making with himself and his horse one uplifted figure, with profound salutation as he drops the point of his sword to the boot-toe; then, facing to his own command, gives word for his successive brigades to pass us with the same position of the manual—honor answering honor."

I would like to leave you with this last request. In your study of the Civil War—its origin, causes, and the events leading up to it, its actual conduct during the 4 years of the struggle, and the trying times of readjustment which followed—see if you, too, do not reach the conclusion that those who were the quickest to forgive, the most willing to give credit where credit was due, and the most ready to establish a firm and lasting peace, were the ones who had subjected themselves to the rigors and dangers of the field of battle.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided,* That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p.m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p.m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided,* That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided,* That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further,* That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided,* That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

Address by Rear Adm. Elton W. Grenfell, U.S. Navy, to the National Rivers and Harbors Congress

EXTENSION OF REMARKS
OF

HON. LEVERETT SALTONSTALL

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Wednesday, August 17, 1960

Mr. SALTONSTALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Rear Adm. Elton W. Grenfell, U.S. Navy, Assistant Chief of Naval Operations, at the 47th Annual National Convention of the National Rivers and Harbors Congress, Washington, D.C., on May 26, 1960.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY REAR ADM. ELTON W. GRENFELL, U.S. NAVY, ASSISTANT CHIEF OF NAVAL OPERATIONS (LOGISTICS), AT THE 47TH ANNUAL NATIONAL CONVENTION OF THE NATIONAL RIVERS AND HARBORS CONGRESS, MAYFLOWER HOTEL, MAY 26, 1960

President Buckman, members of the National Rivers and Harbors Congress, I am honored and happy to be here today to address this distinguished group on the occasion of your 47th annual national convention. I am fully aware of the serious items concerning our rivers and harbors that you have been, and will be, discussing during the next few days. I have looked over your agenda and realize only too well the seriousness of the situations affecting the rivers and harbors in this country. It is consoling to the laymen to know that we do have a capable group of men and women who appreciate the value of our rivers and harbors and who do take action to keep them as a valuable asset to our country's welfare.

Rivers and harbors in this United States of ours have in the past been of great value to the military forces of this country. Indeed our rivers have been of great military importance in shaping the development of our United States. The Navy's participation in the days of the Revolutionary and Civil Wars in battles fought on many of our rivers and in our harbors was of great significance. We in the Navy appreciate the importance of maintaining coastal harbors and inland waterways in a high state of efficiency at all times.

Indeed I feel that a new and vastly important status should be now considered for the inland waterway systems of our country. Therefore, I would like to leave this message with you for your consideration and future planning. If it were the misfortune of this world to become involved in a terrible allout nuclear holocaust which would inflict terrific damage to the major cities and air and surface transportation systems of our country, our inland waterways would become a most important factor in recovery. Certainly some, probably the most important, of our major coastal harbors would be of little use for many months if not years. Therefore, it would be necessary to utilize many of the smaller towns on our rivers, as well as on our coasts for the purpose of beginning rehabilitation and recovery, towns that had little military value and that had escaped damage.

We also must not forget that there will be a large number of friendly ships in the oceans that will survive when the nuclear exchange takes place. For example, it is estimated that at any given moment there are over 4,000 ships at sea in the North Atlantic Ocean alone. Most of this shipping will probably be untouched and will be available to us for recovery and rehabilitation purposes provided we can use some of our small coastal ports and inland waterways in uncontaminated areas to start rehabilitation.

A similar philosophy applies to our Navy and why we should continue to keep a modern and powerful one in the future. Here again, over half of our Navy's ships are at sea at all times and they too would survive in large numbers to continue to control the sealanes, making recovery and rehabilitation a possibility.

Now a few words about this fine Navy of ours. First, briefly what are its missions today? Its primary mission is to maintain control of the sealanes and the air above. It is also responsible for the projection of offensive power from the sea to the land of any potential enemy and likewise to prevent such a projection of power and from the sea to our own lands and territories.

The greatest age of seapower lies not in the past, but just ahead, as modern technologies bring to full fruition man's age-old struggle to conquer and utilize the vast, all-encompassing ocean spaces of the earth. The movement to sea of a larger percentage of the world's total offensive strength is inevitable.

Why do I say this is so? Well these are the answers; first, it stands to reason that one of the best deterrents against a potential nuclear threat is that of the mobile deterrent in the vast expanses of our ocean areas. But this is not all. Coupled with that mobile deterrent capability, your new Navy, just as in the past, will continue to have a versatility and a capability, such that any military threat, hot, cold, or limited war, can be coped with expeditiously and efficiently.

For example, our new attack-type carrier striking forces move with great speed over the surface of the oceans. They have a powerful nuclear striking capability and a strong conventional weapons capability as well.

The important thing to remember is the mobility of these seagoing bases, their ability to be here today and gone tomorrow, or better said, here at this moment and 35 miles away in another hour—a most difficult target to cope with for any type of weapon.

The Polaris submarine system is well known to all of you. Many military theorists consider that this system may soon be among the foremost of our nuclear retaliatory systems; this because it will be almost impossible to locate the launching position of the Polaris submarine.

It is also well to remember that this will be more than an other deterrent system. The Polaris submarine, like other ships of our Navy, will have the versatility to perform many Naval combat missions. It is not just a submarine that can be used only in the event of a nuclear war. It will be a highly, mobile, seagoing base with a powerful offensive punch.

In addition to the powerful Polaris missile, it will carry torpedoes and sonar gear, and will have the military characteristics of just about any other modern, nuclear attack-type submarine. It will be able to conduct many of these missions, all part of the Navy's tasks, without detracting from its nuclear offensive capability. Missions such as ASW activity observation of shipping traffic in and out of enemy ports, etc., can be performed with a security necessary for the success of the mission.

I mentioned a moment ago the fact that it will be almost impossible to locate the launching position of the Polaris submarine system. I would like to enlarge on that statement a little bit. If you will but take a map of the world and look at the terrific size and area of the oceans and seas surrounding the Eurasian Continent, and then if you will mark off a distance of 1,500 miles from the Eurasian Continent seaward, it will give you some idea of the vast ocean area in which our submarines may operate. You will note I said our submarines, not just the Polaris submarines.

All of these nuclear submarines can operate unseen in the depths of this ocean area for periods up to 60 days. Finding any of these submarines is most difficult and then classifying the submarines as to identity is an even more difficult, if not impossible, problem. Indeed it makes the task of finding the proverbial needle in the haystack look like a simple one. Our Navy has spent billions of dollars since the end of the war improving our antisubmarine warfare effort. We have made progress, it is true, but we still have a long way to go solving this one.

The mere fact that we have introduced virtually an invulnerable system as the new nuclear powered attack submarines and the Polaris submarines has caused any potential aggressor considerable consternation and will further cause him the expenditure of large sums of money to build up antisubmarine forces to cope with the situation.

In discussing the Navy's place in an atomic age, I am speaking of the Navy's place today, tomorrow, and for many years to come. We are living in an atomic age now, with all the potentialities of peaceful applications of atomic power, as well as military applications in war. Whatever may unfold in the years ahead, the atomic age will be characterized by a continuing struggle between the forces of freedom and the concepts of communism.

Our country is now in the greatest competition in our history, and the very survival of our way of life is going to depend in large measure upon the extent to which we, all of us, industrialists, businessmen, educators, clergymen, statesmen, labor leaders, and military men, recognize this competition and its very long term potentialities. The objective of the United States in this struggle is to preserve the American way of life for our own people, and to help maintain a world climate within which freedom for other peoples of the world may flourish, and in which independent nations may develop and prosper.

Within these broad national objectives, the Armed Forces have four primary responsibilities. First, they must act as visible instruments in support of American foreign policy. Second, they must help to deter armed aggression short of a general nuclear exchange. If this fails, they must quickly gain control and win. I say help to deter, because this is not solely a military problem. It is also a problem of national will to use our economic,

political, and military power, wisely and positively in the defense of freedom wherever it may be threatened. It also requires the will and determination of other free peoples to stay free. The third requirement of the Armed Forces is to deter all-out nuclear war. Last, the Armed Forces must be able to win any type of war into which we are forced.

Let's look at these three broad military responsibilities and see where the U.S. Navy fits. American foreign relations are a day-to-day, every-day-of-the-year operation involving trade, cultural exchanges, political problems, questions of economics, education, world health programs, defense problems, and the whole range of human affairs.

U.S. naval forces play a vital role in these day-to-day relationships throughout the world because American warships represent the United States in many foreign ports day in and day out throughout the year.

When we speak of the deployment of the 6th Fleet in the Mediterranean Sea, and the 7th Fleet in the Western Pacific, we are speaking of dynamic forces in constant motion, forces which are constantly on the move, constantly calling at various ports throughout the area of their responsibility, visiting the ports of many different countries, and helping to create better understanding between Americans and the peoples of other nations. This is a day-to-day routine. It is in this year-round operation that naval forces are useful instruments in support of American foreign policy.

The very ease and facility with which American warships can be moved, make them most flexible in protecting Americans and U.S. interests abroad, and in handling any other assignment they may be called upon to perform. Individual ship assignments, or reassignments, or rescheduling of of operations can be effected to suit the needs of the international situation without wholesale relocation of fixed facilities and installations.

Our ships perform goodwill functions which help to cement good relations between our country and others. U.S. naval ships effectively support the President's people-to-people program in foreign ports throughout the world. For example, last year ships of our Navy visited 285 ports in 85 different countries.

Our ships carry the spirit of American friendship in missions of mercy in countries beset by natural disasters, such as the Ceylon floods last winter, typhoon relief in Japan, earthquakes in Africa, and rescue missions at sea in both air and sea disasters. The Navy takes these in stride because our ships are constantly on the move. They are immediately responsive to orders to go wherever they are needed, for whatever purpose. The primary purpose of naval forces is to fight, but they are effective and useful in furthering American interests abroad in positive, peaceful ways too. The mere presence of powerful naval forces in an area is often enough to maintain tranquility.

Naval power is silent power, restrained and controlled. It is friendly but strong, pleasant but firm. It is a reminder to our friends that we are near at hand, and ready to help them against aggression. It is a warning to would-be aggressors, quiet but effective.

Readiness for action of any kind, of course, is not new to the Navy. This has been the day-to-day peacetime role of seapower for many decades in the history of our country. These capabilities, improved by technological progress, perfected by concentrated training, and refined by many years in the development of tactical doctrine and strategic concept, are more important to our country today than ever before. They are more important because the range of threats is greater than ever before. The variety of situations is infinitely more complex. Our forces have to be more flexible than ever, more readily responsibe to sudden emergencies, and more versatile in dealing with a wider range of possible situations.

This is why the Navy places such emphasis upon mobility, and multipurpose capabilities, and weapons system flexibility. In the event of aggression, naval forces can perform many kinds of tactical missions, conduct counteroffensive operations, defensive operations, support operations, and diversionary operations. They can achieve strategic objectives, too, not only by the strategic deployment of fleet units in various parts of the world, but also in their contribution to our general nuclear war deterrent as well.

However, I would like to emphasize that while the Navy has an important place in an atomic age, we are just part of an Armed Forces team. The Army, the Navy, the Air Force, and the fighting marines, all have a vital job to do in defense of our country.

The Army today is a hard-hitting, streamlined service. The Air Force is forward-looking and powerful. The Marines are always lean, tough, and combat ready. We in the Navy are proud to be a member of that team. All the services have an important place in an atomic age.

In closing, ladies and gentlemen, I would like to leave with you today some important thoughts that I hope you will retain and pass on to your friends and relatives. The requirement for a powerful Navy in this day of fear and uncertainty is a proven fact. There is no doubt that our strong Navy has maintained a sufficient balance of power to help prevent or curtail serious wars during the past 15 years. The continued need for a strong Navy in the future is likewise most evident. This new Navy of the future, like ours of today, will continue to be one which can cope with any type of situation, be it all-out war or that condition of stress and uncertainty that we have been facing during the past 10 or 15 years. Your Navy today is a strong, efficient military machine. We all must see to it that it is kept that way.

Address of Representative Robert W. Hemphill, Rock Hill, S.C.

EXTENSION OF REMARKS

OF

HON. OLIN D. JOHNSTON

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Wednesday, August 17, 1960

Mr. JOHNSTON of South Carolina. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the remarks of the Honorable ROBERT W. HEMPHILL, Member of the House of Representatives from the Fifth District of South Carolina, delivered on July 25 at Rock Hill, S.C.

Representative HEMPHILL paid tribute to the late C. Harris Williams of Rock Hill, S.C. Mr. Williams was one of the great humanitarians of our day and it was through his kindness of heart and sincere personality that made all the people of South Carolina have so much love and respect for him.

The people of South Carolina feel it appropriate to erect a memorial to Mr. Williams at McDow Park, which is in the city of Rock Hill. I feel it very fitting that Representative HEMPHILL's address to those gathered at this event be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

HOW GLORIOUS IT IS TO LIVE

(Address by Representative ROBERT W. HEMPHILL on the occasion of the dinner of the C. Harris Williams Memorial Fund at Joslin Park, Rock Hill, S.C., July 25, 1960)

Mr. Chairman, my good friend Billy Hayes, honored members of the C. Harris Williams Memorial Fund Steering Committee, honored senator and members of the York County legislative delegation, distinguished guests of near and far, and fellow friends of the late and beloved we gather to honor this evening.

I have been honored many times by invitations to speak to groups or assemblies, each time in humble reflection of my inadequacies, gratitude at the opportunity of discussion and fellowship, but no occasion has aroused by reflection on good deeds, or good works, as this occasion. Each of us, I am sure, has rejoiced in many friendships, experienced the warmth of treasured companionship, leaned on the sympathy of great understanding, and eagerly sought the compassion and understanding of a fellow traveler on the high road of today's civilization—and all of us have had the good fortune of knowing and loving as a good friend, our late and great friend, Harris Williams. Tonight and always we delight to do honor to his memory and perpetuate his good deeds.

When we think of the way of life he expressed, we are reminded of the poem:

"We live in deeds, not years; in thoughts, not breaths; in feelings, not in figures on a dial.
We should count time by heart throbs. He most lives
Who thinks most, feels the noblest, acts the best"—Bailey.

To all of us who love nature there are days so glorious and exhilarating that life is a certain conquest, nights so filled with radiance that we are sure of our destiny, resolved to our duty of usefulness. Such was every day and night to Harris. His life was a mission—of joy, of help, of happiness, of fun, of faith, of usefulness. Never seeking the acclaim of high office, too big to be charmed by the little pleasures of personal acclaim, he went his way doing good, spreading sunshine, showing by example how glorious it was and is to live, to inspire, to help a fellow man.

His loyalty was legion. His loved ones, his home, his church, his country, his community, his business, his friends, all enjoyed the fierce loyalty of his devotion. One could but mention his family, and his face would glow with pride and love. No friend ever dropped in but "Won't you drop by the house?" automatically signaled his love and family pride.

He became a legend long before his time. One of the stories about him tells of his instrumentality in getting robes for his church. They teased him about a request that "C. Harris Williams Gulf Service" be lettered on the back. His spontaneous grin at the joke was quickly followed by his invitation to "come down to Neely's Creek next Sunday and join us." He loved his church and he served its purposes—how many were his charities will never be known—the good he did was exemplary of a Christian life.

He served his country in time of war and in time of peace.

"The man who loves his home best,
And loves it most unselfishly,
Loves his country best."

—*Holland.*

Such was only part of his service. I personally remember his unstinting service as a member of the York County grand jury, unstinting, unselfish, interested, untiring. He

never shirked a duty, gloried in every task for public good. He accepted every appointment to commissioner and to boards carrying duty without renumeration, work with little chance of appreciation or praise. In his home county are statues or progress bearing the indelible imprint of his character and devotion.

He loved politics. He knew the increasing role of politics in the life of the Nation. He could have run for any office with assurance of voluminous support, confident of election. His ability was well known, his concern for his fellow man an every day effort, and his love for people was salutory. Instead, he participated with tremendous vigor, finest sportsmanship, and greatest loyalty. Happy and fortunate was the candidate who had his friendship. To him politics was fun, though a necessity. He believed in—

"The freeman casting, with unpurchased hand,
The vote that shakes the turrets of the land."

—*Holmes.*

Yes; he bet on politics. If he won, he never chided the loser; but if he lost, his was the loudest, the best sportsmanship, publicly acclaiming his mistake, laughing his way into the hearts of his opposition. He was known, loved, respected—never hated. Judge and juryman, legislator, senator, sheriff, clerk, and constable all sought his advice, basked in the sunshine of his friendship. Would that more men took such interest in politics—every election would present a challenge, every political aspirant a seeker of high purpose as a requisite of high office.

As we move ffom horizon to horizon in the life of this good man we reflect on a few of the intimate personal expressions of his belief:

A community that could always count on Harris to be in the forefront.

Almost every parade in a nearby town knew "Mister Rock Hill" was there.

No Federal court ever met in Rock Hill but the admiration of court officials brought this smiling citizen to the courtroom.

No visiting judge ever had a complete term in York unless he met Harris.

No horse show could hope for success without him.

He never asked for himself—always for others.

I know of many men who received the mercy of the court because of his insistence.

I know of men inspired of great service in public office because of his sustaining friendship.

I know of young men now training in the military academies because he sponsored them.

Like others, I cannot know the full measure of his charity; he used his talents to bless his fellow men; but I hope to echo here the silent praise of people everywhere, people who have been helped or guided, a chorus of gratitude for good works.

And so in fetting tribute we gather here tonight determined to perpetuate his memory in the lives of young people tomorrow and in the future.

And as the young of succeeding generations find happiness and seek guidance for usefulness under optimist guidance, I hope the story of Harris Williams will be told and retold. And those who knew and loved him as a friend will remember:

A friend, in work, in play, in sorrow;
The same yesterday, today, and tomorrow.

And others, blessed by his charity, heartened by his smile, made happy by his association, or just a silent admirer, will recall his way of living a glorious life.

If you can give the unforgiving minute
Sixty seconds' worth of distant run,
Yours is the world and all that's in it,
And, what's more, you'll be a man, my son.

Thank you.

West Virginia Newspaper Editor Ralph E. Fisher Writes Compelling Editorial on Communist Threat

---

EXTENSION OF REMARKS
OF
HON. JENNINGS RANDOLPH
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Wednesday, August 17, 1960

Mr. RANDOLPH. Mr. President, those Americans who live and work in the large metropolitan areas and who rely for information upon metropolitan newspapers are inclined to forget the vital role of the small weekly newspaper in keeping alive the currents of opinion in our towns and villages.

Such a publication is the Moorefield Examiner in Hardy County, W. Va., an oracle which has served well the communities in the hills and valleys of the South Branch area of our State. Its editor, Ralph E. Fisher, last year received the award for the best editorial in the West Virginia weeklies. Mr. Fisher has also served as president of the West Virginia Press Association.

I have received a recent editorial from the Examiner of the caliber which won Mr. Fisher his previous award. It is the sort of courageous appeal which calls upon each of us to measure up to his full responsibilities and—rare among newspapers—even calls for higher taxes if need be to fulfill our national responsibility.

I commend this excellent commentary to the attention of my colleagues and ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Moorefield (W. Va.) Examiner, Aug. 10, 1960]

CANCEL YOUR INSURANCE

This will kill you.

All things are related to each other and everything is in a continuous flux. Change occurs because there are opposites opposing each other. But in the course of things it turns out that the opposites are not really opposed, but are really united. This is called "the unity of opposites." This actually means whenever we see struggle there is hidden in it the meaning of unity on a higher level. Or another way of expressing it is that struggle is a necessary form of progress and all existing things carry within themselves the seed of something opposing them. This philosophy further maintains that such changes occur in a sudden leap after the tension between opposites has been growing for a while and that in this leap something new is born, a new quality of essence.

Does the above paragraph make sense to you? It had better for we were perfectly serious when we said that it would kill you. About a billion people in the world believe that nonsense fervently. It is Communist dialectic and is the basis of their philosophy.

The above dialectic, a philosophy about the movement of all things in terms of opposites-in-unity has been combined with materialism, which is the explanation of all things in terms of matter. According to the Communists the dialectic movement of history is a movement of matter rather than ideas and "matter" is the process of economic production. The Communists further maintain that matter moves and that its movement is dialectic. It gets more confusing when they say that each condition already contains in itself the forces which oppose it but from this opposition flows change and unity on a higher level. Thus our capitalistic society supposedly contains within itself the tendency toward socialization and violent change will occur (the revolution) and then the progressive elements of capitalistic society (technology) and the proletarian forces will unite on a higher level (Communist society).

The paragraphs above are a short course in dialectic materialism and are the basis of the Communist movement. Can you imagine 600 million Chinese peasants, 30 million illiterate Congolese, millions of Russians, Egyptians, Cubans, Syrians and others understanding that hogwash? Nevertheless that is the kind of stuff Marx, Hegel, Engels and Lenin have left to the Communists and in 43 years the movement has grown from one man in a room in Zurich to a good chunk of the world's land mass containing a billion converts.

We believe that the Communists do not understand it either and are ashamed to admit it to each other and once caught in the current have to spend all their waking hours trying to justify such silliness.

Nevertheless it is the deadliest threat our civilization has ever known and because it is so empty and meaningless offers nothing to refute. Under that crazy philosophy the Communists justify anything—genocide, murder, atheism, lies—any crime in the book. Under such a philosophy only violence will secure their aims, thus by any means they will subvert a people, pack ballots, incite riots, commit treason, break agreements, commit theft, distort the truth or go to any lengths to foment unrest if it will further their aims. They makes no bones that their aim is to destroy the United States, they say it, they publish it, and they teach it and Khrushchev bluntly says "We will bury you." Russia is completely mobilized under the Communists and their entire energy is directed toward our destruction. They mean it and they believe it. We aren't talking through our hat when we say that, every bit can be fully documented.

And we are sitting on our duffs, fat, dumb and happy, living on the highest standard the world has ever known. We are perfect targets for the Communist propaganda in the rest of the world. Even a dullard must be aware that they have established a beachhead in the West since they have taken over Cuba. Russian and Chinese "technicians" are right now directing the affairs of Cuba and are sending endless streams of Cuban Communists into every Latin American and South American country, all trained in Communist methods to stir up unrest and hatred against the United States. And they have a fertile field to work in.

The Communists constantly use thermonuclear blackmail against us, openly boasting that they have 300 rockets zeroed in on U.S. targets. Man, unfortunately, has actually achieved the means of destroying this world. We don't think the Russians will precipitate a thermonuclear war any more than we will, for certainly if we ever are hit the retaliation will be automatic and

just as deadly. Any war will probably be a war with conventional weapons. Both sides in the last war had poison gas and didn't use it and we think the same conditions will apply in this struggle.

But make no mistake about it, we are now in world war III. It is being waged on the economic front, on the political front, on the diplomatic front, and it constantly flares up in the "brush fire" incidents in all parts of the world. And all in all things haven't been going too well for us since 1946 when we were the most powerful and respected nation the world has ever known. The Communists have said they expect to take us over by 1973 and some of them have even said by 1970. They expect to strangle us economically, diplomatically, and politically without actually waging a shooting war. But never forget they have the capabilities of inflicting a hundred million casualties on us and no one actually knows how the survivors will react from an appalling situation like that. The only consolation we can offer is that Hardy countians will likely be among the survivors. Small comfort that.

Don't ever forget that the Communist definition of "peaceful coexistence" is complete submission on our part.

The bald fact is that we are kidding ourselves working for our retirement and for our children or grandchildren. There simply won't be any future for us or our children unless we wake up and do something. Unfortunately, under a democracy such as ours we don't act, we only react. It is high time we started acting and doing something positive. The question naturally arises: what?

First of all, we suggest that we start with our children, teach them about our heritage, our history, and our ideals. Teach them about our Founding Fathers and our Nation's real heroes. It has become unfashionable in our country to be patriotic. And if we ever needed patriotism it is now. We can start taking our civil defense program seriously. We actually need bomb shelters, we need food and water for survival in those shelters, and we need to know what to do if a thermonuclear attack occurs. Russia has a well integrated civil defense program and those people are well disciplined and trained. Certainly if they believe we will attack them we are only being foolish not to expect they will attack us. Another thing we can do is support the "Voice of America" program which is beamed into the satellite countries and into Russia. The Soviets are spending 10 times as much to jam that program as we are to send it. We can give more economic aid to countries to compete with the Russians. We hold no truck with this business of cutting down foreign aid. It is the best of insurance and is one field in which we can outdo the Russians with ease. It is not a giveaway program, for 90 percent of the money is spent right here in our own country with American manufacturers, American farmers, and American labor. We can spend more for defense. We can assure our Congressmen and our Senators that we are prepared to assume more taxes to protect ourselves and that this is no time to be niggard when our very existence is threatened. As we stated before, in our democracy we never act, we only react, and our Congressmen and Senators will only act when the people want it. It is our job to assure them we do want more defense appropriations and more foreign aid. Another thing we can do is to read and study the methods of the Soviets and to be able to detect their propaganda and to refute it. We have placed an excellent book in our library, "Protracted Conflict," by Dr. Robert Strausz-Houpe and Associates, which we consider one of the best written on the subject. We earnestly urge you to read it. Another project we must continue is to keep West Berlin free and to keep Formosa free. Those two showcases of democracy are perfect examples of life in a free world and are there for the East Germans to see and for the Chinese Communists to see. Japan is another showcase for all the Orient to see and we must keep that country out of the Communist orbit at all costs.

And above all, we can wake up our neighbors, relatives, and friends. We ask you to join with us in this fight for not only our way of life but our very existence.

The Federal Bureau of Investigation

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Wednesday, August 17, 1960

Mr. KEATING. Mr. President, due to the extreme sensitivity of some of our friends on the other side of the aisle about anything which is said on this side of the aisle that smacks of a political character, I would normally follow the practice which many of us have done of sending down some matters for the Appendix, and not making too much of a point of presenting them here; but in the light of the objections that have been made, I ask unanimous permission to include in the Appendix of the RECORD an excellent article by the Director of the Federal Bureau of Investigation, Mr. J. Edgar Hoover.

Mr. President, this month's issue of the American Bar Association Journal contains an excellent article by the Director of the Federal Bureau of Investigation, J. Edgar Hoover, describing the important function of the FBI in our Government. Mr. Hoover emphasizes the care with which the FBI selects men as special agents who will be dedicated to upholding the dignity of the law, who will have allegiance to ideals of just and fair play and who will do their jobs honestly, fearlessly, and zealously.

J. Edgar Hoover has been Director of the FBI for more than 30 years. In that period the FBI has achieved world renown as a law-enforcement agency. He has given personal example of dedication, honesty, and courage, in which all those who serve the public take pride. I know that Mr. Hoover's article will be of great interest to many Members of the Senate, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE FEDERAL BUREAU OF INVESTIGATION: THE PROTECTOR OF CIVIL LIBERTIES

(By J. Edgar Hoover, Director of the Federal Bureau of Investigation)

The basic conflict in the world today is between the concepts of a government of law and a government of men—of democracy versus totalitarian communism. How this issue is ultimately resolved will decide the fate of mankind for many generations to come.

The terrifying reality of the brutal abuse of power—how one man, Joseph Stalin, in frenzies of self-grandeur and egotism, controlled the lives of literally millions of people—was vividly depicted by Nikita Khrushchev before the 20th Party Congress of the Communist Party of the Soviet Union in 1956. All too often forgotten today, this speech affords an appalling insight into the cauldron of terror and fear which is created when law does not exist.

Coming from the Communists, particularly the No. 1 Soviet Communist, the portrait of a tyrannical Stalin, brutally suspicious and cunningly cruel, becomes more meaningful. Here was a man who, through deceitful skill, concentrated all reins of government into his own hands. Just to enter into his physical presence meant personal risk. "It has happened sometimes," a former associate reported, "that a man goes to Stalin on his invitation as a friend. And when he sits with Stalin, he does not know where he will be sent next, home or to jail."

In this regime of personal power, the law became what Stalin said it was. He was the prosecutor, the judge, the jury, the court of final appeal—all rolled up into one brutal club of oppression. In the widely publicized case of the so-called Russian doctors (referring to the doctors arrested in 1953 just prior to Stalin's death on charges of treason but later released) Stalin personally issued orders for the conduct of the investigation. Confessions were to be secured. "If you do not obtain confessions from the doctors," Stalin reportedly told his Minister of State Security, "we will shorten you by a head."

Needless to say, the doctors confessed. Khrushchev's comments in this connection tell us most graphically how a dictatorship works; how different it is from a government of law where the dignity of the human personality has meaning. "Stalin personally called the investigative judge, gave him instructions, advised him on which investigative methods should be used; these methods were simple—beat, beat, and, once again, beat. The case was so presented that no one could verify the facts on which the investigation was based. There was no possibility of trying to verify facts by contacting those who had made the confessions of guilt."

Such tactics, again according to Khrushchev, meant mass arrests and deportations of many thousands of people, execution without trial—in the main, and in actuality, the only proof of guilt used, against all norms of current legal science, was the confession of the accused himself; and, as subsequent probing proved, confessions were acquired through physical pressures against the accused.

THE COMMUNIST SYSTEM: TERROR AND BRUTALITY

This is the testimony of the Communist system—a system of terror and brutality which at this very minute still crushes the minds, bodies, and hearts of millions of men, women, and children around the world. Under a dictatorship, the historic principles of justice, mercy, and fairplay are abrogated. Whim, prejudice, and suspicion become the ruling motifs. Habeas corpus, fair trials, law enforcement agencies dedicated to securing the true facts—these are not the ingredients of a dictatorship. Communist propaganda talks much about Socialist legality, proclaiming that Communist morality is superior to bourgeois ethics. But these mouthings are Aesopian language, designed to conceal the true facts. Under communism the judicial system exists to enforce the will of the state and the party, as defined by the ruling clique, not to secure justice for the individual.

In Great Britain and the United States, partners in the fight for freedom, the dignity of the law—as contrasted with the tyrannical power of a human ruler—gives validity to our democratic way of life. A man's home may be ever so humble, so humble that the winds and the rains pour through its thatchless roof, yet that dwelling is inviolate from

any arbitrary intrusion of the Government. That man has certain rights under the law which guarantee to him the privilege of freedom. This is the great tradition of liberty which we in America have interited from English law.

The law enforcement agency—whether local, State, or National—is an integral part of the judicial framework of freedom. In fact, the judicial system can operate fairly and effectively only when the complete and accurate facts are revealed in the course of the legal proceedings—facts which are unalloyed by personal prejudice, whim, or bias. Most vital in determining the guilt or innocence of the accused is that the official authorities—the judge, the jury, the court officials—know all the facts. This can occur only if there are law enforcement agencies dedicated to the high principles of integrity, honesty, and efficiency.

The FBI, as the investigative arm of the U.S. Department of Justice, is dedicated to preserving the liberties which form the fabric of our constitutional government. In my 36 years as Director, this has been the main principle motivating its existence. The FBI is a servant of the American people, working around the clock to protect their rights, lives, and property.

By no stretch of the imagination is the FBI a national police agency. In fact, as is well known, the FBI's jurisdiction is strictly limited. At all times the FBI is under the supervision of the Attorney General and the President. Each year I appear before committees of the Congress to explain the operations of the FBI. Our procedures are closely scrutinized when FBI cases come before the courts of the Nation. Moreover, an alert press is constantly vigilant to the work of the FBI. Hence, only the highly misinformed can call the FBI a Gestapo or an agency threatening our civil liberties.

The FBI, moreover, is strictly a fact-gathering agency. It does not make recommendations or evaluations, authorize or decline prosecution, issue clearances or pass opinions relative to information gathered. This is the duty of other officials of the Government. Certainly, it is not the function of an agency which collects the facts in a given situation to also pass judgment on them. This differentiation is a salient feature of democratic law enforcement.

The basic duty of the FBI is to investigate violations of the laws of the United States, to collect evidence in cases in which the United States is or may be a party in interest, and to perform other duties required by law or administrative directive. The FBI performs these functions, yet scrupulously protects the liberties of the individual. The criminal and the subversive must be defeated, yet the historic rights of the individual must be held inviolate.

THE FBI: A HIGH CODE

Most important in protecting civil liberties is the maintenance of a high code of ethics by law enforcement. Every special agent of the FBI is dedicated to upholding the dignity of the law. He holds an inner allegiance to those ideals of justice and fair play which have made this Nation great. He is a man of integrity who does his job honestly, fearlessly, and zealously. In these days of payola, he does not allow personal temptation and insidious favoritism to interfere with the validity of his investigation. He is impervious to the glib tongue of the fixer or the undercover gift of the unscrupulous. He does his job without fear of outside intimidation, political reprisal or competitive undercutting. He is guided at all times by loyalty to his agency, to his profession, to a way of life. This is the integrity, I am proud to say, which is the kernel of FBI operations and the rock upon which good law enforcement rests.

Vital in developing a high ethical code of law enforcement operations are high standards of personnel recruitment and training. The FBI maintains rigid physical, educational and moral standards in the selection of personnel, both special agent and clerical. To be eligible for appointment as a special agent, for example, applicants must be between 25 and 40 years of age; graduates of State-accredited resident law schools or 4-year resident accounting schools with at least 3 years of practical accounting or auditing experience. Graduates of law or accounting schools not requiring at least a resident junior college degree, or its equivalent of resident college work, as an admission prerequisite must have received at least a degree from a resident junior college, or its equivalent in resident college work. The applicant must also be able to pass a rigid physical examination. Before being offered an appointment, qualified applicants are comprehensively investigated to determine whether they possess unqualified personal integrity and character.

Special agents, upon reporting for duty, are given an intensive 13-week period of training prior to actual field assignment. This course includes, among other things, instruction in constitutional law, Federal criminal procedures and ethics of law enforcement. The agents study the rules of evidence and are instructed in searches and seizures, interviews and confessions. The special agent learns that he is a servant of the people, a protector of the right of the individual. He develops an esprit de corps, a loyalty to doing his job in the right way. The law-trained special agent, of course, is enabled to make an excellent contribution to the work of the FBI. I wish to pay tribute to the fine quality of the graduates which America's law schools have sent us. We in the FBI are proud to have them as special agents. They are doing an excellent job.

I might mention that in addition to training our own special agents, the FBI provides training for local law enforcement officers. In 1935, the FBI National Academy was founded for the purpose of training selected local officers as police instructors and administrators. To date, over 3,800 officers have graduated, representing every State in the Union and many foreign countries. These men, upon returning to their home departments, instruct their brother officers in the fundamentals of good crime detection. We estimate that over 200,000 local officers have benefited from this training. The Academy's curriculum includes, among other things, courses designed to promote respect for civil rights. Moreover, the FBI, if requested, will conduct police training schools in local departments. Every effort is made by the FBI to promote higher standards of law enforcement throughout the Nation.

MODERN SCIENTIFIC TECHNIQUE—BETTER LAW ENFORCEMENT

Experience has shown that any danger from law enforcement to civil liberties comes not from evil intent, but from law enforcement officers poorly trained, ill-equipped and untutored in the ethics of the profession. Third-degree tactics, illegal searches and seizures, unlawful arrests, abusive language and demeanor—these are the acts of the poorly trained officer who lacks the technical know-how of competing with the criminal. In years past, unfortunately, certain areas of American law enforcement utilized bullying, personal mistreatment, illegal arrests and detentions. Admittedly, these nefarious tactics do still occasionally occur. But they are becoming much less frequent. The modern-day officer, learning up-to-date scientific techniques of crime detection, is using skill—not brute force—to achieve his ends. Hence, the vital need today for communities to realize that adequate salaries, equipment, training and, above all, respect for the profession are absolutely necessary. In the final analysis, the protection of civil liberties rests on the attitude of the individual citizen of this Nation.

Technical crime detection methods are most vital today in increasing the efficiency of law enforcement. Day after day fingerprints and the scientific laboratory are solving criminal cases. A piece of dirt, a fleck of paint, an old orange peel—these often become the clues to prove guilt or exonerate the innocent. The microscope, the test tube, the spectrograph become the ingredients of the law enforcement officer's skill. He utilizes intelligence, resourcefulness, and initiative to solve cases.

During the fiscal year 1959, for example, the FBI laboratory conducted almost 185,000 scientific examinations of evidence submitted by law-enforcement agencies in every State of the Union. The facilities of the FBI laboratory are available free of charge to any duly constituted law enforcement agency. This means that any police department or sheriff's office in the Nation, even though small in size, has available the latest techniques of crime detection to help fight crime. FBI technical experts will examine the evidence submitted and furnish the submitting agency a written report of their findings. Later, if the local case goes to trial, the FBI examiner will testify as to the results of his examination, again without cost to local authorities.

PROVING INNOCENCE: A CASE IN POINT

Many times the FBI laboratory is able to prove innocence. Not long ago, for instance, a book of blank money orders was stolen in a southern city. Two of the stolen money orders were passed by an individual who identified himself with a driver's license. Local police subsequently arrested a man whose name corresponded to that on the money orders and who lived at the address listed on the driver's license, charging him with the theft and passing of the stolen items. Three eyewitnesses definitely identified the resident as the passer of the money orders, despite his pleas of innocence. The result: a sentence of 4 years in jail.

While this individual was serving his sentence, more of the stolen money orders were passed. These money orders, along with those previously passed, were sent to the FBI laboratory for examination. Here, it was determined that the individual serving the prison term had not prepared any of the writing on the stolen money orders. As a result, this person's sentence was completely vacated.

Fingerprints represent another weapon of attack against the criminal. At present the FBI's Identification Division has over 155 million sets of fingerprints on file. They are divided into criminal and civil files, the former representing roughly 20 percent of the total number. These prints are daily rendering yeoman services to the cause of law enforcement. If a criminal is arrested, for example, the law enforcement agency need only send his fingerprints to the FBI Identification Division. They are immediately searched through the FBI fingerprint files—which takes only minutes. The submitting agency is expeditiously advised of the results of the check. In this way criminal fugitives are often located. In fact, during 1959 a total of 16,967 criminal fugitives were identified through FBI fingerprint searches. The services of the FBI Identification Division are available without cost to law enforcement agencies throughout the Nation.

The FBI is today a service institution on a national level to American law enforcement. To think of the FBI as an isolated, highly secretive and prideful agency on the national level, intent on concentrating power in its own hands, is not to be truthfully

informed on American law enforcement today. The FBI is working valiantly to aid local law enforcement on all levels to meet the problems of the day. Crime is a serious menace and all of us in law enforcement must work together. The weapons of attack against the criminal—such as police training, science, fingerprints—must be utilized to the fullest extent. The criminal is exploiting to his own advantage the latest technological developments of society. Law enforcement can do no less. This means that all law enforcement, local, State and national, must work together. This is a basic operating principle of the FBI.

I received a letter some years ago from a local sheriff. He was appreciative of an FBI-conducted police school held in his hometown. "This school was very well received in this territory, and I just wanted you to know that we appreciate the efforts of you and the men of your organization in affording training programs for officers on the State, county, and city level." He pointed out that law-enforcement officers are intelligent, sincere, and tolerant, but their chief handicap "has been a lack of training and a lack of understanding of the legal processes to which a person arrested is entitled."

This letter, in my opinion, reflects the courageous and wholesome attitude of American law enforcement. These men, wherever they may be, are interested in doing a good job. They want to protect the rights, lives, and property of our citizenry. The biggest problem facing them is to secure the working knowledge to do the job. This means that every community must do its share to provide these men with the working tools; as long as the community is niggardly with funds, support, and interest, then law enforcement will do a poor job.

An efficient law enforcement, dedicated to the democratic spirit of America, is our best protection against abridgment of our civil liberties. America does not need a national police. Such an organization would be contrary to the democratic traditions of this Nation. The answer to the crime problem lies in a strengthening of the present system of fraternal, voluntary, and cooperative law enforcement, local, State, and national. These agencies can do the job. The FBI is proud to be a part of this system of law enforcement, protecting the liberties of this land of the free.

Military Pay Equalization

EXTENSION OF REMARKS
OF
HON. BARRY GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Wednesday, August 17, 1960

Mr. GOLDWATER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial which appeared in the August 12 edition of the Washington Post and Times Herald, and which brings attention to the military pay equalization bill now pigeonholed in the Senate Armed Services Committee. Although it is not often I find myself agreeing with the position taken by the Washington Post and Times Herald, this editorial clearly and ably points out the necessity for Senate action on H.R. 11318, and I hope that, if this editorial has not already come to the attention of my colleagues, they will take time to read these brief comments.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

STILL TIME FOR FAIRPLAY

President Eisenhower properly included among urgent items of unfinished legislation the House-approved bill to rectify an injustice done 114,000 veteran officers and men of the armed services. This bill would abolish the so-called "inferior retired list," to which those retired prior to enactment of the 1958 Military Pay Act were relegated and thus unfairly deprived of full retirement pay benefits of that act. Many of these retirees were outstanding combat men of World War II, decorated for bravery in action.

In the name of economy, Congress ill-advisedly restricted all personnel retired prior to enactment of the pay law to a 6-percent increase, whereas officers and men retired after the arbitrary cutoff date were given a much larger pay raise, based proportionately on the active-duty pay scales. The latter formula for adjusting retired pay to active duty pay had been in effect for a century. The 1958 departure from tradition has caused widespread consternation among those now in the services, who fear that similar injustices may develop in the future.

The House unanimously voted to equalize the pay of all retired officers and men, but no action has been taken on the Senate side. The bill is pending before the Stennis subcommittee of the Senate Armed Services Committee. It has been reported that the subcommittee favors a review of the whole system of military retirement benefits. Such a review may be desirable, but there is no good reason why the inequity of the 1958 act should not be rectified in the meantime. There is yet time for the Senate to assure fairplay for the men stigmatized by the act as unworthy of the full increases awarded fellow officers who have retired since 1958.

The Retail Independent Drugstore

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, August 17, 1960

Mr. HUMPHREY. Mr. President, the heart of our free enterprise system is the independent businessman and in particular the retailer on Main Street who serves thousands of communities throughout our land.

Recently, I read two interesting and thoughtful editorials which tell a great human interest story about the retail independent drug store. The community of Wood Lake, Minn., has lost its drugstore and the editor of the Wood Lake News in a moving, informative and thoughtful editorial tells what happens in a community when the local drug store closes up and a community is without a pharmacy.

Then, too, the editor of the Albany Enterprise, Albany, Minn., reminds us what an important asset the retail pharmacy is to every community. In its editorial entitled, "An Important Asset to a Community," the Albany Enterprise editor calls attention to the fact that the Parry Drug Store of Richmond, Minn., is no more. The editor appeals for another druggist to open such a business because of the importance of the pharmacy as a vital part of the health protection for any American community.

Mr. President, I ask unanimous consent that these two editorials be printed in the Appendix of the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Wood Lake (Minn.) News, July 14, 1960]

LET'S KEEP WHAT WE HAVE

Wood Lake has lost a true and valued possession—its drugstore.

The trend of the times all over the country is—the small town gets smaller. Yet we in Wood Lake were proud of the fact that the 1960 unofficial census shows that we have held our own—and when the official returns are tabulated and our citizens who were away at the time of the official nose count are listed, we should show quite a gain—very unusual in the towns of the 500 class.

Yet we have lost our drugstore. Kind of hard to understand, isn't it? What the reasons are, of course, is a matter of pure conjecture on our part.

For instance, we wonder whether we would be losing it if some of the people who very seldom went into the place, but bought their prescriptions and the hundreds of other drugstore items in some other town, had stayed here to shop?

If these people would take their total bills and compare them with local prices they might be in for a big surprise. In most instances shopping in Wood Lake would have saved them money.

Sure—there are the so-called hot specials or leaders in larger towns that look mighty good—but— we're talking about the total bill comparison—not that between just a couple of items at a given time. Local stores advertise specials, too—and we have examined the ads in a good many of the exchange papers we get from the area and find that overall, Wood Lake prices compare very favorably.

Naturally we shop elsewhere for items of clothing, shoes, etc., that aren't available here. Why not stop there, and hold on to what we have in Wood Lake?

Then there is the matter of friendly cooperation. People who locate in a small town do so becauses they like smalltown atmosphere and living and expect to find it. Perhaps it's time we each examine our motives and policies. Do we always try to promote the good of the town and not just struggle for individual gain? Maybe a policy of working together in a spirit of give as well as take is long overdue.

Most of the residents of Wood Lake have bought homes and/or business property. We pay taxes here. We live here. We have a swell town full of swell people.

By the same token Wood Lake should be a good enough place to buy all our groceries, all of our hardware, all of our farm machinery; all of our feed; and all of our milk, cream, and produce should come to our own place of business. Perhaps that's all we need to do to keep the 1970 census from showing a terrific decline.

As stated before, the possible reasons for losing our drugstore are pure conjecture on our part.

Let's all start thinking and doing, shall we?

[From the Albany (Minn.) Enterprise]

AN IMPORTANT ASSET TO A COMMUNITY

An important cog in the health of any community is the pharmacist. Richmond lost their drugstore recently and already Ed Parry's services are being missed. Unlike druggists in larger cities, the local pharmacist depends solely on local patronage. His personal attention to your prescription needs deserves your support. For Parry Drugs, this article is too late. We hope

that Richmond has a druggist back soon. In the meantime Albany people should continue to support Dinndorf Drugs, while St. Josephites should bring their drug business to Jaren Pharmacy.

Msgr. Lucyan Bojnowski

EXTENSION OF REMARKS
OF
HON. THOMAS J. DODD
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES
Wednesday, August 17, 1960

Mr. DODD. Mr. President, Connecticut and America lost a great patriot spiritual leader July 28 when Msgr. Lucyan Bojnowski passed away in New Britain, Conn. By any man's measure this immigrant Polish priest achieved greatness during his 92 years by and through his dedication to assist the oftentime forgotten legions of oppressed, homeless and aged citizens.

Monsignor Bojnowski built orphanges, homes for the aged, and schools for the underprivileged, and then established an order of Roman Catholic nuns to administer these institutions. In fact he was instrumental in assisting thousands and thousands of men, women, and children to realize the great American dream.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial praising Monsignor Bojnowski which appeared in the New Britain Herald of July 28, 1960.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MSGR. LUCYAN BOJNOWSKI

How shall the worth of a man be appraised, by his personal material possessions or by his spiritual wealth? If by the former, the Right Reverend Monsignor Lucyan Bojnowski died poor. If by the latter, he had riches beyond the capacity of men to inventory.

It has often been said that no individual had more beneficial influence on this city than the founder of the Catholic Church of the Sacred Heart of Jesus, whose death has ended a career devoted to the welfare, spiritual and material, of thousands of his fellow men. Others have contributed to the city's growth and have helped to chart its course. But Providence chose as its special instrument for tasks of this kind in early New Britain, a man born in lowly circumstances in a foreign land, who rose by his own zeal to a lofty station in life and won the admiration and esteem of the community. Thus does destiny give evidence of its watchfulness over the affairs of men.

The present generation may read for inspiration the life stories of Monsignor Bojnowski printed in the newspapers. When he came to New Britain it was a small town suffering from growing pains, among which was a lack of sturdy labor. From the cities and meadows of Poland, streams of emigrants crossed the sea to escape oppression and seek new horizons in this land of opportunity. Many came to this city. Monsignor Bojnowski, who was then a struggling parish priest, assumed the responsibility of their guidance. If this discipline seemed harsh in contrast with today's liberal views on human behavior, it was justified by conditions of the times.

In the new priest the leaders of industry and business saw a power for good and they gave him their wholehearted support. The result of this mutual cooperation is seen by the place in the community now held by people of Polish blood. To be a Pole in those days meant to be industrious, thrifty, and God-fearing. These characteristics have endured with the passing of time and their existence can be traced to the strong hand of this parish priest.

Monuments to the memory of Monsignor Bojnowski are numerous. They include the magnificent house of worship on Broad Street, the nearby parochial school through whose doors have passed so many prominent citizens, an orphan asylum that has been a haven for boys and girls in need of friendship, St. Lucian's Home for the Aged on Burritt Street, the Catholic Leader, a weekly newspaper printed in the Polish language, the order of Mary of the Immaculate Conception and the beautiful Mother House on Osgood Avenue and St. Joseph's Home, a residence for women, in New York.

Despite his great achievements, Monsignor Bojnowski continued to be a humble priest, accepting with modesty the acclaim and applause of prelates and laymen.

The last chapter in an epic of New Britain has been written. Its protagonist will live in the hearts of his fellow men while their memory lasts.

To quote Hilaire Belloc: "He does not die who can bequeath some influence to the land he knows."

"Mr. Social Security" Notes Success of Act

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, August 17, 1960

Mr. WILEY. Mr. President, 25 years ago, the social security program was enacted to provide for folks over 65 with a degree of "new hope" for the later years of life.

Traditionally, there have been arguments pro and con, as to whether or not this type of program fits philosophically into our free-enterprise system. Despite the controversy, however, the social security program has continued—and has been improved and expanded—to carry out its objectives of serving our senior citizens.

During its quarter century of existence, the program has been modified in a number of ways. Currently, Congress is considering additional changes.

Among the recommendations by the Senate Finance Committee, for example, is a sound proposal for increasing "extra earnings" for folks receiving benefits, from $1,200 to $1,800—a proposal which I have been happy to sponsor both this session, and in the past.

Upon the inauguration of the program, Mr. Arthur J. Altmeyer, of Madison, Wis., became its first Administrator—and ultimately became known as "Mr. Social Security."

Recently, Mr. Altmeyer reviewed the 25-year progress of the program, and made some recommendations for further improving its provisions, to better serve our people.

The Milwaukee Journal published an informative article entitled "'Mr. Social Security' Notes Success of Act," by Carl Eifert.

Reflecting upon the progress and ultimate objectives of this program, I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Milwaukee Journal, Aug. 14, 1960]

"MR. SOCIAL SECURITY" NOTES SUCCESS OF ACT—ALTMEYER OF MADISON WAS FIRST ADMINISTRATOR OF INSURANCE PLAN 25 YEARS AGO

(By Carl Eifert)

MADISON, WIS.—The feasibility of social insurance has been proven in its first quarter century of existence in this country, Arthur J. Altmeyer, "Mr. Social Security," said Saturday.

Altmeyer, a Madison man, was the first administrator of the social security system authorized by a law signed by President Roosevelt 25 years ago Sunday.

"The big challenge of the next 25 years is to provide protection against ill health," Altmeyer said.

He said it was "no longer speculation, as it was in 1935" whether such a gigantic system could be administered successfully.

WAS FIRST CHAIRMAN

Altmeyer, who was the first chairman of the social security board and later commissioner of social security until 1953, said contributory social insurance was the first phase of the program.

"The second phase, I hope, will become less and less as time goes on—public assistance. This is supposed to be the second line of defense against destitution, providing protection on the basis of need to those who don't get it under the first phase."

(The social security system embraces a number of programs. Two are based on compulsory insurance—Federal old-age survivors and disability insurance and unemployment compensation. The latter is administered by the States. Other State administered programs aided by Federal money are old-age assistance, aid to dependent children, aid to the blind, child welfare, maternal and child health, public health, service to crippled children, and vocational rehabilitation.)

NEW FIELDS SEEN

"Our job during the next 25 years is to build upon the success we had in the last 25 years in establishing nationwide contributory social insurance so that it covers four of the individual economic hazards people face. Unemployment is one. The others are old age, death of the breadwinner and permanent total disability."

These items are covered now, but the system should be made more effective, he said. About one-third of the Nation now has no protection whatsoever against unemployment, he said.

There is 90 percent coverage in the case of Federal old-age, survivors, and disability insurance, Altmeyer said, "but there is no reason why it shouldn't be universal—100 percent."

RESULTS OF ILLNESS CITED

There are economic consequences of illness, he said: "The wage loss when people are sick and the cost of medical care.

"I say that's the big challenge. I feel in the next 25 years we are going to provide protection in this large, unprotected area of economic losses due to ill health."

Altmeyer now is a consultant in this country and abroad in the field of social security.

Paul A. Raushenbush, the director of the State unemployment compensation department, got into that field in 1932, 3 years before the Federal social security bill was passed. He was brought into the State industrial commission by Altmeyer, then secretary of the commission.

"I'm the aborigine in this country, of unemployment compensation—the oldest guy in terms, at least, of seniority," Raushenbush said.

STATE WAS PIONEER

The Federal unemployment compensation program, designed for administration by the States, was based on the Wisconsin system.

Now, Raushenbush said, unemployment compensation revision "is a perennial question in almost every State legislature."

Looking at the country as a whole, he said, there have been three major changes since the program began. In the beginning, there was a waiting period of 3 weeks before unemployment benefits began. One week is typical now.

The maximum duration of benefits generally began at 13 weeks. Now the most typical figure is 26 weeks (34 in Wisconsin).

Benefits have also climbed from a typical $15 a week to around $35 ($49 in Wisconsin).

ADJUSTMENT MADE

Benefits, Raushenbush says, have pretty well kept pace with the cost of living, "but have not kept pace with wage levels in many States. In 1959, Wisconsin practically caught up by adjusting weekly maximum benefits every 6 months by basing them on a percentage of the average wage in the State."

Another Madison man—the "father of social security"—died last May. He was Prof. Edwin E. Witte, who was executive director of President Roosevelt's Committee on Economic Security. That group drafted the social security program.

Other Wisconsin men who could claim major credit for social security were the late Prof. John R. Commons of the University of Wisconsin, world famed labor economist, who developd the theoretical basis for the system, and Wilbur J. Cohen. Cohen was a pupil of Witte and later his assistant in Washington, D.C. Witte was an assistant to Commons.

Newark Leading Urban Renewal

EXTENSION OF REMARKS

OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Wednesday, August 17, 1960

Mr. WILLIAMS of New Jersey. Mr. President, the latest census statistics indicate that New Jersey, with 6,018,570 living within its borders, has the highest population density in the Nation—800.2 persons per square mile. Even though many areas of the State are relatively lightly populated, New Jersey cities and suburbs are growing at a brisk pace.

It is particularly important, therefore, that the best possible use be made of the highly populated areas. Good planning for development and redevelopment is essential. I was particularly gratified to read, therefore, in the July 24 Newark (N.J.) Sunday News, an article which describes the great efforts now underway to make use of one tool for city rebuilding, the title I provision of our urban renewal program.

The reporter, Andre Briod, shows how Newark and New Jersey have, for the moment at least, a commanding lead in support of completed title I projects. He also points out that Newark has been commended by the FHA on its progress.

The article shows how one Federal program has been put to work in dynamic New Jersey. I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NEWARK LEADING URBAN RENEWAL

(By Andre Briod)

Newark and New Jersey have received more Federal money in support of completed title I projects than any other city or State in the Nation, according to the Federal Urban Renewal Administration.

The figures, which rank this city and State together as the Nation's leaders in the field of urban redevelopment, show that Newark has received about one-fourth of $20,134,000 in Federal money allocated to projects now listed as completed, while one-third of all such Federal contributions to date have been assigned to this State.

The figures, made available by the URA yesterday, do not take into account a number of projects under construction elsewhere in the Nation. When they are completed the rankings are expected to change, but Newark and New Jersey would still stand high on the list.

Five cities in this State have completed seven projects to which the URA has furnished a total of $7,571,000. Of that amount, $5,273,000 has gone to Newark, all of it to the Colonnade Park project.

Newark enjoys its status in the redevelopment field solely on the basis of the $20 million Colonnade Park venture, which in reality is still short of physical completion.

The only city in the Nation with completed title I projects receiving a comparable amount of Federal financial support is Baltimore, which to date has closed the books on two projects to which the URA contributed $4,033,000.

TWO SEPARATE PROJECTS

The URA, for technical reasons, lists Colonnade Park as two separate projects, with the Broad Street portion of Colonnade Park designated as one and the Clifton Avenue site as the other. In fact, however, Colonnade Park is a single undertaking and has been regarded as such by its developers and by the city since its inception.

About 200 families are living in the 720 units in the two 22-story buildings at the Broad Street site. The third, a 540-unit building at the Clifton Avenue site, is to be ready for partial occupancy in September.

A Colonnade Park spokesman declared yesterday that, counting those apartments already occupied, 350 apartments of the 1,260 in the entire project are committed for rental.

The completion of the dealings between Newark and the URA last month resulted in the delivery to the Newark Housing Authority of a letter from the URA regional office in Philadelphia commending the city on its progress. Warren Phelan, director of the region within the jurisdiction of that office, said it was the first communication of its kind ever sent to any authority in that territory.

Phelan noted that Newark and Baltimore are both within region II, along with Pittsburgh and Philadelphia, all cities which are considered leaders in the redevolpment field.

Other New Jersey cities which have completed title I ventures are Perth Amboy, Passaic, New Brunswick, and Long Branch.

PROJECTS COMPLETED

Perth Amboy has completed two projects to which the URA contributed a total of $1,325,000, an amount greater than those granted to completed projects in most of the major cities in the country.

Passiac received $734,000 for its Pulaski Park project, on which the URA closed accounts last month. The Bishop Street project in New Brunswick, also officially completed last month, received $157,000 in Federal support. Long Branch's Russel Court project was supported by an $82,000 Federal contribution.

The share of the financial burden which fell to the New Jersey cities as a result of site acquisitions and demolitions totaled $3,785,000. Less than $1 million of that was paid out in cash. The majority of the cities' share was credited to municipal facilities and improvements which were included in the projects and which in some cases were partially paid for by the State.

A few cities, particularly New York, Pittsburgh, and New Haven, have under construction title I projects which would place them ahead of Newark's ranking when they are completed.

By the same token, however, Newark has planned and has received preliminary Federal approval for a number of projects which would, if completed, continue this city's prominence in the redevelopment field. None of the new projects planned here are expected to be started before next year.

Capital Times Hails U.N. Job in Africa

EXTENSION OF REMARKS

OF

HON. WILLIAM PROXMIRE

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, August 17, 1960

Mr. PROXMIRE. Mr. President, the Madison (Wis.) Capital Times recently praised the splendid work for world peace accomplished by Dr. Ralph Bunche and the U.N. Secretary General, Dag Hammarskjold in the African crisis. I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered printed in the Appendix of the RECORD, as follows:

WHAT COULD BE SUBSTITUTED FOR THE U.N. IN AFRICAN CRISIS?

We hope that the bitter-end critics of the United Nations have been watching along with the rest of the world in these last tense weeks of trouble in Africa.

Do they still think that the U.N. is a useless "debating society" that can serve no purpose in bringing peace to the world?

Though the problems in Africa have by no means been settled, is there any other way that the present crisis could have been dealt with more effectively and reasonably than the U.N. has?

One by one, the U.N. is facing the problems in this crisis that has been years in building up. And one-by-one these problems are being worked out with great skill and resoluteness.

The skillful, patient and inspired work of Dr. Ralph Bunche and Secretary-General Dag Hammarskjold has won new prestige for the U.N. before the world and increased their personal stature enormously.

The U.N. has achieved many things in the past to illustrate its usefulness to the world,

but if it had done nothing else its work in the African crisis would have more than proved the wisdom of its existence.

The African situation should make even the enemies of the U.N. ask this question:

What would we be doing now to deal with this problem if we didn't have the U.N.?

The State of Business and the Economy

EXTENSION OF REMARKS
OF
HON. VANCE HARTKE
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Wednesday, August 17, 1960

Mr. HARTKE. Mr. President, we have become accustomed for nearly 8 years to reading honeyed phrases on the state of the Nation's economy. Regardless of what ominous signs there were, we were always told that things were bright. Time and again I have called attention of this body to our lack of economic growth, to the tragic unemployment situation, the trend in housing starts and other signs of weakening economy. I have worried that our dollar growth has not kept pace with the expanding population and inflation to the end that Mr. Khrushchev's prediction that the Soviet Union soon would surpass us economically might come true.

In the current Newsweek there is a keen and concise analysis of statements at President Eisenhower's news conference on the state of business and economy. This article, I have learned, was prepared by Mr. Hobart Rowen, who writes much of the Washington business news. I ask unanimous consent that the article entitled "Business" be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BUSINESS

Backed as he is by a massive array of statisticians and economic advisers, the President commands more than ordinary respect when he offers an opinion on U.S. business. But when President Eisenhower cited Government statistics at his press conference last week to point up the "hopeful signs" in the economy, his optimism surprised most of his own advisers. Some sample presidential quotes, and the facts on which they are presumably based:

"Gross national product for the second quarter is even higher than we had estimated." The revised estimate was only slightly higher ($505 billion vs. $503 billion) and was made several weeks ago. The real concern is the third quarter of the year—when administration economic experts expect a slight rise at best.

"Employment is almost 69 million, another record." The high employment reflects the bulge in service industries and Government jobs; industrial employment is down. Unemployment, which the President didn't mention, is over 4 million—a high 5.4 percent of the labor force.

"Personal income is over $400 billion." The June rate is a record $405.8 billion, but the month-to-month increase has been slowing steadily; it was down to only $1.1 billion in June.

"Right now, they are building houses at a rate of 1.3 million, which is, I think, with one exception, as high as we have ever been." The rate of new housing starts is nowhere near recent highs (e.g., 1.6 million a year ago). Allowing for a recent revision in the Government's method of computing housing statistics, home builders are, in fact, having their worst year, with one exception, since 1954.

"Retail sales continue to go up at a record." Total retail trade dropped during July to $18.3 billion, lowest level in 3 months. It is no higher than it was a year ago, despite rising population and rising prices.

In at least one respect, however, the President did confirm the majority opinion of his experts: Despite his overall optimism, he saw no signs of a burgeoning economy.

Problem of the Cities

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Wednesday, August 17, 1960

Mr. WILLIAMS of New Jersey. Mr. President, the platform adopted by the Democratic Party at Los Angeles asked for a comprehensive group of programs for the urban areas of the Nation. Once put into action the programs would help us deal with the backlog of work in our cities and suburbs.

An editorial in the Morning Call of Paterson, N.J., on July 27, expresses some of the grassroots feeling about the need for such Federal action. It is an example of the growing realization that national programs are needed for a national problem. I ask unanimous consent to have the editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PROBLEM OF THE CITIES

City government used to be called, at the beginning of the century, our worst failure. This has since been taken in hand, so that cities compare in this respect favorably with counties and States. Yet New York's Mayor Wagner has good reason to term urbanization "America's No. 1 domestic problem." With him we are in complete accord.

Cities are struggling with housing shortages and urban renewal programs. Paterson is anxious to get redevelopment off the ground. Cities are being choked by the private automobile, which bids fair to drive unsubsidized mass transportation out of existence. Education, public health, and the control of crime present difficulties which tax the city's entire resources.

The greatest difficulty is that cities are not permitted to find their own way out of their plight. They are straitjacketed by State governments. State constitutional amendments might relieve them, but these are hard to get, usually needing the consent of selfish groups which profit by the cities' inability to act with authority.

A possible solution is Federal aid, which the Democratic platform promises where warranted. There are good arguments for establishing a Department of Urban Affairs. Agriculture and labor have departments set up in their interests. Why not the cities, where the majority of Americans live?

Home Improvement Plan of the Federal Housing Administration

EXTENSION OF REMARKS
OF
HON. LEVERETT SALTONSTALL
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Wednesday, August 17, 1960

Mr. SALTONSTALL. Mr. President, one of the most uniquely successful programs carried on by the Federal Government is the home improvement plan of the Federal Housing Administration.

I believe my colleagues will be interested in learning that there are now 13,700 authorized lenders cooperating with this Federal program, forming the financial backbone of an $11 billion a year property improvement plan.

I take special pride in the fact that this program is headed at the present time by a native of Massachusetts, Roy F. Cooke, of Athol. Under his leadership, home improvevment loans have multiplied spectacularly, and stern measures have been taken to protect the public from a few "fly-by-night" contractors who might injure the reputation of this vast business.

So that this fine record of Government cooperation with private business in the interest of the homeowners of America can be widely available, I ask unanimous consent, Mr. President, that Mr. Cooke's address of August 11, 1960, entitled "The Most Unique Plan in the World," and delivered to the Better Business Bureau of Garden City, N.Y., be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE MOST UNIQUE PLAN IN THE WORLD

(By Roy F. Cooke, FHA Assistant Commissioner, property improvement program)

It is always a pleasure for a Washington Government official to be so pleasantly and generously received.

I find some businessmen outside of Washington are a little skeptical of Government men, but I promise you, I have no forms for you to fill out, at your own expense, nor any inquiries about how you conduct your business.

Instead, I bring you the greetings and warm wishes from Federal Housing Commissioner, Julian H. Zimmerman. The FHA property improvement program is only one of a number under his jurisdiction; the others are home mortgage insurance, homes for servicemen, cooperative housing, rental housing, housing for the elderly, military housing, trailer courts, and the urban renewal programs. The outstanding feature about all of these efforts is that none of these programs would be possible without the complete cooperation of private industry in this great free-enterprise system of ours.

On the other hand we are oldtimers in the field of urging better housing for all. The Federal Housing Administration has been tested by time and criticism and this year we are entering our 26th year of business.

My responsibility is FHA title I of the National Housing Act. I am here to tell you how FHA title I—the Government's property improvement loan insurance program—does business, and how you can profit by doing business with title I. I believe no banker objects to making money, especially

when the net proceeds of the loan is insured by the Federal Treasury.

We like to refer to the FHA property improvement program as the "3 R's." These "3 R's" for us in title I symbolizes three little, but mighty important words: "Remodel, repair, repay."

Wrapped up in these "three little words" is an $11-billion-a-year industry—property improvement. This is not a one-shot expenditure of $11 billion, but the yearly outlay by American homeowners to maintain their properties. A great portion of this money to maintain homes comes out of savings or income. On the other hand, at least 20 percent of this home-repair investment must be financed by lenders.

The FHA title I loan insurance program began in 1934. It was a depression device to stimulate our sagging economy. In those days very few lenders, especially banks and saving and loans, had any experience or interest in installment credit lending.

It developed that it was up to FHA title I to lay down the broad principles of consumer credit and guarantee loans until lenders gained experience. All this was done to induce lenders to make unsecured loans to homeowners to promote our industrial recovery.

Today I am proud to report that FHA title I is a going business. We have 13,700 approved title I lenders, including branches engaged in installment credit lending in about every county of the Nation and in every possession. We are self-supporting; paying all of our overhead—salaries, claims, rent, equipment, etc.—and have a sizable reserve for insurance. There are more than 60 new lenders entering the FHA property improvement program each month.

Title I pays its own way by charging a one-half of 1 percent insurance premium on each dollar of the net proceeds of the loan. This insurance premium has been reduced three times since 1954 when the rate was lowered from 0.75 to 0.65 percent, in August 1957 to 0.55 percent, and in April 1958 to one-half of 1 percent. But the rate to the borrower has remained the same, $5 discount. This rate gives the lender a good net profit, plus 90 percent insurance on the unpaid balance in event of claim.

During this period of premium reduction, the average loan has increased from $200 to nearly $1,000. These larger loans have resulted in bigger profits to lenders because the initial cost of putting sizable loans on the books is the same as for smaller loans.

At this time, title I has over 2½ million active loans in its insurance portfolio valued at nearly $1¾ billion. New loans are being insured at the rate of about 5,000 per banking day and the amount insured each month often reaches $100 million. These are all consumer loans.

We consider consumer credit as the most modern advancement in banking and truly one of the great creative ideas of this era because it enlarged the buying power of the average man who lacked cash. Title I is pleased to be one of the outstanding pioneers in this business and financial revolution.

Now what does this huge property improvement market mean to all lenders engaged in our title I program? Already we have insured 24 million loans valued at more than $13 billion. There are over 50 million homes in this Nation and more than 1 million new ones are being built each year. This presents an inexhaustible market for home improvements—additions, alterations, decorations, air conditioning, etc.—whether a house is 1 or 50 years old. It is well to remember, "A home is only as modern as the last improvement."

Of the 50 million houses I just referred to, it is of interest to analyze them. The most recent survey shows that 66 percent are from 20 to 30 years old and that 45 percent of them were built before 1920; 30 million have not been painted in 10 years; 16 million have no central heating; 9 million no hot water; 9½ million no bathtubs, but still, 23½ million are owner occupied. What a market. Let your own good business sense and imagination evaluate this tremendous market especially in view of the new technological developments and the young family formations seeking to establish a modern home.

Many modern families—you, and the families of your sons and daughters—have been reared in the use of consumer credit. We know it's the way to buy and obtain possessions which would otherwise be impossible if it were purely a cash transaction. However, a recent Federal Reserve survey showed that 50 percent of all families have no installment credit obligation. Also, it showed that of families with annual incomes from $3,000 to $7,500 per year only 40 percent used consumer credit which leaves a 60 percent market to be developed. The basic function of consumer credit is to aid the purchaser, and in view of these figures there is a lot of of pent-up purchasing power available in this country. However, on the other hand, sales promoted by unwise and risky credit use are dangerous to the economy of the Nation.

Often the question is asked, "What rules for granting consumer credit should a good lender use?" The criteria I use, and this is based on experience in both banking and manufacturing, are (1) consumer credit is intended to serve the buyer rather than the producer; (2) consumer credit should be granted on a sound basis to create an asset and not a liability; (3) consumer credit should be sold on a commonsense basis; (4) consumer credit should be extended in accordance with the accepted code of ethics perfected by industry and the banking profession; (5) determine the full obligation of the borrower so that his credit will not be over-extended; (6) good consumer credit builds character in the borrower—it does not destroy it; and (7) a loan well made is a loan half paid.

So that FHA title I may keep all fingers on the pulse of its program from a practical operating approach, we have created two advisory committees who meet periodically to give us advice. The members of these committees are appointed by Commissioner Zimmerman.

The Lenders Advisory Committee consists of 25 of the leading consumer credit bankers in the country. These lenders represent each geographical area of the Nation. We are in constant communication with our Lenders Advisory Committee and find its advice from the practical operating point of view most helpful and useful. We have the same regard and admiration for the local title I lenders groups which have been organized in the larger banking communities throughout the Nation.

Our other committee has a membership of men on the president or vice president level representing business, building material manufacturers, retail dealers, the National Better Business Bureau, and a credit rating organization. This group is known as the Industry Advisory Committee. It advises title I on how the program is working for the dealers and consumers.

All in all, we have a balanced program that operates for the benefit of all—the lender, the manufacturer, the dealer, the contractor, and the homeowner.

To assist lenders in collecting on delinquent accounts, we have begun the use of a communication to delinquent borrowers known as the "preclaim letter." This preclaim letter is sent at the request of the lender by the local FHA office to the homeowner advising that his account is overdue and the lender is about to file a claim with the Government for the unpaid balance. The results of this letter have been amazingly successful; 55 percent of all delinquent accounts, where this letter has been used, have been paid in full or made active again. This letter is now in nationwide use and is available to all title I lenders.

Another assistance given approved title I lenders is the policing of unethical dealers and contractors, commonly known as "suede shoe boys" or "dynamiters". After thorough investigation, we have listed over 6,500 such operators who are out to cheat and swindle homeowners by not installing material according to contract or exorbitantly overpricing the job. A disappointed homeowner is not a good payer on a loan. This type of contractor or dealer is put on our precautionary measures list which to all intent and purposes, precludes him from doing title I business because no lender will buy his paper except under certain regulatory conditions.

This precautionary measures list program is most effective because legitimate contractors can serve the homeowner without the shadow of suspicion which a few morally low ones can cast on the 165,000 contractor-dealers participating in the title I program.

To help our contractor-dealers further, we have an educational program underway. Our dealer relations unit and financial representatives, which are spotted throughout the Nation, meet with and address manufacturers' sales meetings, conventions of trade associations, State and local groups, to advise them on the operation of title I. We find that most contractors are reliable. However, to safeguard the reputation of ethical contractors against the fly-by-night, we urge homeowners to follow these suggestions: (1) check carefully the contractor's reputation. Ask your banker, chamber of commerce, or better business bureau if there is any doubt in your mind; (2) avoid all gimmicks. You want full dollar value on your improvements only. You cannot get something for nothing; (3) buy standard merchandise. Avoid the just as good brands unknown to you; (4) compare the price given, if you think it is high, with that of another known contractor; (5) read your written contract and be sure that you understand it before you sign it; (6) never sign any blank papers or notes. Obtain a copy of all papers you sign; (7) sign your completion certificate only after you are thoroughly satisfied with the completed property improvement; (8) report any complaints of poor workmanship to your lending institution immediately; (9) choose your contractor as you would your doctor; and (10) remember, no one can protect you against yourself.

About the biggest compliment paid the FHA property improvement program came by way of a visitor from Australia. After sitting in on one of our title I industry advisory committee meetings he spoke: "I have visited all countries of Europe studying housing but this is the first and only country in which I've seen bankers, industry, and Government sit down together and work for the common good of the homeowner. It is truly the most unique plan in the world," he said.

A Fable Teaches Lesson in Economics

EXTENSION OF REMARKS

OF

HON. BARRY GOLDWATER

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Wednesday, August 17, 1960

Mr. GOLDWATER. Mr. President, I ask unanimous consent to have a very interesting fable, written by Mr. Frank Macomber of the Copley News Service, entitled, "Can We Have Something for Nothing? A Fable Teaches Lesson in

Economics," printed in the Appendix of the RECORD.

There being no objection, the fable was ordered to be printed in the RECORD, as follows:

CAN WE HAVE SOMETHING FOR NOTHING? A FABLE TEACHES LESSON IN ECONOMICS

(By Frank Macomber)

Something for nothing.

We hear a lot about it. Some people, particularly politicians, like to promise it. But can we really have it?

Here's a fable that gives an interesting answer:

Once in a faraway land there was a small, tree-shaded town of 10,000 inhabitants. The people there were happy, thrifty, industrious, and enjoyed more of the good things of life than those in most parts of the world.

Three men in this town were able over the years to accumulate fortunes. One amassed a million dollars. The other two saved half a million each. These three practiced thrift and displayed ability beyond that of most. They were pointed to by others as the wealthiest citizens in the town.

But after a time there were those who said it was not fair that three people had so much of the community's wealth. When this talk reached the point of unpleasantness, the three decided they would distribute their fortunes to the townspeople. The millionaire got 10,000 $100 bills and gave one to each of the town's citizens. The two with half-million dollar fortunes gave each citizen a $50 bill. So each of the 10,000 citizens received $200 they hadn't expected.

They reacted like most people who get a windfall. Some traveled, a few spent their money in riotous living and others in less questionable ways. But after a few months few if any of the 10,000 still had their extra $200.

Now these good people had overlooked something important. It was the fact that the three men with the fortunes had not kept their money in a bank. It was tied up in factories and businesses which employed people. To raise the $2 million they distributed, the three men had to liquidate their factories, sell their machinery, etc.

So soon there were 200 people out of work in the town—people who had been employed in the factories and businesses of the three men. And soon shopkeepers had to curtail because of the unemployment and reduced buying power of the community. So another 100 were out of jobs.

But the people of the town were generous. They agreed to put all 300 unemployed on relief. This suited the 300 fine. They didn't have to work and had time to enjoy themselves.

Soon, however, the town government began to run short of money to keep these people on relief in the manner in which they had become accustomed. So the town council voted to tax everybody an extra $200 to keep the 300 on relief.

How's your arithmetic? We have 10,000 times 200, minus 300 by 200, minus 10,000 by 200, minus 2 million, minus 3 factories, minus 300 jobs. That's something for nothing.

Confessions of an American Spy

EXTENSION OF REMARKS

OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Wednesday, August 17, 1960

Mr. THURMOND. Mr. President, one of our country's outstanding writers, Mr. Tom Anderson, editor of Farm and Ranch magazine, has written an excellent column on his recent visit to Russia. Mr. Anderson very definitely gained the impression that in many areas the Soviets are still very far behind the great progress which has been made by our country under our free enterprise system. I ask unanimous consent that this informative and encouraging column be printed in the Appendix of the RECORD in order that it might receive the attention which I feel it merits.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Remember the game "I spy" (or "hide and seek")? It was the favorite game of my generation. I'm delighted to learn that it still is. Until our U–2 got caught spying on Russia, I was afraid that the coexistence-brotherhood jag our leaders have been indulging themselves in, might have led to cancelling our spying activities. Can you imagine Khrushchev running back to home base screaming, "One, two, three for the American spy in our sky?" Brings back the olden days. Also brings back into sharp focus my recent trip to Russia, where our party was spied on relentlessly.

In Russia, special floors are reserved in some hotels to house the secret police who are in charge of room service. They service each room with hidden microphones, to record conversations and telephone calls. And, their maid service includes sending photo equipment to your room (while you're out and won't be bothered) to photograph the papers in your bag and provide other small services, for which no tipping is expected.

The Russian security police have a habit, we were told, of slipping into the rooms of visiting editors—and others—to examine all film. Any pictures found to be nonflattering are exposed and carefully put back in place. The photographer for one of our leading weekly news magazines made frequent trips to the airport to lock his film in the safe on our airplane. He found evidence in Moscow that his bag in his hotel room had been opened.

I spied on Russia, too. Checked out Khrushchev's claim that Russia would catch up with the United States, economically, in 7 years. Russia won't catch Spain in 7 years.

We saw their best collective farms. They had to be. We drove 50 to 100 miles to get to each. The people on the collectives don't live as good as our plantation slaves did. And they have less freedom.

In the Russian revolution millions of peasants thought they were fighting the czars to get their own little piece of land. Ninety-five percent of Russian farms are in state or collective farms. Formed by uniting the small farms of millions of Kulaks—little family farmers who owned their land and were murdered (by Khrushchev and his crowd) in one of history's bloodiest purges after the Communists came to power.

Much of the hard labor in Russia is done by old women—or maybe they just look old. The workers in the field were almost all women. Invariably, as we drove by they would straighten up and gaze at us—as if we were from another world—which we were. They probably hadn't seen a car pass all day—just bicycles, wagons, carts, pedestrians and trucks. Trucks driven by their menfolk. Trucks which looked very much like U.S. Army surplus.

"Can we take pictures?" (This was before they knew about our U–2 pictures.)

"Certainly," responded the block of ice masquerading as a woman interpreter-guide. "All countries have their own security regulations. Here, you can take pictures of anything not connected with defense."

The next day we were driving out to see a State farm, and one of the editors asked this so-called woman several times to stop the car so he could take a picture. She always refused. (The picture would not have been flattering.) Finally, when we were passing through a village which looked like those in a TV western, the editor said, "I must stop here." She paid no attention. Some of our fellows referred to her as the "Iron Maid." Maid was not the right word.

The usual collective farm had clusters of drab, primitive-looking shacks surrounding several farm buildings, groups of poorly dressed, runny-nosed children and an oversupply of workers about as busy as a feather-bedding fireman on a diesel locomotive.

There are practically no fences in the Soviet Union. The livestock are herded mostly by women. There are almost no beef cattle in Russia. Steak, when you can get it, comes from dairy culls. Russia overtook America last year in the total production of milk, according to Russian claims.

The Russians claim to have one tractor to every 400 acres of arable land. We have one for every 90 acres. The new and proudly proclaimed sugar beet harvester we saw in operation in the Ukraine required that the women workers rehandle most beets. As an ex-beet farmer, Secretary Benson commented privately that he had better harvesters than that 25 years ago.

Moscow is full of slums, some built before the war, and some brandnew. Most families live in one room, share a community kitchen and bath. In fair weather, the streets are full of people. Because the streets are better than home.

Red Square is the largest square I've ever seen. Across from it is the city's one big department store, Gum. Hundreds of people buying everything from rugs to caviar. It was just like Macy's, 50 years ago. I went in to buy a souvenir, but there were no worthwhile dust collectors.

Our guides, or keepers, saved the Kremlin for last. It is huge, and ugly. But, the museum is one of the best in the world—chariots, jewelry, works of art—bought, received as gifts, stolen by the czars and their Communist successors. The palace of the czars is maintained in all its regal splendor. After the peasant sightseers take in this, they are then taken to Lenin's house, also within the Kremlin walls. Lenin lived amidst surroundings as plain as a sharecropper's in this country.

We went to the Bolshoi opera, one of the world's best. It was wonderful. But a block away the restrooms don't have tissue. The Russians have concentrated on excelling in a few things: Opera, ballet, airplanes, and materials of war.

In Kiev, we went to the ballet. Exquisitely done, I would have enjoyed it more though, if I hadn't been bathless for 2 days and unshaven. My room in the best hotel in Kiev had a hot water faucet, but no hot water.

Nearly everything you see in Russia makes you think, "The worst we've got beats this." The unemployed in America live much better than the average man in Russia. My earliest recollections date back to 1915. That is modern, compared to Russia today. You wonder where the skill and industrial power to build sputniks come from. You conclude it must be from imported scientists, stolen secrets, and in factories in some far-off place, like beyond the Ural Mountains.

The main incentive of the people is what you would expect anywhere there is no profit incentive: To work as little as the government bosses will tolerate. Many of the workers seemed employed in an all-day goof-off. An all-day coffee break, without coffee. We watched for an hour, on one state farm, nine workers exercising a horse. He was a cavalry horse tied on a 20-foot rope to a stake, and the group stood in the circle and kept him running by whirling their hats, hollering, and jumping. But I guess they had to have something to do since they're not allowed to leave the job.

The Russians have a very clever way of reducing man-hours—they use women.

In Russia everything is sold in government stores—stores whose show windows are apt to display a single dusty suit, a row of dirty canned vegetables, or other merchandise you'd expect to find in the country store where you traded in 1913.

They ask you such questions as: Why is there no free schooling, no free apartments in America? Why do 6 million Americans starve every year? Is it true that you can go from State to State in America without a passport? Or even move from one city to another without permission from the Government? There are few open towns in Russia where people are free to enter and leave the town. Most are closed to tourists. Russian sputniks might go to the moon, but Russian citizens can't go from one city to another.

Russia has now had a taste of those American tourist dollars and wants more. So, you can now get a conducted tour of Russia, by "Intourist." You'll get to see about as much of Russia as you'd get to see of America by signing up for visitors' privileges at San Quentin. The Russians are now ready to receive you. NIXON has tested the atmosphere with cosniffer Milton Eisenhower. Adlai's had it. And Ike will get reinvited if he apologizes for the U–2 flights.

If you're planning a vacation trip to Kremlin land, as thousands of Americans are, be sure to do these things first: (1) See a psychiatrist; (2) consider Alcatraz instead. It's prettier, the food and accommodations are better, and it's safer.

Social Security To Observe Its 25th Anniversary

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Wednesday, August 17, 1960

Mr. WILLIAMS of New Jersey. Mr. President, the silver anniversary of social security will be celebrated on August 15. Many Americans will remember on that day, I am sure, the long struggle and debate which preceded enactment of this legislation. Many more Americans, however, now accept social security as a necessary part of life today.

Those of us who believe that the social security system may well serve as the vehicle for a program of medical care for the aging and aged are, I am sure, particularly interested in many of the very kind things which will be said about social security in the next few days.

One such birthday wish has already been given by the Morning Call, Paterson, N.J., in its issue of August 3. I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SOCIAL SECURITY TO OBSERVE ITS 25TH ANNIVERSARY

The silver anniversary of social security will be celebrated on the 14th of this month. Social legislation became law on that day in 1935 when the late F.D.R. placed his signature on the bill Congress enacted to provide financial assistance to peoples and families whose breadwinner no longer can be gainfully employed.

Social security is a three-pronged program, (1) public assistance, (2) old-age, survivors, and disability insurance, and (3) employment security.

All three phases of this legislation—since 1940 when first payments were made—have materially benefited society and have been largely instrumental in keeping families together. Benefits are forthcoming at death, retirement, or disability.

Employment security serves in two ways. It helps workers find jobs and pays weekly unemployment benefits to those eligible for payments who are out of work.

Public assistance pays money to individuals and families in need because of certain conditions, and who qualify under State and Federal law. Aid is given to needy people 65 or more years old; to people who are too blind or too disabled to work; and to families whose providers are dead, disabled, or out of the home for a prolonged time.

Old-age, survivors, and disability insurance provide payments to families when the head of the household has worked and paid into the social security fund long enough to be insured and then retires, or becomes severely disabled, or dies.

The American people should be grateful for the social security system that relieves despair and brightens the remaining years of those who reach the autumn of their lives in the knowledge that theirs is a government with a social conscience which won't permit humans to near the end of the road without security from want.

We join with the community in hailing the widespread benefits of social security.

Birthday Greetings to a Chilean

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, August 17, 1960

Mr. HUMPHREY. Mr. President, I ask unanimous consent that a letter to the editor, published in the August 1, 1960, edition of the Washington Daily News, written by the distinguished Latin American journalist Persio Franco, be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

BIRTHDAY GREETINGS TO A GRAND OLD CHILEAN

Don Emilio Bello Codesido, of Chile, was 92 years old yesterday.

The First International Conference of American States was held in Washington from October 2, 1889 to April 19, 1890. All the delegates who attended it are now dead.

However, the second conference was held in Mexico City from October 22, 1901 to January 31, 1902. Don Emilio is the one survivor of this historic occasion. That is why he is considered and called the "Dean of Pan-Americanists" and "Patriarch of the Americas."

More recently, when the American Foreign Ministers held a meeting in Santiago, Chile, August 12–18, 1959, they unanimously asked Don Emilio to preside over the opening of the first session and he did so admirably.

Don Emilio has been President of Chile, and is a grandson of the very outstanding Venezuelan intellectual, Don Andres Bello.

I'm sure that all friends of pan America and all friends of Chile would salute him personally, if they could, on his birthday. Viva Don Emilio. Viva Chile.

World Soil Scientists Meet in Madison, Wis.

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, August 17, 1960

Mr. WILEY. Mr. President, during this week, the International Soil Science Congress is meeting at the University of Wisconsin.

For the conference, about 1,100 soil scientists from 40 to 50 nations will present, and listen to, about 400 papers on the subject of soil.

The Congress marks the first return to the United States since its first meeting in 1927 in Washington, D.C.

The selection of the University of Wisconsin as the site for the 1960 conference, I believe, was most apropos. Over the years, the university—one of the great educational institutions in the country—has been a leader in the field of research, experiment, and development for improvement of soil and other aspects of agriculture.

Recently, the Milwaukee Journal published an informative article on the Congress. I ask unanimous consent to have this article and an editorial from the Wisconsin State Journal welcoming the soil scientists printed in the Appendix of the RECORD.

There being no objection, the article and editorial were ordered to be printed in the RECORD, as follows:

[From the Milwaukee Journal, Aug. 11, 1960]

WORLD SOIL SCIENTISTS COMING TO STATE

MADISON, WIS.—Dirt will be discussed here next week on a scale to put back-fence gossipers and sewing circles to shame.

More than 1,100 soil scientists from all over the world will assemble at the University of Wisconsin for 8 days and collectively, hear more than 400 papers.

It will be the seventh congress of the International Society of Soil Science. The society, which began a half century ago in central and western Europe, has had many more meetings than that, but not until it was reorganized after World War I did world congresses begin.

The first was held in Washington, D.C., in 1927 and this is the first return to the United States since then. Meanwhile, the congress has met in the Soviet Union, Great Britain, the Netherlands, Belgian Congo, and France.

UNITED STATES PLAYS BIG PART

The Soil Conservation Service (SCS) of the U.S. Agriculture Department has played an important role in developing the congress to worldwide status.

About 400 of the visitors will be leading soil scientists from 40 or 50 foreign nations. Some of them, from underdeveloped countries, are coming on grants which the congress' organizing committee obtained from

agencies of the United States and the United Nations, and from private foundations.

Buses carrying nearly 200 foreign scientists left New York August 5 to see farming operations and agricultural experiment stations along the route to Madison, where the party will arrive Saturday.

Similar bus tours to both coasts will follow the Congress. A 15-day trip will take 125 foreigners through Iowa, Nebraska, and the Southwest and end up at Berkeley, Calif. An 11-day trip will take 150 visitors through the South will end up at Washington.

TOURS ARE A FEATURE

"Field study tours always have been an outstanding feature of these international meetings," said Emil Truog, emeritus soil professor at the university, who is congress manager. "Many of the visitors will take tours Thursday to see the university farm, the Hancock Experiment Station, and other places of interest."

MEETINGS AT UW

Originally, the 9-day program had 2 open days, Thursday for Wisconsin tours, and Sunday for rest and worship. But the Food and Agricultural Organization (FAO) of the United Nations requested a full day symposium on tropical soils and this has been scheduled Thursday. It will be led by Charles E. C. Kellogg, Washington, Assistant Administrator of SCS and vice president of the society.

Elaborate tour guides have been prepared by State colleges and universities along the routes and also by the SCS. The visitors will see all phases of soil research. Pits have been dug for observation of soil profiles (layers) at various places.

Many of the visitors will be housed and fed at the university. Meetings will be held in halls of the Memorial Union and the Wisconsin Center.

The 150- by 100-foot floor of the old red gymnasium is full of exhibits prepared by the agriculture department, the land grant colleges, and foreign nations. Nationalist China, for instance, sent paintings of plant inoculation. SCS has prepared a big layout showing the whole plan for carrying out soil surveys and their use in farm and watershed planning.

Governor Nelson and Conrad A. Elvehjem, university president, will welcome the Congress at an opening general session Monday morning. The same program includes a discussion of the world "freedom from hunger" campaign by FAO's director general, B. R. Sen.

ROLE TO BE DISCUSSED

There also will be a talk on the role of soil scientists in this campaign by Richard Bradfield of Cornell university, the society president. A paper on the productivity of the U.S. arable soils will be presented by Kellogg.

After that, the proceedings will become technical. Another general session will be held Monday afternoon and thereafter one is scheduled every day except Thursday and Sunday. The many commissions of the society, which carry on study programs between Congresses, will have nearly 50 single and joint meetings.

The congress has three official languages, English, French, and German. Speakers may take their choice, but UW men in charge of papers and summaries say that, with few exceptions, the papers will be given in English.

[From the Wisconsin State Journal]

WELCOME TO SOIL SCIENTISTS

Madison is honored today to welcome 1,500 of some of the world's most distinguished scientists who might well hold the future of the world in their hands.

Meeting at the University of Wisconsin will be the Seventh International Soil Science Congress, one of the oldest of the international scientific societies. It has met previously only in Washington, D.C., England, Holland, the Congo, and France.

Perhaps little of the 400 highly technical papers to be presented here will be understood by the general public. Yet all peoples of our world recognize that what these specialists are about is basic to human existence and of first importance to the peace of civilization.

Many coming from overseas want to see how America produces a surplus of agricultural products while other countries are always hungry. Americans, undoubtedly, will learn from them some things to help with our problems.

But beyond the meeting of scientific minds, this is an admirable opportunity for important people of all lands to meet those of others, an opportunity for which the program-makers here have planned well.

Our visitors could have picked no better place than Wisconsin for this people-to-people meetup. Wisconsin is the land of the open mind, the open threshold. These, too, we must believe, are the avenues to human understanding out of which peace may grow.

Timely Article on the Organization of American States

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Wednesday, August 17, 1960

Mr. KEATING. Mr. President, in the light of the opening this week of the critical and historic meeting of the Organization of American States, in San Jose, Costa Rica, I should like to cite a most timely and informative background article on this fine organization in which the United States is proud and honored to hold membership. The article in question, entitled "The Organization of American States," appeared in the August 2 issue of Newsday, and was written by Leonard Baker, chief of the Newsday Washington bureau. Mr. Baker deserves praise for the succinct but highly informative review he has presented of the life history of OAS, and of the nature and purposes of this vital hemispheric grouping of States. Mr. President, because of the relevance of this excellent article I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

UNIFYING FORCE OF THE WESTERN HEMISPHERE: THE ORGANIZATION OF AMERICAN STATES—ACTING AS A UNITED NATIONS-LIKE POWER IN THE TWO AMERICAS, THE OAS PROVIDES A CENTRALIZED FORUM IN WHICH THE NATIONS OF THE WESTERN HEMISPHERE CAN CARRY OUT PROGRAMS OF MUTUAL ASSISTANCE

(By Leonard Baker)

WASHINGTON.—Convinced that "their welfare • • • will increasingly require intensive continental cooperation," the United States and 20 Latin American nations in 1948 established the Organization of American States (OAS) as the vehicle to provide that cooperation.

Tuesday a special meeting of the foreign ministers of those 21 nations will tackle two serious threats to that spirit of cooperation enunciated 12 years ago. Venezuela has accused the Dominican Republic of "acts of intervention and aggression" culminating in an assassination attempt against Venezuelan President Romulo Betancourt last June. This is more than an isolated squabble between two countries. Venezuela, under Betancourt's leadership, represents the movement within Latin America toward democratic government. The Dominican Republic, under the dictatorship of Rafael Trujillo, represents the old order of Latin American governments, anxious to stifle freedom within its own borders and among its neighbors.

Under a request from Peru, the ministers will then consider the subversive activities within Latin America by Russia. These activities, it is feared, have been spurred by the growing rapport between Cuba and the Kremlin. The United States is hoping for a strong declaration aimed at blocking any extension of communism into the Western Hemisphere.

Coping with these threats will not be simple. Within Latin America are deep-seated animosities among nations, strong vocal support for the Cuban revolution and the lingering fear that Uncle Sam is not a benevolent friend but—as he has sometimes been in the past—a scheming mercenary.

Giving promise of success, however, is the recognition by all members of the OAS that their fates are intertwined. The United States first accepted this principle in 1823 with the adoption of the Monroe Doctrine. Three years later, Simon Bolivar, the George Washington of Latin America, tried to promote a collective security agreement among the Latin American countries. He failed but the acceptance of his ideas grew as the nations became more aware of the problems they faced.

FIRST CONFERENCE IN 1889

In 1889 this sentiment produced the first international conference of American states. Meeting in Washington, this country and neighbors south of the border voiced the principle of continental solidarity. In the years since, this principle has been buttressed by concrete actions. Together the American nations worked to promote trade, wipe out disease and increase educational opportunities. They agreed to settle disputes peacefully and stay out of the affairs of their neighbors. When World War II came, they decided that an attack against one would be an attack against all.

In the late 1940's, the nations agreed to consolidate the work of the past 50 years. And in 1948, at Bogotá, Colombia, the Organization of American States was born, dedicated to preserving the freedom of the Western Hemisphere, the freedom of each member country and the freedom of man.

The OAS has set up technical aid programs, peacefully settled border disputes, established a student fellowship program, attacked disease and last year brought forth the Inter-American Development Bank to provide capital for investment-hungry Latin America.

The supreme organ of the OAS is the Inter-American conference, which meets every 5 years to chart in broad lines the course the OAS will follow for the next period. The day-to-day operation is in the hands of the council, which meets twice a month and has one delegate from each country.

A consultation of foreign ministers can be called to meet extreme and urgent threats to peace. The first such meeting under the aegis of the OAS was in 1951 following the outbreak of the Korean war. The ministers did not meet again until 1959 when Cuba,

the Dominican Republic and Haiti accused each other of assisting invasion forces. The ministers called upon all member nations to observe strictly the rules of nonintervention and spoke out against "antidemocratic" regimes.

This action indicated that the ministers are more prone to rely on persuasion than direct action. Their powers range from recommending the withdrawal of ambassadors to the use of armed force. The expectation is that the meetings beginning Tuesday will also attempt persuasion rather than direct action out of fear of disrupting the spirit of "American solidarity and good neighborliness" which is the basis of the OAS.

Plate Glass Industry Protests Further Tariff Reductions

EXTENSION OF REMARKS
OF
HON. HUGH SCOTT
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Wednesday, August 17, 1960

Mr. SCOTT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the principal points of a statement by Robinson F. Barker, vice president, glass division, Pittsburgh Plate Glass Co., before the U.S. Tariff Commission on August 17, 1960.

Mr. Barker has made a distinguished presentation of a problem that is acute not only in the glass industry of Pennsylvania, but is a matter of diminishing returns if not complete oblivion to many segments of our economy. As the time for negotiations on further GATT agreements approaches, I have been very glad to note that industry has taken up the cudgel in earnest, as represented by the fine statements before the Tariff Commission and the Committee on Reciprocity Information. Mr. Barker's is certainly one of the most effective pleas in defense of American industry and American labor. It warrants closer reading which I hope its inclusion in the RECORD will afford.

There being no objection, the excerpts from the statement were ordered to be printed in the RECORD, as follows:

EXCERPTS FROM STATEMENT OF ROBINSON F. BARKER, VICE PRESIDENT, GLASS DIVISION, PITTSBURGH PLATE GLASS CO., BEFORE THE U.S. TARIFF COMMISSION, AUGUST 17, 1960

My name is Robinson F. Barker. I am vice president and general manager of the glass division of Pittsburgh Plate Glass Co., and have been in the glass business for 25 years.

First, I wish to thank you for the opportunity to appear here.

My company—PPG—has previously filed with you three confidential memoranda in opposition to further reductions in existing tariff rates—one relates to sheet glass, one to plate glass, and the third to optical glass. * * *

I appear to present facts which will demonstrate the complete lack of justification for any further reduction in existing tariff duties and the absolute need for the granting of relief at the earliest practicable date by invoking the escape clause provisions of the Trade Agreements Act.

The problem can be stated simply—the U.S. sheet glass industry is losing the domestic market. We respectfully submit that this should concern not only the U.S. Tariff Commission and the Committee for Reciprocity Information but also the American public at large.

Of course, we are mindful of the desirability of reciprocal trade relations among the nations of the world, and it is not our purpose to quarrel with the wisdom of the concept underlying our country's overall international trade policy.

But, we are also mindful of the fact that loss of the U.S. sheet glass market to foreign producers necessarily jeopardizes thousands of jobs as well as sizable investments which people in this country have made over a long period of years. * * *

It is not pleasant to report to you that commencing with August 1959 each succeeding month with but one exception—December 1959—has witnessed a decline in the number of our factory workers employed. It has now reached the point where nearly 25 percent of our normal complement of 2,900 sheet glass factory workers are unemployed. My company is not unique in this respect, and we believe that our experience is typical of all domestic sheet glass producers.

The principal markets for sheet glass include the building construction, automotive (including laminating and tempering), sash and door, mirror and specialty manufacturing, and glass jobbing industries. According to the U.S. Department of Commerce, the total volume of sheet glass shipped in 1959 by the domestic producers was $134,502,000 (U.S. Department of Commerce Facts for Industry Series BDSAF-375-09, Feb. 18, 1960).

* * * * *

Having asserted that the U.S. sheet glass industry is losing the domestic market, I should state the bases for this assertion. If my assertion is correct, as I firmly believe it to be, then this forum presumably will wish to know how this came about, what role the tariff has played, what domestic damage has resulted, and, finally, what can or should be done about it.

Let's begin with some basic facts.

Import impact: In 1950 foreign imports of sheet glass into the United States totaled a modest 31.7 million pounds. In 1959 these imports had risen to the staggering figure of 502.6 million pounds. This represents an increase over 1950 of 1,485 percent. * * *

The rate of penetration of this market by imports has been fantastic. In 1950 foreign sheet glass imports were equivalent to 2½ percent of the total estimated domestic production. In 1959 imports increased to over 31 percent.

I cannot refrain from observing that in the 10-year period in which this foreign penetration occurred there were a series of reductions in the U.S. rates of duty applicable to imported sheet glass—the 1951 Torquay reduction and the subsequent Geneva reductions in 1956, 1957, and 1958—all on top of prior severe cuts together aggregating 62 to 67 percent.

These figures demonstrate that the amount of imports as well as the ratio of total U.S. production supplied by imports increased each year over the previous year shown, with but one exception, 1957. Although we do not pretend to have the complete explanation for the 1957 decline in imports, we do know that the domestic demand was off sharply in that year. This is in contrast with a preceding 2-year period of unprecedented demand which undoubtedly led to some scare buying in 1956. With U.S. demand down in 1957 it is logical to assume that the foreigners concentrated more on other markets in that year in preference to the United States.

Decline in exports: During the 1950–59 period U.S. sheet glass exports have declined substantially. U.S. exports in 1950 were 13.4 million pounds, or 231,837 SSE 50-foot boxes. By 1955 U.S. exports had declined to 7.2 million pounds, or 124,026 SSE 50-foot boxes, and in 1959 to only 4.3 million pounds, or 74,046 SSE 50-foot boxes. Thus, the 1959 exports amounted to only three-tenths of 1 percent of total U.S. production. Contrasted with imports amounting to over 31 percent of domestic production, the picture is certainly a dismal one for this American industry.

One further word about exports from the United States—in recent years we have seen our export markets slowly dwindle away for the reason that more and more countries are establishing their own sheet glass plants. These plants not only serve their own respective domestic needs but also create additional sources of imports to the United States. As a result, during the 1956–59 period, over 30 countries shipped sheet glass into this country.

The foregoing might well be captioned "The Problem Confronting the U.S. Sheet Glass Industry."

I will summarize the reasons which have occasioned the loss of a substantial part of our market to the foreigners and then take up each in some detail. The reasons are as follows:

1. There is equality of technology, labor skills, and productivity among foreign and domestic producers.

2. Ocean freight rates constitute no barrier to importation into the United States.

3. Most important is the fact that the foreigners have an overwhelming cost advantage over the domestic producers. This permits the foreigners to cut well below domestic prices.

4. Finally, successive reductions have increased the ineffectiveness of our tariffs in equalizing or offsetting in any way the foreigners' cost advantage.

Equality of technology: Considering, first, equality of technology, labor skills and productivity, I am mindful that there is a line of thought in this country that American industry can always meet—and beat—foreign competition simply by the adoption of production-line techniques and mass mechanization. Possibly that line of thought might have application to some domestic industries, I don't know. But I do know that it does not apply to sheet glass.

It must be remembered that the flat glass industry had its origin in Europe and over the years a large number of European companies entered the flat glass manufacturing business. Today, many of those old established companies are of great size (even by American standards) and they operate internationally.

Those European companies have large research and engineering organizations and their plants are highly mechanized. Many of the European sheet glass facilities have undergone extensive enlargement and modernization since the end of World War II. Unquestionably the Europeans possess sheet glass technologies equal to those used in this country. Moreover, the quality of their product is comparable to that produced in the United States.

These same observations, only to a slightly lesser degree, are applicable to the Japanese sheet glass industry. And in this connection I respectfully urge that you mark well the fact that in 1959 Japan, which has been steadily increasing its position as a world sheet glass supplier, moved up to second place in the foreign invasion of the U.S. sheet glass market.

In summing up this point, it is indeed fair to state that by reducing our sheet glass tariffs this country has not been giving needed sustenance to small, weak foreign glass manufacturers; rather it has given vast, powerful, international companies more "fat."

Ocean freight rates: The second reason why we are losing the U.S. market to foreign competitors is that ocean freight rates constitute absolutely no barrier to importation. A few illustrations will make my point.

Using Boston as our first example, you will be interested in learning that the freight rate from Antwerp to Boston is 84 cents per hundredweight. This is to be compared with the rate of 86 cents per hundredweight which is applicable to shipments from our nearest plant at Clarksburg, W. Va., to Boston.

Another illustration, the rate from Liverpool to Miami is 73 cents per hundredweight. This compares with the rate of $1 from Clarksburg to Miami, Clarksburg again being our nearest plant.

Turning to the west coast for our final illustration, we find that the rate from Yokohama to San Francisco is $1.24 per hundredweight. This is 38 cents lower than the $1.62 per hundredweight rate from our nearest plant, Henryetta, Okla., to San Francisco.

Foreign cost advantage: By far the most important reason underlying the success of the foreigners in invading the U.S. market is the overwhelming cost advantage they possess over the domestic producers.

This cost advantage applies not only to the cost of labor, by far the most important component of total cost, but also to the cost of raw materials.

Let's examine now what this cost advantage amounts to.

Labor costs: Turning first to comparative labor costs, you will observe that in 1959 the average hourly wages in Japan, excluding fringe benefits, were 33 cents and that such wages (including fringe benefits) were 69 cents and 75 cents, respectively, in West Germany and Belgium.

Our average hourly wages in that year were $3.72. Thus, our wage rates were four times those of Belgium, five times those of West Germany, and eight times those of Japan.

While no data were available respecting Japanese fringe benefits, it is unlikely that such benefits would increase the Japanese 33-cent figure above a maximum of 40 cents.

With respect to our PPG figure of $3.72, I should mention that labor contracts we have negotiated in recent months have provided for increases which will raise the $3.72 figure as follows:

February 1960	$3.82
September 1960	3.87
February 1961	3.92

The significance of this almost insuperable labor cost advantage held by the foreigners is best appreciated when it is realized that our labor content represents more than 50 percent of our total costs in making sheet glass.

Raw materials cost: Is the foreigners' labor cost advantage offset by higher cost of raw materials? The answer is "No." In fact they have an advantage here too.

We had listed a cost comparison between Belgium and the United States of four principal materials needed in the manufacture of sheet glass. Since the memorandum was filed we have obtained comparable costs of a fifth principal material—dolomite—and, accordingly, this additional information is also reflected in this chart which now accounts for 96 percent of the batch composition.

Raw materials cost comparison shows that PPG's costs are approximately 14 percent higher than those of the Belgians. So, here again we are at a marked disadvantage in competing against them. * * *

Domestic price disadvantage: With their tremendous cost advantage obviously the foreigners can and do undersell us consistently in this market. Furthermore, as I will demonstrate, regardless of the level of domestic prices at any given time, the foreigners are able to sell at prices ranging from 8 percent to nearly 25 percent below us. * * *

During the period prior to April 25, 1960, the western European producers laid-down prices ranged from 7.8 percent (Chicago and Miami) to 12.3 percent (New Orleans) below PPG. And, during that period, the prices of Japanese sheet glass laid down on the west coast were approximately 16.5 percent below our prices.

Effective April 25, 1960, we cut our delivered prices to meet this competition and for a brief period we were quoting at approximate parity with the European producers. This, however, was short lived and in a matter of days the foreign producers announced reductions which effectively restored and in some cases even exceeded their previous differentials under our prices. * * *

The post-April 25 differentials of the western European producers below PPG on B quality glass ranged from a low of 9.9 percent (Chicago) to a high of 11.1 percent in Seattle (port city) and 11.9 percent in Pittsburgh.

Japanese prices for single and double strength glass on the west coast after April 25, 1960, have ranged from 16 to 19 percent below our delivered prices and in Miami their prices are now approximately 23 percent below ours. This evidences their ability to quote even lower prices whenever they wish to invade a particular market.

It is apparent, therefore, that our April 25, 1960, price reductions did not effect any significant shrinkage in the differentials in favor of the foreign producers. In fact, in important instances, those differentials were further widened.

Since the date of the filing with you of our memorandum, there has been a price development which I should bring to your attention.

On or about July 14 at least one U.S. importer sent telegraams to its U.S. glass jobber customers indicating that its Western European factory sources were about to increase their sheet glass prices approximately 6 percent. Shortly after that date a number of the European sheet glass producers published such increased prices. I do not know at this time whether those new prices have actually been put into effect. Nor do I know what has motivated this action. I cannot help but observe, however, that this foreign price activity occurred on the eve of the issuance of the witness schedule which lists those who are appearing before you in connection with this extremely vital tariff mater. Whether this is a mere coincidence I do not know.

In addition we realize, of course, that there is nothing whatever to stop the foreign producers from reestablishing the same deep price cuts as soon as these hearings are concluded.

In any event, we learned just last week that one of the domestic producers has also recently announced slightly higher sheet glass prices. A comparison of the new prices announced by the European producers with those of that domestic producer indicates that were such prices to stick there would be a moderate narrowing in the differentials which previously obtained. The amount of this narrowing seems to approximate 3.7 percent.

My company has not changed its prices and is studying most carefully these recent developments.

Obviously, these price gyrations have not materially altered the basic disadvantages which confront us. Foreign sheet glass continues to be sold at considerable price differentials below domestic prices. And, foreign producers continue to possess substantial advantages in every significant element of cost.

Invasion of automotive market: Proponents of tariff reductions in sheet glass from time to time contend that the domestic producers have a significant advantage in making sales to the large volume domestic automobile manufacturers. This is not the fact.

Chrysler Corp., which fabricates half of its glass parts, is presently purchasing 70 to 80 percent of its raw sheet glass requirements from foreign producers. Similarly, the Ford Motor Co., both a producer and fabricator of glass, has contracted to buy sheet glass heavily from abroad. Such glass is used by Chrysler and Ford for fabricating side lights and rear windows. Also independent fabricators of auto glass parts are purchasing a large volume of their sheet glass requirements from foreign producers.

The all-important product for automotive glazing when tempered is seven-thirty-seconds inch A quality heavy sheet glass. Prior to April 25, 1960, the published prices of the Western European producers for this product laid down in Detroit were 12 percent lower than ours. This was 4½ to 5 percent greater than the differential those producers were quoting in Detroit on B quality SS and DS window glass, which products are not generally used in automotive glazing.

After April 25, 1960, the differential in most bracket sizes of seven thirty-seconds inch A quality heavy sheet glass was increased from 12 to 14 percent, and in the case of the bracket size needed for automotive side vents to 17.5 percent. These differentials are to be compared with a differential of 8 percent which the European producers applied after April 25 in sales of SS and DS B quality window glass in Detroit.

Manifestly these prices, on their face, show that the Western European producers are engaging in an all-out effort to capture the large volume domestic automotive market.

I am informed that PPG's sales and profits in recent years were the subject of comment in a brief filed by one of the importers that is urging for another tariff reduction. For that reason, I feel that I should speak to this subject.

In 1959 PPG had net sales of nearly $607 million and net earnings of $44.1 million. Comparable figures in 1958 were $513.7 million and $32 million. We have recently reported sales of nearly $324 million and net earnings of about $25.7 million for the first 6 months of 1960. Viewed abstractly these are large amounts of money but let us examine for the moment their sources.

For competitive reasons PPG, like most diversified companies, does not disclose its sales and profits for separate products. For the most part PPG derives its sales and earnings from the operations of its five major divisions; namely, glass, paint and brush, fiber glass, merchandising, and chemicals and cement (through a wholly controlled subsidiary).

Each of these divisions in turn deals in multiple products. For example, sheet glass is only one of the many products handled by our glass division. Other such products would include plate glass, laminated glass, tempered glass, multiple-glazed units, structural glass, storefront metal, and special glass products for national defense purposes.

Presumably references to PPG's consolidated sales and earnings are made to suggest that each of its many product lines is relatively profitable. This, of course, is not the case. And, with respect to sheet glass it should be obvious that no industry with a heavy investment can make a satisfactory profit contribution when operating at 55 percent of capacity in a market fraught with intense price competition of the type I have described.

By way of summary, the tariff on sheet glass declined from 60 percent in 1939 to 14.8 percent in 1959. The absence of effective tariff rates, coupled with excessively low wage rates, has enabled European producers to sell in the United States at prices 8 percent to 17½ percent below domestic producers and has permitted Japanese producers to sell as much as 25 percent below. As a result, imports of foreign sheet glass increased from 2 percent to 31 percent of domestic production in the short span of 10

years—from 1950 through 1959. In the absence of vitally needed tariff relief there is every reason to believe that this steady loss of markets will continue unabated. It should be kept in mind that many cost disadvantages of the domestic producer are the direct result of rules and regulations which have been established by our Government to attain the high standard of living which prevails in this country. I have in mind here our laws relating to minimum wages, collective bargaining, social security and taxes—to name a few. After helping American workers to secure a fair wage, it cannot be the policy of the Government to promote buying abroad to avoid the resulting higher wage costs of domestic producers. These cost disadvantages materially affect our ability to compete.

At present, we are producing at only 55 percent of our capacity with nearly 25 percent of our normal number of sheet glass factory workers out of work. Operating at such a low rate sharply increases our per unit cost of production, which in turn places us at an even greater competitive disadvantage. In addition, our inventories of sheet glass have been steadily increasing even at our current low rate of operations. Today our inventories are at an all time high and nearly double what they were a year ago. We believe that our experience in this regard is typical of all domestic producers.

In conclusion, I invite your careful attention to one of the most alarming situations which faces us—namely, the steady loss of our position in the American market and the substantial denial of participation by us in the increased demands of the U.S. market for sheet glass. It is my understanding that there is agreement in many quarters that the decade in the sixties will open a golden period of dynamic growth in American industry. Based upon our research and development, and market studies we have every reason to believe the market for sheet glass will be an expanding one. However, under the conditions which presently exist, and which I have endeavored to outline to you, we have no present hope or expectation of sharing in that growth.

We do not believe that it is the purpose or policy of our Government under the Trade Agreements Act or any other provision of law to deny to any American industry—and in this instance particularly to the sheet glass industry—the opportunity to participate in the indicated steady economic growth of our country. That participation, we fear, may be difficult if not impossible unless prompt action is taken to place us on some basis of equality with the foreign sheet glass producers in the U.S. market. We do not ask for, nor expect, an embargo—we ask only for a fair opportunity to compete.

For all these reasons we respectfully submit that this Commission should report to the President of the United States that the peril point for sheet glass has been reached and exceeded, and that pursuant to the provisions of the Trade Agreements Act this Commission institute on its own motion an escape clause investigation in order that action may be taken at the earliest practicable date to extend essential relief to this industry.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided,* That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p.m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p.m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided,* That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided,* That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further,* That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided,* That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

Realistic Attitudes Urged on Import-Export Problems

EXTENSION OF REMARKS
OF
HON. CLIFFORD P. CASE
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Thursday, August 18, 1960

Mr. CASE of New Jersey. Mr. President, the increasing ability of industries in other countries to undersell American products in both foreign and domestic markets poses one of the major economic issues of this period. Whenever constructive approaches to American policy are suggested, consistent with our national interest in an expanding trade among nations of the free world, I believe they deserve the most careful attention we can give them.

I ask unanimous consent to have printed in the Appendix of the RECORD an article by Mr. John T. Connor, chairman of the board of the Manufacturing Chemists' Association, and president of Merck & Co. of Rahway, which appeared in the Journal of Commerce on June 9, 1960.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

REALISTIC ATTITUDES URGED ON IMPORT, EXPORT PROBLEMS—MCA BOARD CHAIRMAN SEES NEED FOR WORKING WITH OTHERS IN DEVELOPING BETTER ARRANGEMENTS ON WORLD TRADE, ALSO URGES CLOSER UNITY IN UNITED STATES

(By John T. Connor)

The events of the last 2 years prove we can no longer afford to believe that American goods have some divine right to world markets.

If you consider that the difference between what we exported during 1958 and 1959 and what we imported during those years amounts to a $7 billion deficit, the hard truth of the matter is symbolized in a dramatic way.

Certain realities have to be faced: The European Common Market, for example, and the European Free Trade Association.

The European Common Market was organized to eliminate gradually the tariffs among its six-member nations and to increase productive efficiency by such means as pooling manpower, transport, and sources of energy. Earlier this month I saw at firsthand how well the ECM is achieving its goals. It was a very impressive view.

COST FACTOR NOTED

The future may well hold serious problems for American firms trying to export to the Common Market countries. European costs of production, research, marketing, and distribution are so much lower than in this country that competition in European markets by American-made products against similar products made in Europe will be severe.

Even though the U.S. export picture is somewhat brighter for the first few months of 1960, the long-term basic problems still remain, in my opinion, and the U.S. domestic trade situation may also deteriorate because of our competitive disadvantages.

I speak from experience when I say that domestic producers in the United States and Canada in the chemical industry are steadily losing business to imported materials. Japanese vitamins, to take just one example, are sold in this country at prices that have now approached the absolute minimums which domestic producers need to break even. Yet we are restricted by the Japanese against selling U.S.-made vitamins in Japan. The same experience is being shared by other industries, as you know. What are we going to do about it?

I'd like to suggest one or two answers. Each of the suggestions has a common base, that of the need for understanding.

First, all of us must come to a complete understanding and realization that the world is closing in on us. And then we must make others understand that, too.

For a start, take European business leaders. Ever since the war they have been preoccupied with building up their own industries. And the United States has helped them with trade and aid so that today Western Europe is economically powerful, a most desirable condition.

REAPPRAISAL URGED

But now the time has come for a new look at the situation by Europeans. They must be made to realize that we in the United States, and in Canada, are indeed partners in the world trade family. They must realize that we have an economic entity to think about, too, and that American jobs are important to the American people.

Our friends in Western Europe today see only one goal before them: Unification of the European economy by, as they put it, bridging the gap between the ECM and the EFTA, and they are quite anxious to have all possible American help in reaching that worthy objective. They are determined to avoid a costly and destructive trade war between two blocs that should be friendly. We should lend our "good offices" to that end.

But because of their preoccupation with their own affairs, our European friends seem completeley indifferent to the trading problems we in this country face. They are inclined to dismiss the $7 billion unfavorable balance of trade in the last 2 years as temporary and to adopt an attitude of "you can afford it."

FORUM SUGGESTED

What we need now is a forum at which American and Canadian viewpoints can be brought forcibly to the attention of our European colleagues. We need some central body which will give consideration to the problems of world trade which we in this country face. The future economic programs of our allies in Europe should not ignore the obstacles confronting North America but should give them room in their plans, just as we in this country have planned our economic programs with Europe's interests very much in mind, ever since the end of World War II.

Such a forum may be created if a proposed new organization comes into being. It has been recommended that the Organization for European Economic Cooperation, the OEEC, be remodeled into the Organization for Economic Cooperation and Development, or the OECD. Eighteen countries of Europe are members of the OEEC and the United States and Canada are associate members.

In the new organization the United States and Canada would be full members, and the emphasis would shift from the recovery of Europe from the war to promotion of world trade on a multilateral, nondiscriminatory basis. Another major activity of the OECD is seen to be helping the newly developing nations of the world reach economic maturity.

Hopefully, then, our country would have a place in the new organization where its views could be formally presented and considered. But if the OECD should not become a reality, or if, after it is established it should not prove to be an effective forum, then we must seek other means to have our interests adequately represented.

Another area in which we need understanding is right here at home. One step in the right direction was the establishment, last year, of the Business Council for International Understanding, the BCIU.

The BCIU sponsors regularly scheduled sessions for intensive training of international business executives at the American University School of International Service in Washington, D.C.

The program is not designed just for the new, junior executive; many U.S. based, senior international executives attend as well as the overseas-bound. Enrollment is limited to 25, with 6 sessions scheduled for 1960. Wives attend a special course in the final week of each session.

The program stresses American customs and values in the light of foreign attitudes toward them, coupled with a grounding in American foreign policy by top Government officials.

In addition, half the course is devoted to specialized study in selected area: Latin America, Western Europe, Middle East, South and South East Asia, Far East, and "special groups." Private consultations are arranged with appropriate officers of the State Department and other U.S. Government departments and agencies, as well as foreign diplomats in Washington and businessmen familiar with the area, to discuss specific commercial and political questions.

Twice a week, lectures from distinguished leaders in these categories are scheduled—one at a coffee hour, the other a dinner meeting. Participants may also attend "coffees" at the School of International Service to hear other distinguished speakers.

We need more of such forward-looking activities.

MORE COOPERATION NEEDED

And, finally, better understanding must be reached between Government, industry, and labor in this country.

Too often business is inclined to think of Government as an antagonist, to regard its dealings with Government bodies and agencies as contests. Similarly, there are individuals in Government office who look upon industry as something to be controlled and restrained.

And the relationships between labor and industry, and labor and Government, also cry out for better understanding of the realities in today's world.

LABOR ATTITUDE IMPORTANT

Leaders in labor unions, particularly, must give recognition to the fact that many European manufacturers, who compete with domestic manufacturers in overseas markets

and in the U.S. market now have modern equipment and a high degree of automation, quite comparable to the best we see in this country.

Labor union leaders must give weight to the wage differential between domestic and foreign producers. They already know the facts. They know, for example, that if you use the labor cost of France as an index of 100, then the wage index in Holland is only 81, whereas in the United States, it is 385.

With such cost factors built into the situation, how long can we reasonably expect that the United States can be an effective competitor.

The United States, if it is to compete successfully with other countries in world markets and at home, can no longer afford the traditional American practice of placing labor and management in direct opposition to each other. Nor can we afford governments which adopt either a promanagement or a prolabor point of view.

CONFERENCE SUGGESTED

Perhaps we should have a White House conference between representatives of industry, labor and Government for the purpose of initiating a program of bringing the 3 elements closer together in an understanding of how this country, is faring in international trade. I am optimistic enough to believe that, once a full understanding is reached, solutions to our major trading problems will be conscientiously sought and found.

The Western European nations, starting almost from scratch, have in 15 years, achieved economic progress without endangering their economic stability. I refuse to believe that we can not accomplish the same thing.

But to accomplish it we will have to adopt new policies and new approaches to replace those which are no longer compatible with the conditions of today.

Our future prosperity will have to come, not from annual pay raises won at the bargaining tables without productivity increases, and not from arbitrary price increases. Our future prosperity will have to be wrested from markets here and abroad in fair and open competition.

If and when that concept is accepted as the basis for action by our industries, our unions and our Government, we can begin to move forward again.

Conservation of Wilderness Areas

EXTENSION OF REMARKS

OF

HON. STUART SYMINGTON

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Thursday, August 18, 1960

Mr. SYMINGTON. Mr. President, as we move into the closing weeks of the 86th Congress, a major piece of legislation is yet to be acted upon—the wilderness bill to set aside portions of our country for the enjoyment of future generations.

This bipartisan, national proposal for the establishment of a policy and program for the preservation of some of our American wilderness has been the subject of two hearings here in Washington before the Senate Interior Committee, and six hearings in Western and Southwestern States.

The proponents of the measure have been patient and cooperative in adopting clarifying amendments and acceptable suggestions. All of these changes have resulted in a number of committee prints as well as a substitute proposal.

Senator JAMES E. MURRAY, of Montana, has performed an excellent, responsible service by bringing together these amendments and introducing, on July 2, 1960—1 day before the Congress recessed—a "clean" bill, S. 3809.

Support for the wilderness bill continues to grow, in spite of the long delay. Mr. Leonard Hall, one of our most distinguished writers, and the recipient this year of the Thomas L. Stokes Award, in a letter published on June 14, 1960, in the St. Louis Post-Dispatch, asks, "Who is for the wilderness bill?"

In answering his own question, he points out that "a large number of Senators and Congressmen are waiting a chance to vote favorably on it." Among the bill's supporters he also lists "conservation groups across America, garden clubs, women's clubs, sportsmen's organizations, labor organizations, outstanding newspapers and magazines, countless prominent Americans as individuals."

Mr. President, I ask unanimous consent that Mr. Hall's entire letter be printed in the Appendix of the RECORD. I also ask unanimous consent that an article from the Christian Science Monitor of July 21, 1960, quoting the St. Louis Post-Dispatch, be printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the St. Louis Post-Dispatch, June 14, 1960]

A FEW TALL PINES, A LITTLE SHORT GRASS—WRITER APPEALS FOR BILL TO PROTECT FEW BITS OF WILDERNESS LEFT FROM AMERICA'S PAST

(A letter to the Post-Dispatch by Leonard Hall)

If any of the primeval beauty of America is to be saved for future generations—if any of our land is to be preserved unspoiled as it was when the Creator made it available to us—then every effort must be made by citizens of goodwill everywhere to secure passage of the wilderness bill.

This bill has been before the Congress since 1956. It has been exhaustively studied and approved by the administration, the Department of Agriculture, Department of Interior, and Bureau of the Budget. It has not been enacted into law because it is being fought to the last ditch by powerful groups whose interest is in turning the people's natural resources into cash for private profit; and these groups influence many individuals, lawmakers, and bureaus in our Government.

What is the wilderness bill? It is a proposal to take the outstanding primitive and untouched areas in our national parks, fish and wildlife refuges, and national forests—and to protect these against exploitation by means of a wilderness preservation system sanctioned by national law. This would simply mean that areas now or in the future designated as inviolate wilderness would be removed from departmental regulation which can always be changed by a stroke of the pen. It would provide that additions, deletions, or changes in the wilderness system would be subject to public hearings and review by Congress.

Why should we preserve wilderness in America? The spoilers and exploiters say we cannot afford to save any untouched, unused land. They say this is "single-purpose use" as against what they call "multiple use." The difficulty in this "multiple use" concept is not that it is basically bad, but that for some it means sustained yield timber cutting, for some it means loading the forest range with sheep and cattle, for some it means establishing mining claims through political means and then skinning off the timber, and for some it seems to mean using every acre for all these purposes and more, besides.

The fact is, there is nothing single purpose about wilderness as specified in the wilderness bill. No areas now open to timber cutting are included, no existing private rights are endangered, no established uses of national parks, forests, monuments, or wildlife refuges are upset. On the other hand, the multiple-use concept is clearly present in the use of wilderness for watershed protection, hunting and fishing, camping, carefully controlled grazing, and, most important of all, scientific research. Only timber cutting and certain other commercial enterprises are excluded.

Why wilderness? The late Aldo Leopold said: "Wilderness is the raw material out of which man has hammered the artifact called civilization." To the pioneer, wilderness is an adversary to be conquered; to the exploiter in an unprincipled age, it is resources to be turned into profit. But to man in an advanced culture, surely there is time and wealth and reason enough to try to save some untouched remnants of this "raw material of civilization" for scientific study, for philosophical contemplation, for spiritual enjoyment.

There is little enough wilderness left and the time for saving even a few tag ends is short. Never again will living man see the long-grass prairie "where a sea of prairie flowers lapped at the stirrups of the pioneer." A tiny bit of short-grass prairie "where Cabeza de Vaca saw the horizon beneath the bellies of the buffalo" has been rescued and set aside to show where once the prairie schooners of the Forty-niners passed.

Oil wells, vegetable fields, citrus groves, and subdivisions have taken the last of the coastal prairie—and the virgin pine of the Lake States and giant white oak forests of the Ozarks are gone forever; and most of the big cypress, as well. Of 200 wilderness coastal areas investigated by the National Park Service, some 20 were considered as worth trying to save—and already several of these have been lost to superhighways and bulldozers. So far we've saved the Quetico Superior International Park in Minnesota and Ontario; and wild areas in the eastern national parks. Most remaining opportunities lie in the West.

Who is for the wilderness bill? The administration, as already stated, a large number of Senators and Congressmen who are waiting a chance to vote favorably on it, conservation groups across America, garden clubs, women's clubs, sportmen's organizations, labor organizations, outstanding newspapers and magazines, countless prominent Americans as individuals.

Who is against the wilderness bill? A small but exceedingly powerful group who believe they should keep the right to turn natural resources belonging to all Americans into personal profit for themselves. The only reason they are ahead is our inertia. It is time to shake off this inertia and get the wilderness bill passed.

[From the Christian Science Monitor, July 21, 1960]

AMERICA, THE BEAUTIFUL

Another session of Congress is nearing its end without action on the wilderness bill, the legislation which would safeguard approximately 55 million acres in various parts of the country as "areas where the earth and its community of life are untrammeled by

man." This proposal lies buried in Senate and House committees, and similar measures have met a similar fate session after session since 1949.

This sometimes is a bit difficult to comprehend since there has been a widespread demand that part of the country be preserved as nearly as possible in its original condition. Posterity surely is entitled to see at least small tracts of virgin timber, of duneland and mountain untouched by bulldozer and unmarred by neon. Conservtionists, women's organizations, civic groups, labor unions, newspapers, and politicians have been pleading for years for the necessary legislation. They have not even been asking that any money be spent, merely for the protection of areas which already are Government property.

The only opposition is a largely hidden one, that of interests which believe they should be free to exploit any and every bit of the earth whenever they see profit to be gained. Congressional inaction can be attributed only to the influence of these interests or to apathy. Neither motive is a creditable one—least of all in legislators who orate so often about "the American heritage."—St. Louis Post-Dispatch.

Rights of the States

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Thursday, August 18, 1960

Mr. BRIDGES. Mr. President, Life Lines, a triweekly publication issued by Life Line, a patriotic and religious educational organization, regularly presents some of the most stirring pro-American information published in the United States today.

Much of the material appearing in Life Lines serves as the basis for a daily radio program by Wayne Poucher, Life Line commentator. This program is broadcast by a large number of stations located in every section of the Nation.

All of the material contained in Life Lines, published at Washington, D.C., is worthy of attention by Americans who are concerned about saving freedom in the world. A recent article is of particular interest at this time, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

RIGHTS OF THE STATES

For the last 30 years or so, we have been witnessing in America a skilled propaganda campaign, carried on by the dedicated and zealous mistaken enemies of freedom to discredit and destroy popular respect for our constitutional doctrine of States rights.

This vital principle of our Republic is set forth in plain language in the Bill of Rights of the U.S. Constitution. Nevertheless, the antifreedom forces long ago set the principle down for destruction. They know that, if literally enforced, this formula for freedom is an effective barricade against socialism, communism, or world government.

Thus an all-out campaign was put underway to fool the American people into believing that the States rights doctrine was a useless something left over to us from the more simple years of our history as a nation. We were told repeatedly that the basic reasons for maintaining the rights of the States had melted away with the coming of mass production, rapid transportation, universal communication, and a mobile population.

Even as the propaganda campaign against the doctrine of States rights was going on, the rights themselves were being washed away by a torrent of laws and Executive orders originating in Washington. More and power was concentrated on the mushrooming Federal bureaucracy. And the American people were told that this new centralism was not only inevitable but was good as well.

A number of other significant happenings were taking place during this time. For one thing, the U.S. Government extended official recognition to the Soviet Government of Russia. This was done at a time when many authorities considered that the Soviet regime was on the point of collapse. A few years later our country's participation in World War II again saved communism from complete destruction.

Other things happened. As the enemies of freedom continued their efforts to weaken and destroy States rights, our Government proceeded to give away American tax dollars by the tens of billions to nations all over the world. Domestic spending by the Federal Government kept jumping upward, even though times were good. Our taxes became a back-breaking burden. Our national debt soared upward to heights never before known, in peace or in war.

The language of our Constitution was expressly designed to safeguard our governmental structure against this kind of costly destruction against this kind of costly destruction. But written language alone, no matter how eloquent, can not protect our liberties. Such language must be backed up by intelligent, patriotic effort if it is to be effective.

Our Constitution assumes that its clear language will be enforced by and in the courts of our Nation. In recent years, however, the Supreme Court of the United States has not halted the excesses of Federal legislation and Federal administration in undermining the interests of States rights. In fact, the Court's decisions have lent strength to those measures that add power to the Central Government at the expense of the powers of the several States of the Union.

Unless an end is brought to centralization of power by judicial decree, it is only a matter of time until the States will be deprived of all sovereignty and power in the enactment and enforcement of laws for the protection of their local citizens. And this, too, is certain: We cannot destroy the rights of the States without at the same time destroying the United States as a nation where individual liberty is taken for granted.

Capital Times Endorses Mansfield's Plea for National Primary

EXTENSION OF REMARKS
OF
HON. WILLIAM PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, August 18, 1960

Mr. PROXMIRE. Mr. President, the Madison Capital Times, which has fought hard for the fullest possible popular democracy for more than 40 years, has published an enthusiastic endorsement of the recent speech by Majority Whip MIKE MANSFIELD for a thorough study of our present method of nominating the President of the United States, together with a long, hard look at the prospect of a national primary.

I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SENATOR MANSFIELD PROPOSES A NATIONAL PRIMARY SYSTEM

For months the Capital Times has contended that the convention system of choosing presidential and vice-presidential candidates is a farcical betrayal of our democratic system.

The conventions this year drove our point home with millions of Americans who watched these melancholy spectacles. Since the conventions there has been a growing interest in abandoning the present system and substituting a national primary in its place.

This growing sentiment has found expression in a proposal made by Senator MIKE MANSFIELD, Democrat, of Montana, the majority party whip and the most likely candidate to succeed Senator LYNDON JOHNSON as majority leader in the event that JOHNSON is elected Vice President.

Senator MANSFIELD noted in suggesting a national primary on the floor of the Senate Monday that the televising of the two conventions this year "led millions of Americans to question the entire nominating and electing procedure as it now operates."

Under the present system, he said, "the nominees come into the arena of deliberations with the bulk of the vote totals cemented beyond the reach of deliberation."

Nothing was more obvious in the two conventions this year than that the delegates were meeting to ratify decisions already made in preconvention deals among politicians across the country.

There never was any doubt that KENNEDY and NIXON had the nominations in the bag before the conventions were called to order. Nor did the delegates have a choice as to the Vice Presidential selections. They were chosen by the Presidential candidates and in the case of JOHNSON, the delegates were not even given an opportunity to express themselves in a rollcall.

The result is that there is deep dissatisfaction across the country with both tickets and a rising demand that something be done to improve the nominating process to give the people more control over the choice of candidates they will have to vote for.

The Capital Times is glad to see that the need for reform is being recognized by officials in Washington. We hope that is doesn't end with a speech by Senator MANSFIELD.

Steps should be taken immediately to draft legislation to provide for a national primary so that the people, not the political bosses in the smoke-filled hotel rooms, choose the candidates for the highest office in the land.

To continue the present system makes a farce of democracy.

Faith To Move Mountains

EXTENSION OF REMARKS
OF
HON. A. WILLIS ROBERTSON
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Thursday, August 18, 1960

Mr. ROBERTSON. Mr. President, each Sunday evening at 10:30 p.m., e.s.t., Dr. Samuel M. Shoemaker, rector of the

Calvary Episcopal Church in Pittsburgh, the distinguished son-in-law of our former colleague, Senator Alexander Smith, broadcasts on radio station KDKA. In a recent broadcast he said:

One of the most helpful things that I see in America today is the growing number of people who are coming to associate our cherished freedom with our inherited faith.

In recent weeks, there have been other broadcasts and a number of sermons preached on the theme that our form of government is based upon the teachings of the Bible and calling attention to the fact that implicit in the propaganda program of the Communists to destroy our democratic institutions is an effort to repudiate the Bible and destroy our faith in God. All polls indicate that the current major concern of the American people is fear of another world war. Candidates for public office are promising a major strengthening of our defense posture. While God undoubtedly expects those made in His image to utilize the powers with which He has endowed them the Bible clearly teaches that we labor in vain to build a temple of peace that is not dedicated to the victory of moral force. Many will recall that in the midst of framing a great instrument under which we have enjoyed constitutional liberty the venerable Franklin said:

If it be true that not a sparrow can fall to the ground without His notice, how can we hope to see a new empire rise without His aid?

Last Sunday, Dr. Shoemaker voiced over the radio an eloquent plea for the recapture of the type of faith that the early Christians had, the type of faith that enabled the Founding Fathers to win their unequal struggle for independence and freedom.

Mr. President, I ask unanimous consent that there may be printed in the Appendix of the RECORD the address by Dr. Shoemaker entitled "Faith To Move Mountains."

There being no objection, the address was ordered to be printed in the RECORD, as follows:

FAITH TO MOVE MOUNTAINS

(By Dr. Samuel L. Shoemaker)

"If ye have faith as a grain of mustard seed, ye shall say unto this mountain, remove hence to yonder place; and it shall remove; and nothing shall be impossible unto you."—St. Matthew 17: 20.

People without faith sometimes alternate between believing that those who have faith are the most fortunate, or the most foolish, people in the world. They envy it, or they despise it. But while they teeter between a desire for faith, and ridicule of it, they must employ at least enough of it to go on living. And life goes on asking questions of them: Where did we come from? What are we doing here? Where are we going? Everybody that gets above living like the animals thinks about these things, and knows that life of itself offers no answer to them.

We know that if there is any answer, it lies in the realm of faith. Faith, at its simplest, means that life signifies something, that it is not pure senseless accident. This belief is hardly tenable without the further belief that life contains a positive purpose, and that this exists because behind life there is a Purposer. So faith comes to mean virtually faith in God.

WHAT IS FAITH?

Faith starts when you begin with this axiom, and put it to the test. As Unamuno, the great Spanish philosopher, said, "To believe in God is to long for His existence, and, further, it is to act as if He existed; it is to live by this longing and to make it the inner spring of our action. This longing or hunger for divinity begets hope, hope begets faith, and faith and hope beget charity. Of this divine longing is born our sense of beauty, of finality, and of goodness."

Jesus, whatever more He was, was a great genius in the art of faith. It is evident to anyone that He could do things with faith that most people cannot do; that He had more faith in God, more faith in faith, than any other man that ever lived. We turn to Him as the great Expert in faith.

We all remember the story of the Transfiguration, when He took Peter, James and John and went up into a mountain, and was transfigured before them, so that "his face did shine as the sun, and his raiment was white as the light." The spirits of Moses and Elijah appeared also, and from the cloud which overshadowed them came a Voice which said, "This is my beloved Son, in whom I am well pleased; hear ye him." The three apostles were frightened by this experience, until Jesus came and touched them and told them not to be afraid.

FAITH "WORKS"

Then, coming down from the experience on the mountain, there met them the father of an epileptic boy who begged Christ to have mercy on his son—he had brought him to the disciples but they could not cure him. And Jeus, full of the great experience which had just come to Him, full of an immense and intense faith, spoke sharply, "O faithless and perverse generation, how long shall I be with you, how long shall I suffer you?" He may have said it to the father, but more probably I think it was with the spiritually incompetent disciples in His mind. Then, shaking this sharpness from Him, He turned to the man as with a smile of gracious welcome, and said, "Bring him unto me."

It was then the belief that epilepsy, and much else, were caused by evil spirits. Moderns dismiss all this with a wave of the hand. We might do well to be a little better informed before we throw out the hypothesis of evil spirits so summarily. Some men very close to this powerful elemental kind of faith have believed in them, and still do. In any case, Jesus rebuked the evil spirit, and the child was cured. The power that had been given on the mountain was needed the moment He came down from the mountain to help a helpless sick boy. The same power that had made the body of Jesus transparent with light made this diseased human body radiant with health.

The disciples then asked Him why they had failed to cast out the evil spirit, and Jesus said, "Because of your unbelief: for verily I say unto you, if ye have faith as a grain of mustard seed, ye shall say unto this mountain, Remove hence to yonder place; and it shall remove; and nothing shall be impossible unto you."

Here is the concentrated essence of Jesus' faith. Here you see it in action, living and triumphant. Here is the vivid contrast, not only between the boy whose own faith is not mentioned, and the father's which is a little stronger, on one hand, and Jesus' faith, on the other; but also between the inadequate faith of the disciples, and the adequacy of Jesus' faith. Here is that tremendous word from Him about faith that removes mountains.

Let us take these words of His, and apply them minutely to ourselves.

UNBELIEF CUTS OFF POWER

"Because of your unbelief." That was why they had been incompetent to do what obviously should have been done, and what was done the moment Christ Himself arrived. We, too, are disciples of His. We, too, meet many who are figured for us in this epileptic boy—all kinds of sickness, all kinds of human suffering. We come into our Lord's presence in church, then we come down from this personal, oft-repeated transfiguration, and there meets us a world that is "lunatick and sore vexed" just as the boy was—a world that has been flung into the fire of war, into the water of uncountable human tears, by some evil and sinister force within itself. We see the tragedy about us on all sides, and we long to help, and we try to help, and we fail. And we come to Jesus and say, "Lord, why could not we cast out this spirit of evil, of hatred, of intolerance, of injustice, of cruelty, of anger, of war?" And He levels His eyes at us, and tells us the unvarnished truth, "Because of your unbelief." Not a man or woman of us can escape that judgment. We know it is true. There is none of us, no matter how much faith we may have, no matter how long we have been believers, or what "mighty works" we may have been able to do with our faith, for ourselves or for other people—there is not one of us that is not intimately and personally convicted by those words. "Because of your unbelief." That person might be well today, that relationship might be solid, that home unbroken, that group of people dominated by the right instead of the wrong motive, that community touched with the right spirit, yes, even the world itself freed from the scourge of war, but for one thing—our unbelief—our closedness to God's full love and power, our unreadiness to spend and be spent as Christ was when He came from the mountain. Yes. That is the world's great curse, the actual unbelief of us professed believers. How we do need to pray, "Lord, I believe: help thou mine unbelief."

"If ye have faith"—He goes on now to the positive—"as a grain of mustard seed . . ." Jesus loved that little mustard seed, loved the way the tiny thing broke open in the soil, and took root, and grew up into a tree that could house the birds of the air. I think He felt His own movement was like that, would grow and spread that way from tiny beginnings. "If you have only as much faith as a tiny grain of mustard seed, ye shall say to this mountain, Remove hence to yonder place; and it shall remove. * * *"

"This is all folly," says the skeptic; "faith doesn't move mountains; dynamite and steamshovels move mountains, but faith doesn't move them. Go to the engineers that built the Panama Canal, or tunneled through the western Pennsylvania mountains, and they will tell you how to move mountains." Some of the arguments about religion would never arise if everybody had a little imagination, and, I might say also, more of a sense of humor. Jesus had just come down the slopes of an actual mountain. He had just seen the power of God banish a long-standing and grave human illness. And filled with the power of faith, He put vividly its immense possibilities before them, saying in His strong, oriental way, "This mountain would blow away and be found in another place if only you had as much faith as is figured by a tiny grain of mustard seed."

ONE NEGRO BOY

Perhaps we shall not understand what He meant until we let Him move some of our personal mountains for us. Here is a frail Negro boy, whose mother was sold as a slave—a sensitive, musical, whimsical boy with insatiable curiosity, balked at every turn to get an education. But that boy felt in his soul that he was meant to turn his personal curiosity about nature to the benefit of his people. And he believed in God. He ploughed through his difficulties one by one, got his education, and became one of

the great citizens of this country, one of its outstanding practical scientists, and one of the great benefactors of his race. I doubt if he could have done it without his faith, but by faith George Washington Carver removed, not only his personal mountains, but many a mountain of difficulty for his people.

THE MOUNTAIN OF PRIDE

His mountains were outside. Some people's mountains are inside. They have a mountain of pride which makes them want to run everything they touch, turn every situation to their own advantage, they thirst always to be right, and the ego is the greatest thing about them. Now there's a mountain for you. It stands between them and any true relationship, any true success. What can move pride? Can hard knocks from without do it? Not always. Can a direct pursuit of humility do it? They sometimes grow proud of their progress in humility. There is only one thing that can remove the mountain of pride—it is a great gratitude, a gratitude of precisely the kind induced in people when they find faith. Faith puts God in the center of every picture. When we truly believe, we are amazed at the goodness of God toward us. We know that God has given us something we could not give ourselves. Such gratitude alone can tear down the mountain of pride, from which many suffer, many who do not even know it, and become people for whom allowances always have to be made if the rest of us are to get along with them at all. O for some faith to remove that mountain.

THE MOUNTAIN OF FEAR

For many the mountain is a mountain of fear or a mountain of sorrow. Someone we love is in danger. We fear what the news may be in these next few hours or days. Or perhaps a message comes that wipes the sun out of the sky and sets up a throbbing ache in our hearts. Can even Christ move that mountain? We still hear His promise, "If ye have faith as a grain of mustard seed, ye shall say to this mountain, remove hence to yonder place; and it shall remove. * * *" Does it mean stoicism, teaching ourselves to endure, to stop caring? Far from it—it means the far more delicate and difficult solution of making us care all the more, but taking the personal hurt out, remembering the power of faith to transmute the meaning of personal sacrifice. That faith rests upon belief in the sovereignty of God in His universe, and the great corollary to this, that "all things work together for good to them that love God." That faith was sealed in the sacrifice of our Lord on Calvary, when He by faith changed forever the significance of the cross of shame, and made it the Cross of Salvation for the world. When we lift up our own losses and sacrifices and bring them under the transforming power of His Cross, faith moves the mountain of sorrow and of fear.

RELIGIOUS STOLIDITY

Sometimes our religious conservatism and immobility are very much like a mountain. We are traditional Christians, temperamentally impersonal, inclined to let others take the lead in spiritual things. We know that if Christians down the ages had been as cold and stiff as we, there wouldn't have been any Christians down the ages at all! But we sit down in the shadow of that mountain helpless and hopeless. Then Christ speaks to us, "If ye have faith as a grain of mustard seed. * * *" and we know it is true. Bit by bit, like steam shovels eating away the sides of a mountain, Christ's living faith eats away the hard bits of self-consciousness, self-enforced loneliness, spiritual pride, and conservatism. And in their place we begin to experience a joyous, confident, contagious faith.

"Nothing shall be impossible unto you." Nothing, that is, which is consistent with the will of God for us and for His world. We have the whole range of possibility within that majestic and wonderful will of God, in which our faith can operate unhindered. A big vision is given to us, say for our own lives, or for our work: we do not see all the means available, but faith goes into action, and prayer; and slowly the vision is turned into reality. There is a lot of imagination in faith, divine, creative, wide-foraging imagination; for faith takes in all the possibilities. Garner and write down the details of the vision while it burns in your mind. Let the imagination roam freely. Bring it all under the purging discipline of prayer, so that all the self gets cooled out of it, and all that God can do through you is preserved. You may have a secondary part in fulfilling the vision, such as Harriet Beecher Stowe had in the abolition of slavery; but it may be a very necessary part. Let the vision grow and lie complete in your mind and in you prayers. Let God shape and modify it. And keep always in mind the immense promise, "Nothing shall be impossible unto you." Who knows what great, needed vision may be forming already in the imagination of someone today, for which the world will one day be thankful? "Nothing shall be impossible."

Let us live much more in our Lord's promises, then we shall do much better in living by His commands. Let us remember that prayer is always faith active, faith persistent, faith growing. Let us remember that the final leap of faith is not the letting in of credulity, but of courage; we only believe because of sufficient evidence; we only stick to our belief and live it out because our wills move up quickly behind our minds and courageously act; and because faith is the gift of God, we must constantly be coming back to God for fresh endowments of it through His grace. Let us all worship now with the prayer in our hearts for ourselves and for one another, "Lord, increase our faith."

Political Divisions

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Thursday, August 18, 1960

Mr. WILEY. Mr. President, a great many people listen to Mr. Erwin E. Canham's comments on the political news. He is editor of the Christian Science Monitor, and his comments come over the air on WMAL on Sunday nights at 8 o'clock weekly. His last comments in relation to the adjourned session of Congress and the Republican and Democratic viewpoints are very interesting and constructive. People listen to Mr. Canham because what he has to say is factual, never bitter nor venomous.

I ask unanimous consent that an editorial, entitled "Political Divisions," written by Mr. Canham, and published in the Christian Science Monitor, be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

POLITICAL DIVISIONS

(By Erwin D. Canham)

The adjourned session of Congress is revealing the deep divisions of American politics. They show the two political parties profoundly split, even in an election year, and even with three of the four major candidates present and active in the Senate.

There are three positions being presented to the American people and their legislators. There is the Kennedy-Johnson position, the policies of the Democratic platform—except on civil rights, on which they want to postpone action. This Kennedy-Johnson position is one of advanced social liberalism or radicalism. It has the support of organized labor, it possesses an eloquent and intelligent brains trust, and it has the hope of gaining also the support of disgruntled and disadvantaged farmers.

Next is the position of Vice President NIXON, and of his running mate Ambassador Lodge if he were represented, and of the Republican platform. It is a position of moderate liberalism—of social reform under safeguards and brakes. It is a middle-ground position. Under normal circumstances, perhaps a substantial number of Congressmen would support this position, especially including many Democrats. It may well have the support of the rank and file of organized labor, certainly of unorganized working men and women, and of the vast middle-ground majorities of the Nation.

CONSERVATIVE VIEWPOINT

And then there is the position of the conservatives, which include most of the Republicans in Congress and the southern Democrats. These conservatives favor the minimum degree of Federal governmental intervention in private affairs, they believe many problems can be adequately and safely solved by State and local action. They would not go so far as Vice President NIXON and the Republican platform on most issues.

The great advantage possessed by the conservatives is their control of committee chairmanships and in some cases—as in the House Ways and Means and the Senate Finance Committees—actual committee majorities. They have real legislative power, which becomes especially potent when there is a time limit, as in the current 3-week session of Congress. (The session, of course, may be extended. There has been talk of it.)

These lines of interest cut straight across the political campaign. They create difficulties for both political parties. They expose and emphasize the illogical principles and makeup of the two political parties, since each party contains inconsistent and irreconcilable elements within it.

One of the great debates of American politics is whether it is better and safer for the public to have division of power within the parties, just as we have it throughout all the rest of American Government, or whether it would be better to have monolithic consistent parties. Efforts have been undertaken for many years to weld the political parties into integrated unities. Such efforts have rarely succeeded and never survived for long, although from time to time potent political leaders have put together large majority coalitions which had considerable survival value. But there was usually some element holding these coalitions together.

DEMOCRATIC ADVANTAGE

A Democratic Party politician, starting with the advantage of the traditionally Democratic South, always has some hope of creating a majority by bringing together the South, the labor-dominated cities, and the farmers. A Republican, not having the heritage of the South, has a much harder time making a majority, and usually does so with the cement of personal leadership.

It is a matter of calculated risks and choice of evils for the Democrats, and having taken up a position of advanced liberalism with their presidential nominee and their platform, they now are marking time on civil rights.

However, they are not marking time on other social legislation. Senator KENNEDY and his liberal allies are pressing hard. Not so his Democratic colleagues from the South—that is, the conservatives among them. And Vice President NIXON is somewhere in between, striving for a moderate program of social legislation which on the whole tends neither to satisfy the radicals nor the conservatives but which may well suit the needs of the Nation.

Recent Successes in Science Demonstrate Anew America's Overall Superiority

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Thursday, August 18, 1960

Mr. KEATING. Mr. President, by all objective standards, it has been a bad month for those who derive satisfaction or seek political advantage by downgrading this country in its race with the Soviet Union for global scientific superiority. A fistful of recent achievements by our scientists and specialists have demonstrated once again that America is second to none in the race for space.

What is more, the peaceful objectives of all our efforts must be clear to all who will take the trouble to study the record.

A number of newspaper editorials all across the country have applauded these recent scientific advances. I ask unanimous consent that one of these, appearing in the Rochester Democrat and Chronicle of August 13, be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE SPACE AGE ROCKETS IN

In the most dramatic few hours in our space science history, American rocketeers and electronic specialists have opened the door wide to the Buck Rogers age of space travel and also made possible easy, worldwide television, radio, and telephone communications.

At the same time, they sent another monster Atlas missile roaring 5,000 miles down the South Atlantic, crammed full of experimental test equipment to advance our knowledge in several ways.

What we hope the world will note about all this is the obviously peaceful intent of all these successful experiments. President Eisenhower has invited anybody in the world who desires it to make use of the 10-story balloon satellite, "Echo," to aid communications. By use of this balloon, it just might be possible, for example, for the Olympic games that open in Rome soon to be televised all over the earth while they are going on.

Recovery of the Discoverer XIII satellite nose cone, the first such object recovered after orbiting around the earth, is one of the final touches to prove that space travel is possible to man. Before sending a human into outer space, it was necessary to prove that he could be recovered safely, and this experiment goes a long way to prove that.

There are collateral benefits to all these experiments, some highly technical. But, just as our recent success with a photography satellite was primarily a weather-watching project, so the latest American successes are most important for their advancement of space science.

Not too many years in the future, a combination of these probing, communicating missiles, with perhaps a man-carrying satellite in addition, will bring about the open skies the free world needs to assure it of safety against surprise attack. These were indeed historic shots into the blue.

The B–52

EXTENSION OF REMARKS
OF
HON. ANDREW F. SCHOEPPEL
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Thursday, August 18, 1960

Mr. SCHOEPPEL. Mr. President, as many Senators know, for a number of years I have advocated the strengthening of the B–52 plane program, which, with all of its new features and modifications, makes it a fine defensive ship in every respect. On Saturday, August 11, there appeared in the Wichita Beacon an editorial entitled, "Use What We Have—The B–52." I ask unanimous consent that that editorial, which speaks so pointedly, positively and so pertinently be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

USE WHAT WE HAVE—THE B–52

The caveman had been getting along fairly well, chunking rocks at the game he wanted to kill, and at the enemies he wanted to keep away from his home cave.

Then he heard of a brand new weapon. Og, a few caves down the trail, had an idea for making a spear. Unfortunately Og hadn't made the thing yet.

However, when he did, it would be great, and he was going to help all his neighboring cavemen make spears and have the most up-to-date weapons possible.

Did his neighbors give up their rock-throwing? Did they discard their piles of rocks, and sit around waiting for this superweapon of Og's?

Of course not. If they had, they would have starved and their enemies would have moved in and taken over their caves and their women.

The United States finds itself in a weapons dilemma that is essentially the same as the caveman's. We have on the drawing boards some wonderful superweapons—missiles and Polaris submarines and B–70 airplanes.

Unfortunately, just like Og's spear, these superweapons are not yet reality. The United States is far behind Soviet Russia in the missile race. The B–70 is still, for all its wonders, a paper airplane.

We do have proven weapons, weapons that are real, that are here. The prime one is the B–52 missile platform bomber.

We don't seem to be as clever as the caveman. We're sitting around waiting for our superweapons, and are refusing to keep up production of the B–52's.

Senator ANDREW SCHOEPPEL deserves a lot more credit than he will probably get, for standing on the Senate floor Thursday and making a plea for more B–52 production.

"I would rather have one proven weapon defending our country than all the modern weapons which still are at the drawing board stage," he told the Senate and the world.

He's been saying this for years. So has Wichita, which produces the B–52. The unfortunate thing is that too many people think such pleas are merely made to buck up the economy of Wichita by keeping the airplane workers busy. Or the cynically think the Senator's heartfelt speech is just another campaign effort.

That simply is not true. Such people as Gen. Thomas S. Power, Strategic Air Command Chief, have told the country and its leaders over and over again that we must have more B–52's.

Gen. Curtis LeMay, the former SAC commander, used to maintain that SAC needed to be able to send off a first strike of 1,000 aircraft.

What is the B–52 strength of the Nation now? By next spring, if present production keeps up, an alert of 80 bombers in the air will be the best SAC can possibly do.

That is a terrible gap. Something has to be done, and done right now.

"There are only about 40 B–52's about to be ordered, carrying production into 1962. However, the program will end then if the fiscal 1962 budget does not contain funds for more of them," Senator SCHOEPPEL said Thursday.

The problem isn't with the people of this Nation. They have long been demanding that the Nation have the best protection. The Republican Party platform promises to "intensify, accelerate and increase" the national defense efforts.

What is President Eisenhower's reaction to this promise? He has just told Congress that he has decided to start using the added appropriations for special defense projects which were ordered by the last congressional session. Those funds, which were meant to be put to work, were put in the deep freeze.

It's fine to have missiles and Polaris submarines and B–70's. But until we get them, let's put to use the weapons we have now, that are here, that are in production. Let's get a decent force of B–52's to protect the free world.

And lets get started on them now.

Houston Press Given Recognition as "Last but Not Least" by Time Magazine

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Thursday, August 18, 1960

Mr. YARBOROUGH. Mr. President, it has been my pleasure to note on many occasions over the last several years that the Houston Press, one of Texas' most outspoken, hard-hitting daily newspapers, has consistently, strongly supported efforts to establish a National Seashore Park on Padre Island, and has opposed fencing up the beaches of the Gulf of Mexico.

The Houston Press editorial support of the Padre Island National Park project is just one of many examples which might be listed showing how the managing editor of the Press, Mr. George Carmack, and his staff utilize their columns in the best interest of the people. Mr. Carmack has an enviable service record in the South Pacific in World War II, so it is not unusual for him to exhibit courage now.

The current issue of Time, August 22, 1960, has an extremely interesting report in its press section on the valuable service the Houston Press has contributed to its readers. One matter not reported in Time, which I would like to add, is recognition of the incisive, penetrating reporting of the Houston Press' Washington correspondent, Mr. Neil McNeil. Although he is a young man, experience has taught me that Neil is among the top-ranking journalists who work on the hill.

I ask unanimous consent to have printed in the Appendix of the RECORD the article from the August 22, 1960, issue of Time entitled "Last But Not Least."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE PRESS—LAST BUT NOT LEAST

By most standards, among Houston's three daily papers, Scripps-Howard's evening Press rates last. With 102,590 in circulation, it is hopelessly behind the evening Chronicle (199,128) and the morning Post (215,063). Its 50-man editorial staff cannot compare with the Post's 90 or the Chronicle's 110, and it suffers periodic, crippling talent raids not only by its wealthy rivals but by the other papers in the Scripps-Howard chain; the Press has lost three managing editors in the last 10 years. All this might be expected to give the Press a real weak-sister inferiority complex. Not so: it happens to be the brashest, liveliest, and most voluble paper in town.

Far more than the Post or the Chronicle, the Press fills the role of municipal watchdog—with a tendency to yip at everything from murder to pay raises for Houston city councilmen. Alarmed at Houston's high murder rate, the Press labeled the city "Murdertown, U.S.A.," campaigned so relentlessly for tighter gun registration laws that it drew scathing mail from nearly every quail-hunting and skeet-shooting type in Texas. Last January, impatient with the slow-moving police investigation into the slaying of Houston Housewife Wilma Selby, the Press rapped the police in an editorial and posted a reward for the killer. The chastened police promptly bestirred themselves, within 10 days collared Mrs. Selby's murderer (Time, Aug. 15).

Editorial boldness: Houstonians have learned to expect outspokenness from the Press, a paper that has little to lose and much to gain from piping up. The Press' editorial vigor gains extra measure from the timidity of the Chronicle and the Post. Established and prosperous, locked for years in a seesaw battle for economic first place, both papers hesitate to take stands on sensitive issues that, by offending any group, might jeopardize their positions.

On the South's most sensitive issue, the race problem, neither paper has shown any inclination to copy the Press' boldness. The Chronicle generally temporizes, the Post—run by onetime WAC Commander Oveta Culp Hobby—usually maintains editorial silence. This month, when Federal District Judge Ben C. Connally ordered the city's laggard school board to step up the rate of public school integration, only the Chronicle and the Press editorialized on his decision. The Chronicle was mild and vague: "It is hoped that all citizens will cooperate." The Press said: "Judge Connally's order is one with which we all can—and must—learn to live."

Enthusiasm in a vacuum: The Press often takes the lead in news enterprise. It was the first to expose kickbacks at Houston's city-owned farmer's market, the first to report police shakedowns on small businessmen, the first to note scandals in the U.S. Internal Revenue Service in Texas, the first to spotlight a State pardon and parole board racket.

In the vacuum provided by his competitors, Press Editor George Carmack, 53, a 6-foot, 4-inch Tennessean who rose through the Scripps-Howard chain, moves with the enthusiasm of a newsman who would rather be forthright than first. Carmack's small staff cannot hope to outproduce the Post and the Chronicle, and the paper frequently relies on sheer sensationalism. But with an independence of spirit rare in a chain newspaper, rarer still in Houston, the third-ranking Houston Press has clearly demonstrated that last is not necessarily least.

Soil Science Congress Meeting in Madison, Wis.

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Thursday, August 18, 1960

Mr. WILEY. Mr. President, as I mentioned yesterday, a highly significant international conference is now taking place at Madison, Wis.; that is, the Seventh International Soil Science Congress.

Historically, an enemy of mankind has been hunger. Fortunately, our own country has been blessed, not with a deficiency, but with a surplus of food. Regrettably, however, this is not true throughout the world. According to estimates, from one-third to one-half of the people of the nearly 3 billion people on earth exist on inadequate diets.

Reflecting further upon the constructive work of this Congress—attended by about 1,500 delegates from 40 to 50 nations, I ask unanimous consent to have two articles—one from the Milwaukee Journal and one from the Wisconsin State Journal printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Milwaukee Journal, Aug. 15, 1960]

SCIENCE URGED TO CURB WORLD HUNGER THREAT—SOIL EXPERTS CONSIDER PROBLEMS INVOLVED AT AN INTERNATIONAL PARLEY AT MADISON

(By R. G. Lynch)

MADISON, WIS.—Hunger remains the major threat to the future of mankind, scientists attending the Seventh International Soil Science Congress were told Monday.

Dr. Binay Ranjan Sen, director general of the United Nations Food and Agriculture Organization (FAO), said:

"Of the three historic enemies of mankind—war, pestilence and hunger—which in the past have taken such a heavy toll of human life and happiness, war and pestilence are already under some measure of control."

ADVANCES ARE NOTED

"Recent advances in medical science, supported by large scale public health measures, have won significant victories against epidemic and endemic diseases.

"A global war today, with the employment of nuclear and thermonuclear weapons, could not be contemplated by anyone who is even remotely interested in the survival of the human race.

"But hunger still remains a major threat to the future of mankind."

The former secretary to the Indian Ministry of Agriculture added: "In the consciousness of what is at stake, let us therefore all work together and hasten the day when man's eternal scourge—hunger—will be a thing of the past."

Sen said FAO experience had confirmed that in soil management the two outstanding factors were intensive use of chemical fertilizers and conservation of water and control of its use.

Nearly all soils in underdeveloped countries, he said, are low in fertility and lacking in one or more of the essential plant nutrients, and in some cases needed lime, as well.

Speaking of the FAO freedom from hunger campaign, he said that in Iran, the use of phosphates and nitrogen had increased production of cereals by 50 percent to 150 percent. One or more nitrogen plants are under construction in Iran, Pakistan, India, Indonesia, the Philippines, and Formosa and others are in the planning stage, he added.

India plans to increase its use of fertilizers in 10 years from 120,000 tons annually to 1,750,000, he said.

Water problems, Sen said, involved water logged and saline soils and inefficient irrigation. He said education in this field was necessary, as well as work with the soil.

NELSON URGES ACTION

In a statement read by his agricultural coordinator, Robert Lewis, Governor Nelson urged the scientists to resolve the "ironic paradox of widespread hunger in the midst of occasional surpluses and potential abundance."

He said it was the duty of the United States to manage abundance of farm products for the use of humanity and with justice to the farm people who produced it.

Nearly a third of the world's people, he said, did not get enough to eat and for them "outright starvation is one of the real and menacing dangers that 'normal' life affords." The mission of the soil scientists, he said, was to speed knowledge and wise use of the soil and its conservation in the world.

POPULATION IS PROBLEM

Dr. Richard Bradfield, chairman of the Agronomy Department of Cornell University, said that unless something was done to reduce the rate of population increases, agriculturists could only delay the day when the world population would exceed the food supply.

Bradfield, president of the social science congress, said that 1 billion acres in the humid tropics seemed to have the greatest potential for expansion. He said the area had a continuous growing season and plenty of water, but these conditions had led to depletion of plant nutrients and had left the soil surface acid, thus reducing the effectiveness of commercial fertilizer.

The congress is being attended by more than 1,500 persons from 40 to 50 nations. It will continue through August 23.

[From the Wisconsin State Journal, Aug. 15, 1960]

ONE THOUSAND FIVE HUNDRED DELEGATES FROM 50 NATIONS OPEN SOIL CONGRESS HERE TODAY—STATE PIONEERING WORK SETS STAGE FOR SCIENTIFIC MEETING

(By Robert Bjorkland)

Madison took on the distinct character of the United Nations Sunday as 1,500 soil scientists registered for today's opening of the Seventh International Soil Science Congress.

Ranking soil scientists from 50 nations will be in the Wisconsin Union Theater on the University of Wisconsin campus at 9 a.m. today to participate in the sessions aimed at promoting peace and health of people by alleviating hunger in the world.

Some came direct from their countries, others have been touring the East and the Midwest to learn more of U.S. agriculture and its soil types.

FIRST TRIP

For many, this was their first visit to America and there were firm first impressions.

G. F. DeConinck, soil surveyor for a research institute in Brasschaat, Belgium, had his chance to meet Americans for the first time and found them with "not so much formality as people in Belgium have."

DeConinck searched cautiously for his words as he commented on the pride Americans have in America with almost a "complex of superiority."

LESS PRODUCTIVE

And after seeing the farms, he said that American farms were larger and much more mechanized, but European farmers were able to get much more productivity per acre.

The leader of the 32-member delegation from the Soviet Union was on his second trip to the United States.

I. V. Tiurin, Moscow, director of the Soil Science Institute, said that he took part in the first international session held in Washington, D.C., in 1927.

The Russian scientists come from the Academy of Science, Agriculture Academy, Ministry of Agriculture, numerous universities, agriculture teaching institutes, and chairs of soil science.

WEST COAST TOUR

Tiurin plans to be in Madison through the entire 9-day congress and travel through the South and return to Washington, D.C. Other delegates will go to the west coast. Their stay in the United States will be for 25 days.

C. K. N. Nair, of the College of Agriculture of Kerala state, India, said that the big American grant of surplus wheat was giving India "breathing space" so it could get started in its farm development programs to increase food supplies.

Nair said his trip here and that of nine other Indian scientists was completely financed by the Ford Foundation.

FOREST SOILS

Dr. Walter Wittich, chief of the forest soils institute at Gottingen University in Germany, said that he would take a special trip through Wisconsin to study forest soils.

His impressions of America were largely set by his son who was in the United States as a physician, and Dr. Wittich said it all turned out to be as he had imagined.

The big second-floor gymnasium area of the old red armory was filled with exhibits. More than a half acre of paneling was required to form the booths where soils material is on display.

PIONEER WORK

Wisconsin was a correct setting for the soil congress because of the intensity of soil conservation practices in the State and the pioneering work done on farms.

The stripcropping practices that are so popular through the State were worked out after ideas were sought from an old German farmer.

Coon Valley watershed became the first experimental conservation district in the world, and work started there put Wisconsin out in front in getting soil conservation practices on the land.

We Must Climb to the Hilltop

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Thursday, August 18, 1960

Mr. HUMPHREY. Mr. President, the distinguished junior Senator from Massachusetts has written an article on the national purpose for the August 22 edition of Life magazine which I commend to the attention of my colleagues. It is an article of nourishing wisdom.

There is one passage that I should particularly like to quote:

If we are to recharge our sense of national purpose, we should accept no invitations to relax on a patent mattress stuffed with woolly illusions labeled peace, prosperity, and normalcy. We should congratulate ourselves not for our country's past glories and present accumulations but for our opportunities for further toil and risk. Rather than take satisfaction in goals already reached, we should be contrite about the goals unreached. We ought not to look for excuses in the budget, but for justification in the dizzying rush of events and in the harsh realities of our time.

Mr. President, I ask unanimous consent that this splendid article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE NATIONAL PURPOSE DISCUSSION IS RESUMED—WE MUST CLIMB TO THE HILLTOP

(By Senator JOHN F. KENNEDY)

In all recorded history, probably the sagest bit of advice ever offered man was the ancient admonition to "know thyself." As with individuals, so with nations. Just as a man who realizes that his life has gone off course can regain his bearings only through the strictest self-scrutiny, so a whole people become aware that things have somehow gone wrong, can right matters only by a rigidly honest look at its core of collective being, its national purpose.

Thus, while on the one hand the fact that we have felt the urge to debate our national purpose signalizes our arrival at a potential crisis point, on the other hand the fact that we have entered into the debate willingly, indeed with gusto, bodes well for the eventual outcome.

Among our overindulgences of the past decade has been the lavish use of a kind of cloudy rhetoric that only befogs the truth. Yet basically we Americans prefer plain talk and commonsense. It is these we must apply if we are to know ourselves again.

The facets of this debate on national purpose are many. Other than to agree that the whole subject vitally needs airing, the debaters are split a dozen ways as to which aspect of it demands greatest emphasis. Some prefer to dwell on what has happened to our national purpose—whether irrevocably lost, permanently strayed or temporarily sidetracked; others on why what has happened has happened; others on what can be done by way of remedy or retrieve. Above all, the debate turns on precisely what this "purpose" is that, momentarily or forever, has gone from our midst.

The distinguished contributors to previous installments of this Life series have offered a variety of definitions of our national purpose, all of them valid. From this it can be seen that no one word or catch phrase will suffice to pinpoint it. Our national purpose is resident, obviously, in the magnificent principles of the Declaration of Independence and of the Constitution and Bill of Rights. It also plainly appears in the writings of Jefferson, Madison, and Hamilton, in the words of Jackson and Lincoln, in the works of Emerson and Whitman, in the opinions of Marshall and Holmes, in Wilson's "new freedom" and Franklin D. Roosevelt's "four freedoms." In common, all of these pulse with a sense of idealistic aspiration, of the struggle for a more perfect Union, of the effort to build the good society as well as the good life here and in the rest of the world.

There is, I think, still another way to describe our national purpose. This definition, while almost a literal one, is nevertheless not a narrow one. It is that our national purpose consists of the combined purposefulness of each of us when we are at our normal best: striving, risking, choosing, making decisions, engaging in a pursuit of happiness that is strenuous, heroic, exciting and exalted. When we do so as individuals, we make a nation that, in Jefferson's words, will always be "in the full tide of successful experiment."

Such a definition, because it implies a constant, restless, confident questing, neither precludes nor outmodes, but rather complements, the expression of national purpose set forth in our declaration, our Constitution, and in the words of our great Presidents, jurists and writers. The purpose they envisioned can, indeed, never be outmoded, because it has never been and can never be fully achieved. It will always be somewhere just out of reach, a challenge to further aspiring, struggling, striving and searching. Quest has always been the dominant note of our history, whether a quest for national independence; a quest for personal liberty and economic opportunity on a new continent from which the rest of mankind could take heart and hope; a quest for more land, more knowledge, more dignity; a quest for more effective democracy; a quest for a world of free and pacific nations.

It should be said at once that no nation has a corner on striving and aspiring any more than on virtue and compassion. Thus our national purpose finds echo in the minds of men of good intent everywhere. But our purpose may differ from others in the particular background against which it evolved and by three fundamental facts about us:

First, Americans, more than other peoples, have since independence cherished a strong sense of destiny.

Second, we have always been optimists about our national future. Down through the decades we have had our indentured servants, our slaves and Simon Legrees, our sweated immigrants, our Okies, our depressed and discouraged folk of many stripes. But we have been unfailingly confident of winning through all obstacles to realize our dream.

Third, Americans have always been willing to experiment. With no fedual inheritance, with little dead weight of caste or tradition, we have ever been in the mood for bold adventure. Our forefathers would not have tossed aside old associations and crossed the seas without it. New frontiers have always seemed unfolding on our horizon.

With these basic considerations, and because of them, the pace of change in this land has been faster than anywhere else on the globe. The change has been less noisy and melodramatic than in Russia or China, among others, for since 1865 it has lacked any real elements of violence. We believe in progress by evolution, not revolution. But for precisely this reason the progress has been deeper, saner and more continuously rapid. In our energy, our resourcefulness and our powers of organization, we can assert that the United States has been and is the most dynamic nation in history.

Since this is so, why then our current widespread sense of staleness, of frustration; why the gnawing feeling that we may have lost our way? In my mind there are two broad answers.

One is that the very abundance which our dynamism has created has weaned and wooed us from the tough condition in which, heretofore, we have approached whatever it is we have had to do. A man with extra fat will look doubtfully on attempting the 4-minute mile; a nation replete with goods and services, confident that "there's more where that came from," may feel less ardor for questing.

The second answer is that we have, of late, lacked the leadership we require—

human frailty being what it is—to remind us of our national purpose, to direct its shaping for current ends, to spur us to new efforts, to encourage and, if need be, to exhort.

In his stirring speech at Queen's Hall in London seeking World War I volunteers, David Lloyd George, soon to be Britain's Prime Minister, described a snug valley in his native Wales. Nestled between the mountains and the sea, shielded from the storms and stresses of the outside world, that little valley offered its inhabitants a placid and sheltered life. But on occasion, Lloyd George recalled, the young men of the valley would refuse to stay put. They would climb its highest hill to be inspired by the majestic peaks in the distance, to have their energies sharpened by the mountain breezes.

Too many Americans in the 1950s, I believe, have been living too much of the time in such a valley. We have felt contented and complacent and comfortable. Now it is time once again to climb to the hilltop, to be reinvigorated and reinspired by those faraway peaks, the principles that are vital to our national greatness, that underlie our national purpose, that foster our "American dream."

Whether we see them or not, those peaks never change. Whether we remember it or not, their meaning never diminishes.

Thus the task that lies ahead is not to create a new national purpose, but to try to recapture the old one. This is no call to retrogression, for this purpose, born 184 years ago, will be as noble and as fresh 184 years hence—and beyond.

It is those same old slogans and same old solutions, surrounding the national purpose, that we must guard against. The old ways will not do. They cannot do. The Census Bureau predicts that, if the present curve of growth continues, our population will reach 260 million in only 20 years. When we think of how this increase alone will clothe all our problems in growing urgency, we know that when we once again seize hold of our purpose, we will have to do so with new ideas and new vigor.

Where and how do we apply our national purpose to the challenges of 1960?

Survival is often listed as the major challenge today, and certainly other issues are overshadowed by the one issue that could render the rest moot. But although our physical safety as a nation is more imperiled than ever before in our history, survival alone is insufficient as an expression of national purpose. Mere physical survival, at the cost of our way of life, would be worth little; more importantly, survival alone is hardly an aspiration worthy of a great nations. The nobleman who, when asked what he did in the Rench Revolution, replied, "I survived," may have been hailed for his wit but for little else.

We remember too seldom that survival is threatened not only by ever more awesome weapons of death and destruction but also by a lack of aim and aspiration. Outside the walls of every nation that has grown fat and overly fond of itself has always lurked a lean and hungry enemy.

Competition with that enemy is today deemed by some to be our major challenge; but it, too, reflects our national purpose inadequately. We are, indeed, in competition with the Soviets, and to a large extent our hopes for the future rest on our comparative efforts in economic growth, in the arms race, in scientific achievement, in aid to other nations, in propaganda, in prestige, and in a host of other fields.

But we will err tragically if we make competition with the Communists an end in itself. Whatever we do in the name of that competition—improving our race relations, expanding our economy, helping new nations, exploring outer space, and all the rest—we ought to be doing anyway, for its own sake, whether competition exists or not.

Peace is humanity's deepest longing, and with the failure to achieve it all other aspirations fail, too. In acclaiming it as the major expression of our national purpose, however, we must know what sort of peace we mean. Certainly the unjust peace of subjugation, the uneasy peace of cold war or the fruitless peace of an interval between hot wars is far from a goal that will satisfy.

Prosperity, like peace, is desired by all, and our political orators have traditionally held out the goal of personal and national economic well-being as a primary American aim. But the good life falls short as an indicator of national purpose unless it goes hand in hand with the good society. Even in material terms, prosperity is not enough when there is no equal opportunity to share in it; when economic progress means overcrowded cities, abandoned farms, technological unemployment, polluted air and water, and littered parks and countrysides; when those too young to earn are denied their chance to learn; when those no longer earning live out their lives in lonely degradation.

No single one of these four challenges—survival, competition, peace, prosperity—sums up our national purpose today. The creation of a more perfect Union requires the pursuit of a whole series of ideals, ideals which can never be fully attained, but the eternal quest for which embodies the American national purpose:

The fulfillment of every individual's dignity and potential.

The perfection of the democratic process.

The education of every individual to his capacity.

The elimination of ignorance, prejudice, hate and the squalor in which crime is bred.

The elimination of slums, poverty and hunger.

Protection against the economic catastrophes of illness, disability and unemployment.

The achievement of a constantly expanding economy, without inflation or dislocation, either in the factory or on the farm.

The conquest of dread diseases.

The enrichment of American culture.

The attainment of world peace and disarmament, based on world law and order, on the mutual respect of free peoples and on a world economy in which there are no "have-not" or "under-developed" nations.

A dream? Of course—the American dream. No candidate for office, unless we were foolish or deceitful, would promise its fulfillment. But we are in urgent need of public men who will work toward its fulfillment, guiding, directing, and encouraging the popular impetus toward that end.

That this impetus exists is beyond question. We are not a people in panic or despair. We have not gone over the hill of history. We have simply, and fortuitously, begun to recognize that somehow we have gotten off the track, and that to get back on we will need stern effort, spirited leadership, and common sacrifice.

If we are to recharge our sense of national purpose, we should accept no invitations to relax on a patent mattress stuffer with woolly illusions labeled peace, prosperity, and normalcy. We should congratulate ourselves not for our country's past glories and present accumulations but for our opportunities for further toil and risk. Rather than take satisfaction in goals already reached, we should be contrite about the goals unreached. We ought not to look for excuses in the budget, but for justifications in the dizzying rush of events and in the harsh realities of our time.

For these are harsh times. The future will not be easier. Our responsibilities will not lessen. Our enemies will not weaken. We must demonstrate that we can meet our responsibility as a free society—that we can by voluntary means match their ruthless exploitation of human, natural, and material resources—that freedom can not only compete and survive but prevail and flourish.

It is not enough to debate: "What is the meaning of America?" Each of us must also decide "What does it mean to be an American?" Upon us destiny has lavished special favors of liberty and opportunity—and it therefore has demanded of us special efforts, particularly in times such as these.

It requires each one of us to be a little more decent, alert, intelligent, compassionate and resolute in our daily lives—that we exercise our civic duties, whether paying taxes or electing Presidents, with extra pride and care—that we use our freedom of choice to pursue our own destiny in a manner that advances the national destiny, in the work we produce, the subjects we study, the positions we seek, the languages we learn, the complaints we voice, the leaders we follow, the inconveniences we endure.

If a dark corner of Africa needs technicians—if a troubled spot in Asia needs language specialists—if a Soviet threat in Berlin requires patience and determination—if the space race requires better schools—we must and can demonstrate that the dedicated efforts of free men can meet these needs better than the efforts of totalitarian compulsion.

Every American must take far more seriously than he has in the past decade his responsibility for achieving and maintaining a democratic society of a truly model kind, worthy to be the champion of freedom throughout the world.

We Americans must again commit ourselves to great ends. We must resume our searching, surging, questing. Then, assuredly, we will come nearer the vision of John Adams of Massachusetts, who, in 1813, assured his friend Thomas Jefferson that our Republic would someday "introduce the perfection of man."

Korean Youth Will Benefit From Kansas City Project

EXTENSION OF REMARKS

OF

HON. STUART SYMINGTON

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Thursday, August 18, 1960

Mr. SYMINGTON. Mr. President, in the spring of 1959, a group of 22 members of the Women's Kansas City Commission for International Relations and Trade made a 20,000-mile trip through the Orient. The good-will visit of these Missourians was a great success, and serves as an excellent example of the role that individual citizens can play in furthering the cause of international understanding.

I commend the story of this trip and the work of this group to all interested persons and ask unanimous consent that a letter from Mrs. Charles S. Demaree, dated June 30, 1960, and an article from the Kansas City Star, September 20, 1959, be printed in the Appendix of the RECORD.

There being no objection, the letter and article were ordered to be printed in the RECORD, as follows:

Senator STUART SYMINGTON,
Senate Office Building,
Washington, D.C.

MY DEAR SENATOR: We left Kansas City April 1, 1959, and returned May 5, after visiting Alaska, Japan, Korea, Taiwan, Hong Kong, Thailand, Cambodia, the Philippine Islands, and Hawaii. Authorized by the city council and commissioned by the mayor, we went as good-will ambassadors from Kansas City, Mo. From our reception in those countries and the favorable publicity both at home and abroad, we feel assured our mission was unusually successful.

We "patted on" over 5,000 red hearts which read in Japanese or Chinese, "Everything's up to date in Kansas City." Also designed especially for us was a beautiful gold medallion, showing the Eastern and Western Hemispheres slightly overlapping, symbolizing our interdependence. In the middle of the United States is a tiny red enamel heart for Kansas City, "The Heart of America." Around the medal's rim are the words, "Women of the World United for Peace." These medals we presented to the most distinguished women in each country—women outstanding in government, education, social work, the arts, and business, e.g., Mrs. Syngman Rhee; Mme. Chiang Kai-shek; the newly wed Crown Princess of Japan; Dr. Helen Kim, president of the largest girls' college in the world (over 5,000 students) and for whom a Korean national holiday was declared on the occasion of her reaching the venerable age of 62; Helen Magsaysay Ho, internationally famous artist of the Philippines, and many others. We presented these medals at the receptions and garden parties we gave in each capital, inviting hundreds of native guests.

Senator Pacita Gonzales is the only woman in the Philippine Senate. (I had written her, and many other people, before I left Kansas City.) She invited us to be her guests at a regular session of the senate. Granted the special privilege of the floor, she extolled our commission, the purpose of our visit, and the importance of Philippine-United States relations, in a 20-minute address. She pointed out the previous guests so honored with seats on the floor of the senate were Members of the British Parliament. Later she gave me copies of the congressional record of her speech and a tape recording of it.

In Japan, we wished to place a wreath in honor of Japan's Great Emperor Meiji, grandfather of the present Emperor who freed Japan from feudalism some 80 years ago. The Head of the Imperial Household in Kyoto not only arranged for the presentation of a magnificent wreath of white chrysanthemums, the national flower, but gave us the rare privilege of holding the ceremony at the front of Coronation Hall, where all of Japan's Emperors are crowned. He told us we were the first foreigners ever to see inside the Imperial Shrine. It was an impressive and moving experience.

We took with us a film made by the Kansas City Chamber of Commerce, entitled "Sound of a Million," showing a typical day in the lives of people living in the heart of America. Our foreign viewers evidenced great interest and could not fail to be enlightened.

Within a week after our return home, we discussed our trip before a capacity audience of 300 at the Woman's City Club here. Since then we have shown films, exhibited our purchases, and made hundreds of speeches to men and women members of organizations of all kinds, and all over the State of Missouri.

In the fall, our members gave $1,500 to help educate young girls and boys who were victims of the Korean war. After conversion into relief hwan, the gift amounted to about $2,200. We have just sent a check for $500 to our Ambassador in Chile, where we visited in 1957.

Each commissioner paid her own way. The collective expense of our "Salute to the Orient" was over $100,000. We think we made a valuable contribution to better international understanding and friendship in a highly important and strategic part of the world.

Sincerely yours,

Mrs. CHARLES S. DEMAREE,
President, the Women's Kansas City Commission for International Relations and Trade.

[From the Kansas City Star, Sept. 20, 1959]

KOREAN YOUTH WILL BENEFIT FROM KANSAS CITY PROJECT

(By Erma Young)

Although the season was April, the melody was "Jingle Bells," as an 8-year-old Korean orphan sang for American friends visiting in Seoul. The Christmas song was the only one the girl Kim, Young Hi, could manage in English. It amused her listeners and bothered the little singer not at all that the "Jingle Bells" came out "Yingle Bells."

The memory of this child and other needy boys and girls of Korea has prompted a move of the Women's Kansas City Association for International Relations and Trade to assist in youth projects there. Three checks, totaling $1,400 and representing contributions of the association, are on the way to Korea. The members contributed from $25 to $100 each. Miss Emma Hall, chairman, Dr. Hester Wilson and Mrs. Julian Huckins, cochairmen, headed the committee for the project.

Holy King orphanage in Seoul, home to little "Yingle Bells," as the Kansas City women call the child, will receive $180. Sixty dollars supports an orphan for 1 year. One thousand dollars will finance teacher and secretarial training for three young women students at Union Christian College, Seoul.

The remaining $220 will be used for the "Shoeshine Boys and Girls" project, a war orphans plan in which Mrs. Syngman Rhee, wife of the president of Korea, is especially interested.

The money has been forwarded by Mrs. Charles S. Demaree, president of the association, to Henry F. Arnold, public affairs officer, U.S. Embasy, Seoul. In a letter to Arnold, Mrs. Demaree explained that the State Department had advised her to send the checks to him and ask him to make the presentations to the beneficiaries. The letter also expressed appreciation for the friendliness and courtesy shown the Kansas City women when they were in Korea last April, as a part of a 20,000-mile air trip through the Orient.

"Yingle Bells" and a 5-year-old child girl, Lee Sook Hi, also from the Holy King orphanage, were brought to Korea House, a government center, by the orphanage president, Lee Hong Joo. The Kansas City association members, who were being entertained at Korea House that day, had expressed interest in the work being done with war orphans.

Miss Nancy Jane Jones, a member of the Kansas City group, had visited the orphanage earlier and had chosen Kim Young Hi as the child to meet the ossociation. Lee Sook Hi shyly stepped forward and tugged at the visitor's skirt, as if to say "Take me, too." So the 5-year-old went along with the older girl. She smiled proudly as "Yingle Bells," dressed in red overalls, green sweater, and a yellow hair bow, sang for the Kansas Citians. Mrs. Demaree's letter requested that the $180 allocated for the orphanage be distributed for 1 year's care for Kim Young Hi and 2 years' care for Lee Sook Hi.

Through Dr. S. Luk Kim, president of Union Christian College, and Dr. L. George Paik, former Minister of Education in Korea and now president of Yonsei University, the association members learned of the great need for help in educating young Koreans. Dr. Paik was host to a group of the Kansas Citians in Seoul. Mrs. Demaree later talked with Dr. Kim when he was given an honorary degree at Park College, Parkville, last June.

Dr. Kim said that Union Christian College was the only one in Korea that accepts young women students who cannot pay. Many of the girls are daughters of Christian ministers who were killed in the war. He explained that $1,000 would educate three young women and prepare them to earn their own living. He indicated that he would choose the three students to benefit from the Kansas City donation.

When the Kansas Citians were guests of Mrs. Rhee at Kyung Mu Dai, the Rhee home, the President's wife told of the "shoeshine boys and girls," a project to help homeless wanderers learn a trade. The project for boys and girls who sleep in the streets and doorways was begun by the Pusan middle police station and has since attracted help from the city of Pusan, the 2d ROK Army District Command, and various world organizations for children's relief.

Facts on Rural Electrification

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Thursday, August 18, 1960

Mr. WILEY. Mr. President, the rural electrification program—now 25 years old—has brought the miracles of electricity—heat, light, and power—to millions of families, farms, churches, schools, and other establishments.

The REA has been particularly important in serving fringe areas that were not commercially profitable.

Today, for example, more than 96 percent of America's farms are electrified—more than one-half of which are served by REA.

Today I received from Richard A. Dell, director, legislation and research, National Rural Electric Cooperative Association, an REA factbook. Reflecting upon the scope of service which this splendid program has provided this country in its 25-year lifetime, I ask unanimous consent to have a brief synopsis of its highlights printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

QUICK RURAL ELECTRIFICATION FACTS

(NOTE.—The following material is, in a way, a synopsis of this book. It offers a quick reference source for the essential information about rural electrification. In addition, some of the items contain later figures than those included in tables and charts in the pages which follow. This is possible because total, comprehensive statistics are available long before official breakdowns are made public.)

BASIC FACTS

Electric systems financed by the Rural Electrification Administration connected 139,000 new consumers during 1959, now serve 4,736,000 homes, farms, and other rural establishments.

REA has 987 active electric borrowers; 983 of them are consumer owned. REA has made electric loans to 24 profit power companies, totaling $20,067,200. Four of the power companies are active borrowers at this time.

Rural electric systems serve consumers in every State except Connecticut, Massachusetts, Rhode Island, and Hawaii.

More than 96 percent of America's farms are now electrified, compared with 10 percent when REA was established in 1935. More than half are served by REA borrowers.

NATURE OF THE PROGRAM

Rural electric systems are locally owned, controlled, and operated by the people they serve. Members elect directors, who establish system policy.

REA, a Federal agency within the U.S. Department of Agriculture, serves only as a banker for the systems. It does not generate or distribute electric power.

Funds for REA loans are annually authorized by Congress. Loans are repaid over a 35-year period, with interest at 2 percent.

Rural electric systems provide service on an area coverage basis, even in the most sparsely settled areas. The systems average just over three consumers per mile of line. A comparable national average for the profit power companies is not available, but reports indicate they average more than 30 consumers per mile of line.

The rural electric systems are voluntarily associated in State, regional, and national service organizations. Nine hundred and fifty-eight systems are members of the National Rural Electric Cooperative Association.

The systems, usually through State associations, publish 28 monthly consumer magazines with a total circulation of more than 2½ million.

FINANCIAL RECORD

REA has approved loans totaling $4 billion for rural electric service.

As of December 31, 1959, REA borrowers had repaid $823 million in principal, and $397 million in interest. Of the principal payments, $154 million had been paid in advance of the due date. Only a fraction of 1 percent of repayments due was in arrears more than 30 days.

The net worth of the systems totaled $602 million in December 1959—18.2 percent of total assets. This was an increase of 1.6 percent over 1958.

Operating revenues for the systems amounted to $618 million for 1959, an increase of 9.8 percent over 1958. Net margins totaled an estimated $87.7 million, an increase of 16.6 percent over 1958. Forty-five systems had deficit net margins in 1958, and 148 failed to make debt service—REA's standard for judging the financial health of its borrowers.

PURPOSE OF LOANS

The bulk of REA loans are now made for system improvements and generation and transmission facilities. In fiscal 1959, 17.3 percent of loan funds were for generation, 19.2 percent for transmission, 26.3 percent for system improvements, 35.4 percent for new distribution facilities, and 1.8 percent for consumer wiring, plumbing, and equipment financing.

RETAIL POWER SALES

The rural electric systems sold 25.3 billion kilowatt-hours in 1959. Average monthly residential consumption per consumer was 343 kilowatt-hours, an increase of about 10 percent over 1958.

The average cost per kilowatt-hour for residential rural electric consumers in 1959 was 2.52 cents. The average monthly residential power bill was $8.64.

WHOLESALE POWER SUPPLY

The wholesale power requirements of rural electric systems are doubling about every 5 years.

Rural electric systems generated 4.9 billion kilowatt-hours in 1959, and purchased 24.3 billion kilowatt-hours.

Of their wholesale power purchases in fiscal 1958, the systems bought 9.1 billion kilowatt-hours (39.1 percent) from profit power companies at an average cost of 8 mills per kilowatt-hour. They bought 10.8 billion kilowatt-hours (46.5 percent) from Federal and other public suppliers at an average cost of 5.4 mills per kilowatt-hour.

The following is the breakdown of Federal power sales in fiscal 1958: Rural electric cooperatives, 8.6 percent; city-owned power systems, 20.1 percent; profit power companies, 12.3 percent; private industry, 18.5 percent; Federal defense agencies, 30.5 percent; State and other public bodies, 10 percent.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at $1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

Appendix

Address by Senator Kefauver to the National Association of County Officials

EXTENSION OF REMARKS
OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Friday, August 19, 1960

Mr. KEFAUVER. Mr. President, I had the honor this week to address the National Association of County Officials at their silver anniversary conference at Miami, Fla.

It has been my experience that the men and women who make up this organization are a vital ingredient of our American democracy. Our Nation is composed of cities and counties and States—each with its important role in government.

It is at the county level where the problems of today are growing into a most serious challenge as our population explosion spreads the cities widely into the suburban areas of the country.

This challenge is being met courageously and with good planning by these county officials who carry the heavy burden of coming to grips with rapid development of their political subdivisions.

Most of the programs that the national association sponsors and works for are programs which the Democratic Party has worked for and sponsored over the year.

I ask unanimous consent that my speech before this outstanding association be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

HOW THE DEMOCRATS STAND ON THE AMERICAN COUNTY PLATFORM

(Address by Senator ESTES KEFAUVER at Miami, Fla., to National Association of County Officials)

It is a great honor and privilege—for a number of reasons—for me to be here with you today.

It is always rewarding to speak to members of your organization, because you are the people upon whom such a large percentage of our citizens must depend for good government, for efficient government, and for progressive government.

It is a particular pleasure to be able to be with you at this silver anniversary conference. Your organization is not only growing venerable, it is also growing by leaps and bounds in size and, more to the point, in importance.

I am honored to represent—at least informally—the Democratic Party and the Democratic point of view. I am certain that you could have gotten a more polished speaker but you could not have found one who believes more deeply in the Democratic program and its importance to the future of our great country.

Recently, I took a little trip that carried me through all of the 95 counties of Tennessee. For me, it was a worthwhile trip in many ways.

During that trip, I talked with hundreds of county officials. I have seen many of them here today. I learned much from these men and women and, again, I wish to express my gratitude to them.

Despite their many, many problems, most of these public servants are devoted to their tasks and are full of enthusiasm about their counties. They are full of good ideas and good plans, and the vast majority of them face the future with optimism.

Yet, almost every one of them stressed the importance of solving one basic problem: What do we do with an expanding population, a greatly increased need for services, and a shrinking tax base—and a near breaking point in local taxation?

I believe that the Democratic Party over the years has evolved a partnership between the Federal Government and State and local governments which, if followed and fostered in the future, will solve this underlying problem.

This partnership has three foundation stones.

First, the Democratic Party believes that it is best to attempt solving local problems locally, just as it is best to let private enterprise do most jobs.

A few years ago at an annual conference in Chicago, your association approved a resolution calling upon every county in the United States "to prepare itself for the assumption of the greater governmental responsibilities which lie just ahead so that local governments across the Nation may justify the faith and confidence which have been reposed in them by the people." In my view, county governments must continue to assume more and more resopnsibilities in the years immediately ahead.

Second, local governments have encountered many problems without assistance, and these problems are common to local governments throughout this county. In this area, there is need for Federal and State cooperation with, and assistance to, municipalr governments.

Third, administratively, the best way to handle these problems is through the advice and help of the State, county, or municipality.

Many of these problems are the direct result of an almost exploding population in our country. But many of them stem almost wholly or in large measure from two migrations, which are ever increasing in intensity.

One is a migration from the cities to the suburbs, and this migration will not cease until we take the drastic steps necessary to clean up and rebuild our cities.

The other is a migration of people from the farms to the urban centers. I deplore not having a farm program which will permit families to stay on the farms. But I recognize that increased mechanization will continue the flow of people to the cities.

The crush of population has and will continue to multiply the great urban-suburban problems of which we are all only too familiar.

These problems are common to thousands of communities. And, in the view of the Democratic Party, the local communities have no way of solving many of them without help. The widespread nature of the problem and lack of a local solution adds up to a national responsibility.

Every State is at the limit—or close to it—of its taxing ability. So are counties. So are cities.

The Federal Government on the other hand, even under the restrictive Internal Revenue Act of 1954, is able to assist in many of these matters.

Without Federal assistance, many pressing problems will not be solved.

This truism—this fact of life—is reflected time and again in the American county platform.

I have been familiar for many years with the general objectives of the National Association of County Officials and where you stood on literally thousands of pieces of Federal legislation. In preparation for meeting with you today, I have studied your most recent platform and policy statements in detail.

The question that I am supposed to answer is: Where does the Democratic Party stand on them?

The short answer is that the Democratic Party goes at least—and I repeat, at least—95 percent of the way with you.

A good indicator of this great similarity of objectives and means is to compare the American county platform with the domestic planks in the Democratic platform which was actually drawn up recently by the delegates to the Democratic Convention in Los Angeles.

Take almost any subject that you choose—airports, housing, tax on local bonds, highways, aid to dependent children, urban renewal, regional housing, control of water pollution, etc., etc., etc.—and you will find that on almost any one subject there is a striking resemblance between the two platforms. Naturally, there are some differences, especially in detail—and I shall discuss the major of these differences later—but, on the whole, they are strikingly similar platforms.

It might be pointed out that there is also a remarkable coicidence between the platform of the Republican Party and that of your organization.

Does this really mean that there is no difference between the parties on the major subjects of interest to you as county officials?

I think not.

If you examine the Democratic and Republican platforms in detail, I think you will discover that they reflect a considerable difference. The Republican platform is liberally sprinkled with high-sounding phrases but is short on specific commitments.

Further, there are better indicators of the differences between the parties than election-year platforms. The real differences show up in a number of other ways.

It has been Democratic Presidents and Democrats Congresses which have originated almost all of the partnership programs which are keystones in your American county platform. If you go down the long list of Federal-State-local cooperative programs, you will find that almost every one of them is a Democratic program in origin.

Also, on the question of timing, the Democrats have favored establishment of Federal aid plans before being forced into them by the sheer weight of adverse circumstances. If things get bad enough, the Republicans will support a "crash program," which frequently is too little and too late. Their recent program for area redevelopment is a good example. They are not willing to admit that States and local governments need assistance until things have hit rockbot-

tom. They will admit to a national responsibility only as a last resort.

Another difference comes in the question of enthusiasm. Whereas the Democrats have enthusiastically initiated many programs of power development, highway modernization, control of water pollution, and a hundred others, the Republicans go along with these programs with a marked lack of enthusiasm—you might even say they drag their feet from time to time.

Last, but not least, is the question of which of the parties has the better record of delivery on promises. When looking to the future for expectations, we must look to the past for performance.

And when we look back it is clear which of the parties has delivered on the programs of importance to you. It is clear which of the parties has supported these programs in Congress when the chips are down. And it is clear which party's Presidents have signed such programs into law and which party's Presidents have scuttled such programs through use of the veto.

President Eisenhower has vetoed important legislation with respect to housing, urban renewal and slum clearance, area redevelopment, public works, aid to airport construction, and stream pollution control.

As you know, the use of the President's veto power has somewhat dampened Federal assistance programs. It has not ended them, but the veto and the threat of veto have resulted in the drastic scaling down of a number of specific programs. The constant reminder that the public works bill was vetoed twice last year serves to delay many very badly needed projects.

I said earlier that I would discuss the points of difference as well as the points of agreement between your platform and that of the Democratic Party. I could find only two differences of any consequence.

First, your platform is specific in its opposition to the establishment of a Federal Department of Urban Affairs. As I understand the Democratic proposal, the new department would work not exclusively on urban problems but would concern itself with suburban and metropolitan problems at the same time. After all, the problems are so intertwined as to be inseparable. As this proposal is spelled out in the coming months of the campaign, I hope that you and your association will follow its development with an open mind. I think that such a cabinet office might be almost as useful to many, many county officials as it will be to city officials.

The second major difference of opinion comes with respect to Federal aid to education, which is supported by both major political parties. I shall not try to proselytize on this subject, but rather explain why I favor Federal aid to education and why my party is for it.

The most common justification for Federal aid to education is the need for building an educational system in this country that will allow us to compete with the Communist countries in the years ahead. This is a valid justification. If our educational system falls behind theirs in this age of frightening technological advance, the next generation of Americans will fall hopelessly behind in national defense, and then it will be too late to do anything whatsoever about it.

For myself, I would advocate radical improvements in our educational system if there were no external threat at all. We are the richest nation in the world, and we can afford not only an adequate school system but a really first-rate educational system for all our children. Sadly enough, this is lacking in many places.

There is no argument that it would be preferable to have our school system brought up to par by local or State efforts. And in recent years local communities and States have made herculean efforts to keep up with the demand for more and better schoolrooms and for more and better paid teachers. Yet there is a serious shortage of both today.

The chief stumbling block, as you all know, is tax resources. At the moment local tax resources are stretched to the breaking point.

The Federal Government does have the tax resources to be of assistance and this Federal aid can be rendered in such a way as to leave local control unimpaired. It can also be rendered in such a way as to allow States and local communities flexibility as to how the funds are to be used, either for school construction or to supplement teachers' salaries.

I have talked too long, but I find that the question of Federal-State-local cooperation is not only one of the most interesting but one of the most complex questions that we face. We must and, I believe, we will continue to solve it on a case-by-case basis.

There is no magic formula, no single equation. But where there is good will, mutual trust, and a spirit of cooperation, we can go forward with a number of vital and progressive programs.

Your association has a program and a platform which are so close to those of the Democratic Party that I can see no obstacle to our going forward together.

Without Federal and State cooperation with, and assistance to, local communities, many of our problems will not be solved. They will simply canker and increase and ruin the life of our communities.

With continuing cooperation, they will be solved and America's great potential will be realized.

Thank you.

Polish Children's Hospital

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Friday, August 19, 1960

Mr. HUMPHREY. Mr. President, the American Research Hospital for Children in Poland is a dramatic and imaginative expression of the heart of America at work in the cause of peace and justice.

It has been my privilege to work closely with the man who conceived this project and who is the guiding light, Mr. Biernacki-Poray. In this year's mutual appropriations bill we shall have the opportunity to provide the means for the long overdue start on this wonderful project.

The story of the Children's Hospital in Poland was best described in an article published in the Saturday Review of July 23, 1960. The title of the article, "What One Man Can Do," reveals the answer to the success of this project.

I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHAT ONE MAN CAN DO

(By Hallowell Bowser)

In this era of multibillion dollar military budgets and multimegaton atomic weapons, a large percentage of the modest, constructive projects undertaken by average citizens have a way of being overlooked. As a result, many of us nurse the brooding conviction that there is nothing the ordinary citizen can do to change his world, a world in which he feels disconnected, helpless, alienated from the governmental processes which intimately affect his life. Fortunately, there are many exceptions to this general rule.

Consider the story of Mr. W. O. Biernacki-Poray, who practically singlehandedly conceived, designed, and obtained the support of the American and Polish Governments for the projected American Research Hospital for Children in Poland. Not much has been said publicly about the project, but there is a fair chance that within a few years it will be regarded as one of the impressive symbolic ventures of our time. It is a venture which took shape because one man decided to act on his convictions.

The story begins in February 1958, when 3-year-old Christina Biernacki-Poray, of Montclair, N.J., was stricken by a violent, mysterious virus infection. The incident had a shattering effect on her father, a Polish-born architect now living in the United States. "The vigil of that agonizing night, the desperation of that longest night of my life," he later said, "brought to a focus in my mind the real need for a practical way to help the sick children of countries which, like my native Poland, had grossly inadequate medical facilities. Within 3 days my Christina was on her way to recovery. But meanwhile I had formulated the idea of building in Poland a medical center for children."

Mr. Biernacki-Poray's characterization of the state of medicine in Poland was hardly exaggerated. Describing the Polish scene circa 1957, Polish-born author, Christine Hotchkiss, wrote in her book "Home to Poland":

"In Infant Jesus Hospital in Warsaw I saw X-ray apparatus glued together with tape, surgical instruments black with age and still used in operating rooms. Few thermometers are available, one large hospital had only 12 to go around."

Such medical conditions were not untypical; even before the devastation of World War II, Poland's medical facilities were inadequate by general European standards. During the war, some 6 million persons living in Poland lost their lives, and postwar boundary reshuffling cost the country almost 11 million people and crippled its economy. Today, most Polish families live in one room, have no refrigeration, and share a kitchen and bath with six other families. Medical conditions are of a piece with this picture of general deprivation.

With this situation in mind, Mr. Biernacki-Poray went to Washington in the manner of Mr. Smith or Mr. Deeds. Soon, despite discouragement and extraordinary difficulties, he had pledges of cooperation from the U.S. State Department, the Polish Government, and CARE, and from John Richardson, Jr., an investment banker who had previously done a heroic job of obtaining American medical supplies for Poland. Senators Hubert Humphrey and Jacob Javits, Representative Clement J. Zablocki, Dr. Howard Rusk, and the editor of SR were among the many others who supported the project.

The difficulties were legion, but Mr. Biernacki-Poray kept moving. On June 17, 1960, the mutual security appropriations bill was amended to permit the expenditure for the hospital of $3,500,000 (tourist rate) in American farm-commodity credits on deposit in Poland. Construction will take about 3 years, and will probably begin this fall, after the hospital committee arises privately an additional $150,000, and signs an agreement with a foundation or medical center willing to supervise the flow of information between the hospital and medical authorities outside Poland.

The Children's Hospital was designed with imagination and loving care by Mr. Biernacki-Poray, who contributed gratis his services and those of his staff. The building is a low-lying, T-shaped, 400-bed structure that incorporates such modern elements as radiant-panel heating and cooling, and a circular dormitory designed to give the nurses easy access to their young patients. The hospital will occupy a high plateau just outside the steel center of Krakow, in full view of the city. The Krakow site was chosen because the city's population has more than doubled since prewar times, with little improvement in medical facilities. Another consideration was the fact that the Jagiellonian University of Krakow, the oldest medical center in Europe, is in this city. The Children's Hospital will prove an invaluable clinical and research component of the university's medical school; for this reason, completion of the hospital is scheduled for 1964, so that it may be presented to the university at ceremonies honoring the institution's 600th anniversary. The hospital is expected to have an ameliorating effect on standards of medical practice throughout the middle and east European countries.

Not the least of the hospital's good effects is the positive encouragement which it should give to men of good will who are diffident about translating their beliefs into action. Gleaming high above Krakow, the American Research Hospital for Children may someday signalize to men everywhere the fact that individual initiative and dedication can have a positive effect on seemingly remote governmental processes. But whatever its larger implications, the hospital will be a reassuring sight to the parents of Krakow, and will certainly stand as something of a monument to W. O. Biernacki-Poray, who has shown us what one determined man can do.

Support for Extension of Conservation Reserve of the Soil Bank

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Friday, August 19, 1960

Mr. WILEY. Mr. President, as we know, the conservation reserve of the soil bank is dead—after 1960—unless action is taken by this postrecess of Congress.

We recognize, of course, that the conservation reserve is not a perfect program.

During its brief lifetime, shortcomings have emerged. However, there have been an extensive number of offsetting factors, including the removal this year of an accumulative total of about 28 million acres from production.

If the soil bank is not extended, we must recognize that a large proportion of this land next year will come back into production.

By logical deduction, it is reasonable to assume that an imbalanced supply-demand situation will be further thrown "out of kilter" because of the increased output from the enriched acreage coming back into production of crops—many of these now heavily in surplus.

As we know, the administration has recommended the extension of the soil bank. As yet, however, Congress—without approving any alternatives to this overproduction problem—has been reluctant to provide such an extension.

Today, I was pleased to receive from Mr. A. D. Sutherland, chairman of the land-use committee of the Izaak Walton League of America, the views of the league on the need for extending the conservation reserve.

Reflecting the public-interest views of this splendid organization, I ask unanimous consent to have the statement printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

LAND RETIREMENT—CONSERVATION RESERVE—SOIL BANK

As chairman of the Land-Use Committee of the Izaak Walton League of America, permit me to express our views on the conservation reserve program. Our conclusions were arrived at after listening to officers of the Farmers' Union, National Grange, American Farm Bureau Federation and members of the Departments of Agriculture and Interior. As a result, at a national meeting in 1954, it was our conclusion that a soil bank program is sound from a conservation point of view as well as from a taxpayer's point of view.

Permit me to give the reasons.

1. The current $2,300 million annual payment for surplus crops is a clear indication that millions of acres of land are unnecessarily used to the detriment of the soil and the taxpayer.

2. That upon the expiration of the present contracts covering 28 million acres in the conservation reserve, these 28 million acres will be added to lands now producing food.

3. Past history has taught us that if a payment is made to retire a part of a farm, the owner used the payment to increase the production on the remainder of the land.

4. The past acts of Congress have provided for a retirement of a comparatively small portion of the lands over a period of years and the program has not been fully implemented. The effect of retiring 28 million acres as provided by the act in effect in 1959 will not be known until the end of 1960.

5. Planting idle lands to grasses and trees holds the soil from erosion by wind and water, affords cover for wildlife and from a conservation point of view is a sound program.

With this in mind, we believe the objective of preserving soil not needed for crops and a reduction in the annual cost can be accomplished by an act of Congress which would direct the Secretary of Agriculture to enter into 3-year contracts with wheat producers. A sufficient acreage should be contracted for so as to eliminate the wheat surplus. The same directive can be made to apply to lands producing corn and cotton. The remaining acreage shall be retired as in the judgment of the Secretary of Agriculture shall be necessary to control an overproduction. The total acreage to be retired should be not more than 60 million acres. The cost of such a program as to wheat is illustrated by the following:

Estimated annual surplus, 500 million bushels.

Estimated production per acre, 20 bushels.

Acres to be reduced to eliminate surplus, 25 million acres.

COST OF CONSERVATION RESERVE WHEAT PROGRAM

Market under price support, $1.75 per bushel.

Average yield per acre, 20 bushels.

Average receipt from wheat per acre, $35.

Average cost to producer, 60 percent.

Average cost per acre to producer, $21.

Net yield per acre, average $14.

Acreage to be reduced to eliminate surplus, 25 million acres.

Average payment per acre, $14.

Annual cost per year to eliminate surplus of wheat, $350 million.

Using a similar formula applicable to corn, the estimated cost of eliminating the surplus corn crop would be in the neighborhood of $120 million.

The foregoing program would eliminate rigid controls of price and production and permit the operation of a free economy, which has been basically inherent in the fundamentals of the American way of life.

You may be assured that the Izaak Walton League of America is a disinterested party except from a public point of view, and we submit our proposals in all sincerity.

Vice President Nixon Wrong on Medical Care Plan for the Aged

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Friday, August 19, 1960

Mr. ENGLE. Mr. President, I would like to call to the attention of my colleagues the following statement made some weeks ago by Vice President NIXON on the matter of medical care for the aged. I ask unanimous consent to have the statement printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY THE VICE PRESIDENT REGARDING THE ADMINISTRATION MEDICAL CARE BILL

The administration medical care bill deserves the support of all American who recognize the need for better medical care for the aged and who want to meet that need without adopting a program which would open the door for socialized medicine, as would the Forand bill.

It is superior to the Forand bill in these respects:

1. The administration bill provides coverage for 12½ million people over 65 who do not have the resources or the opportunity to obtain adequate health insurance coverage.

The Forand bill provides no coverage whatever for 4 million aged people who are not covered by social security. Over 2 million of these 4 million have incomes of less than $1,000 a year. This important group of 2 million is covered by the administration bill.

2. Under the administration bill those who are eligible for the program have complete freedom of choice as to whether they desire to participate in it or to provide for their own protection on an individual basis.

The Forand bill compels all those on social security to participate in the program regardless of whether they need it or want it.

3. The administration bill provides for the use of virtually all medical facilities and services, including medical, nursing and other health services, in the patients' own homes, thereby serving the need of the patient most effectively and economically.

The Forand bill would put a still heavier load on already overburdened hospitals and skilled nursing homes, since its benefits are

available only in institutions. In effect, in order to get the benefits of the program, those participating would be forced to go to hospitals and nursing homes, even when they did not desire to do so.

4. The administration bill preserves the opportunity for private insurers to continue to expand their insurance coverage for the aged. The Forand bill would inevitably curtail the opportunity for continued growth in the coverage and adequacy of voluntary health insurance and would set up irresistible pressures for establishing a compulsory health insurance program for all people regardless of age—a development which inevitably would lead to the socializing of the medical profession. Importantly, the administration program avoids that threat because of its basic voluntary nature.

5. The administration program provides a comprehensive 10-point benefit program which would substantially meet the costs of long term or other expensive illness. The Forand bill provides only a 3-point benefit program limited to the first dollar costs involved in institutional care and surgery. In a nutshell, the administration bill offers the best protection against the costs of catastrophic illness.

The difference between the administration's program and the Forand bill goes to the fundamental nature of our free society. The Forand bill and similar plans would set up a great state program which inevitably would head in the direction of herding the ill and elderly into institutions whether they desired this or not. Such a state program would threaten the high standards of American medicine.

The administration program recognizes the medical problems of the elderly but preserves our basic American principle—a freedom of choice. This would permit elderly citizens who need medical care to accept institutional treatment if they desired and would also enable them to stay home—a choice which many of them undoubtedly would take—and still receive the medical care which they need in the advanced years of life.

Mr. ENGLE. Mr. President, I think the Vice President erred in his assessment of the advantages of the administration proposal as against those of the Forand bill, and I would like to comment briefly on the major points in his statement.

Even if the administration proposal were passed by the Congress, no one would receive benefits without the action of State legislatures. Ninety-nine State legislative bodies would have to act on enabling legislation and authorizations. The prospect of favorable State action should be judged in the light of the recent statement by 30 State Governors, representing more than two-thirds of the U.S. population, advocating that health insurance for the aged be provided through the OASDI system, rather than through Federal-State financing.

Further, before the claim for coverage of 12½ million people could be realized, each State would have to enter into negotiations with insurance carriers, and each person potentially eligible would have to prove his financial need and many would have to pay an enrollment fee.

And in the highly unlikely event that all of that were accomplished, an enrolled individual would have to pay medical bills of $250 from his own resources—$400 for a retired couple—before he could receive the first penny of benefits from the administration's so-called health program.

The Vice President states that each individual eligible would be free to choose whether he wishes to participate. The individual's choice is limited in reality only to whether he will accept the benefits if his State offers them. The taxes to finance the program would be equally compulsory under the administration program as under the Forand bill. And how much freedom would there be for the individual living in a State whose legislature was either unwilling or unable to raise the funds necessary to participate? As I understand freedom—it means freedom to participate—as well as freedom not to participate. The Vice President seems to understand "freedom" to mean only freedom from participation in the social security system.

Vice President NIXON claims that the administration program "preserves the opportunity for private insurers to continue to expand their insurance coverage for the aged," while the Forand bill would not. Private insurance flourished as never before after social security benefits were initially enacted, though similar fears were expressed at that time. Private pension plans have grown in the last 25 years to supplement the basic social security pension. An identical development can be expected in the health field, once basic health protection is provided through the social security system.

Mr. NIXON says that the Forand bill would lead to the socializing of the medical profession. Such a statement is pure sloganeering. The Forand bill leaves all existing relationships between doctor, patient, and government unchanged, providing simply a mechanism for paying certain bills.

The Vice President seeks to persuade us that the Forand bill would result in herding the ill and elderly into institutions whether they desired this or not. I find it hard to believe that Mr. NIXON is not fully aware that no one can get into a hospital without being admitted by a physician. Providing insurance against the costs of hospitalization will not result in a massive exodus from the homes of America to the hospitals. Instead, it will remove the economic barrier to needed hospitalization so that medical necessity can govern whether a person will enter a hospital.

Now the task of providing the aged citizens of our country with some protection against the burden of high medical expenses is obviously an immense one. It cannot be solved with a single stroke of the pen, or with empty promises. There is no panacea. After much study in both Houses of the Congress, a way was proposed by which we could begin to meet this problem. It seemed reasonable to approach this problem as, 25 years ago, we approached the problem of providing some income security to the aged citizens of that generation. The earliest pensions under social security were, indeed, modest ones but they provided the sound basis on which a social security program which provides a real measure of dignity in old age has been built.

The Forand bill, by covering all those eligible for social security, covers the vast bulk of the aged. Social security beneficiaries as a proportion of the total population are continually increasing. Once this large group is provided for, it is a simple matter to extend coverage to those outside the system as, for example, one of the Senate versions of the Forand bill—S. 3503—of which I am a cosponsor, already does. No one has come up with any suggestion which would provide benefits to as many people as would the social security approach.

Expenses for hospitalization are by far the largest single item of health care costs for the aged. There is no better place to start attacking the problem than by providing for financing of institutional care.

The administration decided on a different approach. Instead of advancing a modest workable program, such as those contained in the Forand, Kennedy, McNamara, or Anderson bills, the administration took it upon itself to promise the American people "the works," in the hope that the fact that it could not deliver the goods would somehow be obscured.

In contrast, no one claimed that the Forand bill would solve the problem of protecting all of America's aged from all their medical bills, but it does provide a firm foundation on which we can build in the future.

We are proud that we have proceeded responsibly to meet this vast problem. We are proud that we are proceeding in a great tradition. Just 25 years ago, when the Congress passed the original social security Act, President Roosevelt used these words as he signed that bill into law:

> We can never insure 100 percent of the population against 100 percent of the hazards and vicissitudes of life, but we have tried to frame a law which will give some measure of protection to the average citizen and to his family against the loss of a job and against poverty-ridden old age. This law, too, represents a cornerstone in a structure which is being built but is by no means complete.

President Roosevelt understood that these problems could be met, one solid and constructive step at a time. He did not feel it necessary to promise the people everything, while delivering nothing.

Tribute to Gov. Gordon Browning, of Tennessee

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Friday, August 19, 1960

Mr. KEFAUVER. Mr. President, on June 29, 1960, at Huntingdon, Tenn., more than 2,000 Tennesseans gathered to pay tribute to one of Tennessee's most beloved sons, Gordon Browning.

Gordon Browning has served his Nation and State in an exemplary fashion.

He has won commendation as an officer in the U.S. Army, contributed outstandingly to the national scene as a Member of the House of Representatives in the 68th to 73d Congresses, and served three times as a most distinguished Governor of Tennessee. He is loved and revered by his friends as a courageous and uncompromising fighter for what he thinks is right, and as a champion for the truly good things in life.

At this gathering Jack Norman, Tennessee's immediate past Democratic national committeeman gave an address in tribute to Gordon Browning which was truly worthy of the occasion and serves as an inspiration to those who heard it. I ask unanimous consent that excerpts from Jack Norman's outstanding address be printed in the Appendix of the RECORD.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

EXCERPTS FROM AN ADDRESS BY JACK NORMAN, GORDON BROWNING DAY, HUNTINGDON, TENN., JUNE 29, 1960

It is good that we gather here in his community and in the living presence of our honored guest to pay our respects, express our appreciation, and evidence our affection for the life and service of this good citizen, trusted public servant, and friend.

The son of sturdy God-fearing parents, his early opportunities were favored by their dispositions, but obstructed by their outward circumstances. Though removed above the pressure of poverty, their economic situation was dependent and fluctuating. The benevolence, the modest and prudent integrity, the true devoutness of these good people, shown forth at an after period, expanded and beautified in the character of their son; his heart was nourished by the constant exposure to such influences, and thus the better part of his education prospered well.

The receipt of political honors can be minimized to some degree by the admission of the part of fate and circumstance. The proper and loyal administration of public office is expected, is correct, and deserves no particular compliment, but the deserved appellation of being a good man, a good husband, and a good citizen is the honor which our guest wears within rather than without. It is this honor which he has earned that brings you here today for this expression of affection and confidence.

It is quite likely that his sterling worth and strength of character have been more clearly manifested in his defeats and disappointments than in his successes and triumphs. With the pleasures and honors of all of those high offices, there were necessarily mingled the pressures and vicissitudes incident to their duties and obligations. We who so highly regard him found the origin of our respect in his vitality and strength before such pressures. The keystone of that respect is the firm knowledge that his faith and truth and justice have never wavered. His fundamental concept of duty was never tarnished by expediency. His path could have been much easier through the lowlands of compromise, but he accepted the treacherous high road of right without hesitation. With the suggestion of a compromise of honor, his mouth opened in denunciation like the breach of a cannon, you knew there would be an explosion. This was Gordon Browning by impulse and nature.

I have seen him under pressure and in defeat. It was here that I saw the man. I saw him in Chicago, assailed, threatened, and castigated, but immovable, unwavering, and steadfast before a sense of loyalty and adherence to his conception of his act. His faith and determination were as little affected as an onrushing river into which there has been thrown a pebble.

What have been the fundamental concepts of this man?

He has staked his life on the simple proposition that a firm faith in God is the fit support for every action of a man, that one's own religion is a matter between one's self and one's maker, that religions are different roads converging to the same point, that it does not matter that we take different roads so long as we reach the same goal, that in reality there are as many religions as there are individuals.

He has held that there is no reason to suspect human nature, that it will respond to any noble and friendly action, that no human being is so perfect as to warrant his destroying him whom he wrongfully considers to be wholly evil. He has manifested an undying faith in the responsiveness of human nature. He has believed that we must not lose faith in humanity, that humanity is an ocean, if a few drops of the ocean are dirty, the ocean does not become dirty. He has an ultimate faith in the worth and judgment of his fellow men.

In government he has contended that democracy should embrace the doctrine of natural rights. He believes the theory that the standard of utility or of the happiness of the many makes democracy the preferable form of government. He insists that only democracy makes possible the full realization of the most characteristic potentialities of human personality.

In his profession and on the bench he has held that human rights are sacred and that equal justice is the will of God.

We shall all remember him for his courage. If he was convinced that he was right, the decree of his court, his espousal of the legislation and his executive order were as definite and determined as his order to his military command. This attribute runs through the fabric of his life like a red thread through a piece of white cloth.

The qualities of character, integrity and service about which we have spoken will not be had by chance. In government as in anything else, indifference permits incompetence. The voter's apathy creates the opportunity for the energetic demagogue and the crafty political hypocrite. Too often democracy provides the food for political parasites.

I could not conclude these remarks with the failure to mention his greatest asset in life. Still, quiet, reserved, and exalted in her warm enthusiasm, devoted in her love, she has moved with him as the inhabitant of a higher and simpler world. When he has sailed on troubled seas, Miss Ida's love made the burning sand grow green beneath him and the stunted shrubs to blossom. When the sun of pressure scorched his bare head, when his feet were chilled by the ice of prejudice, when the hail of trouble and tribulation beat round his temples, Miss Ida's love has rocked him to sleep in every storm. Seas and hills and horizons have been between them, but their souls always escaped the restrictions of place and met in a paradise of love. God bless both of them.

Refutation of Charges of Subversion of the Foreign Policy Association

EXTENSION OF REMARKS

OF

HON. J. W. FULBRIGHT

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Friday, August 19, 1960

Mr. FULBRIGHT. Mr. President, on July 15 there was inserted in the Appendix of the CONGRESSIONAL RECORD certain material, the import of which was to suggest that the Foreign Policy Association is engaged in the circulation of subversive material.

This material presented only one side of the controversy, and I think it is only fair that the answer of the Foreign Policy Association to the attack on its program should also be brought to the attention of readers of the CONGRESSIONAL RECORD.

I submit a memorandum prepared by the Foreign Policy Association which contains a point-by-point answer to the charges made against that organization.

Mr. President, I ask unanimous consent that this document be inserted in the Appendix of the RECORD along with certain editorials and articles from southern newspapers concerning this matter.

I have received an estimate from the Public Printer that this material will cost $297 for printing it in the RECORD.

There being no objection, the memorandum and articles were ordered to be printed in the RECORD, as follows:

MEMORANDUM OF FOREIGN POLICY ASSOCIATION, JULY 15, 1960

To: David Warner, regional representative of the Foreign Policy Association.

From: Department of Public Information, Foreign Policy Association.

Subject: Open letter from the Waldo M. Slaton Post No. 140, American Legion.

In an open letter to David Warner, a regional representative of the Foreign Policy Association in Atlanta, the Americanism committee of Waldo M. Slaton Post No. 140 of the American Legion asked for explicit and categorical answers to a series of 12 questions, directly and indirectly related to the association and its publications. We chose not to give further publicity to the matter by making a public reply during the period when the grand jury had the questions under consideration.

For the information of our many friends, this memorandum now provides those answers, question by question. It is designed to remove certain misunderstandings and false allegations about the FPA, and to reaffirm the educational value and purpose of the FPA's great decisions program for community discussion of pressing world affairs issues, including the peril of communism.

Question 1 deals with the question of "interorganizational coordination," at the time when Alger Hiss was president of the Carnegie Endowment for International Peace.

Following the end of the Second World War, private organizations interested in citizen education about foreign policy and international affairs were properly concerned with the best means of carrying out their respective tasks in the new circumstances of increased U.S. responsibility in world affairs. These organizations reviewed their own programs and consulted informally among themselves as to possible coordination of their activities. Far from leading to interorganizational coordination, however, these consultations ended in the decision that the individual organizations would pursue their own separate paths.

Question 2 implies that in the 1947 yearbook of the Carnegie Endowment for International Peace, Hiss endorsed the Foreign Policy Association.

The Foreign Policy Association is mentioned in this yearbook only once, in connection with the recommendation that the Carnegie Endowment should "strengthen its relationships with other organizations principally engaged in the study of foreign affairs."

This can hardly be called an endorsement. Even if it should be so called, it is com-

pletely unwarranted to draw from this fact any unfavorable inferences about the Foreign Policy Association.

We wish to make perfectly sure that nothing said in this memorandum in denial of the allegations in questions 1 and 2 is read to imply any disrespect or disavowal of the Carnegie Endowment. Indeed, in 1956, a close working relationship was set up between the Foreign Policy Association and the Carnegie Endowment for International Peace, under the presidency of Joseph E. Johnson and the chairmanship of Harvey Bundy, when the two organizations cooperated to found the World Affairs Center for the United States, which has since become an integral part of the Foreign Policy Association.

The Carnegie Endowment is a valued ally in the cause of citizen education in world affairs, which continues to enjoy, as it has throughout its history, the participation and support of a long roster of distinguished Americans, including, in addition to its present officers and trustees, under the chairmanship of Whitney North Seymour, such outstanding Americans as Dwight D. Eisenhower, Elihu Root, John Foster Dulles, and John W. Davis.

Question 3 refers to two unproved allegations about Vera M. Dean, editor of two of the Foreign Policy Association publications (the Headline Series and the Foreign Policy Bulletin), made in 1947 by a witness before a congressional committee, and quoted as such in the report of the Reece Committee on Tax Exempt Foundations.

To the first charge, that she signed the Golden Book of American-Soviet Friendship, Mrs. Dean states that she does not recall ever doing so, and in fact has long had a policy against signing such public memorials.

She labels as utterly false the second charge that she was active in a Communist-front organization, called the Congress of American Women. In fact, at the time of her alleged participation in it, she was actually participating in an anti-Communist organization, the International Assembly of Women, sponsored by Lady Reading of Great Britain and by Mrs. Ogden L. Mills, wartime president of the American Women's Voluntary Services.

To the allegation that Mrs. Dean's writings were included in "a Communist kit for teachers," Mrs. Dean points out that her writings are sold on the open market, and that she has no way of knowing, much less controlling, the ways in which they are used. She does know that several of her books, published by McGraw-Hill, Knopf, and the Harvard University Press, are used as texts in many leading universities throughout the country.

It will help to understand the nature and standing of these allegations to keep in mind the fact that the report in which they appeared also included a remarkably strong expression of dissent by 2 members of the 5-man committee. Brief representative extracts follow:

"The minority does not agree with the report submitted by the majority. It not only disagrees with that report but earnestly believes hat it should never be published."

"Each step of the proceedings of this committee placed an ugly stain on the majestic record of the U.S. House of Representatives and the great tradition of the American people. The minority membership of this committee, feeling that fundamental American principles were under attack in the committee, diligently attended its meetings despite the many other congressional responsibilities that were equally demanding of their attention. The majority membership operated primarily through proxies held by the chairman."

"The hard truth is that, by the manner in which the proceedings of the committee were conducted and by the self-evident bias of the majority report, the committee has failed in the most basic way to carry out the mandate of the Congress. The results of the proceedings are of no value to the Congress, and it was, therefore, a complete waste of public money."

A footnote says: "This report submitted by two minority members of the committee may, or may not, be a minority report. One member of the majority has indicated that he disagrees with the report submitted by the staff and approved by two members of the committee, and that he intends to file separate views, although he assented to the submission of the staff report as a 'majority' report. However, that is a problem for the parliamentarian. It is mentioned only to emphasize the unreliability of the report submitted by the 'majority'."

Questions 4 and 5 include allegations about the author of a book which is one of 11 mentioned in a suggested reading list on one of the great decisions fact sheets. The book, "The United States and China," by John K. Fairbank, published by the Harvard University Press, was described in a review in the New York Times as "the best book on China in our time."

Dr. Fairbanks, professor of history at Harvard University, was in Formosa visiting Chiang Kai-shek and his government at the time the letter from Waldo M. Slaton Post was received. His record of opposition to communism is such that he was assailed by Soviet Communists in the New Times (Moscow, January 18, 1950) as "an American intelligence agent." His book is standard in libraries across the country and is used as a text in leading university courses on China and American foreign policy in the Far East.

In recommending many books that reflect different points of view on a given subject, the Foreign Policy Association obviously cannot endorse all and actually does not endorse any of the volumes. Many books listed describe attitudes and beliefs which exist in the world and must be taken into account by our policymakers, such as speeches by Khrushchev or a book by Mao-Tse-tung. An awareness of what these men have to say and what other writers think of them, is at least as important as a good map of China, the Soviet Union, or Red satellite nations. To inform readers that these books and opinions exist does not in any sense imply endorsement of their contents. Such books provide the raw materials for intelligent appraisal and the process of discussion. Is a public library to be condemned because it has on its reference shelves a copy of Karl Marx?

Similarly, Professor Fairbank, and other authors on great decisions lists of suggested readings, refer to a wide variety of authors and sources for a variety of reasons; and they cannot be assumed to endorse or espouse so many introductory opinions. The Fairbank book, for instance, refers to books by a wide variety of writers including John Foster Dulles, Father Harold Regney, officials of the Chiang Kai-shek government including Chiang Kai-shek himself.

For the same reasons, we do not believe it necessary or even appropriate to comment on allegations about authors merely referred to in the books included in our suggested reading lists. Surely it would be impractical as well as un-American to believe that it is necessary to run security checks on every name even mentioned in each book before that book can be listed for reference.

Question 6 is divided into two parts: the first part deals with the same allegations as question five, about authors of books referred to as secondary sources in other books listed in great decisions reading lists. The answer to question five partly covers this point.

We believe that widespread discussion is the best possible protection against subversion and propaganda. Indeed, it is the traditional American protection.

We believe that authors and books recommended in our materials should be identified by their professional qualifications. We do not believe that Americans need a complete dossier of unproved allegations to enable them to evaluate a writer's statements, in open discussion with fellow Americans.

The second part of question 6 deals with alleged actions and attitudes of John Nason, now president of the Foreign Policy Association, Inc., and formerly president of Swarthmore College. The situation referred to in this question took place in 1959. Mr. Nason left Swarthmore in 1953.

Question 7. Mr. Warner's testimony before the grand jury was not made under oath, no such requirement having been placed upon him by the grand jury. He is ready to repeat under oath anything he said in those hearings.

Question 8 asks if a representative of the Foreign Policy Association would be willing to testify under oath in answering charges related to the alleged Communist record of Emil Lengyel, whose articles have appeared in various publications of the Foreign Policy Association.

The Foreign Policy Association submitted through its counsel to the next grand jury a statement denying the charge that Lengyel was a Communist and the other charges made by the Church League of America; and offered to present any witnesses the grand jury desired to have testify under oath.

As far as the record of Prof. Emil Lengyel as an active champion of democracy and enemy of totalitarianism is concerned, his writings speak for themselves.

It is true that his name did appear on the stationery of several organizations which were, at a later date, placed on the Attorney General's list. However, at the time of his sponsorship neither he, nor the other distinguished Americans who were listed on the same letterheads, had any reason to believe that these organiaztions were to be used for Communist front purposes. They were for the most part organizations formed to fight fascism and nazism, and to forward the allied war effort.

His association with these organizations was purely nominal except when he spoke for some of the war relief organizations. He spoke, for instance, for the Russian-American section of the International Workers' Order at the direct request of the Treasury Department, in a letter dated March 7, 1944, which bears the annotation: "This group is undertaking to sell enough war bonds to buy a heavy bomber."

To the evidence of his stanch devotion to the American democratic system contained in his published works (available at local public libraries) can be added the following facts:

He is on the official blacklist of the Soviet Union, Hungary, and other Communist countries.

His book "1000 Years of Hungary" was removed by Soviet officials from the exhibit of books presented by the United States at the American National Exhibition in Moscow. His pamphlet, now in its third edition, "The Soviet Union, the Land and Its People," is on the recommended list of the board of education of New York City and other large cities.

He is a member of the Committee of One Million Against Admission of Red China to the U.N.

At the present, Dr. Lengyel is on the Advisory Board of the American-Asian Education Exchange, where his fellow members are some of the best known anti-Communists in the United States; such as Gen. James A. Van Fleet, Dr. Daniel A. Poling, Hon. Joseph C. Grew, and Stanley K. Hornbeck, distinguished American diplomats and former Ambassadors. Chairman is the Honorable Charles Edison.

For several years Dr. Lengyel was president of the New York Chapter of the American-European Friendship Association, the aim of

which is to foster cultural relations between the United States and the free world. National chairman of this organization is Mrs. George N. Shuster, wife of Dr. George N. Shuster, leading Catholic layman and former president of Hunter College, New York.

Question 9: Photostatic copies have been distributed, and are available for inspection, of letters of endorsement from both President Eisenhower and former President Truman, as well as from John Foster Dulles, Adlai Stevenson and many members of the U.S. Senate. Senator AIKEN has not endorsed the great decisions program, stating that he has a firm policy against endorsements of any kind. A copy of his letter, listed, in error, as an endorcement, is attached as exhibit A. Exhibits B and C are copies of letters from Presidents Eisenhower and Truman.

Question 10 asks for identification of the man and his organization who started the present campaign against the Foreign Policy Association.

The man referrd to is Edgar C. Bundy. In connection with an earlier attack by Mr. Bundy on the National Council of Churches, the national council, in a pamphlet published in 1960, included the following questions and answers about Mr. Bundy:

"Finally, this question: What Are Some Facts About Those Who Have Attacked the National Council of Churches and Protestant Clergymen and Laymen?

"Edgar C. Bundy, Wheaton, Ill., general chairman of the Church League of America, advertises himself as lecturer, soldier, traveler, journalist, evangelist. Poses as an authority on military affairs. Is a major in the U.S. Air Force Reserve.

"His favorite theme is the menace of communism. He attacks the National Council of Churches, the World Council of Churches, local councils of churches, and Protestant clergymen as either being Communist or Communist sympathizers.

"Lecturers on these themes, for pay, before women's clubs, American Legion posts, Rotary, Kiwanis, the Daughters of the American Revolution and other community organizations. He is the author of 'Collectivism in the American Churches,' in which he attacks councils of churches and Protestant clergymen. Bundy has been quoted as describing the late Senator Joseph McCarthy as 'the greatest man alive' and saying 'I like McCarthy and his methods.'

"Bundy was a leading supporter of the resolution condemning UNESCO passed by the American Legion Department of Illinois convention statement which condemned a Girl Scout handbook as being 'un-American.' Bundy has been associated in various activities with two identified by the Anti-Defamation League as professional anti-Semites, Allen Zoll of New York and Harry A. Jung of Chicago."

So far as we know, these statements in the pamphlet have not been challenged.

Question 11 deals with activities of the National Council of Churches, its relationship to the Foreign Policy Association, and its right to speak for the 39 million Americans who belong to its constituent communions.

In a letter to the Foreign Policy Association, a spokesman for the National Council of Churches says:

"The National Council of Churches does not arrogate to itself the power to speak for its 33 constituent communions in any way that is binding upon them against their will. Nor does the National Council of Churches presume to speak for each and every one of the more than 39 million members of its constituent communions. The National Council of Churches does articulate representative views of its constituency arrived at by responsible, representative, democratic processes after careful study and deliberation by representatives of its constituent communions."

No one representing the national council has urged recognition of Red China upon the Congress or the American people. The position of the national council on communism is made clear in the following statements, included in a letter written to every Member of the U.S. Congress, signed by Roy G. Ross, general secretary and duly elected and authorized representatives of its constituent communions:

"The National Council of Churches of Christ in the U.S.A., and its constituent communions are and always have been unalterably opposed to communism. Its unqualified conviction was expressed in the council's policy statement of May 19, 1953, that:

"No body of people is more concerned to combat communism than the church groups of our country," and; "These churches are the greatest bulwarks of freedom in the United States."

Such conviction was reasserted in the recent resolution of the council's general board last June, "reaffirming the consistent position of the National Council of Churches expressed in many official actions opposing evils, the violation of human rights by Communist and other tyrannies."

Questions 10 and 11 also raise questions about Foreign Policy Association statements on American policy towards China, and Foreign Policy Association responsibility for views expressed by the Chairman of the Foreign Policy Association Board in an issue of the Headline Series entitled "Should the United States Change Its China Policy?"

The Foreign Policy Association makes it explicitly clear in this publication, and in all of its publications, that it is a "nonpartisan educational institution which does not take a position on any issue of U.S. foreign policy."

In keeping with Foreign Policy Association's usual policy of impartial objectivity, the issue of the Headline Series which contained Mr. Seligman's article also contained another article entitled "The United States Should Not Change Its China Policy," by Prof. Richard L. Walker of the University of South Carolina.

The most convincing statement of the value of this publication can be found in a letter to Mr. Seligman, from the executive secretary of the Committee of One Million Against Admission of Red China to the United Nations:

"DEAR MR. SELIGMAN: We just received the latest Headline Series published by the Foreign Policy Association entitled "Should the United States Change Its China Policy?" by Prof. Richard L. Walker and yourself.

"I read this with great interest. Although I am in disagreement with many of the points you make, I should like to take this opportunity to congratulate you on your very lucid and fair presentation of your point of view.

"The Committee of One Million since its inception in 1953 has advocated and welcomed public discussion on this crucial issue.

"If funds were available, the Committee of One Million would be quite prepared to circulate the booklet containing the arguments presented by yourself and Professor Walker as it now stands. Professor Walker adequately presented our point of view and, believing this to be the correct approach, we would have no qualms over presenting your point of view at the same time.

"Once again, I offer my congratulations on your article.

"With all best wishes and highest regards.

"Sincerely yours,

"MARVIN LIEBMAN,
"Secretary."

While the Foreign Policy Association does not express an opinion on specific questions of foreign policy, it did, in a 40th anniversary statement in 1958, make perfectly clear its basic belief that "communism is the central problem with which the United States must deal in its foreign policy because '• • • the professed goal of international communism remains a constant, dominating and inescapable threat to the United States and the free world as a whole.' "

Opposition to Communist philosophy, domination or expansion must certainly be built into an organization which includes on its board, as does the Foreign Policy Association, such men as Eustace Seligman, a lifelong law partner of the late John Foster Dulles, Benjamin J. Buttenwieser, banker and former U.S. Assistant High Commissioner to Germany; James B. Conant, ex-president of Harvard University; Roswell L. Gilpatric, lawyer, former Under Secretary of the Air Force; Christian A. Herter, Jr., Boston attorney; Frank R. Milliken, executive vice president of Kennecott Copper Corp.; John W. Nason, ex-president of Swarthmore College; John D. Rockefeller 3d; former U.S. Senator H. Alexander Smith; Emile E. Soubry, executive vice president of the Standard Oil Co. (New Jersey); and Walter H. Wheeler, Jr., chairman of the board of Pitney-Bowes, Inc., and member of the War Production Board in World War II.

Question 12 deals with the endorsements of Senators TALMADGE and RUSSELL, referred to in a Foreign Policy Association statement in the Atlanta Journal and Constitution.

The Foreign Policy Association statement in the Atlanta Journal and Constitution referred to letters written by these two Senators to constituents endorsing their participation in great decisions discussion programs. The letter from Senator RUSSELL is available. Mrs. P. L. Hay, Jr., of Macon will testify under oath that she received the letter from Senator TALMADGE. These letters have not been presented as overall endorsements of the Foreign Policy Association.

SUMMARY

This memorandum would not be complete if all these negatives were not balanced by a positive statement of the values of the great decisions program in which more than 300 newspapers and 183 schools and colleges have cooperated in almost every State in the Union; and which has been sponsored in many of these communities by local chapters of many national organizations, including Junior Chamber of Commerce, the League of Women Voters, the AFL–CIO, American Association of University Women, American Legion, bar association, Congregational Churches, Young Republicans, Young Democrats, YMCA, YWCA, the National Council of Catholic Women, and the National Council of Jewish Women.

We believe that this widespread participation, increasing every year, reflects a characteristic American response to the urgent world problems facing the United States today.

Discussion cannot be free or useful unless it is discussion based on the best possible information about the problems to be discussed. Before we can reach an agreement on the policies we need to maintain effective American leadership in the cause of freedom, before we can decide how we must handle the dangers of Communist expansionism in a nuclear age, we must know as much as possible about the nature of communism and the Communist threat; we must understand the nature of the power we have and of the power we must deal with.

Great decisions materials, widely used and praised by scholars, journalists, statesmen, and religious leaders, not only in Georgia but throughout the United States, make available in compact form, facts on which the great decisions of the coming year must be based.

On the basis of these facts, more than 250,000 Americans in informal discussion groups in thousands of communities are able to make their own decisions on what they think American policy should be.

Great decisions most frequently arise when there are strong differences of responsible opinion on questions of importance. We can all be grateful to live in a country where such decisions can be faced in the full light of knowledge, and where friends can gather, without fear, to argue, agree or disagree with one another.

The freedom to engage in such public debate is a major element in American greatness.

We, at the Foreign Policy Association, are indeed grateful for the broad public support which enables us to provide, in usable and economical form, at least a small portion of the information materials required to nourish this essential democratic debate.

[From the Macon News, May 2, 1960]

A CARELESS LEAP

The members of the Fulton County Grand Jury who accused the Foreign Policy Association of spreading "insidious and subversive material" must have been completely out of anything else to do and desirous of making trouble for a useful and respected organization.

If the grand jurors are critical of FPA's great decisions program because it makes citizens better informed about the world in which they live, then the grand jurors are correct. Those of us in Macon who have participated in and been benefitted by great decisions can testify by the thousands as to the value of the program. Because this community responded to the challenge and inspiration inherent in a plan to increase man's information, we now know more than we formerly did about such matters as the Cuban situation, the Communist plans to take over the world, Red China's ambitions, problems involved in African nationalism and such like.

The Foreign Policy Association, which sponsors great decisions, is about as subversive as a platter of apple pie and cheese with the Stars and Stripes waving over it and the national anthem being played in the background. Such men as Adlai Stevenson, John D. Rockefeller III, Dr. James B. Conant, and a host of others do not carelessly lend their names to just any venture.

The grand jury should have looked before it leaped so carelessly. Thanks to its solid reputation, the Foreign Policy Association's good name is not harmed, but one cannot help but wonder how a group of Fulton County citizens could have acted so irresponsibly.

[From the Atlanta Constitution, May 2, 1960]

GRAND JURY'S OFF BASE IN CRITICISM OF FPA

In otherwise constructive presentments, especially in the field of race relations, the Fulton County Grand Jury made a serious mistake in launching a broadside attack on the Foreign Policy Association, an organization devoted to studying international affairs and their effect in this country.

Perhaps in no other field do the American people deserve more enlightening information than in the field of foreign affairs. Whether this be favorable or unfavorable, public discussion and education in a world in which the United States no longer can isolate itself is important and necessary. Those who would censor or restrict discussions and withhold information from the people make the job of policymaking all the more difficult.

The Foreign Policy Association has on its board of directors some of the Nation's leading citizens. To accuse such men as John D. Rockefeller III, Dr. James B. Conant, Jervis J. Babb, and many, many others of like stature, of supporting "subversive propaganda tactics" is McCarthyism pure and simple. It is also so ridiculous as to be not worth considering.

[From the Atlanta Journal, May 6, 1960]

THE LABEL WON'T STICK

Atlanta's deputy school superintendent, Dr. Raul Stephens, declared that he was unable to find the slightest justification for the "subversive" charge aimed at the information materials circulated by the Foreign Policy Association.

The Fulton County grand jury last week asserted the FPA's "Great Decisions," discussion reports to be "insidious and subversive" and urged that they be eliminated from the public schools.

Dr. Stephens made a thorough study of the reports and found the charges unsubstantiated. If there is any rebuttal to his findings, let the accusers cite chapter and verse. The public is entitled to know exactly what information is considered undesirable.

In the consideration of controversial subjects, students will be confronted by a great many viewpoints, including some that are decidedly anti-American.

Does this mean that unfriendly statements of Castro and Chou En-lai should be censored out of the newspapers?

In discussing the Communist challenge to the Western World, it is necessary to point out the aims, advances, and sources of appeal of communism.

Must we then cease to speak of this challenge?

It is for the new grand jury to wind up this piece of unfinished business. The charges must be substantiated or disavowed before the matter can be dropped. It must not be left dangling and unresolved.

[From the Chattanooga Times, May 10, 1960]

THE RIGHT TO KNOW

Along with a constructive report on the school-racial situation in Atlanta, the Fulton County grand jury recently charged the Foreign Policy Association with spreading "insidious and subversive material." The Atlanta Constitution dealt with the report in two editorials, on successive days. It praised the report which, among other things, strongly endorsed "the right of voters in each school district to determine the fate of schools." In the other editorial, the Constitution said that the report attacking the Foreign Policy Association was "ridiculous" and not worthy of consideration.

David Warner, FPA regional representative in Atlanta, assailed the attack on the association as "like something out of the Dark Ages."

The Foreign Policy Association formed in 1918, has, ever since, been a helpful force in enlightening the people on foreign policies. It has a record of constructive aid to our Government in giving information and opinion which has supported our foreign policies. It has, says Mr. Warner, "never been investigated or indicted by, or to our knowledge, even accused by any committee of Congress."

The grand jury is said to have been influenced in its strange report by the Foreign Policy Association's discussion programs, "Great Decisions," on such subjects as "Communist Time Table for 1960," "Divided Europe; Cooperation or Crisis," "Red China on the March," and "Cuba's Revolution."

Learning of the probe by the grand jury, Adlai Stevenson sent a telegram to Sam T. Turnipseed, chairman of the investigating committee, declaring, "The purpose of this telegram is to repeat what I have said publicly on a number of occasions and that is that the Foreign Policy Association has my emphatic indorsement in its educational programs on world affairs."

One of the weaknesses in the American scene is the underground attack on "the right to know." Dr. James B. Conant, prominent in the Foreign Policy Association, is dedicating his late career to advancement of education. To associate him or the FPA with subversive tactics is the last word in irresponsible propaganda.

[From the Atlanta Journal, May 12, 1960]

STEVENSON REPEATS FPA ENDORSEMENT

(By Douglas Kiker)

Adlai Stevenson has reiterated his "emphatic endorsement" of the Foreign Policy Association, and its great decisions discussion program for the benefit of Atlanta American Legionnaires.

The Waldo M. Slaton Legion Post No. 140 had wired Mr. Stevenson on May 6, inviting him to come to Atlanta and testify before the Fulton grand jury which, in its last presentments, accused the FPA of distributing "incidious and subversive" materials to Georgia schoolchildren.

Mr. Stevenson wired the grand jury during its investigation, endorsing the FPA.

In his answer to the Legion post's telegram, the twice-nominated Democratic presidential candidate said that he "has no plans to be in Atlanta in the near future," but if he did he "would be glad to express again his emphatic endorsement of the FPA and its great decisions program."

The letter was written for Mr. Stevenson by his executive secretary, William McC. Blair. The letterhead showed that it originated from the law offices of Stevenson, Rifkind & Wirtz in Chicago.

Mr. Blair, in a second paragraph, added: "I should perhaps add that the office (apparently referring to the law office) is surprised that any credence at all should be given to Edgar Bundy and his absurd bulletin.

The "Americanism committee" of the Legion post has circulated in Atlanta editions of News and Views, a publication highly critical of the FPA. It is edited by Mr. Bundy in Wheaton, Ill., and published by the National Laymen's Council of the Church League of America.

David Warner, southern director of the FPA, has charged—in an apparent reference to the Bundy organization—that "criticism of the FPA obviously did not originate in Georgia." But the Legion vigorously denied this.

The Legion post has not yet released Mr. Stevenson's reply to their telegram, but copies of it were sent to other agencies in Atlanta and made available to the Atlanta Journal.

A spokesman said Thursday that individual members of the "Americanism committee" would not answer any questions privately and that all queries should be directed to the committee as a whole.

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

Appendix

Your Hometown: Will It Grow or Decline During the 1960's?

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Saturday, August 20, 1960

Mr. WILEY. Mr. President, the revolutions in technology, industry, transportation—yes, in our economic system itself—have resulted in great changes in our economy, including shifts of population from rural to urban areas, and between urban communities.

The population growth—now at about 180 million—also poses new, difficult problems, in terms of jobs, housing, education, and other community facilities, to meet the needs of more and more people.

If we are to plan adequately for the future of our citizens—if our cities are to be well designed—if all our communities are to experience maximum growth then we need to carefully review and analyze the factors influencing such growth and development, and plan accordingly for the years ahead.

Recently the National Publisher, official magazine of the hometown newspaper industry, published an informative article by Gustav E. Larson, entitled "Your Hometown: Will It Grow or Decline During the 1960's?"

Reviewing in a splendid way the factors involved in community progress, I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

YOUR HOMETOWN: WILL IT GROW OR DECLINE DURING THE 1960'S?

(By Gustav E. Larson)

Many thousands of small communities in the United States have virtually disappeared over the past 100 years. Our Western States, cutover areas, and coal regions can point to hundreds of ghost towns where workers and people left when the minerals were mined out, the price of silver dropped, or when the trees were gone.

Abandonment of roads, railroads, waterways, and building of new transportation routes brought an end to many other thriving small towns. Many small trading centers have been stranded as buyers drove over new highways to the larger trade centers.

FUTURE BLEAK?

Many small towns will not survive or grow in years ahead. Even now many face a bleak future because of consumer shifts from coal to other fuels, and because of increased mechanization of agriculture. These changes have closed mines and reduced the number of farm customers for small towns. Changes in markets, roads, and technology will continue. Some small communities will gain but others will lose. This is a cost of progress.

What will determine the growth of your hometown? In the past, towns that died did so because they did not replace a dying industry with a new one. Workers moved on to other areas. Today there are big investments in small towns—investments in homes, businesses, streets, water supplies, churches and schools.

The older people who have the investments stay and push for area developments. It is the young who leave. This is the stage at which stock-taking should begin for the small town.

Are small towns growing or declining? Based on the 1940–50 census and what we have seen of small town growth and decline over the past decade towns under 500 did not do as well in population growth from 1940–50 as did larger towns. As you move up the town size scale from the 500 to 999 group, to the 1,000 to 2,499 group, and so on to our larger city groups, each larger size group generally shows more growth than the size group below.

Only 52 percent of Georgia's small towns under 500 gained population from 1940 to 1950, for example, but of the towns in the 500–999 group nearly 74 percent gained. In the 1,000 to 2,499 group 84 percent gained.

This smalltown growth experience of Georgia is evidently better than the smalltown growth record of many other States which showed greater percentages of small towns in the population loss group. In Iowa, for example, only 41 percent of the towns under 500 and 46 percent of the 500 to 999 group showed gains for 1940–50. Many small towns are expected to show population gains from 1950–60. But these will probably be towns chiefly located within the influence of larger city centers.

GROWTH FACTORS

County seats and university towns are also expected to show up with gains. A majority of the small rural area towns under 1,000 are expected to remain static in population or show some decline.

Why do some small towns decline and others grow? The size of the town in 1900 has had a great deal to do with its growth since then. In Mississippi if a town had a population of only 250 in 1900 its chances of becoming an urban place (1,000) by 1950 were 1 in 100.

William C. Hallenbeck, an authority on the growth of American urban communities, explained it this way, "The growth of cities has become a selective process. Only certain places grow. The basis of selection seems to be functional; that is, cities grow where cities are needed, not just because they are cities. In some cases this is a part of a regional population growth where more adequate and better distributed service centers are required. Also, places may be selected as the location of new activities of production or service and draw to themselves workers and their families and those to operate the facilities and services of community living."

What this means is that growth attracts growth. Larger towns have built-in economic growth advantages working for them. As a town develops more retail and other services, builds churches and schools, installs and expands water supply and sewerage afcilities, and builds homes and office buildings, it attracts new economic activity such as industries. The reason is that the larger town can provide better services and facilities than can its smaller town competitors.

LOCATION VITAL

Geographic location also influences economic growth potential. A region that is growing and going places will bring growth to many of its small towns, too. But where small towns are located within a growing region determines their growth potential. Small towns near larger cities (10 to 30 miles) have better prospects for growth than do small communities which are more isolated from larger population centers. This is so because industries wish to be near the many services needed for plant operation and also to have access to the cultural and recreational advantages of the larger centers.

Some kinds of small towns have had excellent records of growth and should continue to. Most county seats, State capitals, university towns, and some tourist towns have done well because Government, education, and tourism have been growing industries. The excellent growth rate of county seat towns has resulted in large part from the increased numbers of field offices and agencies of the Federal Government established in county seats. This brought more farmers into county seat towns and created an expansion of retail services as farmers stayed to shop. The farmers consequently bought less in centers formerly visited.

INDUSTRY PREFERENCE

Does industry favor smalltown locations? In industry preference for small towns as locations for new plants was recently reported to the Office of Area Development by four Southeastern States as follows: State A, in 1959, 75 percent of our new plants were near towns of 10,000 or less population. In capital investment, however, the total outlay for new plants or plant expansions in all small towns was less than the total for all larger towns of over 10,000; State B, during 1959, 43 percent of all new plants were located in towns of 5,000 to 7,000, 22 percent in towns of 10,000 to 20,000; State C, of the 163 new plants established during 1957–59, 35 were in towns under 1,000 and 79 in towns of 1,000 to 10,000; State D, 35 percent of plant locations or expansions occurred in towns of less than 2,500, 63 percent in cities of less than 10,000.

The foregoing figures submitted by State development agencies included homegrown industries, new branch plants or relocations from other areas, and plant expansions. Keep in mind that the majority of all new industries established in most States are small plants, employing fewer than 50 workers. It is these smaller industries which are widely scattered in small towns throughout a State. These small industries offer the greatest hope for the economic future in most small towns.

But small towns, particularly those near larger city centers, are also getting many large plants. To illustrate, 14 out-of-State firms established branch plants in one Southeastern State during 1959. Of these, six located in large cities and eight in the smalltown size group. Out-of-State plants were most important from the total employment point of view. It appears from the information obtained that industries favor smalltown locations, the larger industries generally preferring small towns near larger population centers.

SMALLTOWN BENEFITS

Reasons industry favors smalltown locations for new plants include the desire to avoid congestion, availability of labor, attractive wage rates, availability of workers who can be easily trained, high productivity of labor, desire to avoid large city competition for labor, and availability of large plant sites at reasonable costs.

Other smalltown advantages frequently cited are: more leisurely living, greater friendliness of smalltown people, smalltown desire for and interest in industry, and the existence of development groups ready and willing to do what they can to help an industry. Some companies have reported that they wanted to become part of a community and this was considered easier to attain in a small town than in a large one. Some company management personnel felt that life was too short to spend so much time commuting to and from work.

Disadvantages of small towns some businesses cite include: the lack of trained workers, the nonexistence or shortage of auxiliary services and supplies, and the less than satisfactory transportation facilities. Industry also frequently makes the point that, if any substantial number of workers must be imported, they may be dissatisfied with community facilities for education, culture, and recreation. Water, sewerage, police protection, and fire protection facilities were also considered by many industries to be inadequate in many small towns.

What does all this mean to small towns which want to do something about economic growth? It means that most small communities will have an opportunity to obtain some kind of new job producing activities.

PLANNING FOR GROWTH

Most small towns located within the influence of larger population centers will probably grow whether they want to or not. It is these small towns which have the best opportunities of acquiring the larger plants. The problem here is one of planning for orderly growth more than one of stimulating growth. It is in communities of this type that industrial parks may be a real inducement to new industry because adequate sites are often not available in the nearby metropolitan areas.

Administrative centers, university, and tourist towns should continue to do well in the future because government, education, and tourism are expected to continue to be growing industries. These towns should work to improve and expand activities which fortify their positions as administrative, education, and tourist centers. This does not mean they cannot develop industry, too. The same things that attract tourists attract industry; and many of the newer growth industries have large numbers of engineering and other professionally trained personnel who wish to live near or in education centers.

Research and development companies and some of the growth industries employing large numbers of engineers reported to the Industrial Location Division of the Office of Area Development that they must locate their new plants where their professional personnel can take courses leading to advanced degrees, see an occasional play (at least twice a year), and commune with other engineers. One of these companies said they believe at least one Ph. D. per 1,000 population is necessary to provide the intellectual communication needed for its staff.

SUBURBS BOOMING

There are, too, the small towns which are developing chiefly as "bedroom" centers for workers commuting to large cities or to larger small towns which offer industrial jobs. These "bedroom" towns are also acquiring more and more retired people. Perhaps there is an opportunity here for some small towns that cannot get industry to increase local business opportunities by making their towns specialists in meeting the needs of retirement people and those workers commuting to jobs in other places. Attractive low cost rental units, recreation developments, adequate medical services, and shopping areas are some of the advantages which could draw more and more such workers and retirement people to these towns.

It is the small towns in rural areas which face the toughest job of area development. Here the roadblocks to growth include isolation from larger population centers, nonavailability of skills, and lack of services and facilities which larger industries need. While occasional large plants will locate in or near these rural-type small communities, the real hope for the future for these communities lies in the direction of small industries based on local resources and markets and development of latent tourist and travel potentials.

Keep in mind, however, that the future economic development of the rural-type towns can be strongly influenced by sound water and land development policies and programs such as are now being worked out by the U.S. Study Commission, Southeast River Basins, with headquarters in Atlanta. Tourist industry dollars (and industries, too) flow into and will continue to go into areas which can provide water.

The services of the Office of Area Development and other agencies of the U.S. Department of Commerce can be of help to you in your day-to-day work on community and industrial development. You can get such assistance simply by contacting the manager of the U.S. Department of Commerce field office close to you.

Use these facilities to help plan and carry out area development programs that fit your town.

The Senate Wage Bill

EXTENSION OF REMARKS
OF
HON. SPESSARD L. HOLLAND
OF FLORIDA
IN THE SENATE OF THE UNITED STATES
Saturday, August 20, 1960

Mr. HOLLAND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Senate Wage Bill," which was published today in the Baltimore Sun.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SENATE WAGE BILL

The House, which had drawn a more limited measure, is expected to balk at the Kennedy minimum wage bill which the Democratic candidate has pushed through the Senate, after compromising sharply on the number of persons covered. Since he had to give somewhere, Mr. KENNEDY preferred to give on coverage, and to retain the $1.25 per hour minimum, up from the present $1. (For workers now covered, the wage would rise by stages to $1.25 in 1963; for newly covered workers, by stages to that figure in 1964. The basic hours of work per week would also be staged for the newly covered, to be reduced to 40 hours in 1964.)

Those who favor the Kennedy bill argue that it would expand consumer purchasing power, enhance demand and employ some of the unemployed, of whom by common agreement there are too many; it is a worrisome point in an economy otherwise in general good shape.

The trouble with that argument, as against the argument for a more cautious approach, as in the House bill's $1.15 minimum, is that while some effects on purchasing power, demand and employment may be granted, the Kennedy formula would encourage adverse forces too.

Where, if the $1.25 minimum should become law, is the extra 25 cents an hour coming from? Of those employers who would be affected, not all would reduce their profits to meet the enlarged payroll. Many would take one or both of two other courses. They would tighten their production efficiency, to reduce the number of those they employ; or they would raise prices to meet the higher pay. Other tides in the economy might, of course, ameliorate or cancel out these counterforces. They would be forces none the less, and need to be considered and weighed before any new minimum wage legislation is finally passed by the Congress.

Counteracting Communism in Latin America

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Saturday, August 20, 1960

Mr. KEATING. Mr. President, Communist penetration into Latin America is becoming a matter of increasing concern to all of us. The present meeting of the Organization of American States represents one way—and a very important way—to defeat the malignant aims of international communism. A condemnation of the Communist-influenced government of Fidel Castro will, we hope, result from the conference and lead to further measures for quarantining the Communist infection in Cuba.

It is much easier, however, to condemn Communist actions than it is to plan constructive counteractions. I want today to call attention to an excellent article by Bernard J. Flatow entitled "A Suggestion for Meeting the Communist Threat in Latin America," which was printed in the August 8 issue of Export Trade, because in this article Mr. Flatow does have some positive and very good proposals for U.S. action in Latin America.

One of the major points which Mr. Flatow makes, is that the Communists have relied heavily on the anticause to unite their followers—causes like anti-imperialism, antimilitarism, antinuclear weapons. What we can do to combat this, Mr. Flatow urges, is to adopt a few anticauses of our own—causes like anti-violence, anticensorship, anti-illiteracy, anti-Soviet intervention in national politics. These causes, he suggests, can easily be promoted through such existing civic groups such as Rotary clubs, Boy and Girl Scouts, professional groups, labor unions, church groups, and other similar organizations.

I have found many of Mr. Flatow's suggestions interesting and perceptive. I believe that they deserve a wide circulation. Mr. President, I ask unanimous consent to include this article in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A SUGGESTION FOR MEETING THE COMMUNIST THREAT IN LATIN AMERICA

(By Bernard J. Flatow)

The Communist-inspired Castro administration is the first successful step in the Soviet attempt to penetrate the political, economic, and social life of this hemisphere. Their ultimate goal is to extend this influence throughout the Americas. If we do not immediately prepare to defeat the Communist purpose, we will probably be confronted with many Soviet-dominated governments in Latin America before the next decade is over.

Despite repeated warnings of this nature, the United States has neither understood nor prepared itself to meet the Red challenge.

FAILED TO TOUCH A RESPONSIVE NOTE

It is true that during the past 25 years we have paid more attention to our Latin American relations than we had previously. But, in general, we have failed to touch a responsive note in the Latins. This is so, chiefly because our increased attention has consisted mostly of new methods, new programs, and new policies—but with the same old thinking.

These new methods, programs, and policies such as the point 4 program, technical aid and military assistance have all had as their unexpressed purpose, the preservation of a status quo which the people of Latin America have been attempting to change for many years. For example, while all of Latin America is clamoring for revolutionary land reform we continue to supply scientific and technical aid whose ultimate effect is to perpetuate the existing system and to impede the popular land reform movement.

We have supported many administrations with callous disregard of the popular will. We have traditionally recognized de facto governments in Latin America regardless of how they came to power. We have followed the policy that recognition implies acceptance and requires support. The present situation in Cuba shows the fallacy in such thinking.

Our traditional method of dealing with governments which do not necessarily represent the will of their people has produced sterile situations which have in no way added to the prestige or popularity of our cause.

Assistance in the form of new credits for developing natural resources, improving communications, extending public health facilities, transportation, and education are of little avail if not accompanied by the type of propaganda which appeals to the Latin American man in the street.

NEW APPROACH REQUIRED

A new approach is required—one based upon mass psychology, an area in which the Communists are past masters.

The Soviets understand the secret of the mass conscience. They have learned that the mass, or mob, provides the precise vehicle through which the individual is able to express his hostile feelings and not be held personally responsible for his deeds.

Like the people of less-developed areas in other parts of the world, the Latin American masses have a reservoir of hostility built up through years of oppressive regimes aided by our insensibility to their national temperaments. This lack of sensibilidad in our policies and programs plus the absence of imaginative thinking at some very high levels have given the Communists practically free reign in presenting to the Latins a distorted image of what we really are and stand for.

THE COMMUNIST APPROACH

In view of the successes which the Communists have achieved, it would be wise to examine and evaluate their tactics. The Communist approach to mass incitement involves three basic elements:

1. Exploitation of general hostility.
2. Designation of a common enemy.
3. Organized leadership.

Psychological research has shown us how common it is for a person to be angered by someone and to take out his feelings of hostility on another.

The Communists have learned to utilize the hostility of masses of people, who in many cases have no connection with communism, in order to further their own imperialistic ends. Even more ominous is the fact that they have learned to do this without exposing themselves as an organized political entity. The nationalization of the Bolivian tin mines, the Jacobo Arbenz Red administration in Guatemala and the machinations of Fidel Castro are vivid cases in point of how clever they have become at getting others to do their work.

THE ANTICAUSE

But communism does more than merely provide an outlet for general hostility. Once it arouses mob passions, it directs these emotions toward a specific common enemy. This is accomplished by establishing what might be called the anticause. It is a known fact that the easiest way to acquire an ally is to first find a common enemy. This is one of the basic tactics used by the Communists to penetrate and consequently subvert large segments of Latin American society. They have used considerable ingenuity in finding anticauses of such a general nature that they have succeeded in uniting many diverse groups under one banner.

The Communists do this either by portraying the common enemy (usually the United States) as being opposed to some popular cause (such as greater social benefits for workers, national sovereignty of the particular country in which they are operating, peace, disarmament, and so forth) or by picturing the same enemy to be in favor of some unpopular cause (such as capitalistic imperialism, exploitation of workers, intervention in the affairs of a sovereign state, war, atom bomb research, and so forth).

DEFENDERS OF THE PROLETARIAT

At the same time, they also attempt to monopolize certain ideas by presenting themselves as the sole defenders of the rights of the proletariat, the true friend of the working class and the only defense against exploiters of the masses, dictators, imperialism, capitalism, militarism, dollar diplomacy, and so forth.

But despite a few positive labels such as "friend of the proletariat" and "champion of the working class" it is the anticause which is the Communists' chief stock in trade.

Count the banners and placards in any pro-Communist mass meeting and you will find that 80 percent to 90 percent of them refer to their anticauses. They very seldom tell you of what they are in favor.

EXPLOIT POLITICAL DYNAMITE

In their drive to exploit the potential political dynamite behind these anticauses, they are using everyone from the teenager to the military, from the unemployed to the housewife, the nationalist to the immigrant.

They exploit the traditional unrest in the ranks of Latin American high school and college students and offer the opportunity for leadership to those too young to achieve it within the established political parties.

They utilize teenagers to foment trouble and thus provide a new outlet with its inherent thrills to this unstable element.

They use the disgruntled lower income group housewife to protest against inflationary trends, rent laws, food prices, scarcities, etc.

USE THE UNEMPLOYED

They push the unemployed into the front lines of their demonstrations in order to force emergency employment measures from the governments—measures for which they take credit, but which usually do nothing to solve the employment problem.

They attempt to set the civilian population against the military by advocating the distribution of arms to the workers and by the same tactic try to instill distrust of the established government in the military.

They incite labor leaders and ambitious politicians to press for gerater social benefits for the workers, knowing that the more benefits, the higher the cost of production, consequently higher prices, less purchasing power, loss of markets, and a host of other economic difficulties, all of which lead inevitably to inflation of the currency.

At present, one of their prime anticauses is the Trujillo dictatorship in the Dominican Republic. It is a most astute anticause because practically all of us are against the freedom-destroying tactics of Trujillo. But the value of the anti-Trujillo cause to the Communists is that they are able to present themselves as the leaders of the anticause and the foregone conclusion which many Latin Americans draw is that if the Communists are against such a cause as Trujillo represents, they must per se be in favor of all that he opposes. This, of course, is not true, but it is the type of specious reasoning that they count upon to further their psychological aggression.

ACCUSATION WITHOUT PROOF

And so it is with all their anticauses. They rely upon accusation without proof, innuendo, halftruths, and similar subtleties to incriminate their opponents and to establish themselves as the source of all good things to all men.

They are a band of political prostitutes who will jump into any bed which they feel they can exploit to their own advantage.

Once the idea of an anticause has been sufficiently disseminated, the Communists have established a beachhead from which they launch their attack. This is the point where their organizers bring the mob into play.

THE ORGANIZED MINORITY

The Communists believe that the organized minority can wield a greater political and social influence than the unorganized majority. The examples of the tactical application of this tenet vary from the heckling of an opposition speaker or a wildcat strike in a key industry to such international incidents as the stoning of Vice President NIXON.

From the innumerable successes which they have achieved, it seems prudent to admit the logic of their theory. This, of course, leads us to only one conclusion: the unorganized majority must now be organized or be dominated by the Communist-organized minority.

Men of principle are always at a disadvantage when they compete with the unprincipled. They are subject to almost any foul play which the adversary may decide to use. And in this battle for men's minds we are in that position. However, we are not without resources to present our cause and our anticauses with greater psychological impact.

The anticause so adroitly employed by the Communists gives us an excellent vehicle for rallying our supporters and awakening them to the inherent dangers in the continuance of their complacency.

Franklin D. Roosevelt used this tactic successfully when he enunciated his four freedoms. Two of his principles—freedom from want, freedom from fear—were anticauses.

The number of pro-Democratic anticauses which could be sponsored today is incalculable. Here are just a few: anti-infla-

tion, antiviolence, anti-illiteracy, antisubjugation of minorities, antirigging of elections, anticoncentration camps and forced labor, anticensorship, antisuppression of civil liberties, antilimitation of travel and free exchange of ideas, antijamming of radio broadcasts, antipersecution of nonconformist intellectuals, antisubversion of religious principles, antisubversion of family life, anticonformism and elimination of opposition, antigenocide, and anti-Soviet intervention in national politics.

Superseding all of these anticauses is the one great anticause which must be the nucleus of our counterattack—the defeat of international communism in the Americas.

As the international Communists have succeeded in uniting the discontented elements who have swallowed their line, our efforts must be directed toward providing leadership for the mass of unorganized anti-Communist sentiment.

Throughout this hemisphere are innumerable groups and organizations which represent millions of people. The avowed purposes and principles of these groups would appear to be so diverse as to have nothing in common with each other. However, we can utilize the tactic of our opposition and unite them all in this great anticause.

There already exist organizations with international affiliations whose cooperation in the anticause could give this drive the momentum which it requires to get started. Professional and social groups, welfare organizations, labor unions, educational institutions, Rotary and Lions International, Boy and Girl Scouts, the churches and temples of organized religious sects, the Masons, and many others are all potential sources of support. It is essentially a question of making them aware of the danger involved in not uniting against the common enemy of international communism.

A central committee composed of members from every country in the hemisphere could be formed to act as the coordinating body of the movement. Outstanding Democratic leaders of all the American Republics could be invited to collaborate with the central committee.

National committees would be formed in each country and each national committee could be autonomous. The principal work of the national committee would be to support all anti-Communist groups who wished to publically express their anti-Communist sympathies. Established non-Communist political parties would be encouraged to include anticauses in their platforms. The dissemination of anticause information in schools and universities, labor unions, and religious groups would naturally be a function of the national committee.

Thus, a great wave of pro-Democratic forces which are now disunited could be set into motion and rallied around the common anticause.

Through the use of special insignia people could be encouraged to identify themselves with the anticause. In this way, the leadership which until now has been lacking and the designation of the common enemy could be provided.

Funds for such an organization could be obtained from governments and numerous private sources. The largest international companies would undoubtedly be interested in supporting it.

A training school for leaders would be required. Publications and public relations material would have to be continually produced and revised.

An ever-constant vigil would have to be kept to see that the basic principles of the anticause were not subverted by the Communist opposition.

It is essential to develop this movement as a cooperative inter-American undertaking. We need the support of all the non-Communist groups in the Americas. Then, too, by having national committees in each country, it would be easier to present the movement as a popular one. This is precisely what the Communists do when they call themselves, "Partido Comunista de Venezuela, do Brasil, etc."

In all countries of the hemisphere are dozens of prominent citizens who could be organized as the nuclei of each national committee. These people have not come forward previously because there never has been an organization dedicated solely to the cause of combating international communism. Given the opportunity, they will provide the leadership.

TAKE ADVANTAGE OF U.S. COMPLACENCY

For many years we have been content to sit back behaving as though our traditional democratic majority was in no danger. The Communists have made political capital out of our complacency. They count on our remaining complacent. They rely upon the correctness of their theory of the organized minority to give us a long-term lease on our fool's paradise.

Their goal is to foment utter confusion and chaos and to make it practically impossible for anyone to govern without their cooperation. In this way, they believe that they can eventually dominate the political stage in Latin America without the need to actually govern. They seek to conquer by posing a constant threat to established governments and thus negotiate deals and attain goals far beyond those to which their numbers would legitimately entitle them. In other words, they are trying to cash in on their nuisance value.

The Communist challenge is unrelenting. The time for our counterattack is now. The keys to the solution are the intelligent utilization of the anticause and an effective organization. At this moment the Communists have the advantage.

If the democratic tradition is to survive in Latin America and elsewhere it will have to organize itself and its partisans. It will have to provide its supporters with the same emotional appeal and psychological uplift as the Communists offer theirs.

Democrats Seeking To Insure Labor's Aid

EXTENSION OF REMARKS
OF
HON. SPESSARD L. HOLLAND
OF FLORIDA
IN THE SENATE OF THE UNITED STATES
Saturday, August 20, 1960

Mr. HOLLAND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Democrats Seeking To Insure Labor's Aid." The article was written by Nicholas P. Gregory, and was published in the Philadelphia Inquirer.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DEMOCRATS SEEKING TO INSURE LABOR'S AID
(By Nicholas P. Gregory)

WASHINGTON, August 19.—The drive by the Kennedy-Johnson ticket to ram through the Senate the $1.25 minimum wage bill and the health-benefits-for-the-aged bill, is motivated by a desire by the Democrats to assuage labor.

Since 1958 labor has fared badly in the Democratic-controlled Congress. Of the 76 legislative requests demanded by labor only a mere 7 were approved and sent to the White House and 2 of these, the depressed areas bill and a minor measure, were vetoed by President Eisenhower.

Of course, the depressed areas measure is up again for consideration. This time it is backed by the President as well as Republicans and Democrats. If the measure is approved, it must meet the President's conditions before it is signed.

Among the other five that were approved by the Congress and signed by Mr. Eisenhower were bills raising railroad workers' retirement and unemployment benefits, setting up partial Government financing for health insurance plans for Government workers and upping the pay of 1,600,000 Federal and postal workers 7½ percent.

The Federal pay bill wage advance is somewhat minimized because the President ordered a cutback in the Government work force to pay for the cost of raising salaries.

To offset even these modest successes was enactment by the 86th Congress of the Landrum-Griffim labor reform bill, which labor's rank and file bitterly fought.

The measure curbed some of labor's important weapons against management such as organizational picketing and outlawed consumer-boycott picketing. Labor charged that these two provisions in the Landrum-Griffin bill totally blocked their attempts to organize workers.

The Democratic-controlled 86th Congress scuttled labor's request to boost unemployment benefits and set minimum standards for them. Further, it ignored proposals to improve workmen's compensation, to give farmworkers the protection of Federal laws, to outlaw State laws banning the union shop, and to approve a Federal fair employment practices law.

Despite this sorry record, labor is solidly backing Senator JOHN F. KENNEDY, Democratic presidential aspirant, and his running mate Senator LYNDON B. JOHNSON.

At the same time, labor has launched a hard-hitting campaign against Vice President RICHARD M. NIXON, who surprisingly, is receiving substantial support from the South. When NIXON visited Greensboro, N.C., the other day, he was virtually mobbed by admirers.

NIXON'S visit to Greensboro was interpreted by political forecasters as boosting Republican hopes of carrying North Carolina for the first time since 1928.

Labor's latest attack against NIXON in the Political Memo, official publication of the Committee on Political Action and Education of the AFL–CIO, is on the Vice President's farm policy.

The AFL–CIO says that NIXON indicates that if he is elected President he will name a new Secretary of Agriculture. It then points out that last February the Vice President had said that Ezra Taft Benson was the greatest Agricultural Secretary in history.

Need for Increasing Dairy Price Supports

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Saturday, August 20, 1960

Mr. WILEY. Mr. President, yesterday, the Senate—and wisely, I believe—passed S. 2917—to establish price supports for dairy products as follows: $3.22 per hundredweight for manufacturing milk, and 59.6 cents per pound for butterfat.

I would sincerely hope that the House of Representatives now will take speedy action on the measure.

At this time I ask unanimous consent to have a statement—emphasizing the need for final action by Congress on the measure this session—printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR WILEY

As the Congress well knows, the U.S. farmer—particularly the dairy farmer—now suffers from an imbalance between income and outgo.

According to reports, the dairy farmers have taken a cut of 7 percent in the average price for all milk sold at wholesale, and 14 percent in the price received from manufacturing milk from the 1947–49 average.

Meanwhile, farm costs have skyrocketed upward. The Department of Agriculture, for example, reports that items used by the farmers have increased 13 percent, and family living items 19 percent, above the 1946–49 average.

As a more specific illustration of skyrocketing farm costs, I cite the following:

Motor vehicles, up 47 percent; farm machinery prices, up 58 percent; farm wage rates, up 50 percent; farm real estate taxes, up 94 percent; increases costs per acre on farm real estate debt have gone up 164 percent.

Now, I am well aware that the enactment of this legislation would not wholly cure this situation.

The establishment of a price support level for milk at $3.22 per hundredweight, and for butterfat at 59.6 cents per pound, by no means provides a price level necessary to the farmer to meet these rising expenses of operation. However, it would be a modest step—in my humble judgment, too modest—toward establishing a higher floor—above the present $3.06 per hundredweight for manufacturing milk—for prices under dairy products.

Personally, I would like to see the price support level raised substantially higher. If, however, even this modest proposal could be enacted, it would, in a small way, provide greater support for the dairy economy.

At this time, I want to stress that—while I am deeply interested in the dairy farm economy—this is not all that is at stake in this legislation.

Across the Nation, not only farms and farm-equipment producing industries, but also local drugstores, hardware stores, car dealers, truck and tractor sales and service establishments, and many other services in the community are dependent, in part, or wholly, upon farm buying power. Consequently, improvement in income would benefit not only the dairy farmer, but a substantial segment of the overall economy.

We recognize, too, that the consumer has a stake in such price determinations. In many cases, in my State of Wisconsin, however, I want to point out that milk sold at about 6 cents per quart on the farm is retailed within 24 hours at 24 cents. This great price spread serves to illustrate that the farmer (a) is receiving a disproportionately low share of the retail price for his product, and (b) that it is not the farmer who is responsible for the rising cost of living. Even though the rising living costs have slowed down in recent years—and this is an important objective—I do not believe the farmer should be the principal one to underwrite stability in prices, particularly when this may jeopardize the farm, and other segments of the economy.

I well recognize that the enactment of S. 2917 would by no means act as a panacea-type step to eliminate the cost-price squeeze, and to restore to the dairy farmer a proportionate share of our national income.

The measure, however, I believe, does represent a minimum step that can, and should, be taken at this time to assure a moderately improved price floor while we are attempting to find a more workable solution for the farm, and particularly the dairy situation.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 680, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided,* That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p.m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p.m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided,* That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided,* That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further,* That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided,* That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Saturday, August 20, 1960

Daily Digest

HIGHLIGHTS

Senate committee approved numerous nominations and three bills.

Senate

Chamber Action

Routine Proceedings, pages 15685–15694

Bills Introduced: Two bills were introduced, as follows: S. 3870–3871. Page 15686

Bills Reported: Reports were made as follows:

S. 3800, to provide a method of regulating wage rates for employees of the Portsmouth, N.H., Naval Shipyard (S. Rept. 1858);

S. 3269, authorizing Secretary of the Navy to convey certain property to the State of Hawaii (S. Rept. 1859); and

S. 3299, to provide for the conveyance to the State of Maine of certain lands located in such State, with amendments (S. Rept. 1860). Page 15685

Social Security Amendments—Aged Medical Care: Senate resumed consideration of its unfinished business H.R. 12580, Social Security Amendments of 1960, and adopted all committee amendments en bloc, and the text of the bill, as amended, will be regarded as the original text for purposes of amendment.

Pages 15694, 15697–15723, 15725–15741

Program for Monday: Senate met at 10:30 a.m. and adjourned at 3:12 p.m. until 10 a.m. Monday, August 22, when its unfinished business will be H.R. 12580, Social Security Amendments of 1960. Pages 15686, 15741

Committee Meetings

(*Committees not listed did not meet*)

COMMITTEE BUSINESS

Committee on Armed Services: Committee, in executive session, ordered favorably reported the following: the nominations of Gen. Lyman L. Lemnitzer, to be Chairman of the Joint Chiefs of Staff, Gen. George H. Decker, to be Chief of Staff of the Army, Gen. Nathan F. Twining, to be placed on the retired list in the grade of general, and 3,606 nominations in the Army, Navy, Marine Corps, and Air Force; S. 3800, to provide a method for regulating wage rates for employees of the Portsmouth, N.H., Naval Shipyard; S. 3269, authorizing Secretary of the Navy to convey certain property to the State of Hawaii; and S. 3299, to provide for the conveyance to the State of Maine of certain lands located in such State (amended).

Also, the committee adopted a report of its Procurement Subcommittee relative to a study on military procurement, and agreed to file same with the Senate.

Prior to these actions, in open session, hearings were held on the nominations of Generals Lemnitzer and Decker, where the nominees were present to testify and answer questions in their own behalf.

House of Representatives

Chamber Action

The House was not in session today. Its next meeting will be held on Monday, August 22, 1960, at 12 o'clock noon.

Committee Meetings

No committee meetings were held.

Congressional Record The public proceedings of each House of Congress, as reported by the Official Reporters thereof, are printed pursuant to directions of the Joint Committee on Printing as authorized by appropriate provisions of Title 44, United States Code, and published for each day that one or both Houses are in session, excepting very infrequent instances when two or more unusually small consecutive issues are printed at one time. ¶ The Congressional Record will be furnished by mail to subscribers, free of postage, for $1.50 per month, payable in advance. Remit check or money order, made payable to the Superintendent of Documents, directly to the Government Printing Office, Washington 25, D. C. For subscription purposes, 20 daily issues constitute a month. The charge for individual copies varies in proportion to the size of the issue. ¶ Following each session of Congress, the daily Congressional Record is revised, printed, permanently bound and is sold by the Superintendent of Documents in individual parts or by sets. ¶ With the exception of copyrighted articles, there are no restrictions on the republication of material from the Congressional Record.

Appendix

Address of Senator Keating to the National District Attorneys' Association

EXTENSION OF REMARKS
OF
HON. FRANK E. MOSS
OF UTAH
IN THE SENATE OF THE UNITED STATES
Monday, August 22, 1960

Mr. MOSS. Mr. President, the National District Attorneys' Association held its annual conference in Boston, Mass., on August 11, 12, and 13 of this year. I had the honor to attend and to hear the remarks of Senator KENNETH B. KEATING, of New York, as he by wire addressed the members of the association at their final banquet on August 13.

Edward S. Silver, district attorney of Kings County, Brooklyn, N.Y., and immediate past president of the National District Attorneys' Association, at the closing dinner of their conference, stated that Senator KEATING's talk ought to be read not only by every prosecutor in the United States, but by every legislator in our country.

I agree that the statement of Senator KEATING should be available to every prosecutor and every legislator and I, therefore, ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ORGANIZED CRIME—WHAT CAN THE FEDERAL GOVERNMENT DO ABOUT IT?

(Remarks of Senator KENNETH B. KEATING at the conference of the National District Attorneys Association in Boston, Mass., August 13, 1960)

Mr. Chairman, members of the National District Attorneys Association, it is a distinct personal pleasure to be with you tonight. Both as legislator and as lawyer I feel preeminently at home in this good company. This conference, I might add, is proof of the twofold attribute of the law. It doesn't merely send people away. It brings them together, as well.

I must say, Ed, that my pleasure is the greater because you are in the chair.

Ed and I are on different sides of the political fence, but with a fellow like Ed you just cut a hole through the fence and maintain a continuous good neighbor policy. After all, friendship was "invented" long before politics.

At the outset, let me tell you how warmly, how wholeheartedly I commend this fine association for the public-spirited initiative you have displayed in accenting, in emphasizing the tremendous and fateful challenge that life—and death—on our highways represents for America.

It is, indeed, one of the grimmest ironies of this century that thousands of our fellow countrymen set out each year on pleasure trips—that end in the cemetery—or in the hospital.

I have often thought the concept of the motorcar in the public mind needs a new definition. The handling of firearms is surrounded by all manner of training and care and caution. It is not a mere matter of learning how to pull the trigger. But in the case of driving, all too often it is, so to speak, the ability to pull the trigger that qualifies a citizen to drive his car on the public highway.

For this reason, we have millions of people moving about our Nation with loaded guns—and many of them without any conception of the lethal quality of the weapons they grasp in their two hands. To me it is, therefore, immensely heartening that this association has thrown the floodlight of its interest and its dedication on a problem that cannot, that must not, be accepted as one of the scourges of civilization. It is the part of civilization to rid itself of scourges—and you gentlemen, by your forthright and dynamic acceptance of this grave challenge, are rendering a service of incalculable significance.

Tonight I should like to talk to you about a malignant cancer this Nation suffers from—the cancer of organized crime. I shall discuss it in terms of its national implications and in relation to the role of our Government in meeting its nefarious challenge.

Following the investigations and disclosures of the Senate Crime Committee in 1951—when a nation learned to its shock and anger that vice and corruption had become major industries in the United States—there was the fervent hope that drastic action would be taken to break the back of organized nationwide crime.

As a matter of record, certain steps have been taken in this direction, notably the creation of the Organized Crime and Racketeering Section in the Department of Justice. But today, 9 years after the Crime Committee's report, the proportions of the entire problem remain mountainous and frustrating.

We are still forced to prosecute alleged murderers and thieves for such comparatively innocuous offenses as tax evasion and contempt of court. There is evidence that organized crime syndicates continue to flourish in this country and, indeed that they are constantly spreading their influence into previously legitimate undertakings.

The hired killers, the narcotics peddlers, the labor racketeers, the blackmailers, the illegal gamblers are still in business. They intimidate honest citizens, corrupt entire police forces, make the public streets unsafe at night, exploit many businessmen and workers. They are a blight upon the land, a running sore of evil, and it will take courage and determination to wipe out the conditions in which they thrive.

There have been enough studies and exposés. The time for counterattack is long overdue. Crime is at war with America. It is high time we declare war on crime.

Unless you are aware of the magnitude of the situation, you will be shocked by the statistics. Crime in the United States today is at the highest point in its history. Almost 8 million major crimes are now committed each year. What does that mean. It means that everyone in this land can expect to be the victim of a major crime at least once in his life if he lives to be 60 years of age. The crime rate has increased almost four times faster than the population of the country since 1950. There were more convictions for extortion, fraud, bank robbery, and gambling offenses last year than ever before in the life of the Republic.

J. Edgar Hoover pointed out in a recent speech that the total cost of crime for the entire Nation "has reached the alarming figure of $22 billion a year—or nearly one-third of the cost of running the entire Federal Government for a year." This is not a very impressive image of the leader of the civilized world. This is America with a scar on its face—a scar of shame.

One of the major obstacles to effective law enforcement at present is the absence of any statutory authority (with few exceptions) for the Federal Government to deal directly with organized interstate criminal activities. The contention that crime is strictly a local problem has been used to defeat efforts to fill this gap in the Federal legal arsenal. Most crimes, of course, are strictly matters for local law enforcement.

But a local enforcement agency, no matter how effective, just cannot deal with crimes that spill over into other jurisdictions. Interstate criminal operations are purposely organized to escape the authority of any one local law-enforcement agency. Criminality doesn't end at State borders; why should law enforcement? We're not chasing speeders here. We're chasing the enemies of society.

The specter of a national police force has been one objection frequently raised to expanding the Federal Government's role in law enforcement. In my view, there is no danger of such a development. At the present time, there are some 347,000 citizens engaged in some kind of law-enforcement work.

This includes uniformed policemen, law-enforcement agents, and clerical, administrative, and custodial personnel concerned with police protection activities. Of these 347,000 law-enforcement employees, 326,000 are employed by State and local governments. On the other hand, only 21,000 are employed by all the Federal law-enforcement agencies combined, including the FBI, Immigration and Nationalization Service, Bureau of Narcotics, and Secret Service. To give one direct comparison, the FBI employs only 6,000 special agents compared to the 24,817 policemen employed by the city of New York alone.

An interstate crime bill certainly would require expansion of the FBI, but not in a manner which would give cause for reasonable concern to any person. The FBI still would be limited to investigative activities. Direction of its activities would remain under the Attorney General, and decisions as to whether to prosecute would remain with the local U.S. attorneys and other Department of Justice officials. The FBI, under the outstanding leadership of J. Edgar Hoover, has never sought expansion of its jurisdiction or an increase in its powers.

The tradition developed during Mr. Hoover's long and brilliant career has established guidelines for the functioning of the agency which would in no way be altered by increasing its personnel.

In its simplest terms, an interstate crime bill would make it a Federal offense to use the facilities of interstate commerce to break certain specified State laws. The laws specified relate to the types of crimes to

which these interstate syndicates are particularly prone, such as narcotics trafficking, fraud, murder, and gambling.

The bill is far reaching, but I do not believe it can be called drastic—although even some drastic measures to deal with the present menace would be justified. In many ways, my proposal is simply an extension of a trend started more than 60 years ago when Congress enacted the Lottery Act to cope with nationally organized lottery activities. Later, there were similar acts dealing with such previously local offenses as train robbery, cattle stealing, white slavery, and kidnappings. In every one of these fields the same thing happened: local criminals outgrew local law enforcement controls.

The intervention of the Federal Government in these cases has been very effective. The train robber, the white slaver and the kidnaper have now virtually vanished from the scene. It is time we moved with equal vigor against the new colossus of organized crime that confronts us today.

The practical operation of such a bill is easy to illustrate. Let us suppose, for example, that we wanted to move in on a big gambling syndicate operating out of New York with outposts in Chicago, Tampa and San Francisco. All you would have to prove is one overt act by a member of the conspiracy involving interstate commerce such as a telephone call or an interstate shipment, or the use of the mails. You could then close in. In one case, with a single conspiracy indictment, you could bag the rich overlords at the heart of the operation in New York and the lieutenants who were running things in Chicago, Tampa and San Francisco, and as many of the other small fry as you found wriggling in the bottom of the net. And that is not all. If the chiefs of police or sheriffs in certain towns and counties were mixed up in the mess, they would become defendants also.

This procedure in no way interferes with States rights, since under the terms of the law, state policies would control the definition of offenses. Nor would it throw an undue burden on our Federal law-enforcement officers.

A man can always do a better job with less trouble if he has the right tools. This is the right tool for breaking up these syndicates.

There is another aspect of crime control I have never been able to understand and that is the special protection we appear to be willing to give to crime plotted by telephone. This great scientific invention is fast becoming the privileged tool of the criminal. Recent court decisions have virtually succeeded in transferring the telephone into a private channel for organized crime.

I believe that we urgently need a Federal eavesdropping statute applicable to wiretapping and all other forms of electronic interception of conversations. Such a statute would permit Federal law-enforcement agents to utilize these devices for obtaining evidence of crime, but only under the safeguards of a court order. At the same time, as a protection against abuse, severe penalties should be provided for any electronic snooping not authorized by court order. And these penalties should be invoked against policemen, as well as ununiformed sleuths who ignore the limitations of the law. There is no criminal worse than a man who breaks the law he is sworn to uphold.

Congress should also make it clear that the States may adopt the same type of eavesdropping regulation.

In the recent decision by the U.S. Court of Appeals in New York in the Pugach case, a majority of the court refused to enjoin the introduction of wiretap evidence in two State court prosecutions. At the same time, every judge on the court agreed that Federal law makes it a criminal offense to present such evidence in a State court. One judge went so far as to invite the U.S. attorney to institute criminal proceedings against the New York district attorneys if they attemped to introduce any wiretap evidence.

This decision emphasizes the incredible legal situation which now prevails.

New York has the most well-balanced, carefully safeguarded, up-to-date laws on the subject of wiretapping and other forms of eavesdropping of any State in the Nation. Nevertheless, a New York district attorney, who acts in full compliance with the requirements of the New York law, now must face the risk of Federal prosecution. I cannot conceive of anything more illogical and indefensible.

If crime were not such a serious problem, the present situation would be ludicrous. I cannot believe that anyone in Congress intended, when the Federal Communications Act was passed, to make criminals out of district attorneys who obtain State court orders permitting wiretapping. We must act promptly to restore some sense and sanity in our handling of this subject.

The stark and ominous reality we must face is that crime is at war with America. It is about time America declared war against crime.

Congress must not delay any longer coming to grips with this challenge to our security. Immediate action is needed on the measures I have outlined. Comprehensive study is needed also to devise other solutions to this appalling nationwide scourge and shame. A national crime commission should be appointed to probe deeply into all the ramifications of this problem.

This should be a citizen's commission divorced from Congress, politics, or any existing law-enforcement agencies. Such a commission is imperative to adjust our operations against crime to the needs of today and the future. Many people shrink from such tasks—they display a certain disdain toward the whole subject of crime. But no one with the public welfare truly at heart can afford to shirk the duty to attack this evil.

In bringing these remarks to a close it is well to be reminded that even in our fight against crime no compromise can be condoned in according to every defendent his full constitutional rights. I would not stand for any departure from the requirements of due process no matter how heinous and outrageous the offense involved or how serious the problem to be dealt with.

At the same time, I do not equate a proper concern for the rights of an accused with a mawkish, sentimental dedication to safeguarding his every interest or convenience at the expense of the community. Law-abiding citizens have rights, too. I have tried to describe tonight some of the ways the Federal Government can protect those rights more effectively, but consistently with our traditions and principles.

Looking at Our Common Problems

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1960

Mr. MULTER. Mr. Speaker, I am pleased to commend to the attention of our colleagues the text on an address by the Honorable Jesse P. Wolcott, Chairman of the Federal Deposit Insurance Corporation, and a very distinguished former chairman of the House Banking and Currency Committee. Chairman Wolcott delivered his address before the West Virginia Bankers Association in Charleston, W. Va., on July 15, 1960.

The address follows:

LOOKING AT OUR COMMON PROBLEMS

(By Jesse P. Wolcott, Chairman, Federal Deposit Insurance Corporation, before West Virginia Bankers Association, Charleston, W. Va., July 15, 1960)

Your invitation to be with you today is especially welcome, representing as you do another of the State associations which has done so much to promote a keen sense of public responsibility in the field of banking.

I welcome, too, the prospect of renewing many warm friendships and the opportunity of discussing some of our common problems in banking.

Let me remark briefly on the fine cooperation and spirit of helpfulness being extended to our examination staff here in West Virginia by the State banking department. I know that Robert McLeod, our supervising examiner, has been generally pleased with the relationship that exists here, and has told me so on several occasions.

This is, in truth, "America's most scenic vacationland." And beyond the vacation splendor that meets the eye at every turn West Virginia has a great number of other assets. Your State is moving forward toward a more balanced industrial growth through diversification in the chemical, mineral, and lumber industries, and I believe your State ranks first, before all States, in glass and pottery production.

Right along with all of these achievements I find, too, that the bankers of this State have paid close attention to the credit needs of individuals, business, agriculture, and industry, in an effort to help build a sound economic base for West Virginia.

Now after these compliments for West Virginia, let me turn the pages of my talk to the problems facing us as bankers and businessmen in the years immediately ahead.

I shall divide my remarks into three general areas: First, bank management; second, our inter-relationship; and, finally, a capsule review of national legislation in our field.

Now, bank management. Just last week I read in one of our leading banking publications of the tremendous and growing need for management personnel in our financial institutions. The needs have been estimated to range all the way from 30,000 new top level management men to 50,000 within the next 2 or 3 years.

A weakness, if it can be described as such, in our business is the developing lack of trained and experienced personnel to replace senior level officers on the threshold of retirement. Most of these "oldtimers" now ready to retire, weathered the dark and cloudy financial storms of the depression years. They learned the hard way, through practical experience, how to run a good bank. I take my hat off to those of you who fit this category—to the oldtimers in banking. We owe you a debt of gratitude for the way in which you have kept the banking business on an even keel, through war and peace, through good and bad times.

However, I am sure that you will agree with me that good bank management consists of more than mere expertness in the routine aspects of running a bank. I think it demands the three essential qualities of (1) technical competence, (2) economic understanding, and (3) conscientious responsibility. Weak or bad bank management will result from weakness in any of these overriding qualities—and the early bank failures of the 1920's and 1930's presented many instances where banks were wrecked by management which lacked either sound con-

science, competent technique, or economic understanding.

Today, bank management—the young people who are coming into the business—must understand economic conditions and fortify themselves as far as possible with technological and economic knowledge, in order to wisely cope with the changes which occur in a free market economy. Herein lies a job for the oldtimers—to pass along the accumulated knowledge that has been gained through experience of the young men and women coming into banking today.

But beyond this legacy of knowledge, we must also strive to develop better techniques to meet the problems and financial demands that face us in our communities—or, in the end, lose our position of leadership in the world of finance to other, more aggressive, financial institutions, or to governmental programs dedicated to solving these same problems.

Banks recognize the need for interested and responsible directors—but let's not forget another important requirement: A competent and well schooled staff. We must make sure that replacements are in prospect and in training for responsibilities that they, in time, will be expected to assume.

To find the caliber of personnel needed by banks, careers in banking must be made attractive and challenging.

Banks must pay the going rate to attract and keep the high type of personnel which has so long gravitated in their direction. A definite promotion policy should be worked out by the bank. There should be opportunities for prospective junior management men to participate in the making of decisions, to work on special projects, to be heard, and to obtain prestige on the job. Banking has long been known for its enlightened attitude toward fringe benefits and educational opportunities. These are strong points for a banking career and should be continued.

We know that the need for seasoned top-level management personnel will double in the next 15 to 20 years, and banks able to fill their need for competent and trained managers will be those which begin now to plan for the future.

Let me point out another problem which plagues us from time to time. That is the lack of internal security in your bank. Now the problems of bank defalcation and robbery will be covered quite adequately by another speaker, Mr. Evans, but I want to add my own thoughts to those already presented. Over the past few years the chief causes of bank failures and closings have been defalcation and embezzlement. These failures, in great measure, reflected a lack of internal protection and an inadequate system of controls and audit. There are yet some bankers who feel that an annual examination by one of the supervisory authorities can somehow serve as an effective audit, a delusion that all supervisory agencies have sought to dispel.

Records show that bank embezzlements are on the increase. Millions of dollars are taken each year; but it is not possible to make an accurate estimate of the loss sustained because many of the shortages have existed, though concealed, for years.

In the last calendar year a total of 1,632 banks reported embezzlements to the Federal Bureau of Investigation. A total of at least $13 million was involved. There were 349 convictions. This total is in contrast to 1955, when there were 260 convictions, with an estimated shortage involved of $4.5 million, involving 1,168 banks.

Motives for embezzlers' activities are many and varied; but whatever they may be, good internal controls are certainly helpful in reducing this problem.

I say again, there is no substitute for continuing internal controls, and I urge you to apply all the known preventative internal security measures to insure the safe and sound continuance of your bank.

OUR INTERRELATIONSHIP

In turning to the interrelationship between the Federal Deposit Insurance Corporation and banks I want to tell you that your deposit insurance membership record is good. In fact, there are only two noninsured banks in West Virginia, so it is quite evident that you have taken advantage of the value of Federal deposit insurance.

Although we desire to extend insurance to all eligible banks, we do rely on the principle of voluntary membership in the Corporation, which has proven to be the most satisfactory.

Since we are so close in our relationships, I needn't tell you that the fundamental objective of the Corporation is a sound banking system: a sound banking system which is in a position to meet its liabilities without difficulty, but which is also in a position to serve the legitimate credit demands which are made upon it.

So far as you are concerned, a sound banking system means strong banking units with sound assets, with adequate capital, operated in harmony with sound banking principles and in accordance with the banking laws and regulations; in other words, a system composed of banks in strong financial condition, under proper management.

You may notice my remarks today have emphasized good management. I intend to make the point frequently to stress that supervision is no substitute for good management and cannot, of itself, insure the maintenance of a sound banking system. It can only contribute to that end.

Within this finance industry of which we are a part, the Federal Deposit Insurance Corporation has earned a most enviable reputation. We are proud of our achievements, and humbled by our successes, and we seek advice and accept it judiciously. We try to answer your questions by explaining reasons, rather than be sending you a copy of regulations. We always seek your active cooperation and understanding.

I believe Aristotle brought up this matter of understanding and appreciation several centuries ago, when he said: "The environment is complex and man's political capacity is simple. Can a bridge be built between them?"

The foundation stones for Aristotle's bridge must be information, candor, and continuous reporting to the citizens.

Through these foundation stones a bridge can be built. In our form of government, more than in any other, the bridge of understanding and support depends on information and the interest of the people.

Now the Federal Deposit Insurance Corporation is threatened with the loss of its independence. Legislative proposals are pending before Congress which would remove the Corporation's flexibility and independence. The Corporation has vigorously opposed the notion that it should become a stepchild of the executive branch of Government under the Budget Bureau.

We rightfully contend that the Corporation, having the responsibility for the protection of the Nation's money supply, should be independent while remaining within the framework of the Government. The Corporation must be a part of Government in order to escape private pressures; yet, within the Government, it must be free of political pressures.

Can Aristotle's bridge be built here?

The independent status of the Corporation must be continued. Will you show the leadership necessary to uphold this independence? I trust that you will agree with me that the Corporation must be free at all times to use its techniques when and if an emergency occurs—an event that we all hope will never happen.

I like to think that the margin between success and failure is a narrow one. This margin can only be bridged by mutual concern and cooperative effort.

NATIONAL LEGISLATION

Since I have maneuvered myself into a discussion of legislation—something which comes to me quite naturally after having served in the Congress for 26 years—I shall take up my third point: national legislation.

The Congress that recessed just a few days ago has not yet finished its work. More than 17,000 bills and resolutions were introduced during the 86th Congress. Out of this maze of legislative thinking, I would estimate that more than 100 bills could be labelled as banking and finance proposals. Some of these ideas are well thought out, others are the pet schemes of planners and pressure groups. Only a small fraction of all these bills will be able to survive the delays, referrals, committee hearings and opposition that wells up when a bill finally comes to the floor of either House of Congress.

Some of the proposals are well ahead of their time; others are keyed to today's circumstances and political trends. As history shows, the deposit insurance idea first came to light as a legislative proposal in the 49th Congress, back in 1886—and was not enacted into law until 1933. About 150 bills were introduced during the 47-year period between the conception of the idea and the final enactment of the proposal in the form of the Federal Deposit Insurance Act.

Banking has traditionally been recognized as a business which has close public interest ties, and which is peculiarly subject to examination and regulation. In fact, both Houses of Congress early recognized the importance of the field by creating standing Committees on Banking and Currency. To these committees come the matters which will eventually affect your business, and which will affect the supervisory agencies.

This session of Congress, following the leadership of both of its Banking and Currency Committees, enacted legislation which will have a direct impact on your bank operations and the work of the Corporation.

I am sure that you know of the enactment into law of the bank merger bill, which amended the Federal Deposit Insurance Act to provide safeguards against mergers and consolidations of banks, where there might be a lessening of competition or the tendency to create a monopoly.

We were pleased, too, with the forthright and timely action on the assessment bill, an idea proposed by the Corporation a number of years ago to simplify your task of determining and computing your semiannual certified statement and assessment return.

The enactment of this proposal by the Congress will help you to reduce your paper work, financial cost and man-hour requirements for the computation of assessments. In addition, it will now be possible for the Corporation to reduce its audit costs, and to complete an annual verification on assessments reported by the banks. In the past we have audited on a selective basis only about 1,000 banks, out of the more than 13,000 insured institutions, over a 3-year period.

I would like to discuss some of the proposals pending before Congress which have not fared too well, but which might be revived and given attention in the future.

The status of the Corporation is continually under congressional fire as I have already told you. Some of these proposals would enlarge the Board of Directors from three to five members; another bill would prohibit the Comptroller of the Currency and any members of the Board of Governors or staff of the Federal Reserve System from serving on the Corporation's Board.

Another bill proposed this session of Congress would require public hearings prior

to determination and actions of the Board on applications coming before it on such matters as admitting banks to insured status and the opening of branches.

The question of branches comes up in another bill, which would require the consent of the Corporation for the establishment of a branch by any insured State or national bank, and for the establishment of a branch by a State bank which is a member of the Federal Reserve System. This same bill requires consent of the Comptroller of the Currency for the establishment of a branch of a national bank.

There has been proposed a plan to allow all banks to join the Federal Reserve System upon payment of a nominal fee of $10. Bank holding company operations would be limited by a bill prohibiting the approval of such operations where they are opposed by State authority.

There are proposals for a national system of mutual savings banks, a central credit union facility, and equality of taxation among financial institutions.

There are bills which would amend the Employment Act to make stability of prices an explicit aim of Government economic policy; then, there are bills which would remove the current 4¼ percent ceiling on long-term Government bonds; and still another bill would require all lenders to state separately the finance charges on loans, both on amount and in terms of the simple rate of interest.

Few of these bills I have mentioned have been enacted into law, although some continue to make progress. In the field of banking I feel that we have fared well during the 86th Congress. This is due in great measure to the bringing up to date and recodification work undertaken by the Senate Banking and Currency Committee under the leadership of Senator WILLIS ROBERTSON, of Virginia, chairman of the committee.

His sponsorship of the Financial Institutions Act of 1957 and continued attention to the need for modernized laws and regulations stand as landmarks for banking legislation.

Although the Financial Institutions Act did not receive consideration by the House, the act did serve as the base point from which Congress went ahead with a piecemeal updating of laws affecting banking. In quick order, bills were passed to liberalize the lending powers of national banks; reserve requirements of Federal Reserve member banks were reduced in certain areas and under certain conditions. The relationship of savings and loan associations to holding companies has now been defined. The Federal Credit Union Act has been amended. Other bits and pieces of the Financial Institutions Act of 1957 have been picked up in other bills and enacted into law, or are today moving forward as items separated from the former omnibus bill.

I earlier mentioned other bills more directly concerned with Federal Deposit Insurance Corporation which were enacted into law this past year.

So, in any summing up, we can safely conclude that we have had 2 good years on the Hill in Washington.

But in this cheerful report I must add one somber note. Based on my own experience in Congress, and from firsthand observation, I would say that the banking fraternity has fared well; however, there are many ideas, plans or bills proposed, or on the legislative drafting boards, which could seriously affect the banking business.

Not all of these proposals will see the light of a congressional committee hearing or get to the floor of the House or Senate for consideration; but some will survive the long and difficult journey to the President's desk and will be enacted into law. In order to carry out your responsibilities as a good citizen and banker in your community you should be aware of these proposals and legislative developments. Being well-informed, articulate and active in your community on State and national affairs is one of your civic responsibilities which should not be overlooked.

As bankers dedicated to the general welfare, with certain public responsibilities and community leadership duties, you must rededicate yourself to the belief that private commercial banking is the principal banking system for this country, and that within our Nation's finance industry we all have a great number of interests in common.

To survive in the world of business we must serve, and to serve we must put aside the minor differences that from time to time divide us. We must look forward to the larger goal of maintaining a sound, free and independent financial system for the overall good of the Nation's economy.

After looking closely at our common problems in banking, let me sum up my talk by again stressing the need for continued attention to the developing problems of good bank management. I want to reemphasize the important role that you play in the vital work of the Federal Deposit Insurance Corporation's efforts to safeguard the money supply by maintaining a stable banking system and thereby promoting a sound financial economy. And, finally, I want to add to my remarks on national legislation the hope that you will become more completely concerned with the dynamics of public affairs.

Your judgment and action on these three important matters will do much to shape the future of the banking industry.

Supergrades for Examiners

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Monday, August 22, 1960

Mr. ENGLE. Mr. President, I would like to call to my colleagues' attention the editorial which appeared in the Washington Post of August 18, 1960, concerning a proposal to bring the hearing examiners in key agencies into the civil service supergrade rating. I agree with this editorial that these examiners serve as the backbone of our regulatory system. They perform a judicial function comparable to that performed in Federal and State trial courts. In order to assure that we have the type of competent men we need in these examiner positions, I favor the proposals pending in the Congress to provide more supergrade ratings for such examiners. I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SUPERGRADES FOR EXAMINERS

In view of the furor over the defects of regulatory agencies, it is regrettable that a rudimentary reform measure has been lost in the congressional mills. This is a proposal to bring the hearing examiners in key agencies into the civil service supergrade rating. The 200 or so examiners who are involved are the backbone of the regulatory system. These career public servants preside over hearings which can play a decisive part in subsequent Commission action in cases affecting all consumers. Because of the increasing complexity of regulatory procedures, a competent examiner must bring judicial fairness and extensive legal scholarship to his task.

If the Government is to recruit—and keep—the ablest legal talent, salary level ought to reflect the examiners position near the summit of the career service. More supergrade ratings (which would bring the salaries to about $18,500) are needed for examiners who now receive a maximum of about $14,000. The American Bar Association, and the chairmen of four major regulatory agencies, support the increase. Representative OREN HARRIS, who has been investigating the needs of the agencies, has warmly endorsed the proposal.

Bills which would effect the chance are lost in two House committees and there seems little hope for action in the present short session. If such action is not now feasible, the very least that should be done is to hold hearings on pending measures so as to clear the way for adoption next January.

Proposal by Hon. Jack R. Young, President, State National Bank, Corsicana

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1960

Mr. TEAGUE of Texas. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article from the Texas Bankers Record of June 1960, written by a good friend of mine, Mr. Jack Young, president of the State National Bank of Corsicana, Tex.

As the article points out, it is a positive approach to the problem of allowing banks to operate their time deposit departments under the same laws applicable to other savings institutions. I commend it to the Members of this body.

The article follows:

POSITIVE APPROACH TO A TOUGH, OLD PROBLEM: LET BANKS OPERATE TIME DEPOSIT DEPARTMENTS UNDER SAME LAWS APPLICABLE TO OTHER SAVINGS INSTITUTIONS

(By Jack R. Young, president, State National Bank, Corsicana)

Bankers throughout the Nation are genuinely and rightfully disturbed about commercial banking's position with respect to the savings associations. Are we not, however, letting our indignation about discriminatory tax laws blind us to the facts, and is not this indignation causing some unsound thinking on the subject? There is indeed an immediate need for action but I think that we should move from the negative approach employed thus far to a positive program of improvement of our own position.

My first suggestion is that individual banks reexamine our policies with a view toward strengthening our competitive position. Here I refer to the matter of rates and charges. And secondly, I propose that we start an immediate study of the desirability and feasibility of seeking new laws and amendments to existing laws that would either require or permit the separation of our time deposit operations from our demand deposit operations, and provide for the establishment of mortgage loan departments to be operated on the same basis as other savings institutions, with the income

from mortgage loans being taxed at the same rate that savings associations are taxed, whatever this might be. For the research of this approach I suggest that committees, preferably of our existing bankers associations, be appointed. The idea of separate departments for time and demand operations is neither new nor novel, for it was only a few years ago that Texas banking laws required that State banks maintain separate departments for savings funds and demand funds, without commingling such funds.

Just how would the separation of time and demand funds be beneficial? First, it would place us on an equal footing competitively if it permitted us to operate our time deposit departments by the same rules that are applied to other savings institutions and then it would serve to clarify to bankers, the supervisory authorities, and the public the difference in time and demand deposit operations and thus remove many doubts and misunderstandings. Banks would be in a position to offer their depositors attractive returns on such funds as they might want to invest and it would help bankers to pinpoint operating costs and to make revisions that would be beneficial to themselves and their customers.

DISCRIMINATION AGAINST BANKS' SAVINGS DEPOSITORS

At present there is a tendency on the part of both supervisory authorities and bankers to make no distinction between time deposits and demand deposits, with the exception of the small differential in reserve requirements. As long as this condition exists and we are urged to maintain fixed ratios without regard for the ratio of time to demand deposits, we canot profitably pay higher rates than we are now paying and as a consequence there is discrimination against commercial bank savings depositors. This is just as unfair as inequality in taxation.

None of my comments should be construed to mean that we should abandon our fight for equality in taxation but it is my opinion that a positive program to improve our own operations will meet with more favor among lawmakers than the negative position of trying to impede the growth and expansion of a competitive industry. Indeed, many Congressmen have already expressed scorn for this stand.

My proposals are made on the premise that the mere removal of discriminatory tax laws is not the final answer to our problems. The very nature of the savings business permits it to operate with far less expense than demand deposit banking and as a consequence it is not likely that we shall ever be able to compete on interest rates, etc., until there is a whole new set of rules by which to operate.

I do not believe that our continued tirades against the savings institutions are going to help our cause or improve our position greatly. Our present negative program should be replaced with one that will seek out our own weaknesses and bring about needed improvements.

The removal of discriminatory tax laws is certainly a legitimate pursuit but this alone or a combination of this and extensive advertising programs to convince the public that savings and loan insurance is not as protective as insurance in commercial banks is not sufficient to improve commercial banking's position in this period of transition. The matter of insurance is at best only a weak selling point and if it were significant, it is pretty safe to bet that the laws would soon be amended.

INFLATION MAKES PUBLIC MORE INVESTMENT CONSCIOUS

It would seem proper at this point to take stock of just exactly what is happening to us. What are our problems? Much of the cream to which we have become accustomed is being skimmed off not only by savings and building and loan associations, but also by other investment media such as Government and municipal securities. Inflation has made the public investment conscious and whereas a few years ago, many people were satisfied to leave their funds on deposit in banks, they are now seeking at least partial offsets to the declining value of the dollar. If it were not for the existence of savings institutions, other investments would be sought. It seems to me that the better approach for banking is to strengthen its own operations and thus place itself in a position to pay competitive rates, whatever they are.

With the loss or depletion of many large accounts, I am afraid that we are going to find eventually that we do not have the revenue to defray the cost of the many unprofitable accounts which we are now servicing at inadequate fees. The figures will be changed somewhat but the same will be true even if we are successful in diverting the demand accounts to our own savings departments. Regardless of which way these accounts go, it is becoming more and more apparent that we are going to have to give far more consideration to service charges and other fees than we are at present.

We should keep up a relentless fight for tax equality not only from a competitive standpoint but also from the fact that it is a dangerous doctrine that would remove such a large segment of our economy as is now going into savings institutions from a tax to a nontax status. It is neither morally right nor economically sound to continue to permit this huge flow of funds into savings institutions where for the most part they escape taxation.

NEED FOR THOROUGH STUDY, POSITIVE ACTION

There is a need for immediate action, for many banks are beginning to suffer from loss of income and pyramiding expenses. In our own case, the two local banks have lost some $3 million in deposits in the past 3 years while two building and loan associations have increased their resources by $6 million, and are currently increasing them at the rate of $150,000 per month. I believe there is an urgent need for a thorough study of the whole problem for it is my opinion that bankers are going to be disappointed if they are depending upon a revision in the tax laws to improve their situation materially. I think the realistic view is that if we succeed in impairing the ability of a competitive industry to pay higher rates by means of taxation and interest rates remain high generally that we have accomplished no more than diverting the funds from savings institutions to some other channel, notwithstanding the strange attitude of an industry of this magnitude that it should not assume a reasonable share of the national tax burden.

With all respect for and gratitude to the fine Congressmen who have worked so diligently on behalf of commercial banking, it is my thought that the bills now pending in Congress have little chance for success in their present from and that even if they were passed, they would fall far short of accomplishing their objectives. Perhaps these measures would serve to restrict the operations of the savings and building and loan associations, but it is unlikely that commercial banks would benefit greatly. I think that we certainly should continue to seek passage of remedial tax legislation but look more to our own resources and our own resourcefulness to strengthen our position.

Bankers everywhere are now doing an enormous amount of talking on the subject and I think that it would be helpful if they would let their views be known to their State and national associations for this is the logical way to correlate our thinking.

Connally Reservation in True Perspective

EXTENSION OF REMARKS

OF

HON. HERMAN E. TALMADGE

OF GEORGIA

IN THE SENATE OF THE UNITED STATES

Monday, August 22, 1960

Mr. TALMADGE. Mr. President, one of this Nation's most respected periodicals, the Saturday Evening Post, has performed a great public service in its editorial of August 20 entitled "If We Agree To Submit Domestic Issues To 'World Law,' It Will Be for Keeps." The editorial clearly and succinctly cuts through the verbiage of misdirected idealism and correctly pinpoints and projects the true issue as one of whether the United States is to protect its sovereignty and constitutional processes from the undermining of violent and revolutionary doctrines now sweeping many parts of the world. It is a forceful and convincing argument for retention of the Connally reservation and I ask unanimous consent, Mr. President, that the text of it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

IF WE AGREE TO SUBMIT DOMESTIC ISSUES TO "WORLD LAW," IT WILL BE FOR KEEPS

The eminent legal Pollyannas who want this country to show its confidence in a nonexistent entity called "world law" advance a unique argument to persuade their less-trusting fellow citizens. This argument is that it is safe to repeal the Connally amendment—which permits this country to decide whether a possible case for the World Court's attention is or is not of purely domestic concern—because, if we don't like what the court decides, we can get out. We could either give notice of withdrawal from the court or exercise our veto power in the United Nations Security Council to prevent enforcement of the decision.

As Alfred J. Schweppe, of Seattle, who has labored prodigiously within the American Bar Association in behalf of a realistic attitude on this subject, puts it, "This is an astonishing suggestion from persons who profess to be deeply concerned with high principles of world leadership for the United States." With the horse on the loose, we could lock the stable door. What an "image" of the United States that would create. The truth is that once we surrender the right to withhold cases which we think are of domestic concern from the international court, "there can be no retreat with both peace and honor."

Barring an unthinkable and revolutionary action like leaving the court, we would be permanently hooked. We would, again quoting Mr. Schweppe, "be giving to an international tribunal, without right of appeal or other redress, power to decide questions arising under the U.S. Constitution that might affect our country, its several States and each of us in a manner contrary to that contemplated by the Constitution. Granted that in most circumstances no such dire situation would arise, there is every reason to retain any safeguards we now have. The temper of the world is not yet above seizing an advantage when one appears."

Advocates of this retreat describe the Connally amendment as "self-serving," as if there were something discreditable in a live-

ly concern for the national interest. Self-saving would more accurately reflect the purpose of the Connally reservation, although it does not fit the propaganda purposes of the various committees which are springing up. Up to now the United States has not used the Connally amendment in a narrow or obscurantist manner. And Mr. Schweppe asks, "If the United States cannot be trusted to be fair in this matter, how, from our standpoint, can more trust be reposed in this international tribunal?"

Despite the apparent feeling of many American liberals and good example setters, this country has no monopoly on deviousness and self-service. Other nations, moved by self-interest or revolutionary fervor, can reasonably be expected to profit from any excess of optimism on our part respecting the prospects of world law. As more and more new nations emerge from the jungle to take seats in the U.N., the need for caution before giving up more of our sovereignty increases. It would be unfortunate if some of our legal bigwigs were forced to learn this simple truth only after they had succeeded in undermining such defenses as we have against the violent and revolutionary doctrines now sweeping the world and craving recognition as world law.

Korea and the Lessons of the Past

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1960

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, I present for your attention and the attention of all my distinguished colleagues of this great legislative body the text of an editorial appearing in the Los Angeles Times on Sunday, June 26, 1960. I commend the reading and consideration of this to all who are blessed with the divine ability to think and to think clearly.

The editorial follows:

KOREA AND THE LESSONS OF THE PAST

Ten years ago the North Korean army—Russian trained, Russian armed, and Russian staffed—crossed the 38th parallel for its almost unimpeded drive to the southern tip of the peninsula. That was June 25, 1950.

UNEXPECTED RESULTS

The Communist plotters expected a quick and cheap victory. Instead they started an international conflict which lasted 37 months, cost hundreds of thousands of lives (33,629 of them American), and revived the military power of the United States and its allies. They had fallen into a state of trusting weakness. Korea opened their eyes and hardened their determination to halt the Red expansion.

Throughout the war and in the face of overwhelming repudiation the Communists reiterated the lies that (1) it was the South Koreans who attacked first; (2) the Chinese forces which intervened when it became clear the North Koreans were beaten were all volunteers; and (3) Russia was neutral in the conflict and not involved. Now these myths have been fully and finally exploded by the former Polish military attaché to both China and North Korea, who was in Korea for much of the war.

Writing in the current issue of Life, Pawel Monat, who defected to the West last year, gives a detailed account of the efforts made by the Communists to mask Russian participation in—and, indeed, sponsorship of—the Korean war. He shows that the invasion of South Korea was carefully and fully planned in Moscow, under Stalin's personal direction. And it was supervised in Korea, by the Soviet Ambassador to North Korea, Lt. Gen. Vladimir N. Razuvayev.

SUCCESSFUL SECRECY

The Soviets made elaborate, and successful, efforts to hide the fact that Russians were actively participating in the war, from fear of both the military and propagandistic consequences which might result if they were exposed.

Russian fighter pilots were ordered never to fly over the ocean or over enemy-held territory, so that if shot down they could not be captured by U.N. forces. Russian advisers, combat engineers and antiaircraft gunners were dressed in Chinese uniforms, were seldom allowed closer to the front lines than 20 miles, and had top-priority evacuation orders in case the U.N. forces broke through suddenly.

With Stalin's death in March 1953, Monat writes, there was an immediate feeling among the Communist high command in Korea that the war would soon end. Communist military leaders in Korea knew by this time that the war could not be won, yet Moscow refused to agree to an armistice except on Communist terms. Four months after Stalin's death the armistice was signed.

But the war has never really ended. The Communists have instead made a mockery of the armistice terms which prohibited further military buildup. Though the Chinese forces were eventually withdrawn behind the Yalu River, the North Korean army has been completely rebuilt and reequipped. Hundreds of new tanks and planes have been added to the Red arsenal, as well as modern artillery and hand weapons.

The two U.S. divisions which remain in Korea are still, however, disastrously underequipped. Mechanization is, at best, rickety and undependable: some trucks have been rebuilt as many as nine times. New armor is almost unknown and in some cases replacement parts are so scarce that tanks have simply been dug in as permanent gun emplacements. Even the hand weapons of individual soldiers are out of date: rifles, carbines, and machineguns are almost all of World War II vintage.

NEW ARMS TO EUROPE

While new and potent weapons have been trickling out of U.S. arsenals, almost all have been put into the hands of our troops in Europe. The danger in Korea, however, is as great as that on the Continent. The Chinese are much less stable and much less astute in judging U.S. determination than the Russians.

Monat writes that Mao entered the Korean war in 1950 partially in an effort to divert the minds of the Chinese people from domestic difficulties. China is still plagued by these difficulties, and the recent anti-American ranting from Peiping suggests that Mao might again find a war to his benefit.

This possibility is too great to be ignored. Ten years ago we learned the hard way that Communist China is a ruthless and determined, if enigmatic, foe. Now we seem in danger of forgetting that lesson. Korea is a prime target for Communist conquest, for it is the steppingstone to Japan, the keystone of the free world's Asian defense perimeter.

If the bloody example of a decade ago is not to be repeated in Korea, if the lives of our 50,000 troops there are not to be needlessly placed in jeopardy by tempting the Communists with an easy target, our military forces in Korea had better be adequately armed, and quickly. History has allowed us one desperate chance in Korea; we can't expect another.

Excerpts of Interview Between Senator Alexander Wiley and Dr. T. Keith Glennan, of NASA

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, August 22, 1960

Mr. WILEY. Mr. President, the pace of our progress in space exploration has magnetically drawn the spotlight of respect and admiration by our own people, and the world. As a nation, our endeavors are: contributing, shot by shot, to our space knowledge; establishing a far faster rate of progress than had earlier been anticipated; and again reflecting favorably upon the ingenuity of a free people—putting their shoulders to a task.

With the rapid-fire space launchings and probes, it is difficult to keep abreast, not only of the specific shots, but of the significance of those ventures to the community of scientific knowledge, and to the ultimate conquest of the forces and elements of space.

Although there have been criticisms of our programs, it is not—realistically speaking—humanly possible to create beforehand a complete blueprint upon which to construct such a complex program—with so many yet unknown factors.

Despite the fact that the Soviet Union started well ahead of the United States, today, we—in my humble judgment, based on expert opinion—are the leaders in space exploration, and the progress of our programs is moving ahead at a far faster rate than that of the Communist nation.

Recently, I was privileged to discuss the highlights of our space exploration with the Administrator of the National Aeronautics and Space Administration, Dr. T. Keith Glennan, who is providing a splendid kind of leadership in this field.

I ask unanimous consent to have excerpts of our interview printed in the Appendix of the RECORD.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

TV INTERVIEW BETWEEN SENATOR ALEXANDER WILEY AND DR. T. KEITH GLENNAN, OF NASA

Mr. WILEY. Friends, welcome to the program.

In the 1960's, the exploration of space will offer new challenges, adventures, problems, and promises for all of us—and for mankind. In these fast-advancing times, man's thinking, ingenuity, imagination—and, yes, his perspective—must extend to the new horizons. The home, fireside, community, and the national and international boundaries can no longer be the limits of our planning, dreaming, and vision.

To cope with the emerging challenges, man must attain a "satellite's eye" view, not only of his progress, but of the new interrelationships of men and nations on the globe—and of our planet, earth, to the universe.

Today, our exploration of space is only in its infancy. As a young child—beginning

to walk, step by step—we, the people of earth, are moving forward gingerly—and yet, with confidence—into the unknowns of space.

As yet, there is no known yardstick by which to determine, evaluate, or predict the ultimate knowledge which the mysteries will unveil for mankind.

However, the tremendous progress already attained within a short time reveals—within our present limited vision—the prospects for dramatic, yet practical, benefits from further development of instruments and vehicles for exploring and utilizing space.

Briefly, now, let's review the accomplishments, projected plans for the future, and the practical benefits and rewards of space exploration.

To present the space picture to you, I have invited Dr. T. Keith Glennan, Administrator of the National Aeronautics and Space Administration.

Welcome, Keith.

Mr. GLENNAN. I am happy to have the opportunity to discuss our program with you, Senator WILEY.

Mr. WILEY. As I recall, the United States has launched about 23 satellites, with 13 now in orbit?

Mr. GLENNAN. Yes; that's right. And I should point out that two of those are in orbit around the sun, of course.

Mr. WILEY. What, specifically, are these satellites doing up there?

Mr. GLENNAN. Senator, I would classify the accomplishments of our satellites into two broad categories. The first is the basic research category. This would include the Explorer and Vanguard series, which give us highly technical information about which we had earlier only been able to theorize. I refer to such matters as the Van Allen radiation belt; the concentration of low energy particles in space; radiation and magnetic storms and fields; and micrometeorites. All of these are tremendously important from the standpoint of basic research, and they help us in achieving our objectives of a more practical nature.

The second category of accomplishments goes toward the practical applications of our space program, and this would include the Pioneer, Transit, and Tiros series. From these we have the beginnings of reliable longrange communications, exact all-weather navigation, accurate earth and planetary mapping, and weather and climate prediction, and possibly control. These are scientific accomplishments to shatter the imagination, and they are at hand. Just as a case in point, we have here a half-scale model of Tiros I, which transmitted from orbit 23,000 excellent photographs of the earth's cloud cover, including the formation and movement of hurricanes and other violent weather phenomena all over the world.

Mr. WILEY. That's a splendid space-view of our accomplishments. Would it be your judgment, then, that—even though the Soviet Union launched the first sputnik, we are now ahead of the Communists in overall performance in space?

Mr. GLENNAN. It is impossible to gage Russia's overall performance in space, Senator, because space capability depends so heavily upon what is being done on the ground. Because of the policy of secrecy followed by Russia, it is difficult to compare their status with our own. I say unhesitatingly that from the standpoint of orbiting satellites—and not merely based upon numbers—that the genuine scientific accomplishments of our satellites surpass those of Russia.

Mr. WILEY. As I understand, you recently announced a new timetable of projects for the future Keith. Would you give us a brief review of the program?

Mr. GLENNAN. Within the next 10 years, NASA plans about 260 major space shots, amounting to an average of more than 2 a month.

Before too many months have passed we hope to achieve a suborbital flight of an astronaut and, before the end of next year, a true manned orbital flight under Project Mercury. In, 1961, also we should see the first launching of an Atlas-Centaur vehicle employing for the first time liquid hydrogen as fuel.

In 1962 we hope to impact the Moon with a scientific payload and launch a spacecraft to the vicinity of Venus or Mars, or perhaps both.

In 1963–64 we should see the launching of the awesome Saturn vehicle, which we have here in model form. This 3-stage giant will be some 185 feet high and 21 feet in diameter at the base, will weigh about 1 million pounds as it stands on the launch pad, and will develop 1½ million pounds of thrust in the first stage alone. This scale model of a man standing at the base (pointing) gives you some conception of the size of the Saturn vehicle.

Also in the 1963–64 period we should see an unmanned soft lunar landing, as well as an Earth orbiting astronomical and radio astronomy laboratory. Unmanned vehicles are expected to circumnavigate the Moon and return to Earth, and reconnoiter Mars or Venus, or both.

In the 1965–67 period we will launch a program which we expect will lead to manned circumlunar flight, and an attempt to establish a permanent near-Earth space station. After 1970 we envision man on the Moon.

We recognize, of course, that unforeseen problems could slow down the achieving of these goals; or, conversely, breakthroughs could accelerate the program. At this time, however, we feel that this is a realistic plan for the 10 years ahead.

Mr. WILEY. The timetable of progress for the future is most impressive, inspiring, and challenging.

In looking ahead in space, it appears that the practical rewards may be just as dramatic and exciting as the idea of manned flights into space and to and from other planets. As a member of the Senate Space Committee—as a citizen—and as a taxpayer—I am also interested in—as I know you are—these practical benefits. Would you review these for us?

Mr. GLENNAN. Although it's difficult to predict all the ultimate rewards of space, there are a number of foreseeable benefits, some of which I have already indicated:

(1) Improved radio, telephone, teletype, and television communications;

(2) more effective weather forecasting to minimize loss from tornadoes, hurricanes, and other storms and benefit agriculture and conservation programs for preservation of our natural resources;

(3) a stronger defense;

(4) further man's efforts to utilize heat and light from the sun and other natural forces of the universe; and

(5) generally gather other data and information about the elements and forces of space for harnessing them to serve mankind.

CONCLUSION

Mr. WILEY. I'm sure you'll agree that creating a greater public understanding of what we're "shooting for"—and what the benefits will be—is a most worthwhile objective.

Mr. GLENNAN. Very definitely. To secure the broad support of the people of the country—who must provide the resources and the personnel—for manning the space program—this is absolutely essential.

Mr. WILEY. In conclusion, I want to congratulate you, Dr. Glennan, and your agency, for the splendid, outstanding accomplishments of the past, as well as the amazing plans you have for the future. Along with you, I sincerely believe that the forces and knowledge of space will play an increasingly significant role in the daily lives, security, welfare, and progress of our people in the years ahead.

Mr. GLENNAN. Thank you, Senator Wiley.

Mr. WILEY (to the audience). Now, friends, thank you for being with us.

Fair Labor Standards

EXTENSION OF REMARKS

OF

HON. SPESSARD L. HOLLAND

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Monday, August 22, 1960

Mr. HOLLAND. Mr. President, I note in today's New York Times an editorial entitled "Fair Labor Standards." It deals with the minimum wage bill which we passed in the Senate last week and which at the time I stated was, I thought, a hodgepodge including about everything that could be put into one act, without any real system or any real uniformity, or any actually fair treatment of the millions of people involved.

Mr. President, I read from the editorial only the last sentence:

Certainly nothing in the measure more clearly symbolizes the degree to which we have departed from the realistic objectives of the Fair Labor Standards Act of 1938.

That comment was made with reference to the much-discussed new wording in the bill which made the bill so broad in its coverage as to cover all business affecting interstate commerce.,

I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows.

FAIR LABOR STANDARDS

With the final vote in the Senate last week both Houses of Congress have completed action on bills providing for what might be termed the "fourth round" of the Fair Labor Standards Act of 1938. The original legislation called for a minimum wage starting at 25 cents an hour and reaching 40 cents an hour by 1945. In 1949 the figure was raised to 75 cents and 1,300,000 workers were added to the number covered. In 1955 Congress voted $1 as a minimum and added 2 million to those in the guaranteed minimum wage class.

By far the more sweeping of the two measures that have now passed is that sponsored by Senator KENNEDY. The House measure would raise the minimum wage to $1.15 an hour and extend the coverage by 1,400,000. Under the Kennedy measure the guaranteed wage would be increased by stages until it reached $1.25.

The most striking point about the Senate bill, however, is to be found in the additional coverage—present and future—for which it provides. The figure is now 4,-100,000. Before the authors of the bill began making concessions to reality the target was about 10 million.

There is nothing implicitly wrong in the figure 4,100,000 or even the figure of 10 million. What is wrong is that in passing the "fourth round" measure the Senate has moved further away from the basic concept of the 1938 law than has any legislative body in the intervening 22 years.

The minimum wage was originally advocated on four grounds: (1) to eliminate poverty caused by the existence of substandard wages; (2) to eliminate unfair competition which was based upon substandard wages; (3) to increase the purchasing power of lower income workers, and (4) to provide for maintaining a high wage structure in depressed periods. In the debate on the present bill the fourth argument was stressed almost to the complete exclusion of the three others and the phrase "increased purchasing power" might be said to have been the battle cry of the supporters of the bill.

Under the 1949 amendment coverage was to be extended only to those workers in jobs "directly essential" to production for interstate commerce. This phrase replaced the word "necessary" in a definition of the basic scope of the act. The word "necessary" had by that time come to mean, for example, that a window washer was in interstate commerce if he scrubbed the grime off panes that let light in on a firm that was operating in interstate commerce. If the word "necessary" wasn't strong enough to prevent the wholesale expansion of this Federal law in the area of intrastate commerce then what is to be said of the comparable phrase to be found in the Senate bill which would extend the law's benefits to all whose work "affects" interstate commerce? Certainly nothing in the measure more clearly symbolizes the degree to which we have departed from the realistic objectives of the Fair Labor Standards Act of 1938.

New President and Cuba

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1960

Mr. FLOOD. Mr. Speaker, a thoughtful news story by Pierre J. Huss in the July 17, 1960, issue of the Houston (Tex.) Chronicle emphasizes that the next President of the United States will have to deal with the problem of Bolshevist intervention in the Republic of Cuba.

This article serves to emphasize the urgency for the Congress, by passage of appropriate resolutions, to make definite what the policy of our country is so that there will be no transitional uncertainty on change from the present to the next administration of the Federal Government.

The article follows:

NEW PRESIDENT TO FACE TOUCHY CUBAN PROBLEM—INTERVENTION BY RUSSIA POSES REAL HEADACHE

(By Pierre J. Huss)

UNITED NATIONS, N.Y.—Here is an indisputable election forecast: Whoever wins and goes into the White House in 1961 must face up to the toughest showdown in the Western Hemisphere since the Spanish-American War.

That will be the ultimate showdown between the United States and Communist-guided Fidel Castro of Cuba.

A major factor will be the brazen intervention in Cuba by the Soviet Union. Through persistently provocative anti-U.S. propaganda and threats, the Kremlin (along with Communist China) has worked to establish a Red beachhead under the nose of the United States by the building of airfields and submarine operational facilities on the island.

The 1961 President will find that by the time he takes office, Castro's Cuba will have advanced very far down the road of dancing to Moscow's tunes. Cuba's wild charges against the United States in the United Nations Security Council and Russia's championing of them strikingly illustrated how extensively Castro has been inveigled by Moscow.

REAL SHOWDOWN

The real showdown with Cuba will probably shape up about the time the new President takes office. He will most likely face an early decision on how rough to get with Castro, and whether further dangerous Moscow inroads in the Western Hemisphere can be prevented without resort to force. Here the President must work closely with the Organization of the American States.

The presidential candidates know now that Cuba has been selected by Moscow and Peiping as the ideological battlefield on which will be fought out the issue of whether the United States or the Communist nations will exert dominating influence in the Western Hemisphere. If Moscow wins, Latin America could go Communist before 1970. Thus the new President's task in fighting that battle will be far from enviable.

Khrushchev has set the keynote of the war of nerves and propaganda the Communists henceforth can be expected to wage against the United States. Although United Nations diplomats brand this fright propaganda as largely huffing and puffing, Khrushchev said in a recent speech:

"Don't forget that the United States is no longer far from the Soviet Union, and Soviet artillery can give necessary support to Cuba if neeed be. Let the Pentagon remember the last rocket tests, in which we proved we can hit a target at a distance of 8,000 miles."

Those at United Nations who have given much thought to the Cuban-American problem are convinced the Castro's government actually would not grant Russia the right to build missile bases on the island, or even airfield, but might allow Soviet submarine facilities.

COSTLY PROJECT

United Nations military men point out that the use of Cuban soil by Russia or Red China for military bases of any kind would be costly and cumbersome and might even trigger U.S. intervention with the consent of the Organization of the American States. In fact, Antonio Nunez Jiminez, one of Castro's closest henchmen, flatly stated on return from a swing behind the Iron Curtain that his country would never permit a Soviet military base in Cuba.

But this same Cuban voiced what U.N. diplomats suspect will be the primary aim of Castro and Khrushchev in their anti-United States onslaughts. He called for the surrender to Cuba of America's important naval and air base at Guantanamo. He charged that the United States is hoping the Cubans will attack the base, intending to seize on that as an excuse for military intervention in all Cuba.

Nunez added: "We will not do it."

An expert viewpoint bearing directly on the Guantanamo Bay situation was given recently by Dominican strongman Rafael L. Trujillo, himself often a target of the Communists. He said:

"Briefly, my evaluation is (1) the Castro Communists have long planned to oust the United States from Guantanamo Bay and in fact the campaign is already underway; (2) the base, owing in part to its peculiar geographic circumstances, can be rendered almost untenable.

"There will be no sudden assault or pitched battle. The Communists are much too clever for that. There will be an agonizingly protracted political, economic, and subversive siege which can be exploited to the hilt for propaganda purposes. The Communists are aided by the fact that there is little or no enthusiasm for the continued existence of the base by even anti-Castro Cubans.

TRAINING BASE

In peacetime, Guantanamo Bay has great value as a U.S. fleet training base. In wartime, it is one of the chain of bases from Newfoundland through Bermuda to Puerto Rico and Trinidad that provides protection for shipping and facilities for antisubmarine warfare.

U.S. rights to the base rest on treaties signed in 1903 and 1934.

Bipartisan Accord on Middle East Is Healthy Sign

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Monday, August 22, 1960

Mr. KEATING. Mr. President, it is gratifying to note that the platforms adopted this summer by both major political parties contain substantial agreement on American relations with the Middle East. In particular, both pledge continued allegiance to the noble state of Israel and to vigorous efforts to end blockades and other acts of international piracy.

This bipatrisan accord shows clearly that the American people firmly believe that Israel is here to stay and that this country must continue its aid and assistance to the end that the independence of that nation will be insured. A recent editorial in the Rochester (N.Y.) Democrat and Chronicle points up the importance and significance of this interparty accord on Israel and the Middle East. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Rochester Democrat and Chronicle, Aug. 17, 1960]

HEALTHY ACCORD ON MIDDLE EAST

It is politically healthy that the two major parties, in the present campaign, have achieved substantial agreement on Middle East policy. Neither party shows any sign of a diminishing interest in the welfare and friendship of this turbulent area. Both platforms urge negotiations between Arabs and Israeli for a mutually aceptable settlement of the causes on Mideastern tension. Far away as this goal may now seem, it would be a sad mistake not to believe in it.

The Democrats, on the troublesome Arab refugee problem, propose resettlement in lands "where there are room and opportunity for them," but they do not say what lands. Except for token numbers, Israel refuses to repatriate Arabs because of Arab hostility to the State of Israel. The GOP promises it will keep trying to remove obstacles to Israel-Arab peace, including the refugee problem. It could have been more enlightening by telling us how it hoped to do so.

President Nasser of Egypt likes neither platform—from which one might conclude

both parties are on pretty solid ground. He is unhappy because both documents recognize the existence of the State of Israel. The real pinch on Nasser, we suspect is the two-party denunciation of blockades. Nasser has illegally been blocking the Suez Canal, an international waterway, to Israel shipping.

Barring some unforeseen development, Mideast policy is not likely to be a campaign issue. The bipartisan accord in supporting the integrity and independence of all Mideastern States, gives the lie to Soviet charges of American imperialistic aims in that area. It would be folly to disturb a U.S. policy which in recent months has proved our interest is one of genuine friendship, with no thought of interfering or dictation in Middle Eastern affairs.

The Message of Abraham Lincoln to Our Times

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1960

Mr. FULTON. Mr. Speaker, at the Republican National Convention held last month in Chicago the delegates from Pennsylvania had the honor of hearing an address by one of Pennsylvania's distinguished citizens, Raymond Pitcairn, of Jenkintown, Pa.

Mr. Pitcairn, born in 1885, in Philadelphia, is an active business, religious, and civic leader. He is greatly interested in the world around him, and particularly the political processes in the United States.

He was an early supporter of Dwight David Eisenhower for the Presidency of the United States, and is now a strong supporter of the candidacy of RICHARD M. NIXON for that office.

Under leave to extend my remarks in the RECORD, I am including this address to the delegates so that it may be called to the attention of my colleagues in the Congress and to the American people.

The address follows:

THE MESSAGE OF ABRAHAM LINCOLN TO OUR TIMES

(Address by Raymond Pitcairn at Chicago, Ill., to Pennsylvania Republican National Convention caucus, July 24, 1960)

A century ago, on November 6, 1860, Abraham Lincoln was elected to his first term of office as President of the United States. Today he might be regarded as a compromise candidate, for he was chosen on the third ballot after the efforts of others had arrived at an unsoluble standstill. Significantly this reveals the violent differences of opinion which divided and confused our country 100 years ago.

There were insistent demands before and after his election, that Lincoln lay down a program, state his position, and give his answers to the grave problems that beset the Nation. Many who doubted his ability accused him contemptuously of vacillation and indecision. His refusal to commit himself on certain important issues before taking office brought bitter charges that he had neither plan nor policy with which to meet the crises that threatened to destroy the Union.

After his election Lincoln received a visitor, John M. Palmer, whom he had known in Illinois. They were close friends, and discussion about policy and issues went on while Lincoln was being shaved. Referring to old times, Palmer said jokingly:

"Mr. Lincoln, if anybody had told me that in a great crisis the people were going to go out to a little one-horse town and pick up a one-horse lawyer for President, I wouldn't have believed it."

Lincoln rose up, lather on his face, and Palmer feared he was displeased. But the President put a hand on Palmer's knee. "Neither would I," he said, "but it was a time when a man with a policy would have been fatal to the country. I have never had a policy. I have simply tried to do what seemed best each day."

Can it be possible, and is it believable, that a man without a policy can become a wise, firm, and competent President of the United States? The answer appears clearly in a record of Lincoln's statescraft. As the war progressed the abolitionists, their preachers in the North, and a delegation of clergymen from Chicago hounded Lincoln to delay no longer to issue immediately a proclamation of emancipation.

He was denounced by Horace Greeley in the press as showing no heart in the fight against slavery. A friend urged him to set the Negroes free on Independence Day, and so make Independence Day more sacred than ever.

Lincoln replied, "I would do it but if I did three more States would rise and go over to the Confederacy."

Months of agony were to pass before the country was prepared for Lincoln's Emancipation Proclamation.

The abolitionists with a single objective could hew to the line. How much more difficult the task of Lincoln, the statesman, to prepare the way, while awaiting the arrival of the appointed time. For by premature importunate action he could so easily lose his cause.

Truly the outspoken abolitionists were needed in the cause of freedom, but without their statesman Lincoln at the helm, their cause must, indeed, have failed.

This is again a time of grave crisis for our Nation. The United States has been defied and derided by a powerful enemy which rules its people with an iron hand. Both abroad and at home the United States is threatened by pressures of relentless policy. Our most cherished institutions are endangered by men who know what they want, and have no scruples in seeking it. What kind of President, in these perilous times, would best guide and lead the American people?

Abraham Lincoln had faith in the fundamental principle of democracy—that the people can be trusted, in the long run to recognize and accept the leadership and choose the policies which will guide their destinies. Repeatedly they have rejected the spirit of benevolent autocracy which tells men what to think and takes away their freedom to decide. And James Reston, in one of his articles wrote, only partly in jest, that "if any candidate for President of this country candidly admitted some day that he was sorry, but he did not have all the answers to all the questions confronting the human race, he might be swept into office by the commonsense of a grateful electorate."

Today the American people are witnessing an extraordinary and somewhat disreputable spectacle. A candidate for the Presidency, of high character and honorable record, RICHARD NIXON, is being badgered and beset to answer questions on every conceivable subject in politics, economics, international affairs, and social relations. Some of these questions are asked by his political opponents; some under the thin guise of friendly or constructive criticism. Some concern matters on which he may not properly give positive opinions while actively engaged in the Nation's business as Vice President of the United States. Many are immaterial to the real issues before the American people, and some verge on the ridiculous.

It is time to recall and reflect upon Lincoln's opinion—that in times of real crisis a leader with a hard-and-fast policy can be "fatal to the country." Lincoln claimed no preconceived wisdom with which to meet unpredictable circumstances. He did declare his humble faith in principle, and his firmness in the right as God gave him to see the right. But while enduring the bitter criticism of his powerful enemies in the North, as well as in the Confederacy, he consistently admitted that he could not answer all their questions, nor foresee solutions to problems not yet clearly defined or ready for decision and action. In his last public address, shortly before he died, he answered demands for a statement of policy by saying, "I am considering and will not fail to act when satisfied that action will be proper." Throughout his career Lincoln led and frequently waited patiently for the formation of public opinion before taking action.

Yet Lincoln did have a real and steadfast policy, which was to deal with situations according to his training in the wisdom of the common law, which does not legislate for the hypothetical. In a sort of passion for platforms, plans and programs many would-be leaders of the American people and self-appointed prophets are doing exactly that. They make promises, many of which will not be kept, and many of which cannot be kept. They offer blueprints for a future which may never be built. They undertake to impose their fallible judgments on the future destinies of nations and their fellow men.

How wise was the policy of Lincoln, who "tried to do what seemed best each day," knowing in his humble heart that "sufficient unto the day are the evils thereof."

If it were reasonable to decide arbitrarily, in advance of the event, the human issues involving constitutional questions of public policy, the Chief Justice of the United States might confer with his associates and declare in advance just what labor and management may do. But even in the light and urgency of the event, aided by their knowledge of the law and by hearings of the parties to a controversy, the Supreme Court Justices often differ in their decisions, sometimes by the minimal margin of five to four. Even the statesman's decisions like those of every one of us, cannot be governed by exact science or dogmatic foresight. They are guided, or should be, by just principles applied to the art of living. They may be applied wisely or foolishly, constructively or destructively, according to the character of the statesman or individual involved.

Today we Americans are well aware that the most unfortunate and unhappy peoples in the world are ruled by men who make all the plans and claim to know all the answers. Therefore, the people are willing and eager, in great majority, to trust and follow the leadership of a man whose abilities are known, and whose competence and integrity have been tested by years of distinguished public service. No Vice President in the Nation's history has served his country so earnestly and faithfully, in so many fields, as RICHARD NIXON. No other man has been a candidate for the Presidency as well prepared to deal with dangerous international conditions in which our survival and that of the free world may be involved.

No political platform should attempt to blueprint the solution of every future problem. While our legislatures look to the future and our courts base their decisions on precedents of the past, our Chief Executive must deal with the present. Many national

and international problems, now unforeseen and unforeseeable, must be left to the judgment and discretion of a President of sound principle and tested experience.

Executive ability rests on the ability to lead men of differing opinions and diverse interests to act together for at least so much of the cause as they may be led to agree upon in unity. A multiplicity of ill-considered and provocative platform dictation can prevent the accord which true statesmanship can achieve. And the science of statesmanship is the science of the possible.

You may have gathered that I don't want Senator KENNEDY to be disappointed when he said of us Republicans: "We know they will invoke the name of Abraham Lincoln on behalf of their candidate," despite the fact, as he charged in his bid for the U.S. Presidency, that RICHARD NIXON "has often seemed to show his charity toward none and malice for all."

Today I submit we all need the message of Abraham Lincoln to our times. It needs telling to our friends, the Independents and Democrats, without whose votes we cannot win. It needs to be told especially to the dissatisfied in our party who may be tempted to sit on their hands, but whose generous support in work and funds we must have if we are to win.

And if we should fail to win, how great will be the loss to all of us, and how tragic the disaster to our country and the whole free world.

Retirement of Peter J. Cahill, Secretary-Treasurer of the National Association of Letter Carriers

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1960

Mr. McCORMACK. Mr. Speaker, the National Association of Letter Carriers is an outstanding organization of postal employees, with leadership throughout the years of ability, vision, and sound judgment.

One of the ranking officials for years of the NALC is Peter J. Cahill, the secretary-treasurer of this splendid organization.

Due to arriving at the retirement age, Peter Cahill retires this year.

For years Peter Cahill rendered outstanding service as an employee of the Post Office Department in the Boston Postal District, and in the Post Office Department in Washington, occupying responsible supervisory positions during his years of employment. He always performed his duties in an outstanding manner, receiving many high commendations.

For years in the Boston Postal District, and later, at the national office, Peter Cahill has been a dedicated member and official of the National Association of Letter Carriers.

He has been the "right arm" so to speak, of a great leader, and one of the finest men I have ever met, William C. Doherty, national president of this splendid organization of postal employees.

I am also proud to number Peter Cahill as one of my most valued friends.

While in retirement, I know Peter Cahill will always treasure his association with the NALC and will always respond to any service the NALC may call upon him to perform.

In retirement, and in other fields, Peter Cahill, always active and dynamic, will lead an active life.

I congratulate my close friend, Peter Cahill, in his many years of dedicated service as a postal employee and supervisor, and as a member and officer of the National Association of Letter Carriers.

I wish for him every happiness and success in the years that lie ahead for him.

In my remarks, I include a portion of a report relating to Secretary-Treasurer Peter J. Cahill made by National President William C. Doherty to the members of his organization, a splendid and deserved commendation of Peter Cahill.

As President Doherty well said, "He was and will be to the end of his natural days, a letter carrier's letter carrier."

A portion of the report follows:

RETIREMENT OF SECRETARY-TREASURER PETER J. CAHILL

The conclusion of these comments on the operation of our national headquarters must, unfortunately, end on a sad note. What must be said, I assure you, is difficult to reduce to writing, and yet express the feelings I have for the officer concerned.

Reference is made to the retirement of Secretary-Treasurer Peter J. Cahill at the Cincinnati convention. Having reached the mandatory retirement age of 65, under the provisions of our national constitution, Pete Cahill must relinquish his official connection with NALC this year.

It has been my good fortune to have known Pete almost from the date I entered the postal service 37 years ago. Even then he was a veteran of some 10 years' service in the postal establishment of his native city of Boston, Mass. Over the years our association has been close and cordial, even during the few times when he did not always see eye to eye with my thinking, or vice versa.

In fact, I think one of Pete's finest attributes is that he has the courage of his convictions and the intellectual honesty not to evade a situation simply because it means taking a stand that might be momentarily unpopular or held by a minority. Withal, he was and is one of the best team players it has been my pleasure to work with in more than 30 years of active association with the NALC.

After serving 6 years as chief clerk of the NSBA, from 1946 to 1952, Pete was elected national secretary at the New York convention. When the offices of secretary and treasurer were consolidated in 1956, he became the first officer to hold the combined position.

It occurs to me that it would be impossible to list item by item the numerous and varied contributions Pete has made to the NALC over the years. Branches and individual members having business with him during the time he was NSBA chief clerk and later national secretary-treasurer will attest to the fact that he was always a champion of the letter carrier. Perhaps it could best be summed up by saying that after his family and his church, Pete Cahill had no consuming interest for his great abilities and talents outside the letter carrier movement.

He was and will be to the end of his natural days a letter carriers' letter carrier. As such, I know every member joins me in wishing Pete Cahill the best life has to offer for many, many more years.

Address by Hon. James A. Farley Before the Rotary Club of Los Angeles, July 8, 1960

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1960

Mr. WALTER. Mr. Speaker, under leave to extend in the RECORD, I include the following:

ADDRESS BY HON. JAMES A. FARLEY, FORMER CHAIRMAN OF THE DEMOCRATIC NATIONAL COMMITTEE, ROTARY CLUB OF LOS ANGELES LUNCHEON, LOS ANGELES, CALIF., JULY 8, 1960

This Nation is in the middle of the greatest crisis since 1776. Now, as then, the question is: To be or not to be? It is, therefore, a time for plain talking.

I foresee no great difficulty on domestic issues. Of the 100 basic acts of the first and second Roosevelt administrations not one has been repealed; all have, on the contrary, been expanded by both parties. What were called rash and expensive experiments of the Democratic Party are now hailed as built-in bulwarks against another depression by a sadder but not necessarily wiser Republican Party. It is somewhat gratifying, of course, to see the selfsame Democratic policies once called by the GOP creeping socialism now being merchandised, after considerable adulteration, as its very own brand of dynamic conservatism.

While we cannot help but be flattered by the attempted imitation, it is a fact that the sense of quality inherent in the American people leads them to accept no substitute for very long.

The care of the old, for which we were so bitterly criticized, was written not by us but by the fourth commandment. Twenty-five years of experience have proven that honoring thy father and thy mother is more likely to strengthen a nation than to destroy it.

Twenty-five years of experience have also taught us that the American economy rests upon stronger shoulders than child labor.

Twenty-five years of experience have taught us that a well-regulated securities market is as much a protection to the vast majority of honest security dealers as it is to the intelligent investor.

Eight years of recent experience have proven that honesty is the monopoly of no single party. Encompassed in the vast multitudes in both parties are some who do not measure up to an understanding of public trust. But it ill behooves a party which unduly dramatized a deep freeze to call attention to a phase in which is must necessarily stand shivering in a vicuna overcoat on the same spurious issue.

What is an issue is that the great administrative agencies, now regulating a great part of the daily life of every American, have fallen into disrepute. Naturally, the American people will turn to the Democratic Party, which created these great institutions, to return them to the power of the U.S. Government instead of the people they are supposed to regulate. Right now, as the Supreme Court has observed, they are responsible to neither the Congress nor the Executive. This is either administrative anarchy or a bureaucratic autocracy and the American people will stand for neither.

By the same token, that no part of any nation has the right to intimidate all, the Democratic administration must assist both labor and management to clean their own houses.

Our economic system has come a long way, from men with their hats in their hands to the collective bargaining table. But the right to collective bargaining does not include the privilege of ganster-led unions to paralyze the country for its own private gain any more than the right of selling securities gave the privilege of swindling the investors. I do not exclude from this charge that form of management which prefers corrupt leadership in labor, but I do identify this unholy alliance as a mortal conspiracy against both the working men and women, the stockholders and, indeed, the Nation. But labor and management have been recognized to a point where the American way demands that all business be done aboveboard—and none under the table.

However, I consider the great issue to be one of nothing less than national survival. We shall not survive, nor will we deserve to survive, if we desert the basic moral platform by which this Nation came into existence. The men of the Philadelphia convention of 1776 exampled those essentials of American character to which we ought to adhere, if we value not only our lives but our sacred honor.

By their ideal, an American is a brave man. "Give me liberty or give me death" could have been spoken by no coward. Courage is not only the wise course; it is now the only course, because there is no place for even cowards to hide.

By their ideal, an American is also an intelligent man. Atomic war is dangerous, of course, but no more dangerous to the individual than any other war—as the Tomb of the Unknown Soldier proves. Yet there move among the American people self-appointed messiahs, who constantly call attention to the horrors of armed conflict, as if George Washington, Robert E. Lee, and Ulysses S. Grant were not aware of the devastation of war. Do these false prophets think Bunker Hill was a picnic? Do they mistake the death march from Bataan for a May walk? There never was a bargain basement price for freedom as the heroic martyrs from the Boston massacre to the Hungarian revolt prove. No party and no free nation can deliver peace. Indeed, the very same Republican Party which promised peace in Korea, as a principal factor in the 1952 election, was forced to land troops on the beaches of Lebanon in full and final proof of the rashness of its promises of 1952. To commit this Nation to a peace-at-any-price leadership is tantamount to the surrender of the free world. We cannot answer Communist brinksmanship with "lameduck" slinksmanship.

Further, by the ideal of the Founding Fathers, the American is also a man who believes in religious freedom. That principle condemns a Nazi Party which persecutes a grand rabbi of Warsaw or a Pastor Niemueller as it despises any communistic regime that crucifies a Cardinal Stepinac and a Cardinal Mindszenty. Now, this very month, the United Nations accused Red China of genocide—the systematic killing of Buddhists and Buddhist priests in Tibet. Yet there are those among us who would urge that we consider recognizing Red China, even while this massacre is in progress.

How shameful can one get? But assuming that the plight of these brave little mountain people does not present sufficient grounds for pause in the appeasers' program by what possible theory can they write off the Americans now in Red Chinese or Siberian prisons? A course of recognition is nothing more nor less than the ratification of the illegal seizure and detention of Americans. That principle, most had thought, was settled by the War of 1812.

Indeed, if the seizure of Americans is not a cause of national action then Presidents Jefferson, Madison and Monroe were, according to our new self-appointed prophets, nothing but an opinionated group of nationalistic warmongers.

The fact is that these Johnny-come-latelies to the Democratic Party have assumed an intellectual superiority which they do not possess. They are willing to risk the fate of the nation on what they regard as their divine understanding and persuasive powers—a conceit so great that they believe they can negotiate a spectacularly successful Communist terror into giving up two-thirds of the world. What they do not comprehend is understood perfectly well by the ordinary American, that is, that there is no trouble in getting the Communists to agree; the trouble comes in getting them to keep their agreement. High sounding are the reasons they advance but unclouded by either fact, common sense, history or honor.

Nor does their mischief end with their idiotic foreign policy. It extends to what amounts to the splintering of the Democratic Party.

This is what I mean. The Democratic Party, ideally, is an American party composed of Americans, thinking for America. It is not an alliance of special interests forming a coalition by which each special interest gets its share of power as if it were a division of loot. This country cannot afford to have a foreign policy based upon political pressure groups, seeking favors for the homelands of its fathers. If they could but see it the question is not where their fathers came from but what kind of an America their grandchildren are to live in. So much for hyphenated Americanism.

Again, there is nothing more dangerous to a nation than exploitation of racial differences. It is absurd, and unconstitutional and disgraceful that a Negro does not have access to every educational institution and every public convenience in any State of the Union. And it is equally absurd, and unconstitutional and disgraceful to apply a reverse racial prejudice to bar a Caucasian born south of the Mason-Dixon line from any public office, including the Presidency. Thomas Jefferson, the founder of this party, would be barred from the candidacy of this party if we listened to the reverse-bigots on the ground that his parents were of the white race and he was born in Virginia. I would have none of either.

Further, I am chagrined to report that the convention is about to be disturbed in its deliberations by a spurious shower of pseudo-messages, more inspired than inspirational, urging a specific candidate. Of course, every American has the right of petition but I cannot refrain from pointing out that each telegram or message telling a delegate how to vote is something less than a compliment to the judgment of the recipient. I wish not to demean the work of those who have labored so hard to contrive the effect of seemingly spontaneous outburst. Indeed, I believe that they are receiving assistance from sources not contemplated but perhaps acceptable. More particularly, it seemed to me that I saw some smug Republican faces happily signing petitions. But, perhaps I was mistaken and they may have been the happy smiles of bona fide supporters who had signed twice.

In any event, it will not recommend the Democratic Party to the American people if its decisions are reached by stampede, or even by deadlock, as the disastrous deliberations of 1924 prove. I have no doubt that the convention will select a candidate who, like Jefferson, Jackson, Cleveland, Wilson, Franklin D. Roosevelt, and Truman, has personal honor enough to admit he seeks the office instead of instigating a futile and unmanly methods of trying to appear as if that great and majestic office seeks him.

I have said that I have confidence in the candidate the Democratic Party will select. It is my earnest wish, however, that the platform committee will provide a sound foundation upon which the party can stand, and not an equivocal magic carpet subject to directional changes.

I was appalled, for example, by the recommendation of a former New York Governor who urged the platform committee to accept no plank which committed the party to a stiffer policy with the Kremlin. What then does he recommend—a softer one?

Further, I also note that the ex-Governor of Illinois is prepared to accept the nomination to the Presidency apparently in the belief that it is the duty of God, the Democratic convention, and the American people to force it upon him. To paraphrase a current statement, to send Governor Stevenson to negotiate with Mr. Khrushchev is to send the cabbage patch to the goat.

I have traveled as much abroad as almost any man in this party. I, too, value the opinion of the world. But I am sure that sound policy cannot be based on loss of self-respect. I am sure that the great Democratic Presidents of the past would deal, and deal effectively, with the rising Communist tide wherever it appears. I am certain that strong Presidents need not justify to the world, the American people, nor their consciences the prevention of new communistic states, where democracy formerly ruled. The Republican administration which promised it would roll the Iron Curtain back has presented us with a Red picket fence coming perilously close to the Western Hemisphere. Here and now, I state my convictions. Any American administration which refuses to protect American citizens and American property in any quarter of the globe, on the ground that its action will be called Yankee imperialism, has in effect struck the flag. Let us not perform the disgraceful act of offering the American people a spurious dove of peace, when every page of recent history identifies it as the white flag of cowardly surrender.

I have been criticized for speaking out, as if I should hold my views in deference to the slinkiness of appeasement for the sake of the unity of the Democratic Party.

As a member, and a loyal working member of the Democratic Party for more than 50 years, I need no instruction from them on party loyalty.

This party stands in grave danger, if their views are adopted, of becoming the party of appeasement. Unless this is effectively rebutted at the convention it will not be the instrument of the American people. Because this country still has as its motto "In God We Trust," and by it, I am convinced, the American people are willing to stand.

Resolution of Grand Parlor, Native Daughters of the Golden West

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1960

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, I am pleased to call your attention to the text of a resolution by the Grand Parlor, Native Daughters of the Golden West, San Francisco, Calif., dated August 11, 1960. I am sure you and all the distinguished Members of this great legislative body will join with me in complimenting these native daughters of the State of Califor-

nia for passing this resolution and sending copies thereof not only to members of the House Un-American Activities Committee but to the President and Vice President of the United States and to all Members of the House of Representatives and Senate from the State of California.

The text of the resolution follows:

RESOLUTION OF GRAND PARLOR, NATIVE DAUGHTERS OF THE GOLDEN WEST

To the Honorable Members of the U.S. Congress from the State of California.

SIRS: At the recent anual convention of the Native Daughters of the Golden West, a fraternal and patriotic organization of California-born women dedicated to the principles of our order—love of home, devotion to the flag of the United States, veneration of the pioneers, and an abiding faith in the existence of God—the delegates in convention assembled unanimously adopted the following resolution:

"Whereas it has been documented and proved that the Communist conspiracy is and has been working to infiltrate our schools, churches, press, radio, organizations, and government, it is vitally necessary to the safety of our country that we be alert to seek out and expose those who have infiltrated our country and hope to bring about the destruction of the American Government we love; and

"Whereas the House Un-American Activities Committee is one of the chief bulwarks on which the people of this country may rely in full confidence; and

"Whereas, Edgar Hoover, Director of the FBI, says, 'Today, communism is the major menace of our time. Today, it threatens the very existence of our Western civilization': Therefore be it

"*Resolved*, That the Native Daughters of the Golden West in convention assembled, do commend the work of the House Un-American Activities Committee and support its continuance until all danger of subversion and espionage is over; and be it further

"*Resolved*, That copies of this resolution be sent to the chairman of the committee, Representative FRANCIS E. WALTERS, the President and Vice President of the United States, and all Representatives and Senators from the State of California."

Respectfully yours,

IRMA S. MURRAY,
Grand Secretary.

The 1960 Pugwash Conference on College Deans

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Monday, August 22, 1960

Mr. PORTER. Mr. Speaker, if we are to mobilize our intellectual resources in time to meet challenges of our precarious days, we must encourage more conferences such as Cyrus Eaton, Cleveland industrial and world peace worker, is holding at Pugwash. Early last month 16 college presidents convened for the first of Cyrus Eaton's 1960 Pugwash thinkers conferences. Not long after 18 college deans and their wives came to Pugwash to devote 10 days of consideration of great ideas of the past as a guide to modern ethics.

By unanimous consent I am including hereafter the remarks Mr. Eaton made to the assembled deans and news items from two Nova Scotia papers:

[From the Oxford Journal, July 14, 1960]

NOTED COLLEGE HEADS HOLDING SESSIONS AT CYRUS EATON HOME

PUGWASH, NOVA SCOTIA, July 10.—Thinking rejoined lobster fishing and salt mining as one of this small seaside village's major industries this week, when 16 college presidents convened for the first of Cyrus Eaton's 1960 Pugwash thinkers conference.

The educators and their wives will be guests of the Pugwash-born American industrialist for 10 days, while they seek renewal of intellectual life through study and discussion of the classics.

Organizer of the conference and cosponsor with Mr. Eaton is the Association of American Colleges. Discussion leaders are provided by the Carnegie Foundation.

Following the presidential group at Thinkers' Lodge, will be 18 college deans and their wives. They, too, will devote 10 days to consideration of great ideas of the past, as a guide to modern ethics.

In a message to the college presidents, Mr. Eaton stated, "It is a source of immense satisfaction that Pugwash serves as the gathering place for those whose emphasis is on philosophy, history and the humanities, as well as science."

Noting that "Pugwash has become a familiar name in the far places of the world, from the warnings of the Pugwash scientists against the grave hazards of nuclear, biological and chemical warfare," Mr. Eaton added, "Pugwash conferences like this one, with concern for things that affect the spirit of man, play an equally important part."

Discussion leaders for both of this year's collegiate conferences are Dr. Carter Davidson, president of Union College, Schenectady, N.Y., and Dr. J. Harry Cotton, chairman of the Department of Philosophy, Wabash College, Crawfordsville, Ind. Dr. Cotton, who is spending his third summer at Pugwash, is an ordained Presbyterian minister. Dr. Davidson, in his second season at Pugwash, is ordained in the Congregational ministry.

Dr. Davidson describes the Pugwash conferences of college presidents and deans as a process of "intellectual retolling." In his view, they present a "wonderful opportunity for refreshment of the mind" by barring discussion of finances, faculty problems, and students, in exclusive favor of philosophical discourse. He points out that "the impast of the Pugwash conferences is making itself felt throughout the United States, so that college administrators are eagerly seeking the opportunity to attend."

The Pugwash Intellectual Life Conferences are entering their fifth year. Because of their popularity, they are held not only at Pugwash, but also at such other summer resorts as Asheville, N.C., and Wagon Wheel, Colo.

More than 20 Pugwash conferences of all kinds have been held in Canada, the United States and Europe in past years. Five Pugwash scientific meetings have brought together 112 authorities on nuclear, biological, and chemical warfare from 23 major nations, east and west.

It was largely in recognition of the contribution of the Pugwash scientific conferences to improved international understanding that Mr. Eaton was designated as 1960 International Lenin Peace prizewinner. The peace medal was officially conferred upon Mr. Eaton in Pugwash on July 1 before a Dominion Day gathering that attracted 15,000 people to this little town of 700. Prof. D. V. Skobeltzyn, director of the Institute of Physics of the U.S.S.R. Academy of Sciences, made a special trip from Moscow to Pugwash for the presentation ceremony.

Participants in the present Pugwash Intellectual Life Conference of College Presidents, and their fields of scholarly interest, are:

Dr. C. H. Becker., president of Wartburg College, Waverly, Iowa, theology and sociology; the Very Reverend Edward Bunn, S. J., president of Georgetown University, Washington, D.C., psychology; Sister Maria Corona, president of College of Mount St. Joseph, Mount St. Joseph, Ohio, philosophy and mathematics; Sister Catherine Francis, president of the College of St. Rose, Albany, N.Y., economics; Dr. Robert W. Gibson, president of Monmouth College, Monmouth, Ill., history; Dr. H. G. Harmon, president of Drake University, Des Moines, Iowa, educational psychology; Dr. R. T. L. Liston, president of King College, Bristol, Tenn., theology; Dr. Delyte W. Morris, president of Southern Illinois University, Carbondale, Ill., speech pathology; Sister Mary Muriel, president of Mount Mercy College, Pittsburgh, Pa., humanities; Dr. R. W. Puryear, president of Florida Normal and Industrial Memorial College, Saint Augustine, Fla., social studies and religion; Mother St. Egbert, president of Notre Dame College of Staten Island, N.Y., philosophy; Dr. Paul F. Sharp, president of Hiram College, Hiram, Ohio, American history; Dr. Rembert Stokes, president of Wilberforce University, Wilberforce, Ohio, social ethics; Dr. Alan S. Wilson, president of Hillyer College, Hartford, Conn., natural sciences; Dr. Val H. Wilson, president of Skidmore College, Saratoga Springs, N.Y., philosophy.

Those who will take part in the forthcoming Pugwash Conference of College Deans, and their fields of scholarly interest, are:

Dr. Isabel R. Abbott, dean of Western College for Women, Oxford, Ohio, history; Dr. Richard L. Barber, dean of University of Louisville, Louisville, Ky., philosophy; Dr. Richard R. Bond, dean of Elmira College, Elmira, N.Y., biology; Dr. F. G. Bulber, dean of McNeese State College, Lake Charles, La., music; Dr. George W. Burns, dean of Ohio Wesleyan University, Delaware, Ohio. botany; Dr. John O. Eidson, dean of the University of Georgia, Athens, Ga., American literature; Sister Mary Emmanuel, dean of College of St. Teresa, Winona, Minn., English; Dr. Thoma H. Henderson, dean of Virginia Union University, Richmond, Va., educational psychology; Dr. Herschel Hendrix, dean of Upper Iowa University, Fayette, Iowa, administration; Dr. C. W. Huntley, dean of Union College, Schenectady, N.Y., psychology; Dr. Robert Kirkwood, dean of Washington College, Chestertown, Md., American history; Dr. Carl Kreider, dean of Goshen College, Goshen, Ind., economics; Dr. David G. Mobberley, dean of Lycoming College, Williamsport, Pa., botany; Dr. Mary J. Pearl, dean of Sweet Briar College, Sweet Briar, Va., classics; Dr. Thomas R. Ross, dean of Davis and Elkins College, Elkins, W. Va., history; Dr. Kenneth P. Smith, dean of Sterling College, Sterling, Kans., theology; Sister Mary Stephanie, dean of St. Joseph's College, North Windham, Maine, English literature; Dr. E. E. Towell, dean of College of Charleston, Charleston, S.C., chemistry.

Classics forming the basis of discussion for these two Pugwash Intellectual Life Conferences include Plato's "Symposium," Kierkegaard's "Fear and Trembling," Swift's "Gulliver's Travels," de Tocqueville's "Democracy in America," and Turgenev's "Fathers and Sons."

The two July gatherings will be followed by a Pugwash International Conference on Continuing Education from August 12 to 17. Heading the organizing committee for the international meeting is Dr. J. R. Kidd, director of Canadian Association for Adult Education. Serving as director of the Pugwash Secretariat, throughout the summer, as in previous years, is Miss Betty Royon, of Cleveland, Ohio, Mr. Eaton's assistant.

MESSAGE FROM CYRUS EATON TO 1960 PUGWASH CONFERENCE OF COLLEGE DEANS

The presence of this distinguished group of college deans in my native Pugwash gives me great pleasure. I hope you share my enthusiasm for this quiet and kindly community as a place for serious study, reflection, and discussion, combined with a simple, wholesome vacation.

In your contemplation here of the great problems of life, perhaps you will come forward with some fresh ideas for challenging your fellow citizens to make the most of their potentialities. Living as we are in an age of propaganda, it seems to me that we need to find new ways to wage the battle for men's minds. This is no mere contest between Karl Marx and Adam Smith, but a broad campaign ranging over the entire area of human thought and endeavor.

Governments the world over are thoroughly familiar with modern ways of forming and directing public opinion, and are taking full advantage of this psychological revolution. The ghost writer is in demand in the highest places.

All of us must marvel at today's amazing instruments of communication. At the same time, must we not stand appalled at the sorry use to which our press, radio, and television are to large extent put? Although these media could provide powerful means for education and enlightenment, their overwhelming emphasis is on dangerous jingoism, narrow nationalism, sensational excitement, and superficial entertainment. Unthinking readers, listeners, and viewers are lulled into insensibility to the serious issues of the day, into unawareness of the imminent danger of annihilation by nuclear warheads. (You will have noted with approval, I hope, the refreshing contrast presented by the constructive character of maritime journalism.)

This presents you and your colleagues everywhere with both a tremendous opportunity and a special obligation. Never was there greater need for the fullest utilization of the enviable ability you possess to think, to express yourselves and to influence others.

JULY 21, 1960.

[From the Amherst Daily News, July 25, 1960]

EATON URGES EDUCATORS TO PRODUCE NEW IDEAS

PUGWASH.—Cyrus Eaton today called upon American educators to "find new ways to wage the battle for men's minds."

The plea of the Canadian-born American industrialist was addressed to the Pugwash Conference of American College Deans currently in session at his Thinkers' Lodge here. A native of Pugwash who now makes his headquarters in Cleveland, Mr. Eaton has just returned to Nova Scotia for his second visit of the summer.

Labeling the present era "an age of propaganda," Mr. Eaton declared, "This is no mere contest between Karl Marx and Adam Smith, but a broad campaign ranging over the entire area of human thought and endeavor."

Mr. Eaton went on to point out that "governments the world over are thoroughly familiar with modern ways of forming and directing public opinion, and are taking full advantage of this psychological revolution." He observed with regret that "the ghost writer is in demand in the highest places."

The Cleveland capitalist deplored the "sorry use to which our press, radio and television are to large extent put.

"Although these media could provide powerful means for education and enlightenment," he said, "their overwhelming emphasis is on dangerous jingoism, narrow nationalism, sensational excitement and superficial entertainment."

According to Mr. Eaton, the result is that "unthinking readers, listeners and viewers are lulled into insensibility to the serious issues of the day," and especially "into unawareness of the imminent danger of annihilation by nuclear warheads."

Mr. Eaton noted parenthetically that the "constructive character of maritime journalism" presents a "refreshing contrast."

Mr. Eaton told the college deans that "this presents you and your colleagues everywhere with both a tremendous opportunity and a special obligation. Never was there a greater need," he added, "for the fullest utilization of the enviable ability you possess to think, to express yourselves and to influence others."

Always a booster of the attractions of the maritimes, and particularly Pugwash, Mr. Eaton said to the deans, "I hope you share my enthusiasm for this quiet and kindly community as a place for serious study, reflection and discussion, combined with a simple wholesome vacation.

"In your contemplation here of the great problems of life," he suggested, "perhaps you will come forward with some fresh ideas for challenging your fellow citizens to make the most of their potentialities."

During their 10-day sojourn at Pugwash, the college deans are seeking renewal of intellectual life through study and discusison of the classics. These Pugwash Intellectual Life Conferences, for college presidents as well as deans, are now in their fifth year. Organizer of the conferences and cosponsor with Mr. Eaton is the Association of American Colleges.

More than 20 Pugwash conferences of all kinds have been held in Canada, the United States and Europe in the past 5 years. Five Pugwash scientific meetings have brought together 112 authorities on nuclear, biological and chemical warfare from 23 major nations, East and West.

[From the Chicago Sun-Times, July 24, 1960]

EATON CHARGES PUELIC LULLED ON MAIN ISSUES

PUGWASH, NOVA SCOTIA.—Cleveland industrialist Cyrus Eaton said Saturday press, radio and television are lulling audiences "into insensibility to the issues of the day."

Eaton's comment was made in a message to eduactors attending the Pugwash Conference of American College Deans. He urged them to find new ways to battle for men's minds.

Although the media of communications could "provide a powerful means for education and enlightenment, their overwhelming emphasis is on dangerous jingoism, narrow nationalism, sensational excitement and superficial entertainment," he said.

"Unthinking readers, listeners and viewers are lulled into insensibility to the serious issues of the day and especially into unawareness of the imminent danger of annihilation by nuclear warheads.

"Never was there a greater need for the fullest utilization of the enviable ability you possess to think, to express yourselves and to influence others."

The college deans are spending 10 days at Pugwash seeking a renewal of intellectual life through the study and discussion of classical writings.

Bishop Ahr Lauds Slovaks for Their Loyalty to Faith

EXTENSION OF REMARKS

OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Monday, August 22, 1960

Mr. WILLIAMS of New Jersey. Mr. President, among the many examples of adherence to a faith in America is the annual pilgrimage by Slovak Catholics in New Jersey. As an expression of faith and as a demonstration of determination, the annual pilgrimage is significant and heartwarming.

The Monitor, official Catholic newspaper of the diocese of Trenton, carried in its July 15 edition a story about the ceremony and a sermon which described the difficulties in maintaining the church in Slovakia. In the edition of July 8, John C. Scirenka, of Passaic, wrote a history of the activities of the Slovaks in America, centering particularly on the history of the Slovak parishes in the diocese of Trenton.

I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BISHOP AHR LAUDS SLOVAKS FOR THEIR LOYALTY TO FAITH

More than 1,200 Slovak Catholics participated in the annual pilgrimage in honor of SS. Cyril and Methodius, which opened with pontifical mass in SS. Peter and Paul's Church, Trenton, celebrated by Bishop George W. Ahr, Sunday.

The pilgrimage was sponsored by the eastern district of the Slovak Catholic Federation of America.

In his sermon, His Excellency commended the Slovaks' loyalty to the faith during the 11 centuries since the two apostles of the Slavs brought Christianity to Eastern Europe.

Assisting Bishop Ahr at the mass were Father Ladislaus J. Rakvica, pastor of St. Michael's Church, Trenton, as archpriest; Father William J. Capik, guidance director at Notre Dame High School, Trenton, deacon; and Father Andrew A. Okal, pastor of Sacred Heart Church, Carteret, subdeacon.

Deacons of honor to his excellency were father Joseph G. Olsovsky, pastor of St. Joseph's, Raritan, and Father Michael J. Churak, pastor of Holy Trinity, Perth Amboy. Father John C. Reiss, vice chancellor, was master of ceremonies to His Excellency, with Father John A. Dzema, assistant at Christ the King, Manville, as master of ceremonies of the mass.

Very Rev. Msgr. Joseph Tomko, vice rector of Nepomucene Pontificial College, Rome, preaching in Slovak, traced the history of SS. Cyril and Methodius as missionaries in Slovakia, where "a new paganism is quickly and systematically driving out Christianity."

During the past 10 years, he declared, Slovakia has lost more than 1,000 priests, 40 percent of the number in the entire nation. To offset this loss, a minor seminary dedicated to SS. Cyril and Methodius will be set up in Rome to train priests for Slovakia. To date, he said, 25 young men have been prepared for this work.

Last year, only one priest was ordained in Slovakia, a nation of more than 4 million inhabitants. Before the fall of the Iron Curtain, Monsigor Tomko said, Slovakia had 11 major and 5 minor seminaries. Today, he said, the Reds permit one seminary.

Following is Mr. Scíranka's account:

When the pilgrims of the eastern district of the Slovak Catholic Federation of America meet in Trenton Sunday to honor SS. Cyril and Methodius, the two apostles of the Slavs in general and the Slovaks in particular, no doubt several questions will come to the minds of not only their American neighbors, but also their children and grandchildren.

Among these may be, "When did the Slovaks come to Trenton? How did they organize? Who were the organizers? Who were the first priests and laymen to serve them?"

The Slovaks settled here about 1880, although prior to that time Venerable Bishop John Nepomucene Neumann, after whom the Knights of Columbus council in Riverside is named, visited Trenton on his missionary journeys. Bishop Neumann, born in Bohemia, the present day Czechoslovakia, spoke among a dozen languages Gaelic and Slovak.

Prior to that, Henry Loskiel, Moravian-Slovak missionary, preached to the Indians in New Jersey, 100 years before the Declaration of our American Independence.

William Paca, Governor of Maryland, was credited with being a Slav of Bohemian origin. It is an stablished fact that Augustine Herman, first Czech in America, served on the board of Gov. Peter Stuyvesant in New York and later made the first map of Maryland and Virginia, for which he received large grants.

Count Maurice de Benovsky, born in Vrbove, Slovakia, came to the aid of Gens. Pulaski and Kosciusko during the American Revolutionary War. He was befriended by Benjamin Franklin, then our ambassador to Paris, and came to Baltimore. Later he became king of the Island of Madagascar. Maj. John Polorecky fought under the command of George Washington and later lived in Maine, where his memory was recently honored.

The first Slovak society in Trenton was the SS. Peter and Paul Society, organized February 19, 1893. Eight pioneers were the organizers. They were Andrew S. Bogdan, Andrew Mras, Joseph Krafcik, Nicholas Bogdan, John Mras, Michael Varga, John Komjathy, and George Bogdan.

The name Bogdan, is widely used among the Slovaks and Slavs and dates from the times of SS. Cyril and Methodius. It means God given. We find the names of Bogdan and Matta in company with the first Poles in Jamestown, Va., who aided Capt. John Smith in building the first permanent English settlement in the New World. Tribute was paid to them during the recent 350th anniversary of Jamestown, when this writer wrote a special article about them, which later appeared in the CONGRESSIONAL RECORD.

These first eight Slovak pioneers of Trenton, after a meeting May 17, 1896, received permission from Bishop James A. McFaul, of Trenton, to organize a parish. At that time there were 103 Slovak families and 105 single persons, mostly men who had left their wives and families in Slovakia.

The parish was incorporated after a meeting January 29, 1900. Father Ladislaus Neuwirth was its first pastor and Michael Bodnar and Andrew Bogdan became the first parish trustees.

The first church was erected and dedicated on the Feast of SS. Peter and Paul in 1902. In the meantime, Father John Gurecky had succeeded Father Neuwirth as pastor. He converted the basement of the new church into a school and two lay teachers were hired, beginning classes in September 1902.

Father Alexander Kovacs was the next pastor, and during his pastorate, the rectory was built.

Father Coloman Tomchany, later named a domestic prelate with the title of Right Reverend Monsignor, served as pastor from March 1905 until his death in January 1948.

The parish rose to great heights under his leadership and the Dominican Sisters took over the parochial school in August 1908. After the death of Monsignor Tomchany, Father Andrew J. Sakson, a native son of the parish, became pastor. During his pastorate the parish celebrated its golden jubilee in 1950. He died just a year ago next week, July 14, 1959, and was succeeded by the present pastor, Father Ladislaus J. Petrick, a native of Passaic.

St. Michael's Parish, Trenton, was founded March 3, 1919. The first Society of St. Michael the Archangel was founded September 21, 1908, with J. Kubala and Michael Pluta, Sr., and 13 other Slovaks as founders.

The original parish committee consisted of John Andrejcik, chairman; Stephen Mikita, vice chairman; Gaspar Rehak, secretary; Urban Walachy, Sr., financial secretary; and George Sholtis, treasurer. The society was the first to contribute $400 to the parish fund.

In 1921 episcopal permission was granted to erect a church. The first pastor was Father Joseph Sabo, of Metuchen, who was followed by Father Lawrence Cierny. Father Cierny returned to Slovakia, where he was imprisoned and tortured when the Communists took over the country.

On November 15, 1926, Father Michael J. Kallok became pastor, remaining until October 15, 1931, when he left for Cudahy, Wis., where he died several months ago.

Rt. Rev. Msgr. Arthur B. Strenski, P.A., now pastor of St. Joseph's, South Camden, was administrator of the parish, followed by the late Father John E. Rura and Father Joseph G. Olsovsky, now pastor of St. Joseph's, Raritan.

On December 3, 1936, Father Ladislaus J. Rakvica, present pastor,. assumed the pastorate.

The Slovaks began to settle in Perth Amboy in 1879. In 1895 when the Poles began to erect their church, the Slovaks aided them. However, 5 years later they began to think seriously of organizing their own parish. They founded the Society of the Holy Trinity with some 100 members.

In 1898 they bought six lots and a year later sent a committee to Father Francis Januschek, pastor of St. Mary's Church, Haverstraw, N.Y., for advice on how to proceed to organize a parish.

Bishop McFaul personally went to Perth Amboy to inspect the property, which did not meet with his approval. A new site was purchased at Penn and Neville Streets.

Father Januschek arrived in Perth Amboy September 29, 1899. The parish was incorporated January 23, 1900, with John Jabrocky and Paul Krempasky as first lay trustees. Father Nicholas Hodobay was named pastor July 13, 1904. During his pastorate the parish cemetery was bought.

In 1907, Father Hodobay prepared a class of 277 candidates for confirmation and was commended by Bishop McFaul for his work. He returned to Slovakia shortly thereafter and Father Hugolin Sebastian, O.Praem., administered the parish for a year until Father Joseph Suchy was named pastor April 17, 1909.

At that time the parish listed 2,700 members. A year later it had grown to 3,028. In 1912, it reached a new peak with 205 baptisms, 52 weddings, and 70 first holy communicants, and a parish membership of 4,500. A campaign was started to build a new church, but World War I intervened. During the influenza epidemic of 1919, 132 members of the parish died.

In that year, the erection of a new parochial school was started at a cost of $100,000, with permission of Archbishop Thomas J. Walsh, then bishop of Trenton and later first archbishop of Newark. The Dominican Sisters took charge and in 1927 it had 560 pupils with 11 teaching sisters.

Father Suchy was assisted for a brief period by Father B. Andrassi and later by Father John Didecky. Father Suchy took ill. He was assisted by Father Joseph G. Olsovsky from January 18, 1932, until November 15, 1934, when he was relieved of parish duties by Bishop John J. McMahon, and retired after serving 21 years in the parish.

On May 25, 1931, Father John E. Rura became administrator with Father Petrick as assistant. In May, 1936, Father Michael J. Churak was the first native son of the parish to be ordained, and celebrated his first mass in the church.

In July, 1948, Father Rura was elevated by Pope Pius XII to Papal chamberlain with the title of very reverend monsignor. He dedicated his efforts to the building of a new church, but died October 20, 1949, shortly after the 40th anniversary of the parish. He was succeeded on November 18 of that year by Father Churak, who became the sixth pastor. Under his pastorate one of the most beautiful churches was erected and was dedicated by Bishop Ahr.

In 1910, Father Stephen Ulrich visited Carteret and encouraged the people to form their own parish. Through the efforts of the First Catholic Slovak Union, Branch 324, property was purchased for the church at that time. Father Ulrich registered the parish in the Trenton diocese but the parish was officially organized May 6, 1912, when Bishop McFaul appointed Father Joseph Horvath, well-known priest-composer, as first pastor.

On August 6, 1912, it was decided to erect a new church, which was dedicated by Bishop McFaul July 13, 1913. Father Horvath stayed with the parish until 1922. He was succeeded by Father Honorat Rogovsky, who was pastor until June 7, 1932. In October, 1940, the Sisters of St. Francis began their catechetical classes. On March 23, 1948, Father Sakson was transferred to SS. Peter and Paul's Trenton, and Father Petrick came to Carteret. During his pastorate the parish celebrated its 40th anniversary.

A year ago Father Petrick was assigned to Trenton and Father Andrew A. Okal was named pastor of the Carteret parish.

The parish of St. Joseph, Raritan, was founded October 1, 1912. Its first pastor was Father Joseph A. Ketter, of German origin, who spoke Slovak. The first trustees were Michael Petrasek and Charles Matta. The new church was dedicated September 3, 1913.

In 1930, Father Michael J. Bacso, a native of SS. Peter and Paul's Parish, Trenton, who was ordained June 6, 1914, was appointed pastor. During his pastorate, in July, 1931, one of the first Slovak Days was held in Duke's Park in honor of SS. Cyril and Methodius, attracting some 25,000 Slovaks. A field mass was offered in the park. The late Gov. A. Harry Moore was speaker for the day.

During the illness of Father Bacso, Father Olsovsky was appointed pastor of the Raritan parish in 1937. A parochial school and many old Slovak fraternal societies may be found in Raritan.

The Slovaks organized several fraternal societies in Phillipsburg before 1909. On August 14, 1913, they formed a fraternal Society of St. Peter. Prior to that, on January 26, 1913, Father Patrick J. Quinn called a meeting and gave impetus to the formation of a parish for the Slovak-speaking Catholics. He deserves credit for this extraordinary action.

The parish of SS. Peter and Paul, Phillipsburg, was incorporated March 4, 1913. The organization work continued for another year when Father Bacso, now pastor of St. Clare's, Florence, was named assistant to Rt. Rev. Msgr. Patrick F. Connolly of St. Philip and St. James Church, Phillipsburg.

Father Bacso was assigned to work among the Slovaks of Phillipsburg and Martin's Creek. Services for the Slovaks of the area were conducted in St. Philip and St. James Church until 1921, when the Church of SS. Peter and Paul was erected.

Father Bacso labored in the new parish until 1930, when Father Rura, a native son of the parish, was named administrator, remaining 2 years. Father Rogovsky became pastor in 1932, remaining until his death November 14, 1938.

Under his pastorate, the Sisters of St. Francis assumed the teaching duties in the parochial school. On November 25, 1938, Father Petrick became pastor, remaining until March 1948, when he was named to Trenton, and Father Okal was given the

pastorate in Phillipsburg. Last year, Father Okal assumed the pastorate in Carteret and Father John J. Churak was named pastor of SS. Peter and Paul's.

Besides these parishes, the Slovaks live in almost every city in the Trenton diocese. In many of them they have fraternal societies and social halls.

All these parishes have contirbuted much to the priesthood and sisterhood. The first son-priest of SS. Peter and Paul's parish, Trenton, was Father Cyril Orendac, O.F.M. Conv., well-known Slovak missionary who was ordained July 27, 1913. Father Joseph Walachy, S.V.D., of St. Michael's parish, Trenton, is laboring in New Guinea as a missionary

Father George Harcar, C.S.Sp., a Trentonian, is vice president of Duquesne University, Pittsburgh. It is remarkable that some families like the Churaks of Perth Amboy, Harcars and Kandas of Trenton, each have two priest-sons.

In 1924 the First Catholic Slovak Union held its national convention in Trenton, and in 1930 the Slovak Catholic Sokol had its national convention and gymnastic and atheletic show in that city.

The following year the Slovak Day was held at Duke's Park, Raritan, and in 1932 in Perth Amboy, where the First Catholic Slovak Union meeting was held.

Slovak fraternalists in America look to the Trenton diocese with great pride for it has the largest fraternal societies now with Perth Amboy in the lead. May this pilgrimage in honor of SS. Cyril and Methodius bring more blessings upon the beloved Bishop Ahr, the priests, religious and people of the diocese, and all its citizens.

Breakthrough on Rails

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Monday, August 22, 1960

Mr. WILLIAMS of New Jersey. Mr. President, New Jersey State officials are now attempting to help keep commuter service alive by offering subsidies to railroads in return for contract promises of transit service for specified periods.

As an article in the New York Times of August 22 points out, New Jersey is the first State to offer such contracts. The article also emphasizes that the contract system is an interim effort that will ultimately be replaced by a more comprehensive one.

The New Jersey program is of interest to everyone concerned about the national effects of the mass transportation problem, and steps that may be taken until a truly national policy is finally drafted. I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BREAKTHROUGH ON RAILS—JERSEY HAILS AID PACTS AS FIRST STEP TO EXPANDED RAPID-TRANSIT SYSTEM

(By George Cable Wright)

TRENTON, August 21.—The spotlight of public hearings was turned last week on subsidy contracts being drawn between New Jersey and eight of its nine commuter rail lines. The hearings posed these perennial questions in a new context: Why is continued rail passenger service important to the social and economic life of the metropolitan area? Are the residents of the area willing to underwrite the deficits that seem sure as long as rail transport is to be sustained? If not, who will underwrite them?

New Jersey's public hearings seemed to emphasize these things:

Adequate rail service for the New Jersey-New York commuter will be available for another year and perhaps for longer.

Much can be accomplished with only $6 million toward meeting the critical metropolitan transit situation.

The contract approach is more acceptable to the hard-pressed carriers than any yet devised in the New York, Boston or Philadelphia region.

A "FIRST" IN RAIL AID

New Jersey is the first State to offer such contracts. The enthusiam with which the major commuter lines have accepted them and agreed not only to halt further curtailments of rush-hour service but to improve such facilities has made it clear that a real breakthrough in the commuter rail crisis has been scored.

Dwight R. G. Palmer, State transit chief, hails the acceptance of the contracts by the carriers as a real "foot in the door."

He predicts that a long-range solution to the railroad problem that he plans to propose within 3 months will prove equally acceptable to the carriers and to the public. It will, he says, eliminate the grave problem "once and for all.".

The contract system, he concedes, is only a stopgap measure. The pacts to be signed within 10 days extend for 1 year. The signatories pledge to continue all existing passenger services deemed essential by the State for the contract period. Mr. Palmer reserves the right to reopen arbitrarily all contracts at the end of 6 months and to order any service revisions he desires.

Of the nine lines, only the Lehigh Valley rejected the proffered aid. A 10th carrier, the New York Central, was offered a subsidy to reactivate its defunct West Shore service, but it has rejected the offer.

Mr. Palmer's long-range solution will be far less costly than the multimillion-dollar blueprints heretofore unveiled and thus far more palatable to the public, which, directly or indirectly, usually foots the bill.

The plan would extend the Hudson Tube service—with new, air-conditioned rolling stock—west from Newark to Bound Brook and north to Morristown. It would link the tube trains with the New York City subways.

Regional bus lines and parking lots would merge the new rail system with new freeways soon to crisscross the State. To alleviate New York City traffic congestion, Mr. Palmer is expected to propose that trucks be admitted to Manhattan streets only between dusk and dawn.

The public, as a whole, has repeatedly indicated its unwillingness to bear the responsibility of financing such commuter transit projects. Mr. Palmer, cognizant of this, hopes for considerable help from the port authority in financing his long-range project. Some State officials are convinced he will get such aid.

The cost of building enough roads to cope with a sudden collapse of rail transit would be prohibitive, all experts agree. In addition sufficient parking facilities to accommodate the increased traffic are out of the question.

MANHATTAN WOULD SUFFER

The primary sufferers of any rail collapse would be lower Manhattan and the suburbs that house its labor force. Most of these people find it impractical to reach their jobs by bus or auto. These workers constitute the major portion of the city's 225,000 rail commuters.

Most of the men employed in that area and many of the women might be forced to migrate to more accessible residential sectors if rail service collapsed. At the same time a serious labor shortage could result among young women who hold clerical and secretarial posts.

Some idea of what impact a major shift of rail commuters from one community to another might have may be seen in this: Rail commuters in the New York area earn about $4 billion a year.

New York State seemingly has been less successful in solving its rail troubles than New Jersey. Its programs of reimbursing communities that extend tax relief to lines and of underwriting port authority attempts to purchase and lease rolling stock to carriers have run into many snags.

Last year the two States set up a bi-State transit agency to attack the commuter problem. Connecticut was invited to join but declined. Neither New York nor New Jersey, it appears, has yet utilized this agency.

Boston has attempted to solve its transit problem by levies on affected communities, Philadelphia by modest local subsidies. In each instance there has been little evidence of cooperation from the railroads.

THREE SUCCESS STORIES

In Chicago, Toronto, and Cleveland there is ample evidence that commuter rail problems can be solved—and most successfully.

Tackling the problem a decade ago, aggressive executives of the Chicago and North Western and Rock Island roads began to replace all their suburban Chicago rolling stock with new double-deck, air-conditioned cars. At the same time they erected rights-of-way along a local expressway into the Loop.

Now they are integrating their track systems with public garages and parking plazas. The result: their commuter services are annually producing substantial profits.

Panama Canal: Last Roosevelt Medal Holder Retired

EXTENSION OF REMARKS
OF
HON. CLARK W. THOMPSON
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1960

Mr. THOMPSON of Texas. Mr. Speaker, as a close observer of isthmian life for many years, I have long noticed that it is featured by a series of highlights in some way or other related to the operation of the Panama Canal.

The latest was retirement on July 31, 1960, of Adrien M. Bouche, lock operator at Pedro Miguel and the last employee in the canal organization holding the Roosevelt Medal for construction era service.

An interesting biography of him sent me by William R. McCann of Hopewell, Va., in the form of a news story in the July 31, 1960, issue of the Panama American, supplies a permanent record of an employee who spent his life in the canal organization. He was one of the few who used his spare time exploring the jungle land and studying tropical flora and wildlife. He was an expert on Panamanian life, customs, and ethnology.

The indicated news story follows:

CANAL LOCKS TO CLOSE BEHIND BOUCHE'S LONG CAREER TODAY

Another era in the history of the Panama Canal comes to an end today when Adrien

M. Bouche locks his last ship up or down through Pedro Miguel locks. He is the only man still in the canal organization who holds the Roosevelt Medal given to those who have had 2 or more years of construction day service and one of two U.S. citizens who began work here during the construction years, and are still on the canal rolls.

When he ends his working day today to join the ranks of the retired, he leaves David W. Ellis of the dredging division as the sole U.S. citizen who was on the canal's rolls before the waterway began transiting ships from ocean to ocean.

Mr. and Mrs. Bousche are sailing for the United States August 10 on the Panama Line and expect to live in Staunton, Va.

Born in Mount Carbon, W.Va., Bouche came to the Canal Zone when Gatun locks were not much more than gaping holes in the ground and steam shovels were working to set new records in what is now Gaillard Cut.

He was only 11 years old when in 1909, he got a summer vacation job running errands in the Gatun office of Maj. William L. Sibert, Chief of the Atlantic Division. Except for short breaks in service he has been a regular employee since 1912.

After he graduated from the jobs as messenger, which he held during school vacations, he went to work as a wireman with the electrical division. In 1916, he became a motorboat operator with what was then the Marine Division and in 1918, after a brief stay in the United States returned to the electrical division as a wireman.

For the next 5 years he alternated between the electrical division and the locks division and in 1923 went permanently onto the locks division rolls. He has held jobs as wireman, locking locomotive operator, and junior and senior control house operator.

As control house operator, he leaves the service today with 44 years, 3 months, and 23 days to his credit—one of the longest service records ever attained by any employee.

Bouche is a walking encyclopedia of information, not only on the history of the Canal Zone but on local plants and minerals.

For many years his major offduty hobby was prospecting for plants which he sent to botanists, pharmaceutical, research laboratories, and other scientific institutions. His botanical hunts have taken him not only over most of the Isthmus but into the jungles of many parts of Central and South America as well.

Arabs Fear Eichmann Trial

EXTENSION OF REMARKS
OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, August 22, 1960

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article by Leo Heiman as it appeared in the National Jewish Monthly, August 1960 issue:

[From the National Jewish Monthly, August 1960]

ARABS FEAR EICHMANN TRIAL—WORLD OPINION MAY BE SHOCKED IF EVIDENCE REVEALS THE PART THEY PLAYED IN NAZIS' "FINAL SOLUTION OF JEWISH PROBLEM"

(By Leo Heiman)

The spectacular capture of Adolf Eichmann by Israel took official Arab spokesmen and political commentators by complete surprise. They soon found themselves on the horns of a terrible dilemma.

On the one hand, they could not defend Eichmann too openly, as this would have appeared to the world as additional proof of Arab complicity in his monstrous crimes. On the other hand, they could not welcome the arrest of a man who was once described by the ex-Mufti of Jerusalem "as the greatest friend Arabs ever had."

ALTERNATE SILENCE AND LIES

For 11 days after Eichmann's capture, Cairo and Damascus radio maintained complete silence on the subject, broken only by gloating (and false) communiques saying that Argentina was about to sever all diplomatic relations with "the Zionist gangster state" of Israel, because Israeli "goon squads" had kidnaped "innocent Argentine citizens" from Buenos Aires.

This was the only official comment of the United Arab Republic. Egyptian-Syrian press comment followed this line, with the tone set by the Cairo government mouthpiece, the daily El Goumhuriya, which stated editorially that not Adolf Eichmann, but David Ben-Gurion "is the real war criminal and bloodstained genocide killer."

In Jordan, the Government-controlled radio did straight reporting, quoting foreign news agencies, without any official comment. But two of Jordan's best known newspaper columnists and political commentators, Youssuff Hannah and Yahya Hawash, supported Nasser's line that "Eichmann is an innocent victim of a frameup, and it is Ben-Gurion and the Jews who are the real war criminals."

Writing in the Jordanian daily Al Shab, Mr. Hannah stated that "genocide and war crimes were invented by the Jews and perfected by the Zionists. The Torah is full of genocide propaganda and bloodthirsty teachings, and the entire Jewish religion is based on hatred, revenge, racial discrimination, intolerance, racial persecution, aggression, murder, looting and raping." His colleague Mr. Hawash, writing in Falastin, stressed that "compared to the Jewish gangsters, Hitler and the Nazis were pure saints."

The dean of Arab political commentators, one Akram El Khalidi, declared in a syndicated column that "the Zionist gangster state is full of bloody war criminals, compared to whom Eichmann and Hitler are innocent babies. When we liberate our stolen land of Palestine, we shall try the Jewish war criminals for genocide and crimes against humanity, and avenge Eichmann as well."

Behind all these pathological ravings—which only prove how right Ben-Gurion is in stressing that peace with the Arabs now is impossible, no matter how many concessions Israel makes—lies one obvious fact: The Arabs are afraid of being implicated in Nazi genocide crimes by Eichmann's testimony. A British dispatch from Beirut stresses this point: "The Arabs forecast a big propaganda war against them to spring from Israel's spectacular capture of Adolf Eichmann, and his forthcoming trial. It is common knowledge that certain Arab leaders, such as Haj Amin el Husseini, former Mufti of Jerusalem, and Rashid Ali el Gailani, former Prime Minister of Iraq, spent the Second World War in Berlin, canvassing Arab nationalist support for the Nazis."

What the British dispatch does not say, but what will most probably come out in the first weeks of Eichmann's trial, is this:

Eichmann, Himmler, Mueller, Heydrich, Rosenberg, and even Hitler himself did not at first contemplate the mass killing of Jews. What Eichmann and other top Nazis wanted was to deport all Jews from Europe to Palestine, Madagascar, and African colonies. Only after it became evident that Britain would not allow any Jews to enter Palestine, and that no Latin American, North American, or British Commonwealth countries would admit them in large numbers, did the Nazis begin to consider another "solution" of the "Jewish problem."

PLANNED DEATH GHETTO

Even then, they did not have in mind mass destruction by gas, poison, and fire. What Eichmann wanted was to herd all the Jews of Europe into some grand-scale "Jewish settlement area," and leave them there to die from hunger, disease, and exposure. Such a big-scale "Jewish settlement area" was actually delineated in the Lublin district of central Poland.

At that stage the Arab nationalists, headed by the ex-Mufti Haj Amin el Husseini, asked for a personal audience with Hitler. You don't know the Jews, he told the surprised Fuehrer. The Jews have enormous powers of resilience and survival. Even if left alone in the desert, without bread, water, fuel, or shelter, they'll find a way to survive. The only way to get rid of them is by gas and by fire. Moreover, the red-bearded Mufti told Hitler, the Arabs would be very unhappy if any Jews survived the Second World War, because that would increase Jewish pressure on Palestine. If Hitler wanted to secure the friendship and support of Arab nationalists, he should exterminate all Jews without mercy, the Mufti told him.

This sounded good to Hitler. Orders went out to force through the "final solution." Eichmann at first envisaged mowing down all Jews by machineguns. This was, indeed, done to many thousands in Russia, Ukraine, Baltic countries and eastern Poland, with the enthusiastic cooperation of the local populace. But to wipe out the remaining millions of Jews in Europe, some efficient factory-like automation was required. It was Eichmann who developed the gas chambers idea, the deadly and cheap zyklon-B gas pellets, and the giant smoking crematoria.

A welcome guest at the Auschwitz and Birkenau death camp centers was the ex-Mufti, and other Arab nationalist leaders. Captured photographs now available as documentary evidence in Israel, show the Mufti with Eichmann and a group of minor Nazi officials, standing at the Auschwitz railroad siding watching a transport of Jews being unloaded from a stinking cattle train, and herded toward the gas chambers. In the photograph, Eichmann looks thin lipped and serious; but the Mufti is smiling broadly, gloating over the suffering and death of so many Jews. Other Arab nationalist leaders, notably the former Iraqi Premier Rashid Ali el Gailani, and the defeated chief of the Arab Liberation Army, Col. Fowzi el Kaukji, are depicted on captured Nazi photographs as Eichmann's guests of honor at Auschwitz and other death camps.

The Yugoslav Government has sent to the Israeli police headquarters—set up to investigate Eichmann's crimes—a set of photographs which show the Mufti inspecting units of Nazi Moslem SS volunteers in Yugoslavia, and congratulating them for massacring Yugoslav Jews, the heaped bodies of whom are clearly seen in the background.

THEY MAY BE IMPLICATED

Arab Nationalists will therefore probably be implicated as equal partners in Nazi genocide crimes against the Jews, in Eichmann's forthcoming trial. What's more, they know it and they fear the trial's effect upon world public opinion. Eichmann himself will try to shift most of the blame upon Hitler, Himmler, and Heydrich, who are dead, and upon the Arab Nationalist leaders, now in Cairo and Damascus.

New evidence accumulated on Eichmann shows that during 1936–39 he admired the Zionist settlement in Palestine, and was willing to cooperate with the Zionist underground in smuggling German and Austrian Jews to the Promised Land. Zionist pioneers are the only good biological material within Jewry, and it's a pity to destroy them.

They are not diseased like the other Jews." Eichmann wrote in a report to his superiors, a copy of which is now available in Israel. Tragicaly, the British White Paper policy of appeasing the Arabs at the expense of the Jews, prevented more than a token number from entering Palestine.

During 1941, 1942, 1943 and the first half of 1944, however, Adolf Eichmann was the "prince of death," as the concentration camp survivors called him. But he was also Hitler's most honest official, a good and faithful husband to his wife, Veronica Loebel, and a loyal boss to his men. He never took bribes, gambled, drank, or romanced with other women. But in the summer of 1944, with the Nazi Reich crumbling, Eichmann saw that the end was near, and went completely berserk. He started drinking heavily, gambling, and romancing with women. In less than 3 months, he acquired three blonde mistresses. He also ran amuck in the death camps, speeding up the murder of Jewish survivors so as to eliminate the last surviving witnesses. But enough survived to tell the full story in the Israeli court.

Rights of the Workingman Under the Landrum-Griffin Bill

EXTENSION OF REMARKS
OF
HON. T. A. THOMPSON
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1960

Mr. THOMPSON of Louisiana. Mr. Speaker, many people from my district have asked me for a concise explanation of the rights of the workingman under the Landrum-Griffin bill and under leave to extend my remarks in the RECORD, I submit the following:

If you are interested in labor and the problems of the workingman, please read the following provisions which state the facts about the Landrum-Griffin (antiracketeering) bill. They will show that this bill, repugnant to labor racketeers, is actually a labor bill of rights, protecting the union members from exploitation.

Under the Landrum-Griffin antiracketeering bill:

First. It is unlawful for a union official to betray his office of trust. The money he collects and uses and the properties he administers are solely for the benefit of the union and its members.

Second. It is mandatory that local union officials are elected by secret ballot.

Third. It is unlawful for unions to raise dues or assessments, except by a majority vote on a secret ballot.

Fourth. It is possible to discipline a union member only after giving him a list of the written charges, a full and fair hearing and reasonable time to prepare his defense.

Fifth. It is necessary for union leaders to file annual financial reports with the Secretary of Labor. These reports must show assets and liabilities, receipts for and sources of all funds. They must show and account for all loans to union members or employees.

Sixth. It is necessary for unions to adopt constitutions and bylaws and register them with the Secretary of Labor.

Why was this bill passed? Here are some of the excerpts from the McClellan committee report:

Dave Beck viciously abused the trust of the union's (Teamsters) 1½ million members and shamefully enriched himself at the members' expense.

Dave Beck took, not borrowed, more than $370,000 in union funds from the Western Conference of Teamsters Joint Council No. 28 building fund.

During the same hearings, Jimmy Hoffa made the following statement, exactly as quoted below:

They, the Congress, can pass all the bills they want to and it won't mean a thing. None of the bills worries me.

And to add to this un-American attitude:

To hell with them, the U.S. Senate.

I have been a friend of labor and labor unions, yet not unfriendly to industry. More industry in my areas means more jobs for my people and a better standard of living. I hope the above excerpts from the controversial antiracketeering bill show conclusively that this act is the best protection the individual worker can have. Our workers need organization, but they need organization without exploitation.

I shall continue to be alert to the problems of our workers and will always fight against the infiltration of Johnny Dio's and Jimmy Hoffa's, and others who would misguide and misuse the laboring man, into our areas of the South. Do not forget that Senator JOHN F. KENNEDY, our present nominee for the highest office of the United States, said he knew something must be done to protect the workingman from such unscrupulous labor bosses and he, as well as our two Louisiana Senators and every Louisiana Member of the House, voted for the Landrum-Griffin antiracketeering bill on final passage.

Resolutions Adopted by the New Jersey State Federation of Colored Women's Clubs, Inc.

EXTENSION OF REMARKS
OF
HON. HUGH J. ADDONIZIO
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1960

Mr. ADDONIZIO. Mr. Speaker, I am pleased to commend to the attention of the Congress the following resolutions adopted at the convention of New Jersey State Federation of Colored Women's Clubs, Inc., recently held at the State Teachers College, Montclair, N.J. These were kindly sent to me by Mrs. E. Gertrude Jackson, of Newark, N.J., the corresponding secretary of this esteemed organization:

Whereas we the New Jersey State Federation of Colored Women's Clubs, Inc., in the spirit of Christian love and care for all members of the human race, deplore the use of atomic and thermonuclear energy for other than peaceful and humanitarian purposes, and pledge our support to the elimination of atomic and thermonuclear weapons: Therefore be it

Resolved, That this convention urge our President, Secretary of State, and Representatives in the Congress of our Nation to pursue all sincere means which would bring to an end the testing and production of nuclear weapons; in accordance with the principle of peace which respects justice, freedom, human integrity and good will among men and nations; and be it further

Resolved, That a copy of this resolution be sent to the President of the United States, to the Secretary of State and to the Senators from the State of New Jersey.

Whereas the New Jersey State Federation of Colored Women's Clubs, Inc., having seen the public school system in the State of New Jersey integrated; and

Whereas the U.S. Supreme Court in 1957 outlawed segregation in public schools; and

Whereas in the year 1960 there still remains segregation in many public schools of the United States: Now, therefore, be it

Resolved, That the Federal Government through its Federal courts and its U.S. Attorney General's Office proceed with greater haste to fulfill the mandate of the U.S. Supreme Court thereby guaranteeing equal education to all children of the United States; and be it further

Resolved, That a copy of this resolution be sent to the President of the United States and to the Attorney General of the United States.

Whereas we the New Jersey State Federation of Colored Women's Clubs, Inc., are deeply concerned with the discrimination against the free access to restaurants, lunchrooms in the South; and

Whereas those States abridge and deny the equal protection of the law to all of their citizens: Now, therefore, be it

Resolved, That this convention urge our President and Representatives in the Congress to employ all means to eliminate such undemocratic practices against the citizens of those several States; and be it further

Resolved, That a copy of this resolution be sent to the President of the United States and our Representatives in Congress.

Significance of the Polaris Missiles System

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1960

Mr. RIVERS of South Carolina. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include therewith an excerpt from the London Sunday Express of July 25, 1960, which catches the significance of the Polaris weapons system and, by so doing, pays tribute to our Navy and to our Navy's special projects director, Adm. W. F. Raborn. The article follows:

The Sunday Express sees one of history's decisive moments in the underwater firing of the Polaris. The paper says it means that Russia, until now preeminent in rockets, has been overhauled. Even if it were possible for Russia in one sudden attack to wipe out every land-based aircraft in the West, she in turn would be utterly devastated by the firepower of submarines. The paper observes:

"Suddenly, in spectacular fashion, the whole balance of power has shifted again from Russia to the West. No longer are the formidable fixed-site rocket batteries of the Soviet Union the ultimate in weapons of destruction. The Americans have made a technical breakthrough comparable to the first explosion of an atom bomb. It is a cause for rejoicing in every country where liberty is prized. It is a triumph for the forces of peace, for if Russia knows that to attack would mean suicide, she will not attack at all."

William Parker Kennedy, President of the Brotherhood of Railroad Trainmen, Honored on His 50th Anniversary as a Member

EXTENSION OF REMARKS
OF
HON. HERBERT ZELENKO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1960

Mr. ZELENKO. Mr. Speaker, I take pleasure in making a part of this RECORD a most outstanding event concerning a most outstanding American.

On September 3, 1960, at the Leamington Hotel, Minneapolis, Minn., William Parker Kennedy, one of America's foremost citizens and great labor leaders, who is president of the Brotherhood of Railroad Trainmen, will be honored on the occasion of the 50th anniversary of his membership in that organization.

Among the many distinguished persons who will be present at that time to pay their respects to Mr. Kennedy will be the Honorable Hubert H. Humphrey and Eugene J. McCarthy, Senators from the State of Minnesota; the Honorable Roy W. Wier, Joseph E. Karth, Fred Marshall, and John A. Blatnik, Representatives from the State of Minnesota, and the following State officials from the State of Minnesota: the Honorable Orville L. Freeman, Governor; the Honorable Karl Rolvaag, Lieutenant Governor; the Honorable Walter F. Mondale, attorney general; the Honorable Joseph Donovan, secretary of state; the Honorable Roger L. Dell, Thomas Gallagher, Frank T. Gallagher, W. P. Murphy, and Lee Loevinger, justices of the supreme court. Also present will be: Robert A. Olson, president, Minnesota AFL–CIO Federation of Labor; Walter Cramond, president, Minneapolis CLU; and R. D. Cramer, editor, Labor Review.

Mr. Kennedy's achievements in his many years of dedicated effort on behalf of his fellow man in all elements of our society have long been recognized. His preeminent standing in American life has been accomplished in the classic American tradition, having risen from the most humble beginnings.

William Parker Kennedy has been president of the Brotherhood of Railroad Trainmen since July 19, 1949 when he was appointed by the board of directors. He was elected by the Brotherhood's 29th convention in 1950 and reelected at the 1954 and 1960 conventions. The Brotherhood, with headquarters at 1528 Standard Building, Cleveland, Ohio, has a membership of 218,000 throughout the United States and Canada. It represents railway employees in train and yard service and intercity bus operators. Besides representing the members in labor-management matters it furnishes sound life, health and accident insurance to its members and it is one of the largest fraternal insurance societies in America.

Mr. Kennedy was born in Huttonville, Ontario, Canada, April 3, 1892, and came to Chicago, Ill., at the age of 10. He attended Ogden School, Chicago.

At the age of 17, he worked as a news butcher on the Rock Island Railroad, between Chicago and Des Moines, on the Rocky Mountain Limited.

He first saw train service as a freight brakesman, on the Dakota division of the Great Northern Railway, working out of Grand Forks, N. Dak., beginning such employment October 1, 1909.

On July 24, 1910, he joined Wheat Sheaf Lodge No. 463, of the Brotherhood, at Grand Forks, N. Dak., and has held continuous membership since that time. He resigned from the Great Northern Railway in 1914 and entered the service of the Canadian Pacific Railway, as a switchman, at Calgary, Alberta, Canada, May 7, 1911. He continued in this employment until October 22, 1911.

He was employed as a switchman on the Chicago, Milwaukee & St. Paul Railway, at Minneapolis, Minn., February 1, 1912, and still retains seniority rights in this terminal.

In 1913, he transferred his brotherhood membership to Minnehaha Lodge No. 625, Minneapolis, Minn., and retains his membership in that lodge.

He served as president and local chairman of that lodge and January 2, 1920, was elected secretary of the general grievance committee on the Chicago, Milwaukee, St. Paul & Pacific Railroad. In April 1921, he was elected general chairman of the grievance committee. He served in such capacity until June 1935.

He attended the 1917, 1919, 1922, 1925, and 1928 conventions of the brotherhood, as a delegate, representing his lodge. At the latter convention, he was elected to the board of trustees and served as secretary of such board until June 1935, when the board of directors appointed him to the position of vice president in charge of the northwest territory of the United States and all of Canada, west of Fort William and Port Arthur.

While serving as vice president, he participated in numerous wage and rule movements and headed the committee which negotiated the Electric Lantern Agreements. He was in charge of the committtee, at Washington, D.C., in the 1928 wage reduction fight, when the widely quoted brotherhood defense book "Main Street Not Wall Street" was prepared and published.

From January 1, 1944, to August 30, 1946, Mr. Kennedy was in charge of the superpromotion department of the bortherhood, with headquarters at the Sherman Hotel, Chicago, Ill.

While in this work, Mr. Kennedy handled 146 representation disputes in the United States and Canada, involving railroads in every section of both countries. He was successful in achieving 109 brotherhood representation victories.

At the 1946 convention, held in Miami Beach, Fla., he was elected general secretary and treasurer and assumed that office January 1, 1947, and was serving in that capacity at the time he was appointed president.

While general secretary and treasurer, he also served as national reporting officer for the Railroad Retirement Board.

From July to September 1934, Mr. Kennedy made an extensive trip through Europe studying labor conditions in England, Ireland, Scotland, Norway, Sweden, Denmark, Germany, Holland, Belgium, France, Switzerland, and Italy.

In May 1955, as a guest of the Israeli Government, visited that country, addressing large groups of railroad and Government works in Tel Aviv, Jerusalem, Beersheba, Tiberias, Haifa, and Jaffa. In July 1956, he was a delegate to the 24th Congress of the International Transport Workers Federation held at Vienna, Austria, at which time he also attended meetings at London, Paris, Rome, and Barcelona. In July 1958, he was a delegate to the 25th labor congress at Amsterdam, Netherlands; also attended meetings in Norway, Sweden, and Brussels, Belgium.

While serving the Brotherhood as secretary of the board of trustees, he traveled extensively through Canada and the United States, studying financial and banking conditions and wrote a series of articles for the official publication of the Brotherhood, entitled "History of Banking in Canada." Such articles have been extensively quoted in many leading financial and trade publications.

He was instrumental in bringing the use of "piggybacking" to the railroad industry several years ago, a development that has since proven of great financial advantage to the railroads, and promises to bring even greater business to the railroads in the future.

At present, he is engaged on another campaign—one to bring order to the present chaos of transportation in major cities of the land, particularly in such metropolitan complexes as are growing in the New York, Washington, D.C., Los Angeles, Cleveland, and Chicago areas.

Mr. Kennedy was married January 21, 1913, to Amy Hannah Berglund at Minneapolis, Minn. Their daughter and three sons are: Miss Phyllis Kennedy, assistant to the librarian, at Minneapolis; R. P. Kennedy, attorney, Minneapolis, Minn.; W. H. Kennedy, traffic representative, Soo Line, Minneapolis,

Minn.; and D. C. Kennedy, department manager, Sears, Roebuck & Co., Minneapolis. Mr. and Mrs. Kennedy have four grandchildren.

Mr. Kennedy is a member of Minnehaha Lodge 165, A. F. & A. M.; Ancient and Accepted Scottish Rite, and Zurah Temple A. A. O. N. M. S., in Minneapolis.

It is most appropriate and timely that the ceremony honoring the 50 years of devoted service of Mr. Kennedy to the preservation and enrichment of our democratic way of life be held on the eve of Labor Day.

Domestic Olive Industry

EXTENSION OF REMARKS
OF
HON. HARLAN HAGEN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1960

Mr. HAGEN. Mr. Speaker, under leave to extend my remarks, I submit for the information of the Congress an open letter from Mr. Daryl Hutchins, manager of the Olive Advisory Board, protesting a proposal under which the protective tariff on imported olives would be reduced by GATT agreement. The proposal is currently under consideration for execution when GATT agreements are renegotiated. It is evident that such action by our Government would be ruinous to our domestc olive industry. Mr. Hutchins' open letter follows:

AN OPEN LETTER TO AMERICANS

The California olive industry, for some 30 years, has been penalized by an inadequate tariff which has arrested development of the industry; which has put most of the American olive oil plants out of business; which has affected the living standard of the California farmer; which has, in name of good relations with friendly nations, penalized one segment of American agriculture to the benefit of America as a whole, and now with further reduction being considered by the U.S. Tariff Commission, can inundate America with the product of Mediterranean countries, with the product of Mediterranean labor, with the product of lower living standards, actually import unemployed Americans.

We are appealing, farmer to farmer, laborer to laborer, American to American, manufacturer to manufacturer, for assistance, be it in the form of public ire and objection as manifested through letters, or other means, to convey to the President and the Vice President, the U.S. Tariff Commission, Senators, Congressmen, the objection by friends of the California olive industry, to lowering the tariff on olives. The American standard of living is the highest in the world. One sure way to break this down is to import the concept of production in Europe, sale in the United States with the chief weapon for economic murder being the gun of labor cost differential: "Pay less in Europe for labor; sell for more in America," the word "less" encompassing nothing more or less than labor in the Mediterranean area, working for a dollar a day, whereas Califronia pays 12 to 35 times that amount for its labor.

Many American industries are now in a position similar to that of the olive industry's predicament the last 30 years. It is just coming to the attention of the American public at this time; that American industries are faced with economic delirium tremens, with delirium between taxes and tariffs where, on the one hand, the taxpayer pays to the limit to provide foreign aid, which many times turns up in the form of a factory in a foreign country, manufacturing goods expressly designed to sell in the United States, in a market originally created by industrious American businessmen, and selling for less because the goods cost less, because labor is paid less. On the other hand, the tariff, in the name of reciprocity, unilateral in many respects, creates a "no-holds-barred" climate, because no protection is afforded the American labor standard of living against its cheap counterpart; he either works for less or has a tariff wall between himself and other labor around the world. Why should American labor go backward 30 years to adjust itself to worldwide conditions?

There is much discussion given to minimum wage. If they are going to legislate minimum wage scales, then American industries must secure more money for their products to create a better living standard. You cannot increase the minimum wage and reduce tariffs at the same time and expect to operate in the black. To insure better wages, necessary protection in the form of an equitable tariff must be afforded American industry.

On August 23 the olive industry intends to make known that the peril point has already been reached; that the growth of the industry has been arrested, and that we need a higher tariff to maintain a rightful place for the California industry and not sacrifice it in the name of reciprocity.

The olive industry sympathizes with the steel industry, and the fact that imports have caused some 56,000 people their jobs in America in the steel industry alone, because we have given money to subsidize foreign countries' production. Each year, some 700,000 passenger cars have been lost to American production, which would have employed 65,000 American workmen. Where is reciprocity when trade barriers are erected in foreign countries and we have lowered ours? What is the reason behind this economic fallacy and where will it lead us?

Is it conceivable, where an American laborer wishes to keep up wage rates and American industry wishes to have satisfactory working arrangements with labor, that this concept can be advanced against tariff practices that completely nullify growth for so many industries, wherein we provide the wherewithall in the name of foreign aid for other countries, and yet do not allow sufficient write off to replace obsolete equipment here in America? The laborers and industry are operating with one hand tied behind their backs; and yet have to compete with the world labor pool, which is 30 years behind American advancement.

We in the industry feel that the 30 cents a gallon tariff, as initiated in 1930, represents a little more than one-third the original intended amount. In the words of the President: "Certainly I know we must find a substitute for the purely temporary business of bolstering the free nations through annual handouts. That gets neither permanent results nor friends." We agree with the President. However, 8 years later, we are still in the giveaway business; this time through concessionary tariff measures at the expense of a strong farmer, strong laborer, and a prosperous consumer.

In many areas, our strong farmers are growing weaker. The backbone of America, the man and wife, the farmers, who are long on determination and short on cash are becoming a passing memory. We must be realistic about tariffs. Our industry does not seek payments for not growing their product and it does not seek support prices. We will take care of our own, if the Government does not lower the barrier to inundate America with that which can put the small farmer and processor out of business. In the olive industry, if there is a surplus the Government does not take care of this problem; the farmer takes it on the chin.

DARYL HUTCHINS,
Manager, Olive Advisory Board,
San Francisco, Calif.

International Control of Outer Space

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1960

Mr. FULTON. Mr. Speaker, the third colloquium on the law of outer space was held yesterday, August 16, 1960, as part of the 11th International Astronautical Congress in Stockholm, Sweden.

Dr. John Cobb Cooper, professor emeritus of international air law at McGill University and an authority on international law and the efforts to establish laws for outer space, in this, the space age, is presenting a paper at this conference.

Under leave to extend my remarks in the RECORD, I am including Professor Cooper's paper so that it may be called to the attention of my colleagues in the Congress, and to the American people:

INTERNATIONAL CONTROL OF OUTER SPACE—SOME PRELIMINARY PROBLEMS

(By John Cobb Cooper, LL.M., LL.D., honorary professor emeritus, international air law, McGill University, member permanent legal committee, IAF)

As part of any final decision on methods for the control of outer-space flight, certain preliminary questions must be answered. This memorandum seeks to raise the most important.

I. WHAT IS MEANT BY OUTER SPACE?

"Outer space," for political and legal purposes must be a finite geographic area, otherwise it could not be subject to "control." Also, it must be outside the areas subject to territorial sovereignty, otherwise it could not be subject to international control. It is therefore suggested that in any international convention for control of outer space or of flight into such areas the following opening statements be included:

"1. Outer space, for the purposes of this convention, is defined as the area whose upper or outer boundary is the outer limits of the solar system, and whose lower or inner boundary is the lowest altitude above the earth's surface at which an artificial satellite may be put in orbit around the earth.

"2. The contracting states hereby declare that no state has or can have sovereignty over such area or any part thereof or any celestial bodies therein."

My friends will recall that in 1956, before Sputnik I was launched, I suggested to the American Society of International Law a new convention: First, reaffirming absolute sovereignty of the subjacent state up to the height at which aircraft could be operated; then further extending limited sovereignty upward to 300 miles above the earth's surface; then accepting the principle that all space above should be free for passage.

In 1957, a few weeks after Sputnik I was launched, I published a memorandum in which I pointed out that my 1956 suggestion was based on earlier and then widely accepted scientific opinion to the effect that somewhere not far below 300 miles the atmos-

phere had sufficient density to prevent free satellite flight, but that Sputnik I had proved this premise to be unsound. It is nevertheless interesting to note that of the satellites now in orbit around the earth the most recent figures indicate that only those satellites with a minimum altitude of over 320 miles above the earth's surface have an estimated orbital life of more than a few months or a few years.

The legal necessity of fixing the lower boundary of outer space is clear. Under accepted principles of customary international law, the Chicago convention, and many national statutes, the area called airspace above national lands and waters is delt with as part of the territory of the subjacent state, which alone has the right to control all flight in this area and to prohibit the entry of foreign flight instrumentalities. However the legal status of outer space is, or under the proposed convention, would be diametrically opposed. For outer space we should accept the high seas principles cogently stated by Mr. Justice Storey in 1826 ("The Marianna Flora," 11 Wheat. 1):

"Upon the ocean, then, in time of peace, all possess an entire equality. It is the common highway of all, appropriated to the use of all; and no one can vindicate to himself a superior prerogative there. Every ship sails there with the unquestionable right of pursuing her own lawful business without interruption; but whatever may be that business, she is bound to pursue it in such a manner as not to violate the rights of others."

If this be the status of outer space, states could without question delegate to an international body the right to control the use of the area, or could between themselves agree on the type of flight permissible in the area. But whether the proposed control be political or functional, the area affected must be defined. An approximate lower boundary of outer space must be fixed. As the United Nations ad hoc Committee on the Peaceful Uses of Outer Space pointed out in its 1959 report, the upper limit of the airspace and the lower limit of outer space do not necessarily coincide. In fixing the lower limit of outer space at the altitude where an earth satellite may be put in orbit, no decision is required as to whether the absolute air space sovereignty of the subjacent state extends upward to that line.

The boundary here suggested would appear to be in the area of 80 to 100 miles above the earth's surface. At least one satellite has been put in orbit around the earth at a minimum orbital altitude (perigee) of 99 miles. At an altitude of 70 to 75 miles meteors have been observed in an incandescent, or burning state. At 100 miles altitude, and in fact much lower, the air no longer exists. At the earth's surface it consists of about 78 percent molecular nitrogen, 20 percent molecular oxygen, and small quantities of argon, carbon dioxide, and water vapor.

At 50 miles altitude the temperature has dropped sharply, the atmospheric density is only about one-millionth of the surface density, and not sufficient to contribute in any degree to the aerodynamic lift of flight instrumentalities.

At 100 miles altitude the temperature has increased up to 2,000° F. or more, the atmospheric density has further decreased to one-billionth of the surface density, the oxygen molecules have already broken down into separate oxygen atoms, and satellite flight has been proven practical. This extremely thin gaseous combination of a few nitrogen molecules, oxygen atoms, and perhaps particles of other gases, has little if any resemblance to the substance ordinarily called air which we breathe and which is needed to support the flight of aircraft envisaged when the Paris and Chicago conventions accepted the principle of airspace sovereignty.

This suggested lower boundary of outer space has therefore practical as well as legal advantages. It is a real boundary. Whatever future observations prove to be the lowest altitude of free satellite flight around the earth will be the lower boundary of the area subject to international control.

It is my recollection that this general boundary location was suggested at a meeting under the auspices of the American Academy of Arts and Sciences in which I participated. In any event, the proposal did not originate with me. My only contribution has been to analyze and elaborate its possible application.

(NOTE.—The statements as to the composition of the air and figures as to atmospheric density are paraphrased from testimony of Dr. Homer E. Newell, Jr., Assistant Director for Space Sciences, NASA, April 8, 1959, before a subcommittee of the U.S. Senate Committee on Aeronautical and Space Sciences, p. 127, pt. I, printed record, hearings on Senate bill 1582.)

II. WHAT ARE THE PRESENT RIGHTS OF SOVEREIGN STATES IN OUTER SPACE?

Assuming that the legal status of outer space as already defined in this paper, is now analogous to that of the high seas, as I personally believe, or that such status will eventually be accepted by formal international agreement, certain presently existing rights of individual states must be acknowledged and preserved. These are particularly the rights of self-protection and self-defense.

The very limited scope of this memorandum will not permit more than the barest outline of how U.S. thinking has historically dealt with these questions.

As early as 1804 the noted Chief Justice Marshall said (*Church* v. *Hubbart*, 2 Cranch 187): "The authority of a nation within its own territory is absolute and exclusive. * * * But its power to secure itself from injury may certainly be exercised beyond the limits of its territory." This statement still stands in our jurisprudence. It would be directly applicable to the right of a subjacent state to secure itself from injury in outer space beyond its territorial airspace.

Our chairman today, Dr. Jenks, in his "The Common Law of Mankind," has quoted from a statement of Daniel Webster, as Secretary of State, in the *Caroline* case (1837) that necessity justifying acts of self-defense (outside national territory) is "confined to cases in which the necessity of that self-defense is instant, overwhelming, and leaving no choice of means, and no moment for deliberation." As Dr. Jenks points out, this statement was cited with approval in the Nuremberg cases. But certainly no emergency could leave less chance for deliberation than a threat from outer space.

Perhaps the most important analysis of the problem made in the United States is found in an address delivered in 1914 by the late Elihu Root as president of the American Society of International Law. Mr. Root served as Secretary of State and also as U.S. Senator from New York. In discussing the right of self-protection as a right recognized by international law he said (8 AJIL—6): "The right is a necessary corollary of independent sovereignty. It is well understood that the exercise of the right of self-protection may and frequently does extend in its effect beyond the limits of the territorial jurisdiction of the state exercising it"; and later, in a much quoted phrase he asserted "the right of every sovereign state to protect itself by preventing a condition of affairs in which it will be too late to protect itself."

As I said in 1959 in a paper on "Flight Space Law" published in Handbuch der Astronautik: "This principle has already been applied toward the regulation of flight. In 1950 the United States and Canada established air defense identification zones around parts of their respective shores. Admittedly the airspace over the high seas is not territorial space and enjoys the same international status as the high seas themselves. Yet the United States and Canada did not hesitate to establish regulations to prevent unidentified aircraft approaching their shores from the seas. The U.S. regulation, for example, requires that foreign aircraft must report their presence and identification when not less than 1 hour or more than 2 hours averaging cruising distance via the most direct route to the shore. This is a clear application of the right of self-preservation and self-defense applicable outside national territory and within international flight space. It may well be that the same right exists for subjacent states to act in outerspace above national territorial airspace to the extent deemed necessary for the protection and defense of the lands below."

In any future agreement for international control of outer space these national rights of self-protection and self-defense should be preserved. It is submitted that nothing in the United Nations charter is opposed to this view. While article 51 deals solely with the right of individual or collective self-defense "if an armed attack occurs against a member of the United Nations," it is my firm belief that this does not take away already existing international law rights of self-protection which have long been supported as part of the international law applicable to all states.

III. IS INTERNATIONAL CONTROL OF OUTER SPACE INCONSISTENT WITH PROVISIONS OF THE CHICAGO CONVENTION?

In any convention dealing with the international control of outer space, the most careful consideration must be given to possible conflicts with the 1944 Chicago convention on International Civil Aviation. This will be particularly true if the International Civil Aviation Organization (ICAO) is not chosen as the agency to exercise outer space control.

One of the major difficulties is that the convention deals solely with the regulation of the flight of aircraft. The term "aircraft" is not there defined. However, ICAO has adopted an annex to the convention containing the following definition: "Aircraft shall comprise all apparatus or contrivances which can derive support in the atmosphere from reactions of the air." Certainly this definition does not include rockets, guided missiles, earth satellites or more fully developed later types of spacecraft. Ordinarily these do not derive support from reactions of the air. A difficulty, however, will arise in case the ICAO definition is modified or amplified to include flight instrumentalities as aircraft even though they do not derive support during flight from reactions of the air. If that is done the most careful consideration must be given to a possible conflict in the regulatory powers of ICAO and the new space organization, particularly as to which agency can regulate spacecraft flight while passing through the airspace and before entering or after leaving outer space.

Article 3 of the Chicago convention specifically prohibits state aircraft from flying over the territory of another state without special authorization. Any new convention for the control of outer space must make it clear that this provision applies only to flight through the airspace. Otherwise serious difficulties may arise as to the flight in outer space of those flight instrumentalities which can derive support from the air while operating in the airspace but can proceed beyond into outer space and continue in flight as spacecraft.

Article 8 of the Chicago convention provides that no aircraft capable of being flown without a pilot shall be flown without a pilot over the territory of a contracting state without special authorization. Again this provision may create difficulty if ICAO modifies its definition of aircraft. Accordingly either

by amendment of the Chicago convention or by any new convention it should be made clear that this article applies solely to flight in the airspace. As it now reads there is no height limit as to its applicability.

Article 12 of the convention deals with the rules of the air. Each contracting state undertakes to keep its own regulations uniform to the greatest possible extent with those established from time to time under the convention. It then states: "Over the high seas, the rules in force shall be those established under this convention." As chairman of the drafting committee at the 1944 Chicago conference which brought this provision before the conference I then understood it to mean, and still do, that states who are parties to the Chicago convention have delegated to ICAO the power to adopt mandatory flight rules applicable to the flight of aircraft over the high seas. It will be noted that the convention places no height limit over the high seas as to the applicability of such rules. If ICAO modifies its definition of aircraft so as to apply to spacecraft, difficulties may arise as to whether the ICAO rules or the rules of an international space agency will apply to flight of spacecraft over the high seas. Even if the article is construed, as I believe, to be applicable only to flight in the airspace, conflicts of jurisdiction may be present so far as the movements of spacecraft are concerned in the airspace over the high seas, particularly if the ICAO rules and the rules of the new space agency are not precisely the same. Even then the question of which agency will have power to enforce the rules over the high seas will require very accurate thinking and drafting.

These appear to be the major presently foreseeable difficulties created by international control of outerspace if that control is not vested in ICAO. If it is so placed, the difficulties and possible conflicts will be very greatly lessened. These are questions which must be determined preliminary to any final decision as to methods of control of outerspace and flight instrumentalities proceeding from the earth's surface into outer space and thereafter returning through the airspace.

Federal Tax Deduction as Federal Aid for Education

EXTENSION OF REMARKS
OF
HON. ALFRED E. SANTANGELO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1960

Mr. SANTANGELO. Mr. Speaker, I have introduced today a bill which will aid taxpayers in their endeavors to provide education for their children and themselves. No grant or loan by the Federal Government is provided for in this bill. Assistance is provided in the form of an income tax deduction for a taxpayer to the extent of $600 paid by him for tuition for each dependent or himself. This deduction will be available for those taxpayers whose dependents attend private, parochial, secondary school, college, or university, and who are required to pay tuition.

Our country is the greatest in the world in the production of goods and in its material wealth. Our position in the field of education is a matter of speculation. Certain critics, notably Adm. Hyman G. Rickover, who studied the Russian educational system, assert that we are falling behind the Russians in this field. In any event, room for improvement exists not only in facilities and curriculum, but also in the availability of education. Reliable reports disclose that some brilliant students are denied higher educational opportunities for lack of funds. Others are denied educational opportunities for lack of facilities. Others are compelled to attend private or parochial schools because public facilities are overcrowded or unavailable. In many instances, taxpayers, because of the high cost of education, cannot afford the tuition for more than one of their children; and, consequently, the younger ones suffer. With the increasing cost of tuition, the burden on the taxpayer has grown heavier. The situation cries for remedy.

My bill provides a remedy. It provides assistance to the taxpayer without resorting to the timeworn remedy of more money. My bill will indirectly relieve municipalities of some of their burdens by diverting some of the students to private schools and will reduce to an extent the requirement of increased taxes to finance education.

Some Background on the Cash Relief Bill for West Indians and Other Non-U.S. Citizens Who Helped Build Panama Canal

EXTENSION OF REMARKS
OF
HON. LEONOR K. SULLIVAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1960

Mrs. SULLIVAN. Mr. Speaker, when any of us in the Congress see our former colleague, the Honorable Maurice H. Thatcher, of Kentucky, or read one of his letters, we are constantly impressed by the tremendous amount of effort he still continues to exert in behalf of the causes of other people—he is a selfless do-gooder, and I use that term in its highest sense of approval and admiration. Perhaps, because the phrase "do-gooder" is often considered uncomplimentary, I should call him instead a good-doer, for he is certainly that.

Mr. Thatcher, only surviving member of the Commission which built the Panama Canal, and a former Civil Governor of the Canal Zone as well as the first Governor of the Canal Zone, has for years worked for better treatment of the construction workers and has never let an opportunity pass to impress upon the Committee on Merchant Marine and Fisheries' Subcommittee on the Panama Canal, of which I am chairman, the need for legislation in behalf of those who helped build the canal a half century ago.

I am very proud and deeply touched as a result of receiving a recent letter from former Congressman Thatcher commenting on the enactment of H.R. 10511, which I introduced at his urging. I am sure many other Members of the Congress will be interested in Mr. Thatcher's letter, and so I include it in the CONGRESSIONAL RECORD Appendix as follows:

WASHINGTON, D.C., *August 4, 1960.*

Mrs. LEONOR K. SULLIVAN,
Member of Congress,
House Office Building,
Washington, D.C.

MY DEAR MRS. SULLIVAN: I wish to express my most earnest appreciation for your splendid service with respect to the enactment of H.R. 10511 at this session of Congress.

This measure—which became a law upon its approval by the President on the 14th of July—will benefit a group of non-U.S. citizens, retirees of the Panama Canal and Canal Zone organizations, about 4,000 in number. They are, as you know, chiefly West Indians (colored), who have rendered long, faithful, and effective service; and the straight $10 a month benefit for each such retiree named in the bill, when added—as it now will be—to the small cash benefits they are now receiving—will prove to them a veritable God-send.

You, Mrs. Thatcher, and I came to New York from the isthmus, by ship, in November 1958. During the voyage you and I had a full discussion of the plight of these retirees, and because of my familiarity with the subject I was able to supply valuable information; and you had seen for yourself certain aspects involved. You evidenced the deepest sympathy for them, and assured me that you would be glad to do what you could to aid them.

Accordingly, in February 1960 you introduced the measure; and as chairman of the subcommittee (of the House Committee on Merchant Marine and Fisheries) on Panama Canal legislation, you arranged for a hearing on the bill, April 12 and 13; and asked me to appear and testify in its behalf, and to submit supporting evidence. This I did.

As you know, I am the only surviving member of the Isthmian Canal Commission, which was charged with the duty of supervising the building of the canal; and, also, during the construction era, I was Civil Governor of the Canal Zone. Afterward I served five terms in Congress, from Kentucky. Since my official service on the isthmus ceased, I have made six visits there, and have kept in touch, throughout, with conditions there; and have always sought to serve the just interests of the canal and Canal Zone Government employees; and this, of course, without charge or compensation.

Because I have known of the conditions under which those of the indicated group have always labored, I early felt, and have ever retained, a strong sympathy for them, and I am very happy over the recent outcome, and most grateful therefor. You have done a fine piece of humanitarian service in sponsoring this relief measure, and you have exercised diligence and skill. These beneficiaries are your everlasting debtors, and their representations to me indicate their sense of gratitude.

Speaking for myself, I am not only deeply appreciative for what you have done in this connection, but am gratified that I was privileged to aid somewhat the successful labors of such a competent legislator as yourself.

Mrs. Thatcher joins me in affectionate regards and best wishes.

Sincerely,

MAURICE H. THATCHER.

Communist Subversion of Youth

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1960

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Evening Star of Tuesday, July 26, 1960:

COMMUNIST SUBVERSION OF YOUTH—BOTH POLITICAL PLATFORMS ARE DESCRIBED AS IGNORING DANGER OF SOME TEACHINGS

(By Constantine Brown)

Both the Democratic and Republican platforms include subjects intended to brace this country for the internal and foreign problems it will be facing in the sixties, except those of Communist subversion at home.

The standard bearers of both parties are fully conversant with the potential domestic difficulties we are facing because of the mounting efforts at subversion, especially of American youth, as a result of the efforts of international communism. In an effort to draw attention of leaders and the public to this grave problem, FBI Director J. Edgar Hoover has made public a well-documented study entitled "Communist Target—Youth."

Mr. Hoover pointed out that Lenin himself laid down the principle that "youth will decide the issue of the entire struggle, both the student youth and the working class youth."

American Communists, Mr. Hoover goes on to say, have been working diligently over the years on our youth. In 1959 their work was stepped up "when campuses throughout the Nation became prime targets of infiltration and recruitment. * * * The party began operating what amounted to a regular lecturing bureau with party spokesmen seizing every opportunity to project their views on campuses across the country."

Pointing to the extraordinary success of Communist-led youth in Korea, Japan and Turkey, Mr. Hoover said that many Americans believe that it can't happen here. But the Communists' success in San Francisco (when they stopped the hearings of the Un-American Activities Committee) proves that it can happen here.

Both Senator KENNEDY and the Democratic platform have endorsed the sit-in strikes of Negro students. The reasons for the sit-ins may or may not be valid. But the method is not.

It is not only political leaders who unwittingly give encouragement to youthful disdain for law and order. It is also some of their teachers, enjoying academic freedom, who prepare our youth by teaching them that our form of government is obsolescent.

The House committee has made available films of the San Francisco riots. Viewing them is a most chilling experience. These boys and girls had been fed academic poison from bottles with insidious labels. Many teachers and professors follow the new philosophy propounded by the Canadian psychiatrist, Dr. Brock Chisholm in his book, "Prescription for Survival," and reiterated by him at the National Conference of Social Welfare at Atlantic City last spring. As reported in the Washington Star on June 9, 1960, he stated that dependence on the obsolete Constitution of the United States is a form of magic Americans must give up to survive in the nuclear age.

And, according to a report in the Washington Post and Times-Herald of June 11, 1960, the Rev. Dr. Samuel Miller, dean of the Harvard Divinity School, stated that the new dimensions of life have made the old-time God "at least questionable, perhaps irrelevant, or even ridiculous."

Vincent X. Flaherty, Los Angeles Examiner columnist, reported that a psychology textbook used in Los Angeles high schools contained a shocking questionnaire. "For how much money," it asked, "would you do or suffer the following: Eat a pound of human flesh? Drink enough to become intoxicated? Choke a stray cat to death?" These are but a few of like questions, but the alltime low was reached by the following: "For how much money would you spit on a crucifix?"

It would seem that the controversial congressional bill demanding loyalty oaths for students is putting the cart before the horse. It is the professors and high school teachers who bend the twig.

Young boys and girls who have been taught that patriotism is corny, that God is "ridiculous" and morality "for the birds" are pushovers for Communist-inspired riots. And the growing number of youthful demonstrations since the San Francisco episode should cause our political leaders to at least raise their eyebrows and ask themselves: Will mere spending of dollars to build new school buildings and raise the pay of the teachers suffice to meet this problem which has been swept under the rug by the two conventions?

Medical Aid for the Aged

EXTENSION OF REMARKS
OF
HON. NOAH M. MASON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1960

Mr. MASON. Mr. Speaker, the following is a copy of an advertisement appearing in various newspapers of the country. In my opinion it places the problem of medical aid for the aged in its proper perspective. Because it does just that, I call the attention of my colleagues to it by placing it in the CONGRESSIONAL RECORD:

MEDICAL AID FOR THE AGED—LET US HELP THOSE WHO NEED HELP

You're walking across a busy street and you see an elderly man stumble and fall. What do you do? If you're like 99 out of 100 Americans, you help him to his feet.

But if you see that same man crossing the street without any trouble, you let him go his own way. He doesn't need help. He hasn't asked for help. And if you offered it to him, chances are he'd resent it.

Now helping others is the decent thing to do. But helping those who don't need help doesn't make much sense.

Right now Congress is considering how it could go about helping our older people meet the costs of their health care. Our older citizens deserve every consideration. Certainly they are entitled to the chance to live their lives as fully as possible, with dignity and independence, with faith and pride in themselves.

But every physician knows better than to think that all older people are sick. They aren't. The great majority of them are in good health. Some are not.

By the same token, all of those over 65 are not hardship cases. Some are needy. Most are not.

As physicians, we deal with older people every day. And we believe that older people differ from younger people only to the extent that they have celebrated a few more birthdays. We believe that the elderly must be treated as individuals because they are individuals—as different from each other as their fingerprints.

The American Medical Association hopes Congress will keep these facts in mind if it enacts a law to help the aged pay the cost of health care. The AMA believes our Nation, as well as its senior citizens, will best be served by a locally administered health aid program designed to help those who need help.

A program that will do this is envisioned in title VI (Medical Services for the Aged) of the Mills bill (H.R. 12580, 86th Cong.). Already passed by the House of Representatives, the Mills bill is now up for further congressional consideration. As physicians and as citizens, the doctors of America urge its passage.

We do so because we are concerned about those among the aged whose health needs cannot be met through private resources, health insurance or prepayment plans. Title VI of the bill introduced by Representative Wilbur Mills, Democrat, of Arkansas, is the answer to the problems of this minority. It proposes a Federal grant-in-aid program for the needy and the near needy—to be administered locally for the benefit of locally determined beneficiaries.

This bill will help those who really need help. And it allows those who don't need help to maintain their independence. Furthermore, by calling for local administration, this program allows experts on the spot to tailor government help to individual need. This is important because medical care is a personal thing; it cannot be mass produced, or administered at long range.

The American Medical Association enthusiastically endorses the principle of helping those among the aging who need help. We are equally sincere in our opposition to legislative measures that approach the problem on a shotgun basis—with the idea of increasing repeatedly the social security tax in order to finance health benefits for everyone who is covered by the old-age, survivors, and disability insurance program, regardless of the individual's need.

There are many serious hazards in using the social security approach to finance medical and hospital care for our older citizens. When Government starts telling the doctor how to practice medicine; telling the nurses how to nurse; telling the hospital how to handle its patient—the quality of medical care is sure to decline. The cost of such a program eventually would be staggering, and would make a serious dent in the pay envelopes of millions of Americans covered by social security. Private voluntary health insurance, which has been doing such a magnificent job, would be undermined and, in time, destroyed.

Most important, perhaps, is the fact that such an approach would be just the beginning of compulsory, Government-run medical care for every man, woman and child in the United States. For it wouldn't be long before the Federal Government would be lowering the age at which people would be eligible, and adding one costly service after another to a program that would place your health care under the Federal Government's thumb. And let's not forget that our present health care is recognized to be the world's finest.

For the reasons stated here, and many more, the 178,000 physician-members of the American Medical Association strongly urge passage of title VI of the Mills bill and rejection of a compulsory Federal approach in any form. (Should you wish to know more about this problem, we suggest you discuss it with your family physician.)

Let us, together, with common sense and a full recognition of our common obligation, help those of the aging who need help.

Time To Redouble Our Dedication to the United Nations

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Monday, August 22, 1960

Mr. KEATING. Mr. President, in recent weeks there has been renewed American interest in and dedication to the United Nations. This has resulted partly from the challenge to the stature and importance of that world body posed by the crisis in the Congo.

Thoughtful consideration of the U.N.'s record to date—the wonderful progress which has been made and the accomplishments it has achieved—should lead all Americans to redouble their faith in this world forum. It should renew our appreciation that the U.N. offers the world's best hope for lasting peace.

The forthcoming resignation of Ambassador Henry Cabot Lodge as our representative to the United Nations has also served to underscore the growing influence of the world agency in the search for peace with justice. As the Ambassador noted in his letter to the President on August 17, "The United Nations has grown greatly in size, and influence, and in indispensability as a preventer of war—and as a builder of peace."

Ambassador Lodge has contributed extraordinarily to the enhancement of the U.N.'s stature, as President Eisenhower noted in his letter regretfully accepting his resignation. Certainly, no objective observer can disagree with the President's view that Ambassador Lodge deserves "the gratitude of all the American people" for his tireless work in the U.N. His has been the voice of immediate truth, of American good intentions and good faith, in the face of Communist innuendo, distortion, and falsehoods. Through his efforts America's world standing has been increased and the virtues of democracy over communism have been more clearly etched for all the world to see.

Mr. President, a very thoughtful editorial in the Brighton-Pittsford (N.Y.) Post of August 18 points up some of the encouraging aspects of recent U.N. activities. It also notes the importance of the work of the American Association for the United Nations and its chapters in insuring America's continued strong participation in the U.N. I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BRAVO, U.N.

We don't know whether the situation in the Congo is fully under control—and it is obvious that it will be years before the new nation fully adjusts to its status as an independent State.

Yet, surely, in the midst of all the gloom on the world horizon, there is something wonderfully encouraging about the performance of the United Nations in this crisis.

It is true, perhaps, that the U.N. possibly isn't ready yet to solve the problem posed by aggressive world communism, but surely it has come a very long way in the years since its organization at San Francisco in 1945.

Every crisis surmounted means that much prestige gained, that much experience acquired. Obviously, the world is far from the "rule of law" for which the founders of the U.N. hoped, but the brilliant and imaginative work in the Congo shows that meaningful progress is being made.

We would also point out that this recent success should be tremendously encouraging to the Rochester Association for the United Nations, and groups like it throughout the world. All these groups, from time to time, must face vexation and frustration in their efforts, yet the success of the U.N. is rooted basically in the hold it has on men's minds everywhere. For this, associations like the local one can claim a major share of credit.

That knowledge should be a challenge for redoubled efforts in the future.

Profile of a City: Lawrence, Mass.

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I take pleasure in including an article about my home city of Lawrence, Mass., which appeared in the Merrimack Valley Communicator, official publication of the Western Electric Co., in North Andover, Mass., issue of August 1960:

PROFILE OF A CITY: LAWRENCE

The lifeblood of Lawrence, down through its history, has been water.

Powerful and abundant, the waters of the Merrimack River raced over Bodwell's Falls—a tumbling rapid with a descent of only 4 or 5 feet—with a strength which aroused the interest and imagination of an Andover textile man named Daniel Saunders. Pausing frequently while crossing the wooden bridge which then connected Methuen and Andover near where the O'Leary bridge now stands, Saunders made a discovery: the thrust of the river at this point was much more powerful than casual observation would indicate.

His interest completely captivated when he proved his discovery by using nothing more than a square and a spirit level to reveal the true incline of the river from Lowell to the falls, Saunders' imagination moved to the fore with a vision of a great industrial city to be built on the banks of the Merrimack. No idle dreamer, he set about to make his thought a reality.

ESSEX CO. FORMED

Moving with quiet diligence, Saunders brought about the formation of the Merrimack River Water Power Association in 1843 with Samuel Lawrence as president-treasurer and Saunders as agent. This organization set about raising funds with which to build a dam and to purchase lands adjacent to the river. A year later, the association's interests were sold to another group which formed the Essex Co. in 1845 to develop the water power of the Merrimack River below Lowell. Abbott Lawrence was named president of the Essex Co., with Charles S. Storrow (later to be elected the city's first mayor) as treasurer and general agent. Mr. Lawrence, is his lifetime, was also a Congressman, served as a U.S. minister to Great Britain, and missed being nominated for the Vice Presidency of the United States by only five votes.

ONCE CALLED MERRIMACK

Despite the suggestion of many people who helped in the founding of the city, Daniel Saunders declined to have the settlement he brought into being named after him. Instead, he proposed that it be named Merrimack. In fact, the first post office established in the area was called the Merrimack Post Office. It was eventually decided, however, to name the city Lawrence in honor of the Lawrence family, so prominent in the industrial life of the valley.

In 1847, by Massachusetts Legislative enactment, land was taken from Methuen and Andover to comprise the town of Lawrence. The area taken from Methuen on the north bank of the Merrimack and from Andover on the south bank was about evenly divided and consisted of 6.75 square miles. So fast did the settlement grow, it was incorporated as a city in 1853. The present commission type of government went into effect on January 1, 1912.

THE LAWRENCE DAM

The Lawrence Dam, built just above the O'Leary Bridge, was in its day a masterpiece of engineering. Excavations for the dam began in August 1845. The first stone was laid in the center on September 19 of that year and the last of the capstones were placed just 3 years later.

Under the guidance of the officers of the Essex Co., Lawrence became a boomtown of industrial building. Where there were only 150 people in the settlement in 1845, there were 8,282 in the area just 5 years later. The Washington mills were laid out in April 1846. The Atlantic Cotton Mills followed a few months later. Many other mills quickly were placed under construction in short order.

DIVERSIFIED INDUSTRY

While Lawrence, for most of its history, was primarily a textile center—one of the largest woolen producers in the world—it has succeeded in effecting a diversification of its industries. It is today considered the leading wholesale trading center of the Merrimack Valley. Manufacturing is the predominant economic pursuit in the city. Principal products include leather and leather goods, paper and allied products, textile mill products, apparel and other finished goods, and machinery.

SOME FAMOUS SONS

A number of Lawrence men have made themselves known in the world of letters and of music. Lawrence was the home of Leonard Bernstein, the famous symphonic conductor, and of John McNulty, the author. Perhaps the most famous graduate of Lawrence High school is the dean of American poets, Robert Frost.

A native of San Francisco, Frost came to Lawrence via Methuen at an early age. Graduating from Lawrence High in 1892, he was covaledictorian of his class with Elinor White, who became his wife 3 years later. Frost played right end or left end (according to the coach's whim) for Lawrence High. The first Robert Frost poem ever published, "La Noche Trist," was published in the Lawrence high school publication, The Bulletin. In his senior year, he became editor of The Bulletin. Annoyed at the lack of material submitted for publication, Frost wrote one whole issue himself, then irately resigned as editor.

Following graduation, he worked for a while as a lamp trimmer at the Arlington mills. He then went into teaching in Methuen. Later to become a Pulitzer Prize winner, Frost first sold a poem to a national publication in 1894. It was "My Butterfly: An Elegy," and netted him $15. He moved from this area to Derry, N.H., where he took

up farming. Now he is on the staff of the Library of Congress.

Frost wasn't the only Lawrence poet to gain fame. It was a Lawrence native by the name of Ernest L. Thayer who penned the immortal lines:

"And somewhere men are laughing,
And somewhere children shout,
But there is no joy in Mudville—
Mighty Casey has struck out!"

Tenth Anniversary of the Repeal of the 10-Cent-Per-Pound Tax on Margarine

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1960

Mr. RIVERS of South Carolina. Mr. Speaker, July 1 was the 10th anniversary of the repeal by Congress of the 10-cent-per-pound tax on margarine. The passage of the National Margarine Act of 1950 marked the commencement of a period of fair competition for colored margarine in interstate commerce and in most States.

Production of margarine has increased from 862 million pounds in 1949 to the alltime high in 1959 of 1,611 million pounds. Production for the period January–April 1960 was 6.8 percent ahead of 1959.

The 10-year period since the repeal of the old Federal margarine taxes and restrictions has been marked by a growth in the acceptance of margarine. Per capita consumption, on a national average, has increased from 5.8 pounds per person in 1949 to 9.2 pounds per person in 1959.

During 1958, manufacturers in the margarine industry shipped products valued at $219 million, an increase of 10 percent over 1954, according to the U.S. Department of Commerce. Value added by the manufacturer, as adjusted, totaled $56.7 million, an increase of 29 percent since 1954. New capital expenditures in the margarine industry were reported by the Department of Commerce to be 3.4 million, an increase from 1954 of 127 percent. Figures are not available for other years.

The margarine industry is composed of firms of various sizes and types of enterprises, including small, family-owned firms. There are 32 firms with 60 plants producing margarine in the United States.

The chief ingredients of margarine are highly refined vegetable oils. American-produced soybean oil and cottonseed oil are the major vegetable oils used. Between 1949 and 1959 consumption of these oils almost doubled to reach 1,218 million pounds, refined basis. Further increases are expected. Corn and peanut oils are also used.

By far the largest source of fats and oils used in margarine is the American soybean. Soybean oil used in margarine reached a new peak of 1,094 million pounds—refined basis—in 1959 and constituted 85 percent of all the fats and oils used in margarine.

Ten years after the act of 1950 there are still restrictions on the sale and use of margarine. The consumer cannot buy colored margarine in Wisconsin and Minnesota. Six States—Wisconsin, Minnesota, Idaho, Utah, North and South Dakota—still maintain per-pound taxes. The U.S. Navy cannot buy margarine for table use, although the other branches of the military can. There are various restrictions in State laws on dealers, State institutions' use of the vegetable spread and use by public eating places.

Major factors in the margarine outlook are continued population growth, plentiful supplies of major farm ingredients, a vigorously competitive industry, and continued increasing consumer acceptance that has raised per capita use levels for several years.

Margarine is 80 percent fat. The principal other ingredient is pasteurized, cultured skim milk. In 1959 margarine used an estimated 240 million pounds of dry skim milk or its equivalent in fluid milk. Salt comprises about 2½ percent of the finished product.

All margarine is fortified to provide a minimum of 15,000 U.S.P. units of vitamin A. Some margarines add vitamin D also.

Great Challenge to the U.N.—Africa

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Monday, August 22, 1960

Mr. HUMPHREY. Mr. President, I commend to the serious study of my colleagues and to our policy planners in the State Department an article by Representative CHESTER BOWLES in the August 21 edition of the New York Times magazine, called "Great Challenge to the U.N.—Africa."

Congressman BOWLES is concerned that the continent of Africa is going to become subject to the most disruptive pressures of the cold war. Its galloping problems are grave enough without compounding the seriousness of them by bringing the cold war infighting to Africa.

Therefore, Mr. BOWLES, with his usual clarity of insight, proposes a program that would keep Africa out of the cold war by having the United Nations administer the help that the new nations need. His plan is imaginative; it is highly necessary; and, most important, it is workable. Further, it is not a negative, stopgap program, but rather a positive one of action.

This is a most judicious and statesmanlike article and I ask unanimous consent that it be printed in the Appendix to the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

GREAT CHALLENGE TO THE U.N.—AFRICA—MR. BOWLES OFFERS A PROGRAM THAT, HE SAYS, WOULD KEEP THAT EXPLOSIVE CONTINENT OUT OF THE COLD WAR BY HAVING THE U.N. ADMINISTER THE HELP ITS NEW NATIONS NEED

(By CHESTER BOWLES)

The recent explosion in the Congo, like a flare in a darkened sky, shows up the extent and depth of Africa's problems and the pressing need for bold American initiative in establishing a new relationship with that continent.

Africa's vast potential would be of enormous importance to the world even if the contest between freedom and communism did not exist. But if Africa, with all its tribal turmoil, nationalistic fervor and political confusion, is allowed to drift into the vortex of the cold war, the world is in for a time of troubles, the dimensions of which are appalling.

The land area of Africa is greater than that of China, the United States and India together. Although Africa's resources are only partially explored, they probably rival those of both the Soviet Union and China combined. With a highly favorable ratio of population to land and mineral resources, the long-range outlook for African economic development is auspicious indeed. The Communist nations, keenly aware of Africa's promise, have already been moving, as in Guinea, Sudan, and the Congo, to fill the vacuum left by the forces of European colonialism, which are now in precipitate retreat. Meanwhile, American foreign policy is caught uncertainly between fear of offending our European allies and a belated but growing awareness of the powerful economic and political tides which are sweeping Africa.

The difficulties which have faced our allies have, of course been enormous, as they adjusted to changing relationships with their former colonies. There are obvious exceptions but in many instances they have acted responsibly and ahead of events. The British followed their dignified withdrawal from India, Pakistan, Burma and Ceylon with an equally dignified transfer of power in Ghana and, soon, in Nigeria, Tanganyika and Uganda. General de Gaulle's imaginative offer of freedom to the to the French colonies in West and Central Africa was a farsighted act of a great European statesman. Therefore, no blanket indictment is justified.

But the truth of the matter is that events in Africa have taken our Government by surprise. As late as 1955, our missions south of the Sahara were still living largely in a colonial dream world. Of the four American consuls general whom I met there in the winter of that year, only one had ever had a black African to dinner. Our African service itself was very nearly nonexistent. Even those few officials assigned to Africa, with some notable exceptions, appeared oblivious to the clearly foreseeable series of explosions that lay ahead.

Thus, when the French suddenly left Guinea in 1958, we could think of nothing more affirmative to do than to await developments. The developments included a rapid influx of Soviet, East German, Czechoslovak, and Hungarian technicians and capital. In all fairness, I must add that our policymakers, however belatedly, are now making rapid progress in creating and training a new and promising African service.

Yet without clear, courageous policy direction, acutely sensitive to the special requirements and hard realities of the emerging new Africa, our ablest representatives will fail.

What then should be the basic ingredients of a fresh and affirmative American

approach to Africa? The first essential is that we know precisely what we seek.

We have no desire or need to control Africa, even if we could. Our national economic and political interests, as well as the long liberal traditions of our democratic society, all point in the direction of a constructive partnership with free, independent, politically stable, prosperous new African nations. Such a partnership would assure open trade and communications with Africa and the friendship and respect of the African people in promoting our common objectives of world stability, prosperity and peace.

What about Soviet objectives in Africa? The leaders in the Kremlin have made it abundantly clear that their end goal is not cooperation but domination. Behind all the blandishments, their objective in Africa as elsewhere is total economic and political control, achieved by whatever techniques of subversion, nuclear brinkmanship or military adventure may appear most effective at the moment.

Now if this is a realistic comparison of American and Soviet objectives, the deep-seated potential strength of our position in Africa comes into clear focus. Our position there can be made strong because what we want for Africa is more or less precisely what the Africans want for themselves. The Soviet position, on the other hand, is inherently weak because Soviet objectives directly oppose the dream of the newly free African peoples for national independence and the opportunity to make their own political and economic choices.

Although the advantage that these common objectives give us is very great, it must be grasped with sensitivity and courage, or the opportunity for creative action will be lost forever. To meet the requirements of the emerging new Africa, it will not be enough simply to stretch policies and procedures that have been proving increasingly inadequate elsewhere.

For instance, both American and African interests will be best served by keeping Africa as free as possible from the tensions of the cold war. Although this will be a formidable task, there are unique circumstances that provide a measure of solid hope that it may be accomplished.

The key lies in the capacity of the United Nations to take the lead in filling the economic and political vacuum in Africa and in the exceptional readiness of most Africans to accept the United Nations in such a role.

Thus the starting point for an affirmative new American policy in Africa should be a dramatically expanded concept of the United Nations' contribution—a contribution that would include not only internal and external security, but also economic progress and orderly political transition. This fresh approach could be dramatized effectively by the introduction of an American-sponsored resolution at the fall session of the General Assembly proposing a charter of conduct for all non-African powers in Africa.

Such a charter should be far more than a negative statement of what the great powers agree not to do in Africa. It would propose that all members of the United Nations agree to a broad-scale course of constructive economic and political action that will assure the independence of the new African nations, encourage their orderly political and economic development, and relieve them in large measure of the pulling and hauling of the cold war.

A commitment of this kind would enable the more developed nations to help meet Africa's vast and varied needs through the neutral machinery of the United Nations, rather than through the dangerously volatile competition of the power blocs, which has kept the world on the brink of war in the Middle East and in southeast Asia.

Let us examine more precisely what some of those commitments might be.

(1) A pledge by all nations to refrain from agitating propaganda within Africa and to end all efforts at direct or indirect subversion. The United Nations could be authorized to investigate all charges of violation and to report to the General Assembly.

(2) A similar agreement not to feed the arms race in Africa. In present circumstances the actual military needs of the new African nations are modest. It is to our advantage and that of the Africans to keep them so. Such a pledge might build on the foundation of Prime Minister Macmillan's presummit proposal for a NATO-Soviet agreement not to ship additional arms to Africa except those minimal amounts clearly necessary for internal security.

(3) An agreement by the great powers to channel the bulk of all economic, technical, and educational assistance to Africa through the United Nations. The essential machinery already exists in the U.N. specialized agencies, the Technical Assistance Administration, the Special Fund, the World Bank, and the new International Development Association. What is needed now is the will to substitute this international machinery to the maximum possible extent for the well-worn path of bilateral aid, which inevitably introduces the competition of the cold war.

The World Bank under Eugene Black and the U.N. Special Fund under Paul Hoffman have a particularly important role to play in Africa in planning national and regional development projects and in raising the necessary funds from public and private sources. Transportation and communications are largely undeveloped in Africa. Resources are plentiful, but precise knowledge is limited and access to them is often poor. Most of the conditions for rational and fruitful economic development are lacking.

The proposed charter would specify that the necessary leadership and coordination should largely be provided by international agencies which, because they have no political axes to grind, would have the confidence of the African governments.

(4) An imaginative and comprehensive effort through a newly created United Nations civil service to meet Africa's overriding need for experienced administrators, technicians, engineers, teachers, and professional men of all sorts—outside the context of the cold war. Although lack of able personnel is common to all underdeveloped nations it is acute beyond all degree in Africa, where such positions have long been filled, almost exclusively, by Europeans of the mother countries.

Precise figures do not exist, but it has been estimated that in 1958 some 30,000 European civil servants occupied administrative and technical positions in the various African governments, colonial and otherwise. Many of these civil servants have already left Africa and others are preparing to leave. Although most of those who may be induced to remain are uniquely qualified through their familiarity with the technical aspects of African problems, they will continue to work under the disadvantage of their former colonial associations.

Yet, for a generation or more, non-African civil servants, working under African policymakers, will be essential to the rapid economic and political development of the African nations. The essential question is, where will those non-Africans be recruited? To whom will they owe their first loyalties? Will they help bring the cold war to Africa? Or will they serve the cause of international cooperation and understanding?

In 1958 the United Nations developed a small program called Operational and Executive Personnel (OPEX) to help supply administrative, technical and operating personnel to underdeveloped countries. On the request of an underdeveloped nation, OPEX attempts to find a person with the necessary qualifications who is politically acceptable to the host country. Once the new employee has been agreed upon, OPEX makes up the difference between the salary and benefits which he would receive in his home country and the salary and benefits normally provided by the underdeveloped country.

This machinery provides the ideal answer to the administrative shortage now existing in much of Africa. The proposed United Nations charter for Africa should call for its immediate and massive expansion. The U.N. civil service could provide an exciting new future for thousands of men and women of all nationalities qualified in industrial development, tax collection, clerical and office management, school administration and teaching, agriculture, village development and police administration. It could bring to Africa the skilled administrators who are urgently needed, free both of political involvement in the new African nations and of direct involvement in the cold war.

(5) The establishment of a permanent U.N. Police Force for use in Africa and elsewhere along the lines of that at present being shaped in the Congo. Such a force now represents the major hope of the new Congolese nation for internal security and national unity. Similar tensions are certain to develop in other areas not only as an aftermath of the withdrawal of European control, but also as conflicts develop among the new African nations themselves.

In West Africa, for instance, colonial access to the sea and a delicate balancing between great powers were the determining factors in establishing borders. This resulted in strips of territory such as Togoland and Dahomey, and enclaves such as Gambia, in which tribal, ethnic and language groups were abruptly severed by diplomatic agreements in faraway capitals.

A map of existing African loyalties superimposed on a map of national boundaries, therefore, produces a crazy quilt of overlapping and intersecting lines. This situation has already led to considerable friction as various federations have been proposed, announced and dissolved.

It is not for the United Nations to decide the outcome of these matters—either to insure the status quo or to promote changes, however wise they may appear to be. This is a matter solely for the Africans themselves. However, it is a proper and essential objective of the United Nations to prevent such situations from exploding into violence and particularly to prevent the great powers from intervening in behalf of one side or the other.

The existence of an adequate U.N. Police Force, recruited largely by the African nations themselves, could do much to reduce the temptation for direct unilateral military intervention from outside.

(6) The proposed African charter might also provide for the setting up of a special African court of justice, perhaps associated with the World Court, and specifically empowered to settle disputes between African nations and between African states and outside nations. Such a court, with its members drawn largely but not exclusively from the African nations, would provide an additional barrier to outside intervention—provided the African powers could be induced to accept its jurisdiction without too many qualifications.

I do not suggest that the United Nations can successfully shoulder all the problems of the turbulent new Africa. However, I believe it can provide by all odds the most effective machinery through which to approach these problems while isolating them from the explosive antagonisms of the cold war.

The sense of vigorous purpose that a bold new leadership role in Africa could bring to

the United Nations could at the same time greatly increase the U.N.'s own prestige and effectiveness in speeding orderly development and in settling conflicts in other parts of the world.

Now let us frankly face the question of costs and alternatives.

The charter I have proposed calls for an unprecedented expansion of United Nations powers and responsibilities in Africa. The annual cost would amount to several hundred million dollars annually, much of which would be paid by the United States. The alternative, however, is not isolationist, inexpensive inaction. The alternative is a vast expansion of the cold war in Africa, in which American dollars will be increasingly matched against Russian rubles, American engineers against Russian engineers, and, eventually, American-made tanks against Soviet tanks.

Unless we are prepared to sit idly by while much of the world's richest and most promising continent becomes a bloody political and economic vacuum that ultimately will be filled by the Communists, this means that a major investment of American dollars and energies will be required in any event. The only practical question, therefore, is how can our dollars and our energies most effectively be brought to bear?

How would the Soviet Union react to the comprehensive United Nations charter for Africa which I have proposed? The Kremlin's dilemma in considering this question would be considerable.

The prestige of the United Nations in Africa is very great. By 1962 nearly one-third of the seats in the General Assembly will be occupied by Africans. If the Kremlin accepted our challenge to deal with Africa largely through the U.N., it would greatly limit, if not actually shackle, its program of subversion and infiltration there. If it rejected the proposal, or hedged its acceptance with political counterproposals, its true imperialistic objectives in Africa would become clear even to the most wishful thinkers in Léopoldville, Addis Ababa, Conakry and elsewhere.

In that case, much of the non-Communist world might still agree to proceed with most, if not all, of the proposed charter commitments I have suggested, including the U.N. police force, emphasis on U.N. multilateral development planning and aid the U.N. civil service and the special African court of justice.

If the Soviet Union still chose actively to oppose even these limited United Nations efforts, it would come into direct conflict not simply with America but with most of the non-Communist world. In those limited areas in Africa where the Kremlin was still able to operate unilaterally, it would be struggling—under the most adverse conditions—against the powerful flood tide of African nationalism which, with strong Asian and Latin American support, would be vigorously represented in the General Assembly of the U.N.

This brings me to the final decisive question: Is our own Government prepared to abandon our present inadequate and sterile approach to Africa and embark on a bold new effort in positive international cooperation there? Is it ready to regain the initiative in world affairs that we held in the days of the Marshal plan, to shake off our day-by-day obsession with Mr. Khrushchev's oratory and maneuvers, and to challenge the world through the U.N. General Assembly to a new cooperative beginning in the great African Continent?

If we timidly turn our back on this opportunity, only one thing is certain: Africa will rapidly become an ominous new battleground of the cold war, with explosively uncertain results. Let us hope, therefore, that we act positively, wisely, boldly, and soon.

More Panama Intrigue

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1960

Mr. FLOOD. Mr. Speaker, in an address to the House on June 23, 1960, I revealed the determination of subordinate elements in the Department of State to engage in the treacherous act of raising the Panama flag over the Canal Zone in disregard of specific provisions of not only an act of this Congress, but as well the intent of House concurrent resolution 459 passed by the House of Representatives by the overwhelming vote of 381 to 12 and our treaty rights. So serious did this matter appear that on June 30, I wrote in protest to the Secretary of State Herter giving notice that should a formal display of the Panama flag over the Canal Zone be made with the knowledge of his department that members of the House, who are clothed with Constitution in this regard, will press for his impeachment.

Were my fears exaggerated? Far from it. Information subsequently published in the New York Times of July 10, 1960, is to the effect that policy papers for changing the concept of the U.S. status in the Canal Zone are now in the embryonic stage, with the Departments of State and Defense at loggerheads over what should be done.

The stand of the Department of Defense is reported as being unequivocal in it determination for retention by the United States of exclusive sovereignty and control over the Canal Zone and Panama Canal. With this view, the House of Representatives, as previously stated, has already voiced its approval.

The President, on July 9, announced a nine-point program toward Panama, which has been described as "pilot plan" for wider inter-American aid application.

Commenting on this plan, Dr. Jorge Illueca, Panamanian Ambassador to the United Nations, on July 11, emphasized that the Panama pilot plan has as its basis the "recognition of Panama's sovereignty over the Canal Zone" with the "flying of the Panamanian flag in the Canal Zone as a symbol of such sovereignty."

That, Mr. Speaker, from the words of a responsible Panamanian, reflects the objectives of radical Isthmian politicians and their communistic mentors. As I have repeatedly tried to stress, the formal display of the Panama flag over the Canal Zone is not a mere gesture of good will, but an action of the gravest significance, far better understood by Panamanian radicals than by officials of our Department of State.

Who is Dr. Jorge Illueca who speaks so strongly? I have done a little checking and made some interesting discoveries about his record.

Many will recall the negotiations, following the end of World War II between the Republic of Panama and the United States, for a Defense Base Treaty, which was signed on December 10, 1947. Despite the efforts of thoughtful Panamanians, opposition to approval of this treaty in Panama mounted.

Twelve days later, on December 22, the National Assembly of Panama, surrounded by a mob of some 10,000 demonstrators and scenes of indescribable tumult, accompanied by threats of personal violence to the members, unanimously rejected the treaty. The result was that the United States promptly evacuated all its military bases in the Republic, although they were established and maintained for the defense of Panama as well as that of the Canal.

Who were the leaders of that anti-American mob? One of them was Jorge Illueca of a certain anti-U.S. youth movement, El Frento Patriotico, who furthered his law studies at a college in the United States. Now he sits as the Ambassador of Panama in the United Nations, issuing public statements on matters of United States-Panama relations.

In these general connections, the vital fact—which is the crux of the entire situation—is that exclusive sovereignty was granted to the United States by treaty to provide and guarantee political stability in the Canal Zone. Without such provision and guarantee the United States would not and could not have undertaken the construction of the canal and its maintenance, operation, sanitation, and protection. A further vital fact is—of which the Department is so naive as to ignore—is continued and insistent declaration of Panama that the official display of the flag in the Canal Zone is but the first step toward Panamanian nationalization of the Canal. Small wonder it is that our Department of Defense is in strong opposition to the Department of State on the all-important sovereignty issue, for which flying the Panamanian flag over the Canal Zone would constitute not only recognition of Panama's claim of sovereignty over the zone, but as well the destruction of U.S. sovereignty with chaos as the inevitable result.

In order that the Congress and the people of the United States may have no false illusions of the ultimate intent of Isthmian agitators and their agents in our country, I quote the following news dispatches as part of these remarks:

[From the New York Times, July 10, 1960]

UNITED STATES WEIGHS PLAN TO HELP PANAMA AND GUARD CANAL—LONG-TERM POLICY REGARDED AS CAPABLE OF SPARKING ECONOMIC REVOLUTION

(By Jack Raymond)

WASHINGTON, July 9.—The United States is preparing, as part of a far-reaching Latin American aid plan, a new long-range policy toward Panama. One official said it could set the stage for a major social and economic revolution in that country.

The new Panama plan is being developed to deal with the arrangement by which the United States controls the canal. But in its economic aspects it may serve as a pilot project in the high priority program now being fashioned by the administration to counter Communist and other anti-U.S. influences in Latin America.

Secretary of State Christian A. Herter has been called to confer with President

Eisenhower on the Latin American plan, which was announced yesterday at Newport.

The President has taken a direct hand in the Panama policy consultations. He is said to have expressed the hope that he can announce, before he leaves office, concrete new measures affecting Panama as a start on the new program for Latin America in general.

The Panama policy is being devised to assure the United States continued control of the Panama Canal, but without the skirmishes over problems of Panamanian sovereignty.

REMEDY A PREVENTIVE ONE

As in the broader objective for all of Latin America, the President and his advisers want to forestall in Panama a Castro-type of revolution—or some other excesses because of the growing demands of the Panamanian people, not only upon the United States, but also upon their own ruling political parties.

One of the major proposals under serious consideration would call for a civilian rather than a military Governor of the Canal Zone, which, according to the original treaty with Panama in 1903, the United States rules as "if it were sovereign."

Approval is expected soon for a Panamanian request for $15 million in loans to build roads that would open the jungles to agriculture. The International Bank for Reconstruction and Development is to provide $11 million and the Development Loan Fund $4 million. Loans are under consideration also for hydroelectric projects.

Other proposals provide for extensive financial support for the Panamanian Government, to assist in broadening the economic base so that the population of 1 million may live off something more than the operations of the canal.

It is considered ludicrous, for example, that in a country of lush foliage, where virtually anything can grow, fresh tomatoes are being imported from Costa Rica by air freight. Most experts, Panamanian and American, believe that agriculture has been neglected in Panama.

Financing plans are being studied here also that would help the Panamanians develop more industries.

Still other proposals would encourage a broadening of the political base of the ruling parties in the Republic of Panama. In this connection there is considerable optimism in Washington over the prospects of a move in that direction by President-elect Roberto F. Chiari, who is scheduled to take office in October.

The suggestion that a civilian Governor be named to run the Canal Zone and the Panama Canal Company, which operates the canal, fits in with the view at the State Department that the time has come to modify the military accent of the U.S. presence in Panama.

The Governor, who is appointed by the President, has always been a major general of the Army Corps of Engineers. This month Maj. Gen. William A. Garter, division engineer of the lower Mississippi Valley division of the Corps of Engineers, succeeded Maj. Gen. William E. Potter.

In addition, the headquarters of the Caribbean Command is in the zone. There are 5,500 military persons stationed in the zone, in addition to about 36,000 civilians. Military exercises are held there regularly.

However, the policy papers for changing the concept of U.S. presence in the Canal Zone are said to be in an embryonic stage, chiefly because of a dispute between the State Department and the Pentagon over what should be done.

The matter has come before the National Security Council, the President's highest advisory group, several times since last fall. The Panamanians had rioted, demanding that the Panamanian flag be flown in the Canal Zone.

The State Department, which long had urged changes that military authorities at the Pentagon have assailed as soft and appeasing presented a 117-page policy statement on Panama to the National Security Council.

The language irritated many officials of the Army, particularly because, in addition to attacking the Pentagon demands for firmness in Panama, the statement included aspersions about the "military mind" of the advocates of firmness.

The National Security Council asked the State Department to draft a substitute, shorter paper. The second 50-page document on Panama appeared to the Pentagon officials to be equally lacking in understanding their position.

Briefly, the military officials believe that the United States must be unequivocal in its determination to retain sovereignty and control over the canal and the Canal Zone. These officials fear that any more concessions, in view of the mounting demands of the Panamanians, would merely encourage more claims and perhaps nurture a demand for Panamanian control of the canal.

Authoritative sources have commented on the activity of a total of 200 "agents" in Panama who are said to represent the political interest of the United Arab Republic and Cuba as well as Communists. The diplomatic representatives of Cairo, which successfully seized the Suez Canal, are said to be unusually active in Panama.

Fears have been expressed that new riots might occur in Panama if some decision was not made before November 3 on the question whether the flag of the Republic might be flown in the U.S.-controlled zone. November 3 is Panamanian National Day.

Under the terms of the 1903 treaty, Panama granted to the United States "in perpetuity" the "use, occupation and control" of the zone areas "to the entire exclusion of the exercise by the Republic of Panama of any sovereign rights, power or authority."

The treaty has been amended twice, but the clauses affecting sovereignty have not been altered. In 1903, the United States agreed to pay Panama $10 million in gold and make annual payments of $250,000. The annual payments have now risen to $1,930,000.

State and Defense Department officials agree that it would be wrong merely to ride with the tide, relenting to increased Panamanian demands from time to time. But officials of the two Departments disagree sharply about what should be done.

[From the Panama American, July 11, 1960]

IKE'S NEW PLAN FOR LA TO START IN PANAMA; ILLUECA SEES RECOGNITION OF RP SOVEREIGNTY AS FIRST STEP

UNITED NATIONS, July 11—Panama's permanent delegate to the U.N., Dr. Jorge Illueca, today expressed satisfaction that the Eisenhower plan would start off with Panama, which, because of the Panama Canal, is the center of attention of all the peoples of the hemisphere.

The White House yesterday announced that the Eisenhower administration would work out a pilot plan of economic and social aid with Panama which would serve as a model for similar plans with other Latin American nations.

Illueca said this will be favorably received both in government and private circles in Panama, "because it not only has a spiritual significance but it also represents a constructive orientation which deserves to be encouraged. . . ."

"I attribute extraordinary importance to the fact that everything seems to indicate . . . that the pilot plan would have as its basis the recognition of Panama's sovereignty over the Canal Zone with its natural implications and it would mean, of course, the flying of the Panamanian flag in the Canal Zone as a symbol of national sovereignty, which would be in harmony with the patriotic sentiments of all Panamanians, prominent among whom are the young student generations that costitute the purest moral force in my country," Illueca declared.

[From the Panama Star and Herald, July 12, 1960]

PANAMANIAN ENVOY TO U.N. HAILS WASHINGTON'S PLAN OF AID HERE

NEW YORK, July 11.—Jorge Illueca, Panamanian Ambassador to the United Nations, said today the formulation of a pilot plan for Panama as part of a wider program of inter-American aid outlined by the Eisenhower administration will place relations between Panama and the United States on the highest level of cordiality and dignity.

Illueca noted that the Washington reports, carried in the New York Times on Sunday, referred specifically to Panamanian sovereignty over the Canal Zone, which, he added, "We trust will lead to the flying of the Panamanian flag over that strip of the national territory."

He said it was encouraging that the Panama project is regarded as a pilot plan, which means that it will have priority. Among the purposes of the plan, according to the Times report, is the creation of conditions for a major economic and social revolution in Panama aimed at the formation of a more balanced economic structure.

Illueca said the basic means for carrying out such a far-reaching program will be a democratic and representative government in which the majority of Panamanians will have real and increasing participation, in order to assure all of equality of opportunity in the nation's social and economic life.

"Latin American public opinion," the Panamanian envoy declared, "undoubtedly will be heartened by a new inter-American economic policy which will strive mainly to raising the standard of life of the hemisphere peoples.

"Panama is a test case in Latin America and the planning that is followed in its territory will show the degree of cooperation that can be attained in the inter-American sphere, without prejudice to the full implementation of the pilot plan as agreed to between the interested Governments."

Illueca said two measures should be considered whose immediate application "will contribute to renew the faith of the Panamanian people in inter-American solidarity."

One is the raising of the Panamanian flag in the Canal Zone, for what it represents for national honor.

The other is the elimination of the recent 10 percent increase in ocean freight rates for Panamanian ports, announced by the Atlantic and Gulf, Panama Canal Zone, Colon, and Panama City conference.

Panama, according to Illueca, could take the matter of the freight rates to the Inter-Governmental Maritime Consultative Organization, the Economic and Social Council of the United Nations or the Council of the Organization of American States.

"This," he added, "would be unnecessary if the U.S. Government, in a gesture of friendly cooperation, should refuse to approve this increase in ocean freight rates in Panama."

Illueca pointed out that the U.S. Government-owned Panama Line is a member of the conference and would benefit from the proposed increase. He said the implementation of the increase would only serve to increase the cost of living in Panama.

He added there is precedent already for action by the Inter-American Economic and Social Council against increases in shipping rates. Also, he pointed out ocean freight rates of U.S. shipping lines have to be filed for approval with the Federal Maritime Board.

Caribbean Crisis Widens

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Monday, August 22, 1960

Mr. THURMOND. Mr. President, Mr. Anthony Harrigan, associate editor of the News & Courier of Charleston, S.C., has written another excellent article in the publication U.S.A. on the subject of our Nation's difficulties in the Caribbean area. This article is entitled "Caribbean Crisis Widens" and was printed in the August 12, 1960 issue of U.S.A. I ask unanimous consent that it be printed in the Appendix to the RECORD so that it might receive the attention which it merits.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CARIBBEAN CRISIS WIDENS

(By Anthony Harrigan)

When finally the Castro dictatorship is overthrown by free Cubans supported by the United States and its Latin American partners, the danger of Communist victory in the Caribbean will not have disappeared. Indeed the island-studded vastness of that sea is the scene of unparalleled opportunities for subversion by Red regimes. Haiti, the Dominican Republic, Puerto Rico and the Caribbean Federation already are targets designated by the conflict-managers of the Kremlin. If efforts to turn the Pearl of the Antilles into a Soviet satellite are a failure, then the United States public can expect that Communist efforts will be shifted to other islands along the southern sea frontier of our country.

Already there are reports of new Communist activity in Haiti. Reds from Europe, including the Iron Curtain countries, are being allowed to enter the country. Last May, a student demonstration took place in Port-au-Prince where 400 participants denounced "Yankee imperialism." Puerto Rico has harbored for a long time nationalist extremists who hate Uncle Sam. Gov. Luis Munoz Marin, while professing strong friendship for the United States, has declined to allow that territory to be used as a base by free Cubans to smash Castro-type communism in neighboring Cuba. The conditions for future serious disagreements with the United States seem to be present in Puerto Rico.

A most ominous development is reported from the island of Jamaica. A group of back-to-Africa cultists calling themselves Rastafarians and adopting Mau Mau names and methods is active there. Two British soldiers were killed by Rastafarians last month. Jamaican police say that unidentified submarines, manned by white seamen, have been seen off the northern coast of the island. It is widely believed that arms, presumably from Communist sources, have been turned over to the cultists. In addition, Castro's agents have been sowing seeds of discord among the populace in Jamaica.

These conditions are not the only reason for concern among North Americans. The Trujillo regime seems headed for a major crisis. Even if none takes place in the next year or so, the aging of the ruler of the Dominican Republic poses a serious problem concerning the future of the island of Santo Domingo. This island, shared by Haiti and the Dominican Republic, has a long history of bloodshed and disorder. No one can predict what will happen there when Trujillo dies or steps down. If Communists were to seize power in the Dominican Republic, it would be relatively easy for them to keep it, because the people there are accustomed to authoritarian rule.

The financial mess in Haiti, accompanied by general chaos and lack of popular discipline and stability, makes that country an easy target for communism. The Caribbean Federation, with 3 million people in a long string of islands extending from Jamaica's Cayman Island in the northwest to Trinidad in the southeast off the coast of South America, is more a nation in name than in fact. Heavily populated, lacking industry and responsible leaders, it is in danger of complete fragmentation and then domination by a Communist minority. Red leaders in British Guiana are working on the leaders of the Caribbean Federation, seeking to draw them closer to communism.

MORE CASTROS?

Given these conditions, it is not unthinkable that a score of Castros may pop up in the Caribbean during the next decade. Every day that the tyrant in Havana is permitted to rule, the danger of bad example grows greater among demagogs in the region. And while the United States may legitimately use whatever methods are needed to free the Cuban people from Castro and his clique, our country must look beyond such action to creation of a comprehensive and constructive policy toward the entire Caribbean area.

Undoubtedly, the reaction of the left-"liberals" in both our parties will be to seek the solution of Caribbean problems through extension of massive government-to-government foreign aid. But this solution completely begs away the question of what must be done about the political climate of the Caribbean region.

The essential fact to bear in mind is this: The Caribbean is but another theater in which world war III is being fought. Moreover, it is a battleground for the struggle between capitalism and collectivism.

SEA OF THE AMERICAS

American free enterprise has an enormous stake in all the countries and islands of the Caribbean. It is a sea where U.S. merchantmen and tankers ply the trade routes. Across this sea, American companies bring cargoes of oil, iron, and bauxite; in the skies above the sea, U.S. airlines fly their dominant routes. The Caribbean is the sea of the Americas—South, Central, and Northern. It is a region rich in agricultural products consumed by the U.S. public. It is an area in which hundreds of enterprising North Americans started their businesses within the last decade. In the years ahead, if communism can be thwarted there, the Caribbean will be intimately connected with the daily lives of millions of southward-looking citizens. The Caribbean is a region where healthy and inspired North American leadership and influence can spread over a great arc, nourishing economies and cultures and fostering the politics of freedom.

But this North American projection into the Caribbean, carrying along great rewards for the peoples of the area, will be halted if any of the islands are turned into Communist protectorates. If that should happen, the United States would lose its most strategic area.

HOW TO WIN

What can be done to halt the spread of communism in the Caribbean? The first step, as the people of the United States are beginning to understand, is to stop Castro in Cuba. Beyond this, however, is the imperative need for coordinated anti-Communist action from Haiti to Trinidad.

Nothing is more important for successful action than a U.S. State Department staffed with personnel who are aggressively anti-Communist. There is an absolute necessity that the State Department Director of Caribbean Affairs be a man of demonstrated anti-Red zeal.

Our military men too can do much to check communism in the region. The Army's Caribbean Command, now based in the Panama Canal Zone, might be moved to a more centralized location in Puerto Rico. The Navy's Roosevelt Roads Base at Puerto Rico might be built up into a major installation as the operating base for a patrol force similar to the 6th Fleet in the Mediterranean. The need is not for heavy fleet units but for a strong and impressive "show the flag" force that would be a visible reminder to Caribbean peoples of the strength and good will of the United States, and of how military might can be a deterrent to Red aggression and shield against it. Permanent assignment to that fleet of a Marine Corps helicopter carrier with a battle team abroad would be especially useful.

Not enough is known in our country about the mercy missions conducted by the 6th Fleet in the Mediterranean and about its aid-to-orphans program and other humane and charitable activities.

Backing up the visible signs of might must be a broadcasting and printing operation that would smother Communist efforts to subvert any Caribbean nation. The task in the Caribbean is a battle for the minds and loyalties of men, as elsewhere in a world threatened by Red aggression.

PRIMARY EFFORT

Much as these actions by our Government are desirable, the likelihood of their being taken promptly is not great. Heavy demands upon troop and fleet units elsewhere are cited as justification for looking on the Caribbean as an area that can be defended on a brushfire basis. It might require several years of intensive education to persuade the American public to accord such recognition to the importance of the Caribbean as would enable the military to receive the kind of political and economic support required for the assignment of armed strength there. As for creation of superior broadcasting facilities and printing presses necessary for an effective educational operation, the abysmal failure of our Government Information Agency to develop an adequate truth program for the Cuban people indicates that little can be expected in a hurry for the Caribbean region as a whole.

The continuing inadequacy of our Government agencies in fighting communism in the Caribbean area suggests that the primary effort must be made by private persons. Indeed, such an effort might prove to be more effective than any drive in which the permanent bureaucracy in the State Department and Information Agency has a part. A private anti-Communist effort in the Caribbean with stringent security supervision could not be easily subverted by anti-anti-Communists in key positions. Moreover, the personnel of such a private effort could be composed of staunch believers in free enterprise, not mere lip-servants.

What appears to this writer as a necessary and reasonable start for such a private effort is the formation of a Caribbean committee by the U.S. enterprises doing business now in the region. Such a committee would provide a central clearinghouse for political information so that the various enterprises would know the entire scheme of Communist effort against American capitalism in the Caribbean. From such a committee could emerge a common free-enterprise strategy, joint action of one sort or another, and coordinated information programs designed to keep America strong in the Caribbean. While individual companies are engaged in competition and have opposing business goals in some respects, it is nevertheless true that all the principal American firms doing business in the Caribbean have

a stake in defeating communism and strengthening capitalism there.

Unless private businesses in the United States make such a joint effort, our country may suffer serious reverses in the Caribbean during the next few years—with confiscation of U.S. property and establishment of Red protectorates becoming the rule rather than the exception. Time and again, the State Department and other government agencies have shown they do too little and too late in the fight to halt communism—even when they understand the menace.

If the American system is to be saved, U.S. private enterprise must organize and work for its own salvation.

Harry D. Strunk

EXTENSION OF REMARKS
OF
HON. PHIL WEAVER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1960

Mr. WEAVER. Mr. Speaker, it was with great shock that I learned the news on Saturday, August 6, of the passing of my good friend and the great reclamation leader of Nebraska, Harry D. Strunk of McCook.

I have known Harry Strunk for many, many years. During all of this time he was an outstanding and vigorous fighter for the development of sound and practical reclamation projects and flood control in the Republican Valley. His efforts were ceaseless and his devotion to this cause complete.

I suppose it was the great Republican River flood of 1935 which claimed over 100 lives that caused Harry Strunk to strike out so vigorously and so unceasingly for better protection for his neighbors. That may have been the triggering reason; but he had always held a deep and abiding interest in flood control and in the development of sound, economic reclamation projects.

But in the middle thirties Harry Strunk started to wage a war which was still the center of his whole being the day he passed from us to his reward. Many of my colleagues who have sat on the Public Works and Appropriations Committees will remember him well. They will recall the long, lean, and weathered figure which appeared before their committees year after year. They will remember the intense face, the vigorous and eloquent speech. Most of all, though, they will remember the fire which burned throughout his being and the force that drove him, which he could so easily communicate to others.

Harry Strunk grew up in the newspaper business and for many years published the McCook Gazette at McCook, Nebr. He wielded a strong force in his community and his State, and became a potent force in the Nation in his efforts to broaden the concept of reclamation and to further the cause of flood control. Though primarily interested in the Republican River Valley, Harry Strunk worked diligently and hard for reclamation and flood control everywhere. No farmer in the reclamation States nor a single flood-threatened family anywhere in America had a better, truer friend. Their needs were his; their fears were likewise his.

He has created a living memorial to himself in the development of the Republican River Valley. But even at the close of his career he knew that his work was not done and he was still fighting.

Mr. Speaker, I cannot say how deeply I will miss the presence of this great man. I cannot express in words my own feelings completely. Let me say only that a great and fighting heart has stopped beating and that his absence will be felt.

Let My People Go

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1960

Mr. McCORMACK. Mr. Speaker, one of the outstanding leaders in the field of religion, and a great American, whose deep and understanding mind is appreciated by all persons, and by communicants and members of all creeds, and who is universally respected and admired, is the distinguished Chaplain of the U.S. Senate, Dr. Frederick Brown Harris. Dr. Harris is truly one of God's noblemen.

His nobility of character is an inspiration for all others to follow. His fine mind and his beautiful life are symbols of everything that is good, noble and uplifting.

In the July 24, 1960, issue of the Washington Star is an article entitled "Let My People Go" written by Dr. Harris, relating to the meaning, significance and importance of the Captive Nations Week resolution which was enacted by the Congress last year, under which the President each year issues a Captive Nation Week proclamation.

It was my pleasure to introduce this resolution in the House of Representatives following the passage of the same by the U.S. Senate.

Mr. Speaker, it is with pleasure that I include in my remarks the timely, appropriate and expressive article written by Dr. Harris, and to which I have hereinbefore referred:

SPIRES OF THE SPIRIT—LET MY PEOPLE GO
(By Dr. Frederick Brown Harris, Chaplain of the U.S. Senate)

The test of America's boasted freedom is how much her freemen care for those who have lost their liberty. To revel only in one's freedom, and to forget the fetters of others, is a base betrayal of our own heritage. Such forgetfulness is an ominous prophecy that those who do not fight for liberty everywhere will finally lose their own. There is absolutely no question more vital in this day of besieging problems than the attitude of the free nations toward the lands Soviet Russia has bound with the shackles of serfdom.

There is nothing on which the conspirators of the Kremlin are more adamant than their insistence that their imperialistic robberies be recognized and the status of satellite nations be accepted as final. That assumption is a definite part of their strategy to communize the whole earth. They have the effrontery to suggest to the free world that they agree to coexistence with those who are using every foul force to stamp out the fire of freedom in lands once free but now under the Soviet's savage sway.

The greatest imperialists of the age so discount the intelligence of the human race and so distort the facts that they now charge the very Republic which gave Cuba its freedom wtih plotting its enslavement. The system with millions of slaves in its iron hold threatens to "free" Cuba. Could the big lie be stretched to bigger proportions?

It is an appeal to the best instincts of America which sounds in the call of Congress and of the President for a specific week of remembering the captive nations whose anguished cry, "How long, O Lord, how long?" must never be drowned by the glorification of our own freedom. Nothing which he heard in our free land aroused the ire of the crude and cruel peasant who stands at the top of the Soviet pyramid of brute strength as much as any reference to Hungary, and the other captive nations.

No wonder, for it is the one heinous blot that gives the lie to all the fair promises of this vast principality of evil which has invented its own inverted and perverted dictionary in which the holy word "peace" means simply the victory of their tyranny.

Captive Nations Week serves notice on the Kremlin that no rocket rattling will ever make America forget her vow to keep alive the knowledge of atrocities perpetrated until the submerged nations are rescued from the invader and their soil no longer defiled by this abomination.

Our Congress has called the roll of those now under the Soviet yoke: Poland, Hungary, Lithuania, Ukraine, Czechloslovakia, Latvia, Estonia, Rumania, East Germany, Bulgaria, mainland China, Armenia, North Korea, Albania, Tibet, and others. To make sure that the idea of Captive Nations Week does not prove to be simply an ephemeral sop to the American conscience, Congress specifically declares that: "The President is further authorized and requested to issue a similar proclamation each year until such time as freedom and independence shall have been achieved for all the captive nations of the world." With wholehearted approval President Eisenhower sounds a trumpet which must never know retreat in his ringing words: "There can be no true peace which involves acceptance of the status quo in which we find injustice to many nations and repression of human beings on a gigantic scale."

And what does all this have to do with "spires"? Everything. It is under the church spires of America that there thunders the emancipating words of the Father God, to whom all souls belong and to whom all souls are dear, "Let my people go."

Every remembrance of the captive nations is a prayer. Their plight ought to be the subject of prayer in every temple of worship on the Sunday of the annual Captive Nations Week.

We can imagine no more moving scene in any church in America than the service at 11 a.m. on the dear Lord's blessed day of that week observed at St. Patrick's Catholic Church in the Capital of free America. Present were many whose ancestral roots are in the nations now enslaved. Many of them had fled from the present tyranny. From the high white pulpit of that lovely sanctuary, Bishop Philip M. Hannan proclaimed the unvarnished truth in sermon and in prayer. His was indeed the voice of

America, and the voice of the universal church as to the altar of the most high the shackled millions were lifted in the arms of Christian sympathy and intercession.

In such an hour of worship in any church we are reminded of the final judgment test of the Master who came preaching release for the captives as He asks the piercing question: "When I was in prison did you come unto Me?"

In the spirit of that moving service in St. Patrick's, let us pray—Our Father God, author of liberty, without ceasing we would remember the captive nations in their cruel bondage—proud peoples with their precious traditions stamped into the dust while alien Caesars exercise their ruthless sway over them. Above all the tumult and shouting of these volcanic days we hear Thy summons, even as in centuries past, "Let my people go." Give us to see that to acquiesce in the crucifixation of freedom anywhere is ultimately to nail our own liberty on the same cross, knowing that with what measure we mete, it shall be measured to us again. We ask it in the name of the Redeemer who came to proclaim liberty to the captives and deliverance to those who are bound. Amen.

VJ-Day Anniversary Recalls War Tolls

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, August 22, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a most interesting editorial by Steve Walsh which appeared in his column the Bell Ringer, in the August 14, 1960 issue of the Lynn (Mass.) Sunday Post:

VJ-DAY ANNIVERSARY RECALLS WAR TOLLS

(By Steve Walsh)

In the majority of cases, death is not an easy or a pleasant subject to write about. Personal tragedy usually stalks the scene and sorrow is its helpmate. One thinks of that on this very day, the 15th anniversary of the ending of World War II. No conflict was of greater magnitude and the horror and misery created by the wanton action of worldwide participants was incalculable. Yet, miraculously, some men escaped this doom.

TIME OF WAR

It is true that, directly or indirectly, the average home felt the hand of the mailed fist pounding at its portal. Bad news brought a pang to the heart which is indescribable. But for those who were permitted by fate to live out an orderly existence, good fortune stood firm and fast.

That is one reason why the reading, the presentation, or the publishing of a will is often quite interesting. Make sure that there were millions during the war who never had a chance to put their houses in goodly shape before the storm brought elimination. Legal documents simply become unknown quantities.

Thus the recent announcement of the contents of the will of John B. Kelly, prominent Philadelphian, brought national study, due to its nonconformity; its humor, provisions and philosophy. Mr. Kelly rose from rags to riches; from toil as a hod carrier to prestige as a multimillionaire.

This grand gentleman became a world-famed sculler and the father of Princess Grace of Monaco, ran for high office in his State and was known for his charity to the needy as well as a socialite with the elite. After taking care of his family, in worldly goods, he wrote this appendix:

"Kids will be called kids and not issue and it will not be cluttered up with parties of the first part, per stripes, perpetuities, quasi-judicial, to wit, and a lot of other terms that I am sure are only used to confuse those for whose benefits it was written. Some lawyers will question this when they read my will, however, I have my opinion of them ,so that makes us even." At the end of his will came this:

TIME OF LOVE

"As for me, just shed a respectful tear if you think I merit it, but I am sure that you are all intelligent enough not to weep all over the place. I have watched a few emotional acts at graves such as trying to jump in, fainting, etc., but the thoroughbred grieves from the heart. So just remember, when I shove off for greener pastures, or whatever it is on the other side of the curtain, that I do it unafraid, and if you must know, a little curious."

These were the last words of a man who had that "down-to-earth" manner of living for which some of us crave. Famous wills of a kind are classified as good literature and Mr. Kelly's offering ranks among the finest. He knew that shrouds have no pockets; to live-and-let-live is a sound philosophy; to abhor any contest by hostile measures is common sense.

Of course the theory of self-preservation in time of peril must never be discounted. Yet, the question remains: "Will wars ever end?" Seemingly the answer is "No!" Look to history and find out why. Great praise to the men who sedulously strive for peace and find that loser's odds are heavy.

TIME OF PEACE

Man became the first weaponmaking creature at the beginning of the ice age, probably a million years ago. With few intervals, he has been at his neighbor's throat ever since. In World War II, the record left behind (in the United States) shows the Army having a total casualty list of 948,418, including killed, wounded, injured, captured and missing. "Destroy the complete population of Baltimore, Md., and you will approach that figure. Battle deaths for all theaters totaled 229,238 with 173,441 known to have been killed outright in action. The Navy, Marine Corps, and Coast Guard suffered 148,775 casualties, the merchant marine, 6,066.

Optimists, to the contrary, this information is heartrending. It still leaves suffering and anquish on the face of America even after 15 years to which Lynn, the homeland of our hopes, paid a high percentage.

No one man could write all about that war. It was too vast; too terrible. At the end, high promise was given that never again would its ugly presence appear before us. Yet today we find that many World War II implements are out of date, and the new age has things like ballistic missiles, nuclear warheads and international systems to guide us from pending destruction.

Is it any wonder that we who pray snap the fife and still the drums and show war the monster as she is! In chapter III of Ecclesiastes one read: "A time to love and hate; a time for war, and a time for peace." Mr. Kelly, and his kind, leave us in a world where there is an uncertain state of affairs. We who ponder over his last message can recall what Bishop Bossuet said: "O death-We thank thee for the light thou will shed upon our ignorance!" Being one of them I, too, can say I am a little curious!

Recommended Changes in the Federal System of Unemployment Compensation

EXTENSION OF REMARKS
OF
HON. A. S. HERLONG, JR.
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES

Monday, August 22, 1960

Mr. HERLONG. Mr. Speaker, I am fortunate to have in my congressional district a number of retired experts in many fields, whose retirement does not prevent them from taking an active interest in the area in which they have had so much experience.

Among these experts is Mr. William Netschert of Daytona Beach, who was formerly the research supervisor and deputy chief of research and statistics for the New Jersey Division of Employment Security. From his experience with unemployment compensation he has developed the following seven-point recommendation for changes in this program:

STATEMENT TO CONGRESS

Recommendations for a program of standards needed in the Federal system of unemployment compensation, under the Social Security Act of 1935 and the Internal Revenue Code of 1954, beginning at section 3301:

1. In any State, the potential allowance for total benefits in a benefit year shall be predicated on base wages of individuals in the same ratio for all who qualify. (Discrimination on the basis of wages is indefensible. The U.S. Supreme Court has declared the Constitution "nullifies sophisticated as well as simple-minded modes of discrimination" (see *Lane* v. *Wilson* (307 U.S. 286, at page 275)); but the expense of appeal on this precedent is so out of proportion with the gain, if won, that only a taxpayer's suit by a consumer wealthy enough would serve the purpose of testing this notion.)

2. The potential benefit allowance of an individual shall be predicated on all taxable wages of the individual in his base period.

3. Base wages not taxed shall not be benefited. (Taxable wages are the only common denominator.)

4. Dependency benefits shall not be allowed out of funds accumulated under the provisions of sections 3301, et seq., of the Internal Revenue Code of 1954. (There is not now, nor should there be, any provision in titles III and IX of the original Social Security Act of 1935, for such payments: They are provided for in other titles of that act which are now administered by the Department of Health, Education, and Welfare, making provisions in unemployment compensation administration is duplication of effort. Furthermore, such payments, under what the late President Roosevelt called the "payroll contributions" under his social security program, constitute discrimination; and since when has an employer been held accountable for the size of a man's family.)

5. Employees of firms whose accounts in State funds are overdrawn, in the cumulative balance of benefit charges against contributions, shall be required to match their employers' contributions. (For seasonal workers, this would be the equivalent of a "sure-thing" bet on an 8 to 1 shot, and in some States to a 16 to 1 shot. So many firms and whole industries and even whole States

are so hopelessly overdrawn that continuance of this subsidy is unthinkable.)

6. In no case should the contribution rate of an overdrawn account be limited to 90 percent of the tax on employment in the Internal Revenue Code.

7. There should be provision in section 3303 of the Internal Revenue Code of 1954 for additional credit allowances for employers who voluntarily match compulsory savings of their employees in commercial banks or in special State funds invested in savings accounts, under supervision of their State unemployment compensation agency. Such accounts to be established in lieu of standard unemployment compensation coverage by voluntary election of individuals, or groups, or whole plants. The moneys deposited shall be classed as special savings accounts and shall accrue to each individual's estate accordingly. The balance on hand shall be maintained at a level equivalent to half a year's earnings or more and withdrawal for any week of unemployment shall not exceed 1 percent of the individual's annual wages. (This is the best answer to the inflationary threat of the present system; it would be an anti-inflationary influence in prosperous times. If such a system had been in effect in 1957–58, there would not have been any need for Mr. HERLONG's H.R. 12065, now Public Law 85–441. Moreover, if the same ingenuity, which went into the design of the original unemployment compensation system, were put into the design of a voluntary system of compulsory savings, it could be made to work.)

Of course, this program will take a lot of political courage. It has in it the potential of a political asset: the American public believes in fair play and it will support those who show confidence in the willingness of the people to recognize fair play when they see it, despite the protests of minorities with vested interest in the present discriminatory system. The term "trust fund" itself implies equity and confidence. Why not, therefore, apply the principle all the way.

Rockets and Religion

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1960

Mr. CANFIELD. Mr. Speaker, I became aware recently of an important speech given before the Paterson (N.J.) Rotary Club on May 26, 1960, by Dr. W. M. Mebane, vice president and secretary of Thiokol Chemical Corp., of Bristol, Pa.

Dr. Mebane, speaking on the subject of rockets and religion, received a standing ovation from the members at the conclusion of his address, which was given without benefit of script. Fortunately, the speech was tape recorded.

It is good to hear a scientist in considering the salvation of the world take such a forthright stand in the field of theology. Following is the text of Dr. Mebane's speech:

Fellow Rotarians and guests, I have somewhat a feeling of humility in addressing you so soon after my very pleasant previous visit, and particularly so in following the same line of thought as before. Usually when one has the opportunity for such a distinguished audience to be captive, there is a strong temptation to do some selling—to sell himself, his company, to entertain, or to stir up some emotional response for one of these ends.

I will try today, however, to limit myself to the job of making you think quite seriously and realistically. In order to appreciate the significance of the technological developments of the past 15 years, it will be necessary to review the things which have generated great social forces in the past. Some of these are geography, climate, transportation, communication, but those which interest us most today have been man's ethical religion and his weapons.

Since the day when the caveman first picked up a stone to bash the head of his enemy, the development of weapons has determined the history of the world. This began when the early man discovered that he could put the stone on the end of a stick and wreak greater havoc with it. As the efficiency of the weapon increased, there was a parallel development of cooperative armament, from the clan to the tribe and finally to the nation. This movement gained momentum with the discovery of metal working.

In the valley of the Tigris-Euphrates River, ancient civilization grew where people discovered the metallurgy of bronze. As hand weapons improved, organized states developed, but there was no radical change until King Phillip of Macedon invented the phalanx. Until this time armies had been groups of men who went out and fought man to man with whatever weapons they could carry. The phalanx was a method of organized attack and defense, and it enabled Phillip's son, Alexander, to conquer all of the armies and nations within his ability to travel.

The next great invention was a discovery by a group of tough minded young men in the city state on the banks of the Tiber. This was that, as most swords were a yard or more long, a sword half as long and twice as heavy could be most effective for a system of in-fighting. This new idea of weapons, coupled with iron will and discipline, enabled Rome to conquer the world and hold it for centuries. The Roman Empire was not conquered by military power, but it fell because of internal deterioration of those characteristics which had made Rome great.

After the fall of Rome the rise of feudalism was in a great part due to advances in metallurgy which enabled the man-at-arms or knight on horseback to dominate many men on foot. Throughout the Middle Ages the man on horseback was the master, and enabled the few to dominate the many.

It was not until the English yeoman developed the longbow which could drive a steel tipped shaft with the hitting power of a 30/30 rifle that the knight began to yield to a newer force. At the battle of Crecy the English yeomen destroyed in a few minutes the flower of the armored strength of France. It was on this same battlefield that a knight was found dead of a hole in his armor which was not made by an arrow. That was the first time that black gunpowder had killed a man in battle.

The invention of black powder had been accomplished many centuries, perhaps 3,000 years, before, in China, but it had not been used in warfare. The gun was rapidly developed after its introduction, and it began a new change in the affairs of men. Up until now a mighty man of valor was a big and strong man, but now a small gun was known as the great equalizer, which made any man the equal of another in combat. It is not surprising that England was the modern cradle of democracy, because it was the English who developed the weapons by which the common man became the equal of his masters.

The effect of the family of weapons classed as firearms underwent no great change until during World War I when the English developed the military tank. This was a weapon against which the common infantry soldier was helpless, but this war was ended before the tank was fully developed. It remained for the German Panzer Divisions of World War II to demonstrate how completely warfare was changed. The panzer divisions enabled Germany to crush the not inconsiderable military power of France within a few weeks. General Rommel and others used the invulnerability and speed of the tanks to apply the tactics of Nathan Bedford Forrest to destroy all military opposition. This force was met by a similar force in the allied side, but the call went out to the research people and the military organizations to invent a weapon which would stop this mechanical monster.

In France back about 1915 was an event of significance. A German aviator and a French aviator passed each other in the air while on reconnaissance flight. It had been the custom of these aviators to wave at each other, but on this day one man raised a shotgun and fired at the other. Within a few months men had devised automatic guns which fired between propellor blades, and the business of aerial warfare was on its way.

When World War II came along, the airplane had advanced to the point where the fighter plane guns of World War I didn't bother much more than rain. Someone had to do something about it, so the call went out to the researchers to invent a weapon which would enable fighters and anti-aircraft crews to knock down those giant bombers.

In sea warfare a similar problem was developing. Cannon had grown larger, ships had to be larger to carry the larger cannon. They also had to be larger to carry the heavier armor plate, and the cycle of the race between armor and armament was reaching an absurd state. The battleship of 1940 weighed 60,000 to 80,000 tons and required crews of 3,000 or more men. The bombing planes were the deadliest enemies of the big ships, even though the 16-inch naval rifle was perhaps the most destructive weapon yet developed by man. Again the call went to the researchers to do something about weapons.

In each of these cases the problem was the weight of the gun and the force of its recoil. The airplanes, the foot soldier, and the ships needed a weapon with greater hitting power but with less weight and recoil. A 75 millimeter cannon was actually mounted in an airplane and fired in flight during the war, but the recoil almost stopped the thing in the air. It was definitely not a practical thing to do.

The only weapon known which had striking ability with little weight and no recoil was the military rocket. The military rocket was developed by an English ordnance man named Congreve around 1800. The rocket was first developed by the Chinese perhaps 5,000 years ago, but not for military purposes.

Napoleon gathered together a group of brilliant scientists to improve the artillery of his armies. His major interest in this was that the Russians had the finest field artillery in the world and he expected to conquer Russia. Many improvements were made in gunnery. Control of gunpowder quality, shaping of powder grains, rifled gun barrels, means of aiming, calculating trajectory, and dependability were developed. The result was that the gunner could hit what he was aiming at, whereas the rocketeer could not. The rocket was so erratic that it was abandoned by the armies of Europe in favor of the cannon before the end of the Napoleonic era.

And so the rocket came back into favor during World War II. Its freedom from recoil, relatively light weight as compared to cannon, and potentially unlimited range made it attractive in spite of its inaccuracy. Work was begun to solve the problem of accuracy and control.

The first reapplication of the military rocket was the bazooka, which enabled the common soldier to fire a rocket from a pipe carried on his shoulder which could definitely destroy the most powerful armored vehicle. They were so poor in accuracy it was difficult to score a hit much beyond 100 yards, but this was definitely a beginning.

Toward the end of the war our researchers had developed aircraft rockets, and so had the Germans. We are all familiar with the tragedy of Schweinfurt when we sent a large force of B-17's against this target and about half of them were knocked down by rockets.

The most dramatic field demonstration of rocket power was put on by the Russians. When the German army approached Leningrad they came within about 20 miles of it and dug in to organize for final assault and capture of the city. During the night the Russians brought up rocket launchers and fired artillery-type rockets with antipersonnel warheads into the trenches. It was reported that an entire army corp was wiped out overnight, and the Germans never did take Leningrad. It was not surprising that the Russians had so well developed artillery rockets. As early as 1917 an engineer named Riabouchinsky was making and testing such rockets near the old St. Petersburg, so it is highly possible that the Russians had about a 20-year lead on us in the study of basic rocket science.

The main problem in the use of rockets was guidance and control. Dr. Goddard in this country had demonstrated how pumps could be used to control the flow of fuel to the combustion chamber of the liquid rocket, and the Germans used his methods to build the V-2 rocket to which they applied a new guidance principle. They used the principles of the gyro stabilizer and the Schuler pendulum to give a space frame of reference for guidance.

After the war most countries went to work on rockets. The roeket is a simple device in principle. That which makes a shotgun kick is the same thing that makes a rocket go. With the shotgun the velocity of the shot, wadding, and gases multiplied by their weight, gives a figure which is exactly equal to the weight of the shotgun multiplied by the velocity with which is recoils. If one stands on ice skates and fires a shotgun, the recoil will propel one in the direction opposite from that of the shot. It makes no difference whether the ejected projectile is solid, liquid, or gas; it is the mass times the velocity that causes force. The hot gases used in rocketry have weight, and it is the expansion of the hot gases in the nozzle which gives the high velocity. The rocket is definitely a heat engine where heat energy in the gas is converted to kinetic energy of the jet by isentropic expansion, and the rocket obeys all the rules of thermochemistry and thermodynamics.

The technical problems in making large, long-range rockets are numerous. We had to learn the metallurgy of lightweight pressure vessels, and to pump large volumes of liquids in short periods of time. It is no small engineering feat to pump 50 or 60 tons of liquid from one tank to another within 60 seconds. The big liquid rocket has two tanks, one for oxidizer and one for fuel. A pump system transfers these under control to a combustion chamber which is fitted with a nozzle. The solid-type rocket has the oxidizer and the fuel intimately mixed and molded into a cake of designed shape and formed inside the rocket case. The basic principle is the same for both types.

Today the art of rocketry has grown to the point where both sides have some very effective guided missiles. For example, suppose we wish to destroy the city of Washington from here. We could take a relatively small rocket for the job. We would set it up somewhere around here and read into its control device instructions as to how it should take off, what direction is should travel for how many seconds, what changes in course it should follow, what corrections to make for earth's rotation, wind and weather conditions, and how high above the target it should explode.

If this rocket were to carry a thermonuclear warhead, I have no language to describe what would happen. I recently heard a comment by a man who saw the first hydrogen bomb experiment: "I wish fervently that it would be possible for all of the leaders of men to see one of these tests. It is so fantastically unreal that it defies language to describe." It would produce a fireball of many thousands of degrees of heat of about 25 miles diameter. Everything within this area is utterly and absolutely smashed by the brute mechanical force of the explosion and completely incinerated by the terrifically high temperature. And then of course there would be concentric areas of lesser damage but far too much for humans to survive, and the long lens-shaped area of radioactive fallout which would develop downwind.

If such a thing were used over New York City, 4 to 8 millions of people would cease to exist within the time of a finger snap; they probably would not know what happened. There are on both sides literally thousands of these devices in the warehouses of war. It is estimated that if half of these weapons were to be explosed within a few weeks, in a matter of a few more weeks not a cubic foot of air would be left on this earth which would not be certainly lethal. An all-out assault on this country could leave 40 to 60 million dead within a few days of the start.

There are other new weapons less advertised which are no less horrible. These are the radioactive, biological, and chemical devices. They are devices to immobilize or immolate whole populations at will without destroying property. Here again we are faced with the fact that both sides are no doubt well supplied with these weapons of war. It is said to have been demonstrated that it is practicable to render a population within a 500 square mile area completely helpless for sufficient time for an invading force to take over, after which the population may be reduced to slavery for the service of the conqueror.

It is not a figure of speech that the President and the leaders of other nations have used in citing man's capacity for self-destruction. It is as real as the fact that we are here in this room. The reality of the situation is explained by the actions of the nations as reported by recent news events. Man has not yet changed his nature and no matter how deadly serious the situation, we are likely to find world leaders trying to horse trade for any possible advantage from any decision.

I think possibly the explanation of the events in Paris (collapse of the summit conference) can be traced to some such human trait. How can men worship the idol of dialectic materialism and be expected to not play the game to the fullest possible advantage? When we deal with a materialist of this type, we cannot lead from weakness. We must lead from strength. The President explained that in his talk to the Nation far better than I could.

What is the salvation of mankind? Are we going to have a salvation? Are we going to destroy ourselves or are we to continue to sit on this razor's edge of in-between, armed to the teeth, and expecting devastation?

It has been 5,000 years since men first organized on the Yangtze, the Tigris-Euphrates, and the Nile Rivers into some sort of cooperative system of living together. It has taken all this time to evolve a system of law and ethics whereby we can live at peace with each other in our cities, our counties, and our States.

We have not made really important and serious progress in the development of a practicable and working international law. It is only now that our new weapons are forcing us to consider the reality of international law and order. The new weapon system is forcing men to make the greatest decision that mankind has ever had to make. We must evolve international law and justice or we will not survive. If we are to expect anything good, any improvement, we must change our basic philosophy of conduct as men, as states, as nations. In our side of the world much has depended upon the ethical standards which Western civilization has evolved. We lived by faith in each other, and it is hard for us to realize that half of this world has adopted this infamous philosophy of dialectic materialism which is a gnawing cancer in the side of all ethical religion.

How strong are we to throw off this disease? I fear we are not strong enough with our present standard of spiritual values. I believe that man must turn once more to the only real source of strength he has ever had. Man has never been within himself adequate to live and survive without outside spiritual aid. Man has never been strong enough to survive on his own intrinsic value. This absurdity of dialectic materialism is a weak crutch to support the needs of men, particularly since it is trying to destroy the only real hope the human race has ever had. There are five or more great ethical religions around this world which have always offered strength, hope and courage to men, the will to live, the will to grow, faith in the reason for life.

I am afraid that since the beginning of the 20th century we have paid more and more lip loyalty to these religions and less and less attention to really serious thinking. We are becoming more and more materialists. When you drive through the cities and towns of this country you cannot escape the thought that we are organized only for the living. We have little concern for the past and we avoid thoughts of the future. We must ask ourselves the fundamental question: Is man a living soul? Is there anything to this spiritual side of living? Is it really important? Or is it just a set of rules for living to which we have attached an emotional tag in place of the organization and procedures of jurisprudence?

Is it just an invention of the human mind against the unknown future which we fear, a sort of "hell insurance"? Has man invented God because he is afraid to live without a superior being on whom he may lean? Was the writer correct who said: "If there were no God, man would find it necessary to create one?" Objective philosophy has attempted to analyze these things for us, to explain why men make graven images, and build systems of theology, and concludes that these things are the result of man's fear of the unknown and man's self-insufficiency. We must take an intelligent interest in these analyses; in fact they are the basis of the academic comparative theology, but they have no strength to support us in our time of crisis. We must believe.

If we do not believe, another generation of people, who may be permitted to populate this earth after we shall have destroyed ourselves, will believe and live much by the things of the spirit and not entirely by the things of the slide rule. We have lived so much by the things of technology, chemistry, physics, biology, and the skills which we have in these things, we have forgotten all else. We are so insulated by technology from

God's nature, that we have forgotten what it is like.

We are much surrounded by noises, radios, TV's, entertainments, theater, automobiles, airplanes, and such that we have no time to obey the advice of the ancient prophet of Israel who said, "Be still and know that I am God." By what laws can we live together? In our fear and weakness we may get down on our knees and pray for an answer, but the answer has already been given to us. The ancient writer said, "Oh man, what doth the Lord require of thee, but to do justly, love mercy, and walk humbly before thy God?" Then Jesus of Nazareth added something very great and very important to this: that if man is to survive, he must live with and respect his brother because he wants to do so and not because he is forced to do so. The choice is for us to make, we live with each other, respect each other as men, establish economic, social, and political justice throughout the world; or we continue a path of self-interest until we also become victims of the dialectic materialism of communism and go down in utter destruction.

Is this pessimism? No, it is using history which is a record of what man has done, to predict and plan for the promise of the future. We will follow a path of spiritual value, right thinking, right acting, under God, or we will perish.

National Conventions Highlight Importance of the House in National Picture

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1960

Mr. O'HARA of Illinois. Mr. Speaker, we are back again in this historic Chamber to complete the work of the 86th Congress, and we have returned with a strengthened sense of the importance in the national picture of the House of Representatives of the Congress of the United States. By unanimous consent, I am extending my remarks to include a radio address I made over station WIND in Chicago on the eve of the convening of the Republican National Convention and in which I stressed, among other significant matters, that the presidential nominees of both major parties were colleagues together in the 81st Congress and in the 80th Congress that preceded. I also mentioned the circumstances that the chairman of the resolutions committee at the Democratic National Convention and the keynoter at the Republican National Convention are both members of the Committee on Foreign Affairs in the 8t6h Congress. The radio broadcast follows:

I am speaking on the eve of the Republican National Convention with the Democratic National Convention just behind us, and I am thinking back only 12 years when first I came to the Congress, as the Representative from the Second Congressional District of Illinois. That was in 1949. There for the first time I had met JACK KENNEDY, now the nominee of his party for President of the United States, and DICK NIXON, the probable nominee of his party for the highest office in the world. I was a freshman Member, a first termer, and KENNEDY and NIXON were second termers, with only 2 years more of service in the House.

In this year of 1960, when we are facing perhaps the most serious fight for our survival in our history, one of these two young men who then were beginning only their second term in the House will be elected President of the United States to guide our ship of state and to carry the hopes of mankind in turbulent times with the world in the violent eruptions of dynamic changes. I am presuming of course that, as expected, Vice President NIXON will be the nominee of his party.

Also among my colleagues in the first Congress of which I was a Member were HENRY JACKSON, whom we all called by his nickname of "SCOOP," and THRUSTON MORTON. These are the relatively young men who now as chairmen of their respective parties will call the shots in the great campaign of this fall, a campaign destined for a high place in our national political history.

There were 435 of us in the House of Representatives of the Congress of the United States when we were sworn in the first week of January of 1949. The star of destiny was hanging over the heads of two in that group of 435 who were to battle for the Presidency in perhaps the most crucial period in our history. Also it was hanging over the heads of two others of that group who were to be the guiding managerial geniuses of the campaign of 1960.

When the 87th Congress convenes next January, I, if reelected, will look about the historic Chamber of the House, now with its 437 Members because of the admission to the Union of Hawaii and Alaska, and I will wonder over which of those 437 heads the star of a future destiny may be hanging.

The importance of the House of Representatives of the Congress of the United States in the making of Presidents is not to be overlooked by students of American politics. The House is very close to the people because its entire membership every 2 years must stand the test of the ballot box.

FROM MAYOR TO PRESIDENT

Grover Cleveland reached the White House from a start as mayor of the city of Buffalo in New York. That was the period when there was a large public interest in the conduct of the municipal chores. Cleveland caught the eye of the Nation and won the approval of the American people when as mayor of a city not as large as Chicago he effected economies, safeguards, and reforms in municipal government that long since have become fairly standard throughout the Nation. That seemed the road most likely to lead to the White House. Johnson and Baker of Cleveland, Pingree of Detroit, and Dunne of Chicago, at a later period, were the last of the era when crusading mayors were national news and national political idols.

Mayor Daley of Chicago has received more national and international news coverage of any chief executive of a city since that period because there has been an awakened interest in the tremendous and fascinating job of rebuilding great urban centers of population to meet modern conditions and an admiration of the herculean way Daley has gone about the job.

The fact, of course, is that nations cannot survive if their cities decay. Hence I would say that inevitably there will be a trend back to the days of Cleveland as regards the importance of the mayoralty in the national picture.

FROM STATEHOUSE TO WHITE HOUSE

The era of the Governors as the focus of popular national interest followed the era of the mayors. This was a natural development since many corrections of abuses manifested in municipalities, and reflected in the "Public be damned" attitude of traction and public utilities interests, required State legislation. Johnson of California, who ran for Vice President with Teddy Roosevelt and the Bull Moose, probably was the greatest of our Governors since he was the pioneer draftsman for much of the State legislation that put an effective check on prevailing evils of unbridled power.

Dunne of Illinois, with whom I served as Lieutenant Governor, must be placed high on the list of great American Governors if for no other reasons, and I think there are other reasons, than that his administration was responsible for the creation of a public utility commission that fixed the price of public utilities services on the basis of cost plus reasonable profit and also was responsible for the start of a program for good roads.

Today we have public utilities commissions in every State of the Union with the sole exception of Texas, I believe, good roads programs in all of the States. In general, the patterns in State government have been set, and now it is largely a matter of improvement and efficiency. The old days of crusading for new State instrumentalities are gone.

Today the gubernatorial office is largely administrative, an office requiring integrity, high administrative ability and a dedication to the public servce. It will continue to furnish a training school strictly on the administrative side for future Presidents, but I would think its glamour in the popular eye, a glamour that could lead to the White House, is on the decline.

There is a marked trend today toward the regional rather than the State approach. This is indicated by the increasing number of compacts among States in the same region to work jointly in common undertakings that Congress is asked to approve. A bill to approve a compact of the Great Lakes States has been help up for months in the House Committee on Foreign Affairs largely because there are three members of that committee from the Chicago area, Congresswoman CHURCH, Congressman MURPHY, and myself and, despite some unquestioned advantages in the compact, we wish more assurance than we have received to date that the other States in the compact would not gang up against Illinois in the Lake Michigan water diversion matter so vital to the people of Chicago.

But the point I wish to make is that in these compacts State sovereignty in limited areas and extent is being surrendered to regional sovereignty, and this is indicative of a trend. It all adds up, I think, to the diminishing attraction of the executive mansion for the young man who has set out to reach the White House. But, after all, I suppose destiny will continue to find her child wherever he may have wandered and guide him safely to his appointed spot.

COLLEAGUES IN 81ST CONGRESS

I was very fond of JACK KENNEDY. His simple democracy, his kindly consideration of the people in his office and around him appealed to me. I had heard of his heroism in the saga of the PT boat in the hostile waters of the Pacific. I knew, too, of the wealth of his family, and, perhaps more revealing, I had known his grandfather when "Honey Fitz" was mayor of Boston. Mayor Fitzgerald always will stand out in my memory as a man in public office who was all heart. JACK KENNEDY showed the same traits. Once I said to him, when he had put himself to much inconvenience to appear on a radio program, Quorum Call, I was preparing for my constituents in Chicago: "JACK, you come by this human charm naturally; you get it from your mother's father."

DICK NIXON was on the other side of the aisle, and in his freshman term had served as a member of the Un-American Activities Committee with the late Congressman Vail under the Thomas chairmanship. Once I clashed with him in debate on the floor of

the House. But when we did meet personally, as Members of the House frequently do during a session at dinners of the American Legion, Veterans of Foreign Wars, and similar occasions, the meetings were pleasant. Since he has been Vice President and circumstances have brought us together, there has been the pleasant nostalgia of a reunion of college alumni. After all, we were fellow graduates of the 81st Congress.

I would not have picked him out as likely to be a future nominee of his party for President. I suppose when William Jennings Bryan was a second termer in the 53d Congress—and seniority was much sterner then—none of his colleagues in the House would have picked him out. It would have been different, I think, in the case of McKinley because of his long seniority in the House and his reputation as an authority on the tariff, which then was the great political issue.

THRUSTON MORTON and "SCOOP" JACKSON, now the party leaders in the forthcoming battle for the Presidency, I knew much more intimately. "SCOOP," although only 37, was a fifth termer, having been elected to the 77th Congress at the early age of 29. MORTON was 40 and a second termer. He is of a wealthy Kentucky family and came to the Congress at 38.

Frank Roosevelt, namesake of his father, then a Member of the House and recently a campaigner for KENNEDY in the primary elections, and MORTON were members of a group of barbershop choristers that occasionally met in hours of relaxation during the 81st Congress, singing the classics of the yesterday under the direction of the old master, Congressman LOU RABAUT, and graciously recognizing the presence of one who enjoyed but could not sing by turning in my direction and singing "Irish Eyes."

I would expect both JACKSON and MORTON to conduct hard-hitting, hard-driving campaigns, but, after it all is over and the next President of the United States chosen by the people to lead the Nation in time of grave crisis, to shake hands, each with the feeling that the hand he clasped was as clean as his own.

FROM THE HOUSE TO WHITE HOUSE

I trust that I have not taken undue advantage of the invitation graciously extended me to appear on this program by talking of the Congress more in the terms of men than of measures. What I do wish to emphasize is the growing place in the overall national picture of the House of Representatives of the Congress of the United States and in connection with the two national conventions of this year to bring to the attention of my listeners some significant phases that otherwise might be overlooked.

In the House there are 31 members of the Committee on Foreign Affairs, 3 from the Chicago area. The present Secretary of State, Chris Herter, is a former member of that committee. It is to be noted that a Democratic member of that committee of 31, Congressman CHESTER BOWLES, was the chairman of the resolutions committee at the Democratic National Convention, and a Republican member of the committee, Congressman WALTER JUDD, will be the keynoter at the Republican National Convention. This is significant. It pinpoints the expanding importance of the House of Representatives in the making of policies and Presidents and one of the principle reasons therefore, the position of the United States as a world power. No longer are we a provincial people, beset only with local problems. What happens now in any part of the universe has repercussions in every American home. For better or for worse, our destiny under Providence has wedded us with world responsibility. The national conventions, as I have sought to interpret their significance, show the change this has made in the political scene.

TERM KEEPS HOUSE CLOSE TO PEOPLE

I would not pass over this opportunity to urge upon this radio audience, the men and women into whose homes my voice is reaching, a stout resistence to any suggestion that the term of tenure of office in the House of Representatives should be lengthened from 2 to 4 years. It is hard on Members of the House to run every 2 years. Of course, it is. But there is no law that compels a person to run for Congress, and once elected he may have an urge of duty to try for reelection, but there is no law to prevent his voluntary retirement if he chooses.

My experiences and observations during the years my constituents, to whose unfailing friendship I forever am indebted, have kept me in the Congress have confirmed and deepened my conviction that one of the greatest strengths of our Constitution is the provision that each member of the people's branch every 2 years must go back to his constituents for a new commission.

I doubt very much if the House of Representatives of the Congress of the United States would be in its present enviable position of expanding influence if its members were elected for 4 years, contrary to the concept of the wise men who wrote our Constitution, the concept that one branch of the Congress, the House should be kept very, very close to and immediately responsive to the will of the people, and the other branch, the Senate, its Members serving for 6 years, acting as a check.

If ever the gulf between the people and their Congress is widened from 2 to 4 years we will have been started on the way to rule, not by the people, but by government itself.

I am proud to have been a member of the 86th Congress. There still is much to be done, and it will be done, advance in housing to bring a decent within the means of every family, broadening of the minimum wage concept that even the humblest are entitled to decent subsistence for their time and toil, medical care to save our aged from the tolls of pain and death they do not deserve. These are among our legislative objectives when we reconvene in August. But what already has been accomplished by the 86th Congress constitutes a page of brilliancy in the legislative history of our country.

New England Pays More for Less

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 22, 1960

Mr. LANE. Mr. Speaker, the cutback in residual fuel oil imports for New England for the last quarter of 1960, as ordered by this administration, will have adverse effects upon the economy of our region.

It will inflate the prices of a fuel that is essential to the operation of many industries, electric plants, housing projects, large apartment and office buildings.

This "planned scarcity" is designed to pressure New England into using more expensive domestic supplies of heavy crude oil, or to convert heating and energy plants to the use of coal as their basic fuel.

It will increase the costs for our industries and our residents.

My home city newspaper, the Lawrence Eagle-Tribune published in Lawrence, Mass., makes a strong case against this artificial policy that is so detrimental to the New England economy.

Under unanimous consent I insert in the CONGRESSIONAL RECORD the pertinent editorial, "New England Pays More for Less" from the August 20, 1960 issue of the Lawrence Eagle-Tribune:

NEW ENGLAND PAYS MORE FOR LESS

Residual oil is tremendously important to New England industry. New England needs it in substantial quantity at a reasonable price. New England is not going to get it at least for the last quarter of 1960. The Department of the Interior has raised the price and reduced the import quota. The Department's acts, the New England Council estimates, will cost New England $10 million.

This additional cost to New England will be exacted while supply of petroleum throughout the world is so large that prices everywhere are going down. But the policy of Washington, in the name of the national defense, requires New England to get along with less and to pay more for residual oil.

The Presidential proclamation setting up the oil import quota program said the purpose of it is the preservation of "a vigorous, healthy petroleum industry in the United States." Official opinion underlying the program, therefore, ostensibly is that the reduction of oil imports will enlarge domestic markets for domestic producers and official theory ostensibly is that the enlarged markets will preserve the health and vigor of the domestic industry. The theory is persuasive when there is a diagnosis of serious illness in domestic producers and reason to think making New England pay more for residual oil will cure the illness.

The coal industry, rather than the oil industry, seems to be the one being treated by Washington at the expense of New England.

Residual oil is a heavy petroleum product left after other products are removed. It is extensively used for electric power and for industry and for heating large buildings. It can be imported inexpensively from Venezuela. In times of peace or war it can be brought more quickly from Venezuela than from gulf ports. Its competitor in New England is coal.

The New England Council asked the Government to establish a quota of 560,000 barrels a day for the last quarter of 1960, a period of heavy use of residual oil. The coal industry asked for a quota of 400,000 barrels.

The Government established what it called a compromise between the requests—415,000 barrels a day. A true compromise would have split the difference at 480,000. The quota obviously was not a compromise. Despite the noble words in the Presidential proclamation, it has all the appearance of an effort to help the coal industry try to force New England to turn from oil to coal.

Representatives of the New England Council visited Washington in July, after the price of residual oil had been raised 15 cents a barrel, and got the idea the Department of the Interior is not concerned by the disparity between the world price and the American price of residual oil and that, in determining what it calls a fair price for oil, it is interested only in the relation of the price of oil to that of coal and gas. Evidently, in the Department's mind, oil is not overpriced until it has risen to the point at which coal is less expensive.

As recently as May of this year, panelists at a New England Council discussion of the oil situation expressed the idea this country has an adequate national fuel policy in that it allows free competition between the different forms of fuel and enables different areas to use fuels that give the greatest economic advantage.

A completely free market for residual oil would cut the price by 56 cents a barrel. This is too much to hope for while the instinct to build tariff walls is strong. It should not be too much to hope, however,

that Government policy will strive to avoid giving a competitive advantage to one fuel over another—which appears to be the effect of the policy of increasing the cost and reducing the quota of residual fuel oil. It should not be too much to expect Washington to see the injustice of two prices for oil, one for the United States and a lower one for the rest of the world. It should not be too much to expect that a government concerned with vigorous, healthy industry will be concerned with the well-being of an industry as important to the Nation as that of New England.

Labor-Management Reporting Act Most Important Bill Enacted by 86th Congress

EXTENSION OF REMARKS
OF
HON. PHIL WEAVER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1960

Mr. WEAVER. Mr. Speaker, of all the legislation enacted by the 86th Congress of the United States, only one law is likely to go down in history as an outstanding achievement, and that is the Labor-Management Reporting and Disclosure Act of 1959—better known as the Landrum-Griffin bill.

The need for this legislation became dramatically apparent because of the hearings held in the Senate and so obviously necessary because of the hearings held here in the House that its enactment was inevitable.

Since the law became effective, actions by the Department of Labor under the able direction of Secretary Mitchell have provided additional proof that the law was not only desirable but necessary. Mr. Mitchell has undertaken vigorous enforcement of the new law designed to clean out the underworld elements which in some instances have infiltrated and subverted a segment of the labor movement. He has appointed competent men to administer the law. They have functioned well and have in the course of a few months begun to bring order out of the chaotic conditions which once existed.

In the first 6 months of administering the new law, the Department has instituted investigations into 654 cases and has turned 75 cases over to the FBI for further inquiry. Of the 654 cases, 27 involved bill-of-rights violations of individual union members; 7 were embezzlement cases; 27 involved violence; 15 were officer-convict violations; 6 involved Communist-suspect officers; 6 unlawful disciplinary actions against individual union members and 1 involved extortionate picketing.

This is only the beginning.

As the Department speeds up its activities in this field, the investigations will increase and—although it may take more than a few years—the cleanup of the labor movement will be completed.

The law that has made this possible was one of the most bitterly-fought bills ever to come before the Congress. It was proposed only after long and careful investigation and was enacted only after weeks of hearings and long hours of debate. In my years in Congress I have never seen the kind of tension, the bitterness and the heat that the Landrum-Griffin bill generated. I suppose that in years to come the rollcall on acceptance of the Landrum-Griffin substitute will be marked as one of the most dramatic moments in the recent legislative history. I know that it was one of the most tense.

Many who supported the bill were accused of being antilabor. This was not in most instances the case. Personally I supported the measure because I felt strongly that it was in the best interest of the average working man and woman. I do not for a moment believe that the rank and file of labor union members support and believe in the kind of corruption, intolerance and injustice uncovered by the Senate and House hearings. It was to eliminate this, and this alone, which brought so much solid and stanch support to the measure.

Mr. Speaker, this vital legislation has begun to have its effect. With the kind of continued vigorous administration which was begun under Secretary Mitchell, the measure will go a long way toward clearing up the mess which was found in a part of labor's house.

Stockpiling for Survival

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1960

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks I include a very interesting and informative letter signed by our colleague, the gentleman from North Carolina, Mr. COOLEY, and appearing in the New York Times of July 20, 1960. There is no man better versed in the needs and necessities of the agricultural life of our Nation, and in connection with the legislation relating to agriculture, than Mr. COOLEY, the distinguished chairman of the House Committee on Agriculture:

STOCKPILING FOR SURVIVAL—NIXON FOOD BANK PLAN DECLARED IN PAST REJECTED BY ADMINISTRATION

To the EDITOR OF THE NEW YORK TIMES:

Many newspapers recently have given generous emphasis to the idea of a world food bank administered by the United Nations, and a suggestion that our great stocks of food be stored close to the centers of population, against the emergency needs of our people in the event of a nuclear attack.

This affirmative interest is encouraging to those of us in the Congress who, along with the President and the various executive departments, have the responsibility for developing, and for effective administration of, the Nation's food policy, including the sharing of our abundance with friendly peoples in other countries.

I regret, however, that these propositions of such great meaning had received so little attention in the press until Vice President NIXON, in a recent North Dakota speech, threw them into the political arena. Actually, they have been proposed in the Congress and in the Food and Agriculture Organization of the United Nations for more than a decade. Both propositions have been rejected by the Eisenhower administration.

U.N. EFFORTS

The U.N. Food and Agriculture Organization made two attempts, in 1947 and 1949, to develop a world food bank. On each occasion they failed to gather sufficient support among the exporting nations. Subsequently, several congressional resolutions, by Senator MURRAY, of Montana, and others, were introduced, proposing a world food bank. A spokesman for the Eisenhower administration testified before a subcommittee of the Senate Foreign Relations Committee in May of 1956: "We see no need for the proposed world food bank." On June 27 Secretary of Agriculture Benson said: "The already burdened American taxpayer will question the vision of a world food bank which would require Uncle Sam to provide the stocks, the storage, and the cost of carrying the wheat."

In 1957, as chairman of the House Committee on Agriculture, I appointed a special subcommittee, under the able chairmanship of VICTOR L. ANFUSO, of New York, for the specific purpose of examining our food preparedness for civilian survival in the event of war.

This subcommittee, on July 17, 1957, following public hearings, issued a report finding that, "In the event of nuclear war, the United States is utterly without a plan to immediately feed its civilian population, including its territories and possessions." It recommended that the Government move swiftly "to assure that emergency stocks of food commodities will be available at accessible locations as reserves against possible disaster."

ADEQUATE FOOD

Just recently, before Mr. NIXON made his speech, I made inquiry of the Department of Agriculture as to what has been done with respect to stockpiling. On June 7 I received the following from that Department's Food and Materials Division:

"This Department has made a number of studies of the effects that various types of enemy attacks would have on the food situation and has come to the conclusion that there is and would be adequate food in the Nation after an attack without Government stockpiling."

It is surprising that Mr. NIXON now seems totally unaware that his administration has consistently opposed these two propositions he now proposes as his "farm plank."

I hope that, with the help of the Times and of our other great newspapers, large and small, we shall be able to make determinations with respect to a world food policy and to stockpiling for survival, in the best interest of this Nation and the world, and that these undertakings of such moment will not be lost in the confusion and bitterness of partisan politics.

HAROLD D. COOLEY,
Chairman, House Committee on Agriculture.

WASHINGTON, *July 8, 1960.*

Hemispheric Security: Congress Must Act

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1960

Mr. FLOOD. Mr. Speaker, soon after the Congress recessed, Soviet Premier Nikita Khrushchev on July 9, 1960, pub-

licly declared that the Soviet, with its arsenal of rockets, is pledged to all-out support of Cuba in event that that country were attacked by the United States.

Does this provocative statement signify the existence of a mutual defense pact between captive Cuba and its Kremlin masters? I do not know, but believe it does. Nevertheless, this threat was and is a challenge of the most brazen audacity that could not be ignored and the President reacted promptly with a policy pronouncement on the next day, which I now quote:

The statement which has just been made by Mr. Khrushchev in which he promises full support to the Castro regime in Cuba is revealing in two respects.

It underscores the close ties that have developed between the Soviet and Cuban governments. It also shows the Soviet purposes in this hemisphere.

The statement of the Soviet Premier reflects the efforts of an outside nation and of international communism to intervene in the affairs of the Western Hemisphere.

There is irony in Mr. Khrushchev's portrayal of the Soviet Union as the protector of independence of an American nation when viewed against the history of the enslavement of countless other peoples by Soviet imperialism.

The inter-American system has declared itself, on more than one occasion, beginning with the Rio Treaty, as opposed to any such interference. We are committed to uphold those agreements.

I affirm in the most emphatic terms that the United States will not be deterred from its responsibilities by the threats Mr. Khrushchev is making. Nor will the United States, in conformity with its treaty obligation, permit the establishment of a regime dominated by international communism in the Western Hemisphere.

This was followed on July 12 with a statement by Premier Khrushchev to the effect that the Monroe Doctrine is dead, thus evoking a further statement on the matter by the Department of State on July 14 that I now quote:

[From the Washington Post, July 15, 1960]

TEXT OF MONROE DOCTRINE STATEMENT

In his remarks concerning the Monroe Doctrine at his press conference only July 12, Mr. Khrushchev again displayed his extraordinary ability to ignore facts.

In the first place, the principles of the Monroe Doctrine are as valid today as they were in 1823 when the doctrine was proclaimed. Furthermore, the Monroe Doctrine's purpose of preventing any extension to this hemisphere of a despotic political system contrary to the independent status of the American States is supported by the inter-American security system through the Organization of the American States.

Specifically the Organization of American States charter and the Rio Treaty provide the means for common action to protect the hemisphere against the interventionist and aggressive designs of international communism. Likewise, Mr. Khrushchev failed to mention that the Rio Treaty is the first of the regional treaties for which provision is made under article 51 of the United Nations Charter.

TREATY AIM CITED

Mr. Khrushchev might appropriately reflect on the fact that one of the considerations for establishing the Rio Treaty was that:

The American regional community affirms as a manifiest truth that juridicial organization is a necessary prerequisite of security and peace is founded on justice and moral order and, consequently, on the international recognition and protection of human rights and freedoms, on the people and on the effectiveness of democracy for the international realization of justice and security.

One of the principal purposes of the Rio Treaty was to provide a method for dealing with threats of imperialistic powers seeking to establish their domination in the Western Hemisphere.

A further remarkable development was revealed in Mr. Khrushchev's meeting with the press. Speaking as the head of the Soviet Government, he arrogated to himself the power to detremine what international agreements should or should not be binding—even though the Soviet Union is not a party thereto.

THREAT CALLED STRAW MAN

In this particular instance it was not only the Rio Treaty but also the treaty between the United States and Cuba covering Guantanamo, which he has sought to abrogate. While disregard for treaties to which it is a party may be viewed by the U.S.S.R. as a convenient approach to international relations, such an effort can only be regarded by law-abiding states as another example of Soviet intevention in the affairs of other countries.

Mr. Khrushchev's latest references to United States-Cuban relations are of a piece with his threat of July 9. As a pretext for his threat, he conjured up the strawman of a nonexistent menace of United States aggression against Cuba.

The threat of the use of force, made to blatantly by the Soviet chairman in relation to the affairs of nations of the Western Hemisphere is contrary to the basic principle of the United Nations Charter which rejects the use of force in the settlement of international disputes. This naked menace to world peace, brandished so callously by the Soviet leader, reveals the hypocrisy of his protestations in behalf of peace.

SEE BOLSHEVIK DOCTRINE

Moreover, these statements of Mr. Khrushchev appear to be designed to establish a Bolshevik doctrine providing for the use of Soviet military power in support of Communist movements anywhere in the world. Mr. Khrushchev speaks approvingly of the historically positive role of the Monroe Doctrine during the 19th century, when it was applied against the European imperialisms of that day, but declares that "everything has changed abruptly" now that it (the Monroe Doctrine) stands in the way of the new imperialism; international communism.

The principles which the U.S. Government enunciated in the face of the attempts of the old imperialism to intervene in the affairs of this hemisphere are as valid today for the attempts of the new imperialism. It consequently reaffirms with vigor the principles expressed by President Monroe: "We owe it * * * to candor * * * to declare that we should consider any attempt on their (European powers) part to extend this system to any portion of this hemisphere as dangerous to our peace and safety."

Today, nearly a century and a half later, the United States is gratified that these principles are not professed by itself alone, but represent through solemn agreements the views of the American community as a whole.

The agreements alluded to in the above statements are the 1947 pact of Rio, the 1948 Bogota Charter setting up the Organization of American States, and the 1954 Caracas Declaration.

With the sense of the statements above quoted, all thoughtful Americans of the Western Hemisphere, North, Central, and South, will heartily agree. But Executive pronouncements, merely reacting to crises created by our failure to lead boldly in making our position clear are not enough. They should be promptly followed up by adequate congressional actions on resolutions now pending in both Houses of the Congress to defend our policies from Bolshevist attacks.

In various previous addresses and unheeded warnings to this body, I have foreseen and predicted what is now happening, and outlined a definite program to remedy the situation in the Caribbean. So far, no conclusive measures have been taken and matters have been allowed to drift from bad to worse.

All the evidence increasingly emphasizes the necessity for immediate action and the gravest peril in further delay. We must make clear to all nations of the world exactly where we stand. Had the Congress and the Executive acted earlier, as they could and should have done, the present crucial situation might well have been avoided.

Thus, Mr. Speaker, I ask again: Why wait for new blows to fall which may start another world war?

Hyde Park High School a Pattern for the Nation

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1960

Mr. O'HARA of Illinois. Mr. Speaker, in the district in Chicago that I have the honor to represent is located Hyde Park High School. It is a school with a glorious past, many of its graduates having reached places of high eminence. Walter Eckersol, regarded by oldtimers as the greatest of football players, came from Hyde Park. I have a personal sentiment for Hyde Park High School, stemming from the fact that one of my sons was a student there. The Hyde Park neighborhood has changed with the years. Now there are many Japanese-Americans, many Negro Americans, many Caucasian Americans, an integrated community abiding by the precepts of good neighborliness. Hyde Park High School is living up to its traditions. It is setting for the Nation, in this challenging period of change and readjustments, a pattern of an integrated high school that quiets the fears of the timid in the face of change and strengthens the faith of others that our America, under God, at last will make democracy come true.

To the Hyde Park High School PTA I am indebted for a copy of Alex Dreier's news commentary over NBC radio station WMAQ of Chicago on June 23, 1960, which by unanimous consent I am extending my remarks to include for the thoughtful reading of my colleagues, both from the North and the South. Mr. Dreier's commentary follows:

When Chicagoans talk about race relations, they usually are talking about race

problems, and there is quite a difference. Actually, a great many Chicagoans hold a very distorted, if innocent, view of the true situation in the Windy City.

Chicago has a great and crushing Negro population. And per capita crime in that population is appalling. Just about as appalling as it would be if the people of Chicago selected any other racial or ethnic group and compressed it into a horribly inadequate amount of space, and then denied the members of the oppressed group adequate economic opportunities.

What has always amazed most thoughtful people who have observed the Chicago racial scene is the number of Negroes who insist upon keeping all the rules, many of which are designed deliberately to keep them in a state of subservience, and raise their children to be conscientious, law-abiding citizens.

Why don't the Negroes react more violently to the ethnic and spiritual ghetto into which they have been driven? Some say they would, but the only immediate road out is violence, and that they do not want. Others, their vision marred by suppression, recoil and say that if the white man does not want him in his world then they will stay in their own, no matter how unsatisfactory it may be. Still others hope and pray for a better future, and work with civic and social organizations to better themselves while they try to gain a bit of empathy from a too-often unfeeling, or worse, unthinking, majority.

But there are numerous bright spots in an otherwise disgraceful situation. Hyde Park High School, on the Southeast Side, is one of them. Here almost every race, religion and nationality group is represented, and at almost every economic level. The area that sends Negro, white and oriental children to the high school is inhabited by workers on the lowest rung of the economic ladder, as well as the children of the well-to-do, and professors at the University of Chicago. Here, in race-conscious Chicago, is a large, integrated high school at peace with itself, and busy with the job of educating youngsters of every background. And the record shows it is doing a mighty good job of it.

This is the same high school that has produced so many leaders in so many fields, including a raft of well-known celebrities such as Steve Allen, Mel Torme, and Arch Oboler.

There is nothing magical about the Hyde Park formula. Intelligent administration, of course. And equally important, intelligent parents who care how their children think and act.

Yet, Hyde Park High School is unique in other ways. The standards are higher, and although much of its huge enrollment is from economically underprivileged areas, the vast majority of Hyde Park students go on to higher education, and many of them make it possible through scholarships.

It is true that in many parts of Chicago there is racial segregation. Only a fool or a liar would deny it. Here in Chicago, racial segregation takes the form of geographical segregation. A Negro cannot live anywhere he can afford to live. He encounters subborn, though often silent opposition. So where he lives, his children go to school. In the Hyde Park area, Negroes live among whites, or is it the other way around? Here, in one corner of Chicago, is the American experiment, and so far, it has been working far better than the bigots would have you believe. Here, in Hyde Park, is proof that school integration can and will work. And like it or not, the rest of Chicago had better look on and learn. For this is the Chicago high school of 10, 15, or 20 years from now. But ironically, if most of the fearful could observe this high school, they would realize they have little to fear.

The Sierra Club

EXTENSION OF REMARKS
OF
HON. JEFFERY COHELAN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1960

Mr. COHELAN. Mr. Speaker, under permission to extend remarks I submit the following article by Philip Hyde from the Christian Science Monitor in which Mr. Hyde describes the work of the Sierra Club. His words of praise for this dedicated conservation organization which are so richly deserved and his remarks about the club's powerful recent publication, "This Is the American Earth" by Ansel Adams and Nancy Newhall, warrant the attention of us all.

The article follows:

TO EXPLORE, ENJOY, AND PRESERVE

(By Philip Hyde)

If John Muir, our celebrated western naturalist, could today see one of his favorite projects, the Sierra Club, he would be surprised. He would also be immensely pleased, for his prime purpose in founding the Sierra Club in 1892 was to develop an organization that would become a strong voice for protecting the natural scene. From the small beginning of five men in 1892, brought together by Muir, the Sierra Club has grown to its present membership of over 16,000, and to a national prominence as a major voice for the protection of our natural scenic resources.

The club's motto reads: "To explore, enjoy, and preserve the Sierra Nevada and other scenic resources of the United States." It is made up of people who are dedicated to enjoying our natural scenic resources and to making sure they will be here for coming generations to enjoy. Though it has long since outgrown the possibility of holding a "club meeting," the membership is subdivided into a number of chapters which sponsor local activities, such as educational meetings, lectures, local walks, climbs, auto-tours, and camping outings. Much of the membership is concentrated in the West, but there are also active chapters ang groups in Chicago, New York and Washington.

EXPERIENCING NATURE

The Sierra Club sponsors a varied program of summer outings which emphasize the "explore and enjoy" part of its motto, but they are not without purpose in fulfilling its chief objective, for they are, in a sense, basic training for the rising conservationists, and are often scheduled in an area where a conservation problem has arisen.

Outings this summer include such varied places as the North Cascades of Washington, the High Sierra of Yosemite and Kings Canyon National Parks in California, the San Juan Wilderness in Colorado, Three Sisters Wilderness in Oregon, and the Sawtooth Range in Idaho. River trips are floating Sierrans down the Green and Yampa Rivers in Dinosaur National Monument, on the Green through Desolation Canyon, the Rogue in Oregon. An innovation this year in the expanding scope of outings is the canoe trip through Minnesota's Quetico-Superior canoe wilderness. Another outing, not all on the enjoyment side, is the Clean-up Week in a littered scenic area.

Behind this variety of activities is the philosophy that education and experience are prerequisite to conservation: that natural beauty, like freedom, will be most enthusiastically defended by those who have experienced it.

The present leadership of the club knows where it came from: mature people now who were the trailblazers and "crag rats" of yesterday, who know the joys of wilderness and want their children to know them, too.

TO STIR AWARENESS

In its work of making Americans more aware of their great natural scenic resources, the Sierra Club publishes the Sierra Club Bulletin, described as "that model of mountain periodicals" by Ronald Clark, British author. It has also, of recent years, begun to publish books of conservation significance.

BOOK HAILED

Its most recent publication, "This Is the American Earth," by Ansel Adams and Nancy Newhall, has been hailed as a landmark in American publishing. It expresses beautifully and powerfully what the Sierra Club stands for. With superb photographs made by Ansel Adams, and those of 30 other leading photographers, its moving, poetic text by Nancy Newhall poses the 6,000-year question: Will civilized man learn to live with his environment, so carefully and painstakingly prepared for him since the birth of the planet—or will he go on ruining it, and himself in the process?

His tools and technology today are more ruinously efficient than any he has before possessed during his brief tenancy on earth. Will the development of his most important resource, the spiritual, come soon enough to teach him how to use his hools wisely to preserve his environment, and himself?

Memorial Tribute to Philip B. Perlman

EXTENSION OF REMARKS
OF
HON. BYRON L. JOHNSON
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1960

Mr. JOHNSON of Colorado. Mr. Speaker, 2 weeks ago one of the greatest champions of civil rights that this country has ever known passed away—former U.S. Solicitor General Philip B. Perlman. Over the last two decades Philip Perlman had held many positions of great responsibility and had distinguished himself in all of them.

It was, for example, he who presented the restrictive covenant cases to the Supreme Court in 1947. The subsequent ruling in 1949 constituted an important milestone in the abolition of legal sanction for segregation.

While I had been fully aware of his vigorous and aggressive role for years in the struggle to stamp out racial discrimination and assure all Americans equal rights under the law, it was only recently my great privilege to serve with him on the Platform Committee of the National Democratic Convention in Los Angeles and to watch at close range his brilliant and incisive mind in action as the cochairman of that committee. Little could I know or suspect that this was to be his last contribution to that cause.

Time and again throughout our deliberations and the drafting of the platform, as throughout his entire career, he revealed himself as a prodigious and diligent defender of the downtrodden, as an uncompromising protector of those

people who have been the victims of prejudice. I am profoundly humbled by the opportunity and the experience of having shared in so small a way in the creation of that document, so appropriately entitled "The Rights of Man," which is an enduring monument to his memory.

Philip Perlman's passing is an irretrievable loss to the Democratic Party and indeed to the American people.

Louisiana State Winner in National Teenage Safe Driving Road-e-o Again From Third Congressional District

EXTENSION OF REMARKS
OF
HON. EDWIN E. WILLIS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1960

Mr. WILLIS. Mr. Speaker, the Third Congressional District of Louisiana, which I have the honor of representing, has produced for the third successive year the State champion in the National Teenage Safe Driving Road-e-o sponsored by the Junior Chamber of Commerce of the United States.

Bill Vincent, 17, son of Mr. and Mrs. Britton Vincent, of Lafayette, senior and honor student at Lafayette High School, the Louisiana winner for 1960, has been in Washington for the finals of the ninth annual road-e-o. He finished first in the State competition at Ruston where approximately 50 victors in local contests participated. Jimmy W. Carter was State chairman.

Forty-eight State champions took part in the Washington events in which they were tested on their attitudes and their knowledge of road rules, given a driving machine test, interviewed and required to negotiate successfully four tricky obstacle courses in the District of Columbia Armory and a 6-mile run through District traffic. After all scores were compiled, prizes of $2,000, $1,500, and $1,000 scholarships were awarded to first, second, and third place winners respectively during a banquet at the Statler-Hilton Hotel, road-e-o headquarters. The Louisiana champion made a very good showing, placing 16th among the 48 contestants.

Young Price was accompanied to Washington by Donald E. Butcher, also of Lafayette, son of Mr. and Mrs. Edwin Butcher, of that city, a director of the Lafayette Junior Chamber of Commerce and local road-e-o chairman. Others in the Lafayette group visiting Washington were Mrs. Elden Butcher and Miss Gloria Foreman.

Bill brought with him for President Eisenhower a gold Lagcoe oil hat which had been presented to Bill for this purpose at a petroleum club luncheon in Lafayette by Leo Franques, chairman of the Louisiana Gulf Coast Oil Exposition. With the hat, symbolizing the Louisiana oil industry, the exposition, and Lafayette's position as the oil center of the South, was a scroll which read:

The Louisiana oil industry and its biennial exhibition, the Louisiana Gulf Coast Oil Exposition, is deeply honored to present this token of esteem to Dwight D. Eisenhower, President of the United States, accompanied by our most sincere wishes for a long and happy future, and a most cordial invitation to attend the Fourth Louisiana Gulf Coast Oil Exposition in October of 1961 at Lafayette, center of petroleum activity in the south of Louisiana, our Nation's greatest producer of petroleum per acre.

The scroll was signed by Chairman Franques; Maurice Heymann, developer of the Heymann Oil Center at Lafayette; and Sidney C. Ory, president of the Lafayette Chamber of Commerce.

Through arrangements made by my office the presentation took place at the White House where Bill and Donald were received by Secretary of the Cabinet Robert K. Gray who accepted the hat and scroll in behalf of the President.

The Lafayette Junior Chamber of Commerce, with a membership of around 40 young men active in community affairs, sponsors numerous civic projects in addition to the safe driving competition which is open to both boys and girls. Cary Moore is president and the other officers, in addition to Donald Butcher, are Lionel Prejean, first vice president; Alvin O'Fleurty, second vice president; Earl Grand, secretary; Scott O. Brame, treasurer; and Tom Rogers, I. J. Mires, and Noel Diuffrida, board of directors. Formed several years ago, the organization meets for a luncheon program on the first Wednesday of each month and gathers for a night meeting on the third Wednesday.

In 1958 Louisiana was represented in the road-e-o finals in Washington by State champion Raymond Albert Young, son of Mr. and Mrs. William Young, of Centerville, who was accompanied by Ted L. McIntyre, son of Mr. and Mrs. F. P. McIntyre, of Franklin, representing the Franklin Junior Chamber of Commerce as a member of the board of directors.

Last year's Louisiana champion also came from the Third Congressional District. Bill Young, son of Mr. and Mrs. Pierre W. Young, of Lafayette, competed in the Washington finals. Accompanying him was Cary Moore, son of Guilliam Moore and the late Mrs. Moore, who is head of the Lafayette Junior Chamber of Commerce of which at that time he was vice president and local road-e-o chairman.

A World in Turmoil

EXTENSION OF REMARKS
OF
HON. DONALD J. IRWIN
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1960

Mr. IRWIN. Mr. Speaker, pursuant to permission previously granted, I would like to introduce into the RECORD for the information of my colleagues the latest issue of my newsletter "Report to the People" for August 10, 1960:

A WORLD IN TURMOIL

Since my last newsletter report to you, the world has been in turmoil—in turmoil to such a degree that developments abroad have to a considerable degree overshadowed congressional activity.

Congress, of course, has been busy and has been in session since January except for the recess declared July 3 for the national political conventions. Much important and vital legislation was acted upon before the recess and much more is awaiting action before final adjournment.

I have delayed writing you this newsletter for several reasons, among them the fact that I had hoped before doing so to be able to report on the final actions of Congress on all major legislation. But with Congress ending its recess, a later issue of the newsletter will report on unfinished business of the House and Senate.

Then, too, I hesitated about writing this newsletter while deveolpments abroad—one after another—kept the world seething. These developments, starting with the U–2 spy plane incident and including the summit collapse and the critical situations which arose in Korea, Turkey, Japan, the Congo, and Cuba, left the world in a state of tension.

If nothing else, the developments abroad brought into sharp focus the problems of the hesitant leadership in our foreign policy program. They highlighted the lack of an aggressive leadership which, I maintain, is essential if we are to meet the challenges facing us in the world.

I expressed this view in Bridgeport on June 25 when I accepted nomination for re-election and I still maintain that ours is a world in revolution and in the last year we have suffered unexpected and incredible reverses. The situation in which we find ourselves is the result of a make-believe foreign policy—a policy which could cause countries in four continents to capitulate to communism.

In this world in ferment, our position has been weakened by lack of creative leadership and our only hope of survival is an aggressive foreign economic policy plus a strong military capability.

WHAT CONGRESS HAS DONE

Congress, with world tension tightening, has been active. When the recess began, Congress had acted upon 10 regular appropriations bills and several supplementals for fiscal 1960 and 1961 and sent them to the President. Elsewhere in this newsletter, I have reproduced a breakdown for your information showing the status of appropriations in the second session of the 86th Congress. I would like to point out, however, that other statements to the contrary, the Democratic-controlled Congress kept a close eye on expenditures and you will note that the amounts appropriated are several millions less than President Eisenhower had requested. But note, too, the Defense budget—particularly for the Polaris missile program—is higher than requested. The Polaris program, of course, gives great promise for an effective mobile missile launching capability and Congress authorized $241 million more for this program than had been requested by President Eisenhower.

In the field of foreign aid, I want to emphasize that I supported every effort to appropriate the full amount requested. In this area, I feel very strongly that we should do much more than has been done. The mutual security bill passed the House before the recess, but is under consideration by the Senate Appropriations Committee. It is my sincere hope the Senate will restore the funds trimmed from the foreign aid bill by the House.

In connection with this subject, incidentally, I expect and hope that with Congress reconvening the President will present

his program for aid to Latin America, where the crisis has been deepening and fostering new problems as the result of Castro's appeal to many Latin American countries. Not only is a strong program for our Latin American relations long overdue, but this Nation also should move forward in developing additional programs of this nature for all other critical areas of the world. It would not seem too early to prepare an economic program for the development of Africa, where the emergence of any newly independent but ill-equipped nation presents fertile soil for Communist activity.

Other legislation completed by Congress prior to the recess included:

Civil rights: I had voted for the House-passed civil rights bill at the time of my last newsletter. Later, of course, after a record filibuster, the Senate also acted on civil rights legislation. For those who may not have read my last newsletter, let me emphasize I have long been a strong advocate of civil rights. I felt the House-passed bill could be improved upon but nevertheless certainly represented a step in the right direction.

Sugar Act extension: I supported this legislation, passed after an all-night session, which gave the President complete authority to determine the amount of sugar to be imported from Cuba. I did so in view of our deteriorating relations with the Castro government and because I felt the President should have the power to act in an emergency.

Farm legislation: The farm problem is still in a muddle and I voted against a wheat bill providing for the maintenance of supports at 75 percent of parity. I still feel the administration has shirked its responsibilities in failing to offer a comprehensive farm program this year. Just before the recess, incidentally, one bill was enacted which can absorb some of the mounting surpluses on farm commodities. This was a measure authorizing the United States to participate in the 63-nation International Development Association to help underdeveloped countries. The law permits the overseas sale of some farm surpluses, with payment to be made in foreign currencies. Farm spokesmen say the new law may have a dual advantage. Besides serving to relieve the surplus problem, returns from sales, when invested in the nations in which the sales are made, can help create or expand markets for other U.S. commodities.

Federal employees' pay raise: This measure, passed over a Presidential veto, was less than a perfect bill. I supported it, however, because of a very definite need for substantially increased Federal salaries. Experience has shown that the Government needs higher salaries at top levels of Civil Service and there is a study presently being made which I hope will result in legislation to correct this shortcoming.

Rivers and harbors bill: This was legislation of particular importance to Stamford and the Fourth Congressional District I represent. Included in this authorization bill was a vitally needed hurrican flood control project for Stamford. Many hours of combined effort and hard work went into this particular project before it was finally authorized. It took close coordination, cooperation, and teamwork on the part of Stamford city officials, and interested industrial and civilian parties, operating in conjunction with my office, to get the project approved. Congratulations are due Mayor Walter Kennedy, Flood and Erosion Control Board Chairman Al Kanzler, and others for sticking with this matter until it finally was included in the bill. Much credit must go, too, to people like Stamford Finance Commissioner Norm Gluss; Dean Brossman, executive vice president for the Stamford-Greenwich management council; Gil Brooks, Dom Del Guidice, and Ed Bankowski, among numerous others. The fight is not finished, though—it will resume in January when efforts must be made to get the necessary funds appropriated. Assuming I am reelected, I shall, of course, continue to do everything in my power to have the funds appropriated for the project.

Better labeling bill: Overlooked and often ignored in the heavy publicity and news coverage given controversial measures are many noncontroversial, so-called unimportant bills. Yet these little-known laws frequently do great public good. A case in point is the better labeling law requiring far more prominent warnings on hazardous and poisonous materials brought into the average home daily. Hereafter, labels on these items (including cleansers, dyes, disinfectants, and polishes) must clearly state: "Keep out of the reach of children." Also, every package must henceforth display prominently first-aid antidotes for the misuse of such products. Why is this such an important piece of legislation? Every year some 600,000 youngsters swallow dangerous preparations and, of these, more than 500 die.

STILL AWAITING ACTION

The Senate has already returned after the recess. The Senate, with more pending business on its calendar, resumed sessions in advance of the House which must wait for the Senate disposition of various bills before it can take action on them. I anticipate the House sessions will be fairly short, perhaps of but 2 or 3 weeks' duration. I do not think there will be any major squabbling because there is a definite job to do and we will want to get it done.

The mass transportation bill: Of major importance from my personal viewpoint is what I hope and expect will be final House action on the Senate-approved bill sponsored by Senator WILLIAMS of New Jersey to provide loans and grants to ease the mass transportation problem. This bill, a companion to one I introduced in the House, is vital to the ultimate solution of the commuter situation in Fairfield County. Incidentally, I have expressed strong dissatisfaction over the action of the Interstate Commerce Commission in permitting another 10 percent boost in New Haven railroad fares even before the ICC's investigation of the line was concluded. It appeared to me that the proper action would have been to refuse the fare increase until public hearings were completed.

Bridgeport Harbor appropriation: Another item I expect favorable action on in the remaining days of the session is an appropriation bill before the Senate containing $750,000 to inaugurate improvements of the Bridgeport Harbor during the coming fiscal year. The amount, contained in the President's budget, nearly got sidetracked by a House subcommittee recently but fortunately I was able to convince the subcommittee to retain the allocation because of the tremendous importance of the project to Fairfield County. Eventually the harbor improvements will cost more than $6 million. Had the subcommittee knocked out the allocation, work could not have been started this year. Thanks to the support of two of my New England colleagues I was able to convince the subcommittee the Bridgeport Harbor is a distribution point for southwestern Connecticut where commerce is increasing, and that deepening and widening of the channel would eliminate tidal delays to existing commercial traffic and permit the use of larger vessels with substantial transportation savings.

Also on the calendar for further action are the following:

Health insurance for the aged: High on the priority list for consideration when Congress reconvenes is the extremely controversial bill providing health insurance for the aged. The House has already passed legislation providing increased social security benefits and a moderate, State-option, health benefits program. The Senate Finance Committee held hearings on this legislation before the recess started, but took no further action. Incidentally, I did not consider the House-passed bill adequate in the area of health benefits for the aged.

Federal aid to education: This is a bill snarled in controversy and parliamentary wrangling and I hope that definite action can be taken before final adjournment, though I am far from hopeful on this possibility. The Senate, early in the session, passed a bill providing $1.8 billion over 2 years for school construction and teachers' salaries. Late in May, the House passed a bill authorizing $1.3 billion over 4 years for construction only.

Minimum wage bill: Another bill passed by the House just before the recess was a minimum wage bill raising the minimum wage to $1.15 an hour for workers previously covered by the Fair Labor Standards Act and extending a $1-an-hour minimum, without overtime protection, to an estimated 1.4 million workers in the interstate retail chains. The Senate is still to act on the legislation.

Omnibus housing: Also lodged in the House Rules Committee is an omnibus housing bill providing funds for Federal housing programs. This bill, reported favorably by the House Banking and Currency Committee, would, it is hoped, revitalize housing production which dropped sharply over the past year.

Foreign investments: I am hoping for Senate action on H.R. 5, a tax-incentive measure to spur U.S. private investment in underdeveloped countries. This is a bill I supported when it passed the House.

Self-employed retirement: This is H.R. 10, the Keogh-Simpson bill which would permit self-employed to defer taxes on portions of their income set aside for retirement purposes. I voted for it when it passed the House, and regard it as forward-looking legislation which I would like to see enacted into law. Indications are, however, that the bill may encounter opposition in Senate floor debate.

VIEWS ON THE NATIONAL CONVENTIONS

I attended the Democratic convention in Los Angeles as a delegate. I was satisfied both with the choice of the ticket and the platform adopted there. I also watched the Republican convention in Chicago and was encouraged by developments there, too. Of particular note, in my opinion, was the adaptation of Vice President NIXON to a new posture concerning the issues before the Nation in the light of developments of the last year. For an interesting view of the Republican platform, I suggest you read the editorial on page 120 of the July 30 issue of Business Week magazine.

MY BACKGROUND TO JUDGE CUBA

In my last newsletter, I commented about the Cuban crisis, United States-Cuban relations, the Castro government, etc. My comments were based partly on a personal trip I made to Cuba in March. Several letters I received questioned my authority to judge Cuba on the basis of such a brief visit. I would like to say this, in the event others also wondered about my remarks in which I said I was convinced a poor job of administering Cuba by the Castro government would in itself bring serious economic troubles to that country in the near future. True, my visit to Cuba was brief, but for the benefit of those unaware of it, my knowledge of Spanish-speaking nations is extensive. For one thing, I was born and raised in Argentina, where I attended public school. My father worked for Swift & Co. in Argentina and in fact is still employed by that company although now residing, with my two sisters and my brother, in Brazil. Besides this background, I also was an instruc-

tor in Spanish at Yale College and at Hotchkiss School in Lakeville, Conn. Developments since my comments appear to be bearing out the views I expressed regarding Cuba. Castro has grown weaker and seems to be losing his hold, particularly with important and influential groups. They're talking out against him now, warning of economic collapse. There are some sources in our own Government who think Castro will fall by year's end. Incidentally, you might also be interested in knowing that for some months now I have been making weekly Voice of America broadcasts in Spanish which are aired into Latin American countries. Usually these broadcasts are made jointly with Representative JOSEPH MONTOYA, of New Mexico, and we feel they are playing an important role in improving and strengthening our Latin American relations. Similar programs are broadcast as panel discussions whenever visiting Latin American legislators are in Washington.

Charles Nutter Takes the Rust Off the Iron Curtain in a Most Informative and Penetrating Analysis of the Real Threat of the Soviet Union

EXTENSION OF REMARKS
OF

HON. F. EDWARD HÉBERT

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 22, 1960

Mr. HÉBERT. Mr. Speaker, I am bringing to the attention of the House one of the most informative and penetrating analyses of the real Communist threat that has ever come to my attention.

Charles Nutter is managing director of the famed International House of New Orleans. Before coming to that important post he was one of the outstanding reporters for the Associated Press and among other duties which he had when connected with that great news-gathering organization was bureau chief of the Association Press in New Orleans. It was in that capacity that I first came to know him more than 20 years ago and shortly after he had returned from an Association Press assignment in Moscow.

Recently he headed a New Orleans businessmen's delegation behind the Iron Curtain countries. His observations are the result of a skilled and trained mind. There is nothing brash or extreme in these observations. They are firm and well grounded. I suggest Mr. Nutter's piece on Russia must reading.

(By Charles Nutter)

NEW ORLEANS.—The Associated Press, in its wisdom, recently distributed a story saying that around 15,000 Americans will crack the Iron Curtain and visit the Soviet Union this year. This number may be even greater if hotels and travel agencies can handle the influx. What Khrushchev and Eisenhower think of each other has not blighted the tourist crop to Russia this year.

These visitors will spend a week, a month or two hitting the tourist spots in Russia and will come home with a curious confusion of impressions which they will pass along from amateur lecture platforms all over America for the next year or so.

Get ready to hear these scarcely new facts about the Soviet Union: There are some churches open but not many; antireligious museums are hard to enter; posted prices on foodstuffs and clothing are sky high; there are very few automobiles and many pedestrians; lots of new housing is being built; Russian kids like gum and know a little English; women work at everything including day labor; hotels are adequate, but not luxurious; photographic restrictions seem to have disappeared.

Now and then some traveler will regale his listeners with an exciting story, mostly imaginary, of difficulty with the police, losing his passport, or another spicy account of hidden dangers he faced and mastered there beyond Minsk.

These bits of chit-chat will be passed along to Americans who have not seen Russia. They would be harmless enough if the visitors accounts stopped there, or if they dug deeper into the real meaning of the Soviet Union and Communist International which you don't see or read from a hotel window or taxicab.

But unfortunately there will be many otherwise astute observers return with a belief that because of its frontier appearance, high prices and scarcities and lack of many comforts and luxuries, that this is a backward nation and is no economic threat to the United States because it has several generations to go before it catches up with capitalism.

International House of New Orleans recently conducted its 40th trade and travel mission abroad in 15 years; and this time we took 85 persons to Russia, Czechoslovakia, and Poland, being behind the Iron Curtain for 2 weeks and in Red Square in Moscow on May Day at the very time that the U–2 incident occurred.

I conducted this trip on behalf of International House and I am as convinced that few trade contacts or opportunities were uncovered as I am that very few of our traveling members grasped or understood the economic facts and threat of communism as we glimpsed it in our brief mission.

The Soviet experiment, now 43 years old, is so vast, so different, so thought provoking and so startlingly successful at last that the Kremlin feels no fear in letting in large numbers of Americans to see their country and openly boasts of its economic plans for us all in the full belief that we cannot comprehend the facts and the danger.

A year or so ago Nikita Khrushchev told us over television that our grandchildren would live under socialism (a sugar-coated word for communism which is used frequently so as not to alarm people too much), and he further declared that "we declare war upon you in the peaceful field of trade. We declare war and we will win over the United States. The threat to the United States is not the ICBM, but in the field of peaceful production. We are relentless in this and it will prove the superiority of our system."

Adolf Hitler in his celebrated book Mein Kampf never was more specific in the plans he had for the world than the Communists are and constantly have been for about a century since Karl Marx dreamed in the British museum in London. So long as these plans were just dreams we could afford to pay little attention; now they are dreams backed by a billion captive people who have become, against their will or approval, economic serfs under an industrial empire which would engulf the world.

The recent trip to the Soviet Union was my second visit there. In 1936–37, at the height of the great purges, I was a foreign correspondent there and saw Russia beginning to emerge from agricultural serfdom into an industrial state. Today, despite a great and disastrous war, the transition is far advanced, and the industrial power of Russia is beginning to roll and menace the world.

This visit to Russia left me with the very definite belief that the real Soviet threat is economic, not military. The Communists, by dint of clever planning, hard work and forced or virtual slave labor of their entire populace, have created an industrial power second only to the United States. In full view of the world but without its realization or alarm, the Kremlin has adapted outlawed and outdated malpractices of capitalism to establish a supreme state monopoly under state capitalism. It is called communism.

The fruits of a labor force which is larger than in the United States and which is surprisingly efficient in many areas and fields doesn't go to improve or help the people; it goes into a gigantic fund for use of the Kremlin, ample financing indeed for world revolution.

Communism in Russia is not communism at all, and probably never was. Today the Soviet Union is one gigantic trust in which the people are and have been exploited beyond the wildest dreams of capitalism in this or any other country. Everything and everybody belongs to the state and move and operate at the whim of the state. The state owns every job and every means of making a living, and it owns every living area, every bit of production, all land and factories, and resources, developed and unexploited.

The state controls all wages and salaries and it also controls the cost of living or rather it fixes both. It can raise or lower either overnight, closing or widening the gap without consultation or law, for some 210 million people. It does so, of course, by holding wages down and raising living costs, particularly clothing or food, so that a whole family, including the wife and mother, has to work to make ends meet.

It looked to me as if the Soviet system, communism or so-called socialism in Russia today, economically speaking is a colossal distortion of the company, the company town, and the company store, all monopolies, as we used to know them in the United States, but which have disappeared. The profits of this great all-embracing monopoly, which is nationwide, do not reach the people; they are used instead by the state for political purposes, national and international; ample financing indeed for the worldwide conquest plans which communism espouses.

It is necessary to know and remember that profits and the profit motive didn't disappear in Russia, the government just took them over and gave them new names that are deceptive and misleading as always.

Profit is a dirty capitalistic word in Russia, something reserved for blasting the capitalistic world. Capitalism also is a dirty word, reserved for enemies of the Soviet Union. Yet there are profits beyond the wildest dream of anyone in the Soviet Union today, and a degree of capitalism that surpasses anything in the free world.

The difference in that under state capitalism, Kremlin style, profits are not distributed to many private owners, the profits go to the sole owner of everything—the state. And this is by no means the workers paradise, for the worker has nothing whatever to say about what goes on.

The high prices which we saw quoted in good stores in Moscow and Leningrad are not necessary or realistic. They are, instead, a subtle form of taxation to drain off any surplus a worker might accumulate. In a monopolistic economic state, prices have no relationship to costs necessarily; prices are not geared to cost but are fixed by political decisions taken in the Kremlin. Shoes need not cost several weeks' salary, for they could be sold for a day's salary or issued free, if

desired. But this might leave the individual with cash in hand which the state dislikes. Private accumulation is the first step toward private capitalism.

The worker is left drained dry at all times. He must exert his maximum effort to make ends meet, and this work effort, multiplied by a hundred million souls, goes to enrich the parent corporation, which uses the labor force's productivity for capital expenditures and goods, for propaganda, for sabotage, espionage, and subversion, for education, for military preparation and adventures, for sputnik and lunik, for training of Communists to work in other countries all over the world, and for any other purpose it sees fit.

Better housing, food and clothing for the proletariat comes into this scale at whatever level the leader decides. Usually it is near the tail end. It is correct to say though that food and living conditions are improving and are vastly better than they were in the thirties.

The important thing also to remember about Soviet economics is that despite 10 million slogans and claims to the contrary, the workers or proletariat have nothing whatever to say about what goes on; they are as voiceless actually as slaves because there is no way they can make their voices felt or heard.

The proletariat does not control, they comply. There are no real unions, no strikes, no sitdowns, slowdowns, complaints; nothing but obedience or disaster. The world's greatest private corporations never approached this system in power or in numbers of workers. The Soviet Union has complete and absolute mastery over a work force of more than 100 million workers. The proletariat hasn't one thing to say about what jobs they hold, their wages, their rents or food costs, or any like factor. Russia has a dictatorship of state capitalism, big business beyond the wildest dreams of the hated trusts which the Soviet press and leaders are always denouncing.

Behind the curtain and always ready for action against a sullen or unresponsive worker or a troublesome one, is compulsion. He might lose his work card, or his assigned room to live in, or he might be ordered to a new job thousands of miles distant. Finally there is the secret police and terror. The Soviets have killed more people for economic reasons in trying to uproot humanity and change its habits than they lost in World War II.

Under Secretary of State Dillon, wise to the ways of the Soviets, recently said that "in the thirties the Communists procured foreign capital equipment by exporting grain at prices below an already depressed world market—despite the fact that millions of Russians and Ukranian peasants were dying of starvation." The graves of tens of millions of workers in the so-called workers paradise are the foundation for present industrial successes, and more will suffer and die as necessary to build this success higher.

This is the face of the enemy and the economic war in which we find ourselves. No day passes in Russia, or presumably in China, without millions of printed words exhorting greater production, greater efforts, greater sacrifices so that capitalism and particularly the United States may be surpassed, and then destroyed.

Big Business as above-explained now is working well in Russia after more than 40 years, and is moving along rapidly. The people who make it possible, albeit perhaps reluctantly, are not unhappy actually for they are better off than they have been before and feel that their lot and living conditions have improved. This is the important thing always to remember about Russia; not that the people are not as well off as we are, but that they are better off than at any time previously. Things are improving for them and they are satisfied with this.

They really do not know of better things in the world. Ninety percent of the present population grew up under so-called Socialism or Bolshevism, know little of the outside world, and are victims and believe in the Soviet's clever, well-planned, monopolistic and universal propaganda.

No longer is it useful to dream that in educating the people the Kremlin will create a frankenstein to rise and destroy the master. The Soviets have sold the people on the system, and the alleged danger and threat from the outside, particularly the United States. It is safe to say that the Russian people, naurally friendly and broadminded, have been taught to fear and distrust the United States. They believe that the United States is a grave peace threat to the world, and that it would destroy Russia if possible.

Absurd as this may seem to Americans, it loses its absurdity and becomes a menacing fact when it is realized that this is a genuine fear help deeply in the hearts of people who lost 20 million dead and saw a third of their country laid waste only a generation ago.

Summarizing a little on this phase the sad fact for us is that the average Russian may not be very well off by our standards, but he doesn't know it and he thinks he is doing better by his standards. And he has actually been taught to believe that America endangers Russia's frontiers and he must work and sacrifice to prevent this.

The average Russian also has no idea the extent of subversion and meddling in world affairs engaged in by the Kremlin, nor of the seriousness of the Communist International plans for world conquest. He is, in other words, providing the sinews and the financing for world conquest without knowing that this is the master plan of Communist planners.

Russia has always been imperialistic to a certain extent but the Russians themselves are not conquest minded. This, though, makes no difference because they have not nor will they be asked their views; here again they are the foils of communism, and they obey.

Meanwhile we are confronted with an inexorable desire by the heads of the Communist International for taking over the world. The important aspect of Soviet foreign economic policies which must never be forgotten is their determination and powerful drive to penetrate and eventually capture the newly developed countries of Asia, Africa, and Latin America through trade and aid techniques. Economic warfare was developed and is thoroughly understood by the Soviet Union; to us it is largely a nuisance well remembered from World War II of which we'd like no more.

Khrushchev has told us openly and repeatedly that the Communists shall fill the needs of backward peoples better than the Americans and consequently shall win their minds, control of their lands, their resources and themselves. We do not seem to understand such language. We understood Pearl Harbor and we finally understood Hitler's Nazi Germany; but we do not seem to gather any alarm from a more determined, more resourceful, better financed and better planned threat from Communism.

Under Secretary Dillon once said that "in their offensive economic weapons have been cleverly blended with military assistance, propaganda and diplomatic moves, to inflame local passions and to create and aggravate situations of crisis. The long rnge aim is to create climates and attitudes in the newly-emerging areas conducive to eventual Communist take-over."

If Soviet penetration, economic subversion or trade succeeds in extending Communist rule in Asia, Africa, the Near East and Latin America the cost to the Kremlin is nothing compared to the results. Police power will be used to hold the people in line, and to hold control over immense wealth in the world's vital minerals.

Americans have been reluctant to grasp the awful significance of Soviet totalitarian plans, design and action. We'd rather relax and enjoy an economy that could be toppled by Soviet plans. We cannot or rather we have not understand that human beings can think, act and work from a set of motives and reasons completely the reverse of our own.

Last year President Eisenhower told the Congress in his State of the Nation speech that "we have learned the bitter lesson that international agreements, historically considered by us as sacred, are disregarded in Communist doctrine and in practice as mere scraps of paper. The demonstrated disregard of the Communists "of their own pledges is one of the greatest obstacles to success in substituting the rule of law for rule by force.".

There can be no doubt that the Communists live by the law of the jungle; stealing, lying, killing, and destroying are virtues when done for the state. They dishonor their own word, their firmest commitments are meaningless. And this is the movement that teaches that Russia keeps its pledges but the United States does not; that Russia wants peace and we want war; that all powers are warmongers except the Communist powers.

For almost 40 years the Soviets have been training nationals of every country in the world in revolutionary tactics; how to destroy and create chaos, how to inflame and arouse peoples against their rulers and leaders. They also have been dumping trade goods into desired areas of the world at giveaway or at extremely low prices. They know how to attack America's export market by dumping of their own goods. And they have the will to do this when they see fit. They also have the financial ability, thanks to very long and successful planning.

The industrial output of the Soviet Union today is very impressive, and is very menacing. Factories still are not as neat, well built, and imposing as American factories but in many cases they are as productive; the Soviet workman has become a skilled workman. His productivity can and does rise as high as the American workman. Need is sparked by fear to drive him ever forward.

When we were in Europe Premier Khrushchev announced Russian abolition of income taxes over a 5-year period, starting next year. He made much of the fact that Russia could abolish income taxes while the United States very largely lived on such high taxes. Here is distortion and misrepresentation that takes keen analysis. The Kremlin can in fact abolish all income taxes without losing a single ruble of revenue; it shifts the emphasis to higher priced consumer goods or rents, and collects just as much as ever. But in the remote areas of the world they can brag to an unsophisticated people that they alone can live without income taxes; bane of the capitalistic world (their language).

The Soviet Premier said: "The abolition of taxes on workers and employees in our country is an impressive social gain for the peoples. One cannot speak of it without pride and emotion. This is an enormous gain, dear friends.

"Look at what is happening in the capitalist countries, where taxes are perpetually rising, unemployment reigns and prices are spiraling upwards. The insecurity of the working people lies like a heavy weight on the masses.

"When people all over the world see that the living standard in the Soviet Union is regularly improving, that wages and pension benefits are rising, that taxation is being

abolished and that the network of free medical, cultural and welfare facilities is expanding, they come to the clear realization that socialism is solving the most urgent problems and is showing the right way to get rid of exploitation, unemployment, and poverty."

This kind of talk is for the export trade, not for home consumption since Khrushchev doesn't really care a fig for public opinion at home—that is already captive. He is trying to influence public opinion in the non-committed countries.

This is "black is white, white is black" at its pinnacle. But this is not the picture the American tourist will bring home. This is the reason that it is dangerous to accept at face value the impressions of tourists traveling in the Soviet Union and the reason that permitting 15,000 or more Americans to travel there this year is in reality part of the master plan to confuse and confound the world. Facts are not always facts in Russia and what you see with your own eyes or hear with your own ears may mean something wholly different than you think.

Travelers going to Russia therefore won't necessarily bring home the truth about that country, and often are dangerously misleading in their reports.

Russia has been called a puzzle, enigma, and a riddle but it is none of these. Its purposes and plans are well advertised. It is of course difficult to understand how human beings can become so dedicated to a cruel, inhuman system which feeds on destruction—even of its own architects—but we must recognize there are several million such dedicated Communists in Russia and China.

Our job is to take the economic offensive and prove that the capitalistic system is a superior one to theirs.

Monroe Doctrine and Cuba

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1960

Mr. FLOOD. Mr Speaker, the Congress now has under consideration a number of measures that would reaffirm one of our basic hemispheric policies: the Monroe Doctrine.

Among the recent contributions to the cumulating literature on that key subject is a thoughtful article in the July 25, 1960, issue of the U.S. News & World Report, which summarizes the 1947 Rio Pact, the 1948 Bogota Resolution and the 1954 Caracas Declaration in relation to enforcement of the Monroe Doctrine.

The indicated article follows:

JUST WHAT ARE U.S. RIGHTS IN CUBA?

If the Communists force a showdown over Cuba, what can the United States do about it, legally? The answer: Plenty.

United States has the means to move to protect its interests. Pacts with the Latin-American Republics set a course of action.

Behind them is the Monroe Doctrine—scorned by Khrushchev, but still a U.S. weapon, ready for use if necessary.

Nikita Khrushchev, on July 12, brusquely informed the United States that the Monroe Doctrine—after 137 years—is "dead," and that Communism is on the way to the Western Hemisphere.

The Soviet dictator was saying, in effect, that he would do what the czars before him had failed to do: challenge the United States and enter this hemisphere.

James Monroe, fifth President of the United States, proclaimed on December 2, 1823—when the U.S. Government was only 34 years old—that any attempt by European powers "to extend their system to any portion of this hemisphere" would be considered "dangerous to our peace and safety."

In brief: The United States was prepared to resist with force, if necessary, the incursion of a European power into affairs of the Western Hemisphere.

AN EXPANDED DOCTRINE

In recent years the Monroe Doctrine has been expanded, by treaties, into a policy that is binding on all the American republics.

On July 9, 1960—in the 137th year of the Monroe Doctrine—President Eisenhower asserted flatly that the principle of the Doctrine would continue to be enforced.

Said the President, in a warning to Khrushchev:

"I affirm in the most emphatic terms that the United States will not be deterred from its responsibilities (to prevent interference in hemisphere affairs by an outside power) by the threats Mr. Khrushchev is making. Nor will the United States, in conformity with its treaty obligations, permit the establishment of a regime dominated by internatitonal Communism in the Western Hemisphere."

Nikita Khrushchev 3 days later, on July 12, challenged the President. Khrushchev declared the Monroe Doctrine "has died a natural death." Earlier, he threatened the United States with attack by intercontinental missiles if it moved to interfere with communism's spread in Cuba.

The United States came back on July 1 to declare "the principles of the Monroe Doctrine are as valid today" as ever. It said these principles are upheld not only by the United States, but they "represent, through solemn agreements, the views of the American community as a whole."

What United States can do. Thus raised is the question of U.S. rights and U.S. agreements related to the invasion of the hemisphere by communism—through either force or subversion.

The Rio Pact: Under this treaty of 1947, the American republics are pledged to a "common defense" if the "political independence of any American state" is endangered by an outside power. It authorizes the use of armed force for the common defense of the Americas.

The Bogotá Resolution: Under a resolution passed by the Ninth Inter-American Conference, at Bogotá in 1948, the American Republics condemn "the action of international communism or any other totalitarian doctrine." That conference also adopted the Charter of the Organization of American States, which reaffirms the commitment made in the Rio Pact to act jointly against a threat from outside the Western Hemisphere.

The Caracas Resolution: Under this declaration of 1954, the domination or control "of any American states by the international Communist movement" becomes a threat to peace. In such event, the resolution calls for consultation for "appropriate action."

Beyond these are U.S. rights under international law. If American lives are endangered in Cuba, for example, the United States can send in troops under an international right of self-defense. The same applies to wholesale seizures of American property without "prompt and adequate" compensation, if such action is felt by the United States to be a threat to peace and if the Organization of American States fails to act.

United front? Privately, almost every responsible leader in Latin America is fed up with Fidel Castro and his ties with Moscow. There were signs that hemisphere allies were beginning to rally around the United States.

At Peru's request, the Council of the OAS met on July 16 to take up the Red threat. Before that, Argentina called on Cuba to denounce Khrushchev's "statements which may be construed as interference."

At some point, joint action could come to check Castro and the Reds. The Monroe Doctrine, far from dead, looked stronger than ever.

The Changing Face of American Cities—No. 4

EXTENSION OF REMARKS
OF
HON. DONALD J. IRWIN
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1960

Mr. IRWIN. Mr. Speaker, I have been introducing in the RECORD a series of insertions, "The Changing Face of American Cities," and under permission previously granted include the following excerpt from Forum magazine's two-part survey, "The New Urbanites." The excerpt:

THE INFLUX OF NONWHITES IS COMPOUNDING THE BIG CITIES' SLUM PROBLEMS AND FOCUSING ATTENTION ON THE INADEQUACIES OF THE NATION'S PUBLIC HOUSING AND RENEWAL PROGRAMS

Three-quarters of the estimated 13-million substandard housing units in U.S. city slums are occupied by Negroes and other nonwhite racial groups, most of them recently migrated from rural areas. Last month, Forum examined the sources of this new urbanite population, and the economic, ethnic, and social forces causing it to huddle in teeming and growing slums. This month, Forum considers the major necessity without which the integration, urbanization, and free advancement of this new group of city dwellers cannot begin to be solved, which is decent housing. And, although the record to date is bleak, there are some real stirrings toward a more hopeful future.

The housing market for Negroes has traditionally been a trickle-down market, but only in the past decade or so has the trickle amounted to much. Though Negroes have expanded into formerly white residential areas, their chances of moving on, outside the city limits in the wake of families with the same economic and social characteristics and ambitions, are slim at best. Thus the middle-income Negro is blocked off from becoming truly middle class in terms of housing, for he is banned from that great oasis of middle-class mores, the suburb. The case of Grosse Pointe, Mich., an upper-income suburb of Detroit, exemplifies the smug exclusiveness that has intensified the minority housing problem. That community has devised a system of ratings for potential home buyers, who are investigated by a detective and screened by a special panel. The ratings are based on ethnic background, accent, clothes, and other important measures of desirability. Negroes, however, do not get rated at all. The furor over this bit of nonsense has already prompted State officials to consider legislative action to bar any further employment of such ratings scales.

Government has attacked the problem of the slum ghettos with two basic weapons—slum clearance and public housing. Both seem sound in principle. Certainly the worst

slums should be destroyed, and ideally they should be rebuilt with new, healthy housing, available on an open-occupancy basis to low-income groups. However, neither Federal urban renewal nor public housing has come close to solving the overall problem of slum proliferation and misery. In many respects, they have intensified the problems.

THE FAILURE OF FEDERAL SOLUTIONS

The Federal public housing program has just about ground to a halt. Last year, only 21,427 units were completed, and this year less than that will be built. Five years ago, when the program was cut to 35,000 units per year, its advocates howled, but the sad fact is that even this is much more than the cities can digest. Several weeks ago, acting Public Housing Commissioner Lawrence Davern was asked by a Senate committee why cities were no longer requesting Federal aid for public housing, and he replied that northern cities, in particular, were not requesting more aid, despite demonstrated shortages in low-income housing, because of integration problems. City officials, Davern maintained, are unwilling to approve sites where neighbors might object to public housing (which must have open occupancy in almost all northern cities, although Federal law does not require it), or where integration might prove difficult.

Many cities are gravely concerned about the heavy concentrations of Negroes in public housing projects. Chicago public housing is 88 percent Negro, Washington over 90 percent, and New York City 39 percent. Yet it is the Negro families that need housing most, and they can hardly be restricted by quotas or any other such artificial means as long as they are least privileged in housing choice. It has been estimated that average Negro income for the Nation as a whole is only 60 percent that of whites, and that three out of every four families dislocated by slum clearance in cities are Negro families with incomes under $4,000 per year.

The fact that what little public housing there is has been increasingly Negro does not enhance its popularity, and the overpublicity given to the antisocial behavior of a few problem families in public housing sours many cities' taste for more. Much of the blame for the failure of the program must be laid directly to the local authorities and to the PHA itself (Forum, June 1957). Unrealistic income and building cost ceilings, unworkable regulations, too few large dwelling units, and other failings have all been charged at various times, in various cities, but none of these is as important as the misguided notion that public housing could be used to create new neighborhoods, isolated from the rest of the community. From this misconception grew the goliath developments that cover block upon block of New York, Chicago, and other cities, unfriendly monstrosities that are never referred to by their inhabitants as anything but "the project." Problem families are indeed a problem, and always will be, but problem buildings need not be duplicated year after year.

Philadelphia and Baltimore, among other cities, have discovered that new neighborhoods cannot be created by public housing, and that the effort is likely to result only in the exchange of new blight for old. These two cities have pioneered a more sensible approach to the problems of housing low-income families, based on upgrading their housing and neighborhoods by judicious rehabilitation of single units, accompanied by vigorous social work to educate the new urbanites in the ways of urban living. They have successfully attempted scattered site and conversion programs, and have encouraged new design concepts. The settlement-house approach, wherein the newcomers are drawn into a neighborhood rather than walled off from it, has worked and is being refined. In Baltimore, the usual 1-year in-city residence rule has even been waived in public housing, and it has not led to any rush of new urbanite families, but rather made it possible for the authority better to serve those families which are most in need of help.

In New York City, the biggest public housing program of all has fallen short in many respects. Planner Raymond Vernon, author of "Anatomy of a Metropolis," perhaps summed it up best when he observed that "the redevelopment of neighborhoods through the subsidized construction of low-income housing has generally not greatly altered the density or distribution of population." Thus, despite 26 years of effort and a total of 110,000 units built, New York's public housing, though it has greatly augmented the supply and quality of housing for the least privileged, has hardly made a dent in the cruel pattern of segregated, congested slums.

Of course, the greatest failure of public housing has simply been its insufficiency. Every big city in the Nation has a long waiting list for public housing, and relocation agencies have long decried the lack of it for eligible families uprooted from slums by Government action of one sort or another. There are currently 326,000 units in active planning or under construction, but this can hardly meet the challenge of 13 million substandard dwelling units occupied by more than 13 million families due to doubling up.

GILDING THE GHETTO

If public housing has not helped low-income families, particularly minorities, by dint of its insufficiency, poor design, and administrative shortcomings, the urban renewal program has, indeed, been a real obstacle for these families. In the first place, though it is, like public housing, a slum-clearance program, urban renewal was never designed to provide housing for the slum families it must, of necessity, dislocate. Its purpose has been to draw middle-income families back into the central city with attractive new housing. No one argued with this notion back in 1949, when the urban renewal program was passed, because no one then foresaw the utter collapse of public housing, with a consequent loss of housing opportunity for those families uprooted. As a result, low-income families are constantly being ousted from their slums, and shifted to other slums, unless they can get into public housing. This not only adds to the congestion of the already crowded slums, but propagates and intensifies the slum ghetto, for the majority of dislocated families are usually forced into Negro slums not very different from those being cleared.

Urban renewal, like public housing, attempts to create new neighborhoods, but it seems to have a better chance of succeeding. For one thing, urban renewal can operate on a vaster scale. Philadelphia's Eastwick area, for instance, will eventually be rebuilt with 10,000 units of new housing, selling for $10,000 to $12,000. As Development Coordinator William Rafsky says: "This will be the first large supply of new housing available to Negroes in Philadelphia and it may become the first large-scale integrated area of the city."

Most cities say their renewal programs are not far enough along yet to gage fairly the final result. But it is already apparent from progress in New York City, Chicago, and several other large cities that most projects with not accomplish much more than clearing patches of slums and substituting new housing. By and large it is housing that will not accommodate those living in the replaced slum or the surrounding neighborhood, so in effect, it must attract a different breed of city dwellers, usually older, well-to-do couples without children, or professionals who have long spurned the suburbs. Moreover, though urban renewal housing is thought of as open-occupancy housing, it is for whites only. This is due simply to high rents, too prohibitive for any but the tiniest minority of high-income, Negro professional families. One New York housing expert, when asked his opinion of the effect of housing white families in Harlem title I projects, scornfully characterized such integration as "gilding the ghetto." Neither public housing nor urban renewal has done much to solve the basic problem of housing the vast number of Negro families, new and old urbanities, in central cities. Basically, this has been because neither program has been big enough to solve the housing shortage which underlies the whole problem. In New York, scene of the Nation's biggest urban renewal and public housing programs and its biggest private apartment boom, a total of 380,000 housing units has been produced in the past decade; yet, according to a recent analysis by J. Anthony Panuch, the city today has the same basic housing shortage it had 10 years ago. It still lacks 430,000 units in meeting its needs, and this was exactly the deficiency in 1950. Thus 38,000 units a year on the average (25,000 of them new) are only enough to keep New York standing still. At this pace, it will be 20 years before the city pulls abreast of today's needs.

Coal Wins Over New England

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1960

Mr. LANE. Mr. Speaker under leave to extend my remarks in the RECORD, I wish to include an editorial which appeared in the Boston Herald on August 16, 1960:

COAL WINS OVER NEW ENGLAND

On Saturday we warned that the soft coal interests were seeking to hold down imports of residual oil to 400,000 barrels daily for the last quarter of the year. The New England Council, keenly aware of the importance of residual in this area's economy, asked for 560,000 barrels a day.

We said that what the Interior Department decided as to the quota would show whether coal was retaining its dictatorship over New England.

The dictatorship of coal has now been reaffirmed. The Department of the Interior, while not going quite down to the level sought by the coal interests, has set the import quota at 415,000 barrels a day. This is so close to coal's demands that it marks a clear victory.

Why is the Department of the Interior thus playing coal's game? There is nothing in the Presidential proclamation setting up the oil import quota program that mentions coal. The declared purpose was the preservation of "a vigorous, healthy petroleum industry in the United States."

Residual oil is unimportant to the petroleum industry, and unlimited imports of this product would not disturb the domestic oil companies. The President's proclamation was aimed at crude oil and other products.

But residual oil does compete with coal. The coal industry would like to see the price of residual so high that users of oil equipment convertible to coal will turn to coal, and new customers will choose coal over residual.

What then is the intent of the Interior Department? Has it secretly determined what share of the market coal should have and will it now arrange import quotas ac-

cordingly? Or is it merely bending to the superior strength of the coal lobby as against the Petroleum Industry Research Foundation, the New England Council and the New England delegation in Congress?

The New England Council calls for a tougher fight to protect New England's interests. We join them.

Monroe Doctrine at Full Cycle

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1960

Mr. FLOOD. Mr. Speaker, students of history have long since recognized the cyclic nature of foreign policies of great nations. This tendency is well illustrated in the case of the Monroe Doctrine.

An informative editorial on this doctrine by Robert Akerman in the July 25, 1960, issue of the Richmond (Va.) News Leader will be of interest to every Member of the Congress.

The editorial follows:

RUSSIA FIRST FOE OF MONROE DOCTRINE

(By Robert Akerman)

With Nikita Khrushchev's shocking defiance, the Monroe Doctrine comes back where it started.

Russia was its first target, the first enemy of the principle which it embodies, the first nation to be warned by the United States against further colonization in the New World.

A widespread impression is that the Monroe Doctrine of 1823 involved protecting South America against Spanish attempts to regain her former colonies. However, that's only part of the story—and not the first part, either.

Since 1741, when Vitus Bering discovered Alaska, Russia had claimed territory on the Pacific coast of North America. These claims were followed up by Russian settlements in Alaska before the end of the century.

No one could object to Russian activity in Alaska, as international law recognized the rights of a discovering nation. But Russia began to make bigger plans. Talk started in czarist circles about converting the Pacific into a "Russian lake," by extending settlement from Alaska into the Oregon territory and even into California—areas which she had not discovered.

Acting on this idea, in 1811 the Russians set up a trading post in California, only 48 miles north of the present site of San Francisco. More than 100 colonizers established themselves there, even though Spain actually owned California. Nikolai Rezanof, the Czar's chamberlain, viewed this move as a step in making California a Russian possession.

J. B. Prevost, a U.S. naval officer in the area, sent warnings to Washington of what was happening. He wrote: "Surely the growth of a race on these shores, scarcely emerged from the savage state, guided by a chief who seeks not to emancipate but to enthrall, is an event to be deprecated—an event, the mere apprehension of which ought to excite the jealousies of the United States."

Meanwhile, in negotiations with England and Spain, the United States has strengthened its claims to portions of the Oregon Territory. Because it was between the legitimate Russian colony in Alaska and the illegitimate infiltration in California, this Oregon foothold gained in importance.

In 1821 the Czar issued a decree declaring a large portion of the north Pacific closed to trade or navigation except for Russian vessels. This brought Russian imperialism out in the open. Secretary of State John Quincy Adams moved vigorously to oppose it. Discussions were held with the Russians over their intentions. In his diary for July 17, 1823, Adams records the decisive conference with the Russian envoy, Baron Tuyl:

"I told him specially that we should contest the right of Russia to any territorial establishment on this continent, and that we should assume distinctly the principle that the American continents are no longer subjects for any new European colonial establishments."

That was 6 months before the formal announcement of the same principle in President Monroe's famous message to Congress. The first part of the subsequent Monroe message was clearly framed as a warning to Russia.

In another 6 months Russia backed down from her grandiose ambitions, signing a treaty with the United States setting the present southern boundary of Alaska as the limits of her territorial claims.

Eventually the United States acquired California from Spain and Alaska from Russia, changing the Pacific picture entirely. The Russian decision to give up Alaska in the 1860's, incidentally, was partly owing to this earlier failure to make it the nucleus of a North American empire, though Russian weakness revealed in the Crimean War of the 1850's was a more immediate factor.

Thus, in both a general and a particular way, reactionary Russia was a foe of the Monroe Doctrine—its very first foe. So today Communist Russia is following in the footsteps of a czarist imperialism it pretends to have killed.

Renewal of Bill Which Brought Books to 30 Million Is Urged

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HCUSE OF REPRESENTATIVES
Monday, August 22, 1960

Mr. CANFIELD. Mr. Speaker, I submit a timely and appealing article appearing in the Washington Start of last Sunday in support of the library services bill, captioned "Renewal of Bill Which Brought Books to 30 Million Is Urged":

RENEWAL OF BILL WHICH BROUGHT BOOKS TO 30 MILLION IS URGED

(By Mary McGrory)

Lovers of libraries are hoping that the special session of Congress will do something special for the library service bill, which will expire next June unless the program is extended.

The renewal of the program which brought books within reach to some 30 million readers in the past 5 years, passed the Senate without any trouble. But in the House it has been stalled in the Rules Committee.

The library services bill started some 200 bookmobiles chugging around the backroads of the United States, added 5 million books to the bookshelves of the Nation under a cooperative Federal-State scheme.

APPRECIATIVE READERS

The reservations entertained by the Rules Committee about its efficacy and necessity are not echoed by the patrons of the 5-year-old service.

An old man in Texas, enjoying the first public library patronage of his life, wrote in to say this: "It is almost too much for me. When I look at all these books of knowledge and adventure at my fingertips and think of how much I've missed in the past, I'm just desperate to know where to begin."

The wife of a New Mexico forest ranger put the hunger for books more starkly: "This bookmobile is a bright spot in our lives. We live for the times it comes; we need the reading to keep us sane. It's lonely out here."

Housing Glut

EXTENSION OF REMARKS
OF
HON. EDWARD J. DERWINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1960

Mr. DERWINSKI. Mr. Speaker, a recent editorial in the Chicago Daily Tribune should be of particular interest to us at this point, and I hereby insert it into the RECORD without further comment:

HOUSING GLUT

Last Sunday the Tribune printed 33 columns of want ads offering houses and apartments for rent in and about Chicago. Yet on June 16 the Democratic-controlled Senate passed a $1.2 billion omnibus housing bill which provided, among other things, for an additional 25,000 public housing units. A similar measure has been reported by the House Banking and Currency Committee, but the Rules Committee has refused to clear it for floor action.

In its platform the Democratic Party moans, "Today our rate of home building is less than 10 years ago. A healthy expanding economy will enable us to build 2 million homes a year, in wholesome neighborhoods, for people of all incomes. Republican policies have led to a decline of the home-building industry and the production of fewer homes.

"We support a housing goal of more than 2 million homes a year. * * * Our housing programs will provide for rental as well as sales housing. * * * Even with this new and flexible approach, there will still be need for a substantial low-rent public housing program authorizing as many units as local communities require and are prepared to build."

The only question is: Who will occupy all this housing? The weekly Labor Forecast and Review reports, "Members of Congress at this special session of Congress will consider a bill for an expanding housing program. Many observers, including labor union leaders, try to place the 17-percent lag this year in homebuilding on a shortage of housing credits. But a new Federal survey of housing vacancies shows evidence that the supply of existing dwelling space already is well above demand.

"The high rate of rental vacancies, coupled with reports of large inventories of unsold new homes, indicates many people are unable or unwilling to enter the market for a new place to live. * * * Yet this congressional session will be pressured to provide more cheap housing money to further glut an oversupplied market."

The other day we cited a survey which showed small demand among elderly people for Federal medical handouts and as little need for such intervention. Housing seems to be another instance where the Democrats

insist on spending when the need is nonexistent. How much more of the Democratic program consists, not of what the people need, but of what the politicians insist on forcing on them at their own expense?

Sound Bases for Federal Aid to Catholic Schools

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, August 22, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a most comprehensive article on Federal aid to education as written by Rt. Rev. Timothy F. O'Leary, superintendent of schools for the archdiocese of Boston and which appeared in the Pilot, Boston, Mass., on August 20, 1960:

SOUND BASES FOR FEDERAL AID TO CATHOLIC SCHOOLS

(Monsignor O'Leary, superintendent of schools for the archdiocese of Boston, has recently been appointed area editor in the field of philosophy of education for the preparation of the new Catholic Encyclopedia. The following article is reprinted from the September issue of the Catholic Educator.)

(By Rt. Rev. Timothy F. O'Leary)

The relationship between Government aid to education and the broad topic of "Catholic Social Philosophy" is not difficult to ascertain. For Federal aid legislation is at once a current social problem and a subject within the legitimate scope of Catholic social philosophy.

As a social problem, it is concerned with the laudable objective of equalizing educational opportunity and advantage in America. The need of such equalization is readily conceded.

As a subject for application of Catholic social philsophy, it furnishes occasion for the restatement of some of the fundamental postulates upon which the Catholic position toward Federal aid is based.

For the purposes of the present discussion, these fundamentals may be succinctly stated:

(a) If the concept of Federal aid includes the idea of Federal or any other kind of governmental control which would destroy the antecedent educational rights of the family or the supernatural educational rights of the church, then such aid is to be rejected upon well-established social, moral, constitutional, and traditional grounds:

(b) If the concept of Federal aid excludes children in nonpublic schools as the legitimate beneficiaries of social services and economic advantages to which they are entitled by virtue of their status as part of the body politic, then it is to be rejected as discriminatory.

These two propositions, in turn, are based upon the Catholic philosophical ideas, respectively, of social justice and distributive justice.

RIGHTS

Social justice, grounded upon the norm of social ethics, and buttressed in this Nation by constitutional sanction, holds that the primary right of education inheres in the parents of the educable being, the child.

Distributive justice, so well expressed in our pledge of allegiance as "liberty and justice for all," requires that the benefits of the general government, as well as its burdens and obligations, be parceled out without discrimination by reason of race, creed, color, or national origin.

It is in the light of this philosophical background that the Catholic position on Federal aid must be understood and analyzed.

No one will deny, I think, that the theory behind any form of governmental aid to education revolves around the principle of aiding and encouraging parents in fulfilling their obligation to provide instruction and character formation for their children. The secondary motive behind governmental aid, and one of equal importance, is the production of an alert, intelligent and informed citizenry.

If we subscribe to this theory, then we must logically hold that all parents without exception should receive the same kind and degree of aid and encouragement. Consequently, if the parents may, as the Supreme Court has held they might, fulfill the duty to educate by enrolling the child in a school of their choice, it would be illogical to say that the government cannot or should not render assistance to the parents because the school chosen is nonpublic in character.

To me, this logic appears irrefutable and it firmly supports the Catholic position in opposition to any Federal aid to education legislation which does not include school children in private and parochial schools as distributees of Federal funds expended for auxiliary school services.

CHILDREN

Catholic education, as a distinct but coordinate system in the larger scheme of American education does not ask for either Federal or State funds to underwrite construction or repair of parochial schools, to subsidize maintenance of them, or to pay teachers' salaries.

It does demand, however, that its subjects, as the offspring of present taxpayers and as future citizens themselves, participate in whatever benefits and advantages may accrue to the school population generally from the distribution of Federal funds for payment of auxiliary services. Frankly, this means that we will compete under present fiscal arrangements in the domain of the three R's and continue to stress the importance of the fourth R without outside assistance, but if subsidiary, auxiliary and complementary services are to be made available from the general treasury, then we can conceive of no reason based upon equity or justice why the Catholic school child should be penalized because his parents have decided that secularism is not a good educational philosophy.

An example in point is the National School Lunch Act. It is impossible, objectively speaking, to conceive of any valid reason why a child in a private or parochial school should be deprived of a hot lunch or a bottle of milk paid by Federal subsidy when the national legislation providing therefor is predicated upon the proposition that the lunch and milk are nutritional aids to the general welfare of the entire body of our future citizens.

By the same token, bus transportation as a safety measure, nonreligious textbooks as educational aids, health examinations and innoculations as contributions to physical welfare, visual and audio aids as supplementary teaching equipment and all other similar auxiliary educational devices which are of direct service to the child, if federally subsidized at all, should be made available to all school children without discrimination.

EQUALITY

The boundaries of the area covered by the constitutional phrase "equal protection of the laws" may be rather nebulous, but if its sanction is transgressed by withholding aid and encouragement of Federal assistance from Catholic school children, then we are faced with a proposition which is tantamount to a declaration that there exists in this country a catageory of second class citizens. Obviously, deprivation of such assistance would result in grave educational and economic disadvantage to the child attending the nonpublic school. If the latter is omitted from consideration and if the Federal Government should decide to eliminate all aid to Catholic schools, then general welfare, becomes partial welfare, and a minority is stigmatized by exclusion from common benefits solely because of the exercise of the right of free choice in education.

What I have said is nothing more or less than a reiteration of the words of Pope Pius XI in his encyclical on the Christian education of youth:

"It is clear that in all these ways of promoting education and instruction, both public and private, the state should respect the inherent rights of the church and of the family concerning Christian education, and moreover, have regard for distributive justice. Accordingly, unjust and unlawful is any monopoly, educational or scholastic, which, physically or morally, forces families to make use of government schools, contrary to the dictates of their Christian conscience, or contrary even to their legitimate preferences."

In relation to the educational rights and duties of parents and government, the encyclical on the Christian education of youth is in harmony with American law as construed by American courts. Unfortunately, the whole issue of Federal aid to private and parochial schools has been beclouded by serious misunderstanding as to the true meaning of the Jeffersonian concept of the "wall of separation" between church and state.

Misconstruction of this doctrine has tended to foster the notion that schools which supplement secular education with religious instruction are inimical to the idea of separation of church and state. This, in turn, tends to confirm the fallacious reasoning which contends that education of the youth in the land is properly a state or government monopoly and that sectarian schools exist only by government sufferance. In the argument in the Supreme Court case which upheld bus transportation for nonpublic schoolchildren, this reasoning was carried to its logical conclusion in the form of a contention that sending of children to a private school was merely an excuse for not utilizing the public facilities afforded by the state.

Until the decision by that Court in the Illinois religious instruction case, we had cause to believe that such invidious philosophy would find little support in American constitutional interpretation. The Oregon school case, and the New Jersey schoolbus case had previously led to the belief that the State as parens patriae could legally and constitutionally provide social benefits to all its children without regard to the type of school attended. Then, however, the wall of separation between church and state was enormously heightened into an impregnable barrier between public education and any attempt to leaven its secularism with religious or moral instruction.

Sound social, legal, and educational thought rejects the idea that the Jeffersonian concept of church-state separation means what the Supreme Court said it does in the Illinois case. Such rejection is based upon the premise that the common welfare of both the individual man and the state is intimately related to their correspondence with the supreme scale of values ordained by Almighty God—and cannot be attained if such values are ignored or denied. What the Supreme Court overlooked or intentionally disregarded was the simple but ultimate fact that the sanctity of law itself,

based as it is on the higher norms of the moral law, is denuded when separated from religion.

Law, morality, and religion are the forces which cement society together. The constitutions of 19 States expressly refer to the moral training of children. The courts of the country are unanimous on the necessity of moral training. The state needs morality and religion as much as the individual for purposes of social integrity.

The sweeping generalizations of the McCollum decision were fortunately modified by the 6–3 ruling in the Zorach opinion of 1952. In this case the constitutionality of released time off the school premises was tested. This arrangement was sustained by all the New York courts as well as by the U.S. Supreme Court.

CHURCH AND STATE

The full meaning of the Zorach opinion is still a matter of some speculation. From 1952 until at least early 1960 the U.S. Supreme Court has not granted review to any important church-state matter. As a result, it is not certain to what extent Zorach would condemn various church-state practices which are now in litigation. In any event, Zorach is significant for the following reason:

(a) The opinion contains the often cited phrase by Justice Douglas who wrote for the majority of six: "We are a religious people whose institutions presuppose the existence of a supreme being."

(b) The decision does not even mention the "wall of separation" adverted to in the McCollum opinion.

(c) The ruling, while stating that it does not set aside McCollum, nonetheless affirms that the separation of church and state is not an absolute and that the state may accommodate its schedules to serve the spiritual needs of its people.

The groups which sponsored the Zorach litigation (the American Jewish Congress and the American Civil Liberties Union) have consistently tried to minimize the retreat of Zorach from McCollum. The fact remains, however, that Zorach stands as a major qualification, a substantial gloss, on the wild and sweeping generalizations included in the McCollum opinion.

Religionists and those interested in the parental right to educate should be completely familiar with the language and interpretations of the Zorach opinion since it is the actual law on church-state relations in this country at this time. These same groups should similarly be very cognizant of the force of the three-man dissent in Zorach. These opinions represent the views of these innumerable citizens and organizations which are opposed to virtually any form of cooperation between public education and organized religious bodies.

THE WALL

If extension of Federal aid to nonpublic schools, particularly to Catholic schools, should founder upon interpretations currently fashionable as to the meaning of the wall of separation between church and state—interpretations, by the way, which would probably amaze, if not shock, the author of the phrase—then a nonlegal phrase taken out of context will become a constitutional norm superseding the narrowest interpretations of the general welfare and equal protection clauses of the Constitution itself.

The "wall of separation" argument is used today as a means of denying parental rights conferred by the first amendment of the U.S. Constitution, e.g., through attempts to make it difficult for the parent who wishes his children to get a Christian education by denying rights of transportation, free lunches, schools, and through endeavors to drive the Catholic schools out of business by taxation as attempted recently in California.

Thus, the enemies of the Catholic schools discriminate against Catholic parents and children on the sole ground that they are Catholics. Both are penalized by the very fact of their religion.

The "wall of separation" works, indeed, against the welfare of state and nation. As Edwin S. Corwin has pointed out in his criticism of the McCollum case, a democracy presupposes, if it is to work at all, a people or citizenry morally responsible, and there can be no real moral training unless it is based on religion. In this statement Professor Corwin has given an excellent summary of judicial thinking on the subject in America. Therefore, when separationists oppose schools where religion is taught, they are denying state and nation of the very thing government requires for its existence.

In the States, and in Federal provisions where they affect the schools of the Nation, discrimination results from legislation which treats matters of general welfare as exclusively public school matters, as in school adjustment counselors, free lunches, etc.

In this whole matter we may recall the words of Leo XIII in the Encyclical entitled "Rerum Novarum." "No man may with impunity outrage that human dignity which God Himself treats with reverence; nor stand in the way of that higher life which is the preparation for the eternal life in Heaven."

Proposed Citation for Contempt of Congress by House of Representatives of Officials of the Port of New York Authority

---

EXTENSION OF REMARKS

OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, August 22, 1960

Mr. JAVITS. Mr. President, late today a telegram came to one of my colleagues from New York in the House of Representatives. Apparently it was sent to all Members of the House by the incumbent Governor of New York, Hon. Nelson A. Rockefeller, and the three preceding Governors of New York, Hon. W. Averell Harriman, Hon. Thomas E. Dewey, and Hon. Herbert H. Lehman. The telegram is with relation to a matter which will be before the House of Representatives tomorrow concerning certain citations for contempt involving three officials of the Port of New York Authority. This agency is a bistate agency.

The telegram makes an urgent plea which otherwise might not be available to all Members of the House tomorrow, because of their not having received a telegram or through other failures of delivery. Therefore, in fairness to my colleague, Representative LINDSAY, who has asked that this matter be placed in the Record, I ask unanimous consent, at the request of Representative JOHN LINDSAY, of New York, that the text of the telegram be printed in the Appendix of the RECORD, where it will be readily available to all Members of the House of Representatives.

There being no objection, the telegram was ordered to be printed in the RECORD, as follows:

AUGUST 22, 1960.

Telegram to all Congressmen:

We join together in our respective capacities as Governor of the State of New York and as his immediate predecessors in that great State office to express our concern over the recommendation to be made to the House of Representatives tomorrow that the House cite three respected officers of this State and the State of New Jersey for contempt of Congress. One of these officers is serving our State, on successive appointments by Governor Dewey and Governor Harriman, as the nonsalaried chairman of the Port of New York Authority.

To the best of our information and belief such precipitate and unhappy action would mark the first time in the history of the United States that the Congress ever voted to instigate criminal prosecution for contempt against State officers serving a State agency in a matter that concerns the proper exercise of their official State duties. What is more they will have been cited for carrying out the express and written instructions of the Governors of New York and New Jersey, based on the conclusion of the two Governors that "the furnishing of the internal records now requested, in the opinion of (the Governors') legal advisers, would represent a serious infringement of the rights of the States under the Constitution and could constitute a dangerous precedent as recognition of Federal authority in an area of State responsibility."

Prior to the issuance of these instructions the three officers had made available to the Congress great volumes of materials amply sufficient to supply all the information with which the Congress could have any proper concern in the pursuance of its legislative functions.

Since last April the Governors of New York and New Jersey, as well as many former Governors, had asked to be heard in opposition to the bill introduced by Congressman EMANUEL CELLER (H.J. Res. 615) which would require that all future projects of our port agency here in New York be conditioned upon the approval of the Congress and the President of the United States, and which would provide also for a continuous right of inspection, review and approval by the Congress of all books, records, and papers of the port authority. The hearings on this bill have been repeatedly and now indefinitely adjourned by Congressman CELLER with the result that both the two Governors and former Governors of New York and New Jersey have been denied any opportunity to be heard in opposition to this destructive legislation.

Furthermore, the appeal of Governor Rockefeller and Governor Meyner to be heard by Mr. Celler's committee before any action was taken by his committee on the contempt citations was also rejected by Congressman Celler.

We are therefore faced with an assertion of Federal power to control State and municipal agencies which would wrench our system of government from its established foundations. As Governor Rockefeller and Governor Meyner put it in their joint directives of June 25, 1960, to the port authority the subpena at issue appeared to us and our legal advisers to constitute a novel intrusion by the Federal Government into areas reserved by the Constitution to our respective States and to constitute a precedent which could subject various agencies of State government throughout the Nation to be similarly answerable to Federal authority.

There has thus been precipitated a clash between the Congress on the one hand and the constitutional rights of the people of the States to administer their own governments on the other which can and should be

avoided. We respectfully request you support our position.

NELSON A. ROCKEFELLER.
W. AVERELL HARRIMAN.
THOMAS DEWEY.
HERBERT H. LEHMAN.

Mr. WILLIAMS of New Jersey. Mr. President, will the Senator yield?

Mr. JAVITS. I yield.

Mr. WILLIAMS of New Jersey. Mr. President, it was my hope that this matter could be discussed at some length in the Senate today. There is great concern throughout the country over the proposed action in the House of Representatives. Not only are the Governors of New York and New Jersey concerned about the development; but we have had some expressions of concern from many Governors. Furthermore, there are 36 bistate agencies which are looking with interest, some with alarm, but all with concern, at this development.

Mr. President, I have prepared a statement which I thought might be timely for the discussion in the Senate today. However, the hour is late, so I ask unanimous consent that my statement be printed in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF MR. WILLIAMS OF NEW JERSEY

I have refrained from public comment on the dispute between the Port of New York Authority and Subcommittee No. 5 of the House Judiciary Committee because I do not wish to interfere in a matter now directly under House consideration. Since, however, the subject has been raised here today, I would like to give a brief statement on my reasons for hoping that the subcommittee will not press for a contempt citation.

Thirty-six interstate agencies throughout the Nation now await the outcome of this dispute. Grave concern has been expressed by the directors of those agencies, by several Governors, by legislators, and by newspaper editors and others who have studied the relationship of State and Federal Government.

Already, several of the New Jersey representatives who asked for the original House subcommittee inquiry into port authority operations have said that the demands made by the subcommittee go further than anything they asked for. Gov. Robert Meyner has found considerable agreement from other Governors on his stand against the investigation of records describing internal operations.

Undoubtedly, there are many general questions about the Port of New York Authority that warrant the attention of legislators here and all those concerned about the powers of such agencies elsewhere throughout the Nation. How, for instance, are metropolitan regions of the future to work cooperatively with such agencies to settle mutual problems? But I personally doubt that the issuance of subpoenas will lead to little more than protracted court test and general confusion about the purposes of the original House subcommittee inquiry.

I think that Governor Meyner, in a letter to New Jersey representatives on August 19, suggested a wise and workable alternative. First he wrote that he objected only to the subcommittee for material relating to internal management of the agency, not to requests for any documents necessary to help the Congress in its study of whether the agency is operating within the scope of its authority. Then he wrote:

"There is a simple, quick, and efficient means by which the issue could be resolved in court if the committee were willing to permit it. The Attorney General of the United States is fully empowered to bring an action against the port authority for a declaratory judgment as to the respective rights of the Federal and State Governments. *United States* v. *California* (332 U.S. 19 (1947)).

"I would be pleased to have a court test if Congress wishes to question the sanctity of confidential internal memoranda of an executive arm of State government. Indeed, I have requested such a court test. But I believe it would ill befit the importance of this principle of Federal-State relations to try the issue in a criminal proceeding against three eminent, reputable State officials who acted in conscientious obedience to the instructions of the elected chief executives of their States."

It may well be that, after nearly 40 years of operation under a novel method of authorization, the Port of New York Authority will require a legislative reassessment of some of its policies. Any such reassessment can be done most thoroughly, I believe, at a State level, while Congress lives up to its more general responsibilities.

I hope, therefore, that a more satisfactory way will be found for the subcommittee to continue its inquiry, if it is decided that the inquiry must be continued. Unless we do find a more satisfactory way, we shall find ourselves increasingly involved in side issues rather than in obtaining a more thorough understanding of the questions raised by the overall impact of interstate agencies on the Nation today.

Public Laws 592 to and Including 620

EXTENSION OF REMARKS

OF

HON. BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 22, 1960

Mr. O'HARA of Illinois. Mr. Speaker, since the convening of the 2d session of the 86th Congress until the time of our adjourning for the recess, a total of 293 public laws were enacted. In the 1st session of the 86th Congress 383 public laws were enacted, hence the numbering for the 2d session starts with 384. In my reports to my constituents in the Second District of Illinois I have given a digest of all the new legislation, both major and minor.

Thinking that this digest might be of interest to my colleagues, and of some use for easy reference, I extended my remarks on page A5956, A5957, A5958, A5962, A5963, A5964, A5966, A5967, A5968, A5972, A5973, A5977, A5978, and A5979 of the CONGRESSIONAL RECORD of July 15, 1960, to include the digest of Public Laws 384 to and including 591. The large number of letters I have received from readers of the CONGRESSIONAL RECORD in all parts of the country has encouraged me further to extend my remarks to include Public Laws 592 to and including 620, as follows:

PUBLIC LAW 592

H.R. 12311: Sugar quotas

Public Law 592 (1) extends the Sugar Act of 1948, which had been extended in 1952 and in 1956 for 4-year periods, for a period of only 3 months, and (2) empowers the President to determine Cuba's quota for the balance of the current year and until March 31, 1961, "as he shall find from time to time to be in the national interest."

On the rule of national unity in matters of immediacy in international relationships, the House voted to the President the power he regarded as essential in the existing situation in Cuba. The vote was 395 to 0.

In my remarks I said: "I trust that the power the President has asked will be administered without punitive design and in sole consideration of what in his judgment is just, wise, and necessary for the nations of the American Hemisphere, including our own."

The squabble over where Cuba's quota, if terminated, would go almost tied up the adjournment for the recess. It will be renewed when the Congress reconvenes on August 15.

PUBLIC LAW 593

Air Force is building up its own traditions. Public Law 593 helps along by changing the designation of "Distinguished Service Cross" and "Soldier's Medal," which are Army terms, to "Air Force Cross" and "Airman's Medal."

PUBLIC LAW 594

Public Law 594 removes the 4-year limitation on the $400,000 total income tax deduction for expenditures on explorations for ore or minerals (not gas or oil). Purpose is to benefit small operators whose limited capital requires them to take more time.

PUBLIC LAW 595

Public Law 595 adds to the national parks of our Nation the Arkansas Post National Memorial at the site of a fur trading post set up in 1686 by Henry de Tonty, a lieutenant of La Salle's, that figured in the "Mississippi Bubble" scheme, was a military post from 1730 on and once was the capital of Arkansas Territory.

PUBLIC LAW 596

Public Law 596 is of interest to conservationists. It ends the scandals in California and the Southwest arising from raids by sharp operators on the lands of the national parks under a defect in the "lieu lands" provision in the Act of 1897 as amended. It corrects the defect, disqualifies heirs and assigns and makes compensation to clear title.

PUBLIC LAW 597

In 1959 the Air Force gave flight instructions to 1,663 ROTC cadets at 159 schools, the Army to 643 cadets at 66 schools. This qualifies the cadets for FAA private pilot certificates. Public Law 597 extends the program for Army, Navy and Air Force another 4 years.

PUBLIC LAW 598

Public Law 598 provides the furnishing of needed services of optometrists to veterans having service-connected eye conditions. It adds "optometrists services" to VA's medical duties. This is in addition to the eyeglasses given to veterans, 30,774 pair in 1959. I am happy to report to many constituents who wrote me that I cast your vote for Public Law 598.

PUBLIC LAW 599

Coal industry, hard hit by oil and gas, is in a bad way. Public Law 599 authorizes a $2 million coal research program to open new ways.

PUBLIC LAW 600

Since 1820, when Yankee Captain Nathaniel Palmer landed on the shores of Antarctica, Americans have been exploring into the frozen realms. Public Law 600 creates a special commemorative medal to be presented persons (military and civilian) who have served on Antarctica expeditions.

PUBLIC LAW 601

H.R. 11998: Defense appropriations

Public Law 601 appropriates $39,996,608,000 for the Department of Defense for fiscal 1961. That is slightly under $40 billion, and $661,608,000 above the budget, in part due

to an increase in the number of Polaris nuclear submarines, in general to girding of defenses in a worsening world climate and to meet the challenge of Soviet missiles. The House passed the bill, 377 to 3. Your vote was aye.

PUBLIC LAW 602

This permits the Navy to swap some land in South Boston, no longer needed, for another piece of land owned by the Massachusetts Port Authority. It couldn't be done without the approval by Congress.

PUBLIC LAW 603

Public Law 603(1) eliminates requirement of physical examination every 4 years for members of the Standby Reserve, and (2) authorizes officers of the National Guard on inactive duty to issue orders to active duty for training and perform similar chores when designated by proper authority.

PUBLIC LAW 604

Former Members of Congress when they work for the Federal Government forfeit their civil service retirement annuities. Public Law 604 exempts them from such forfeiture when they work without compensation. This protects them from being penalized for rendering, gratuitously, a public service.

PUBLIC LAW 605

H.R. 12263: Dam on the Rio Grande

Public Law 605 authorizes agreements with Mexico for the joint construction and maintenance of a second major international storage dam, with water generating facilities (to be known as the Amistad Dam) on the Rio Grande River. The first major dam (the Falcon, 75 miles downstream from Laredo) under the 1944 Water Treaty with Mexico was completed in 1953.

Your representative, as a member of the Subcommittee on Inter-American Affairs, attended many days of public hearings in the processing of this measure. It is refreshing and strengthening to have two neighboring nations working together in friendly cooperation in joint undertakings for a common benefit.

PUBLIC LAW 606

Public Law 606 extends until June 30, 1961, the present suspension of duty on metal scrap.

PUBLIC LAW 607

H.R. 10644: Merchant marine

Merchant Marine Act of 1936 is credited with building up a hard-core American-flag merchant fleet by construction and operating differential subsidies to bridge the gap between costs here and abroad. Nevertheless, rising costs here have caused the American ship building industry to drop from first to eighth place among the nations of the free world. Hence Public Law 607 raises the permissable construction differential subsidy from 50 to 55 percent.

PUBLIC LAW 608

In 1935 Congress cooperated with the cities in their street-widening programs by authorizing gift to municipalities of portions of Federal lands needed to widen streets. Public Law 608 extends this to States, counties, and other political subdivisions. It sometimes happens that a Federal Building is in a city but adjacent to a State or country highway.

PUBLIC LAW 609

Public Law 609 legalizes and admits to polite communications society the humble antenna booster stations that have been the sole means of extending TV entertainment to small, remote communities. Here is how the booster, now legalized works: (1) an ordinary rooftop antenna strategically located to get a usable signal from a distant station, (2) a shielded cable connected to a small amplifier and running to a second rooftop antenna, and (3) everybody happy, the second rooftop antenna beams the signal to the whole community.

PUBLIC LAW 610

Public Law 610 I place high on the achievements of the 86th Congress. It authorizes the President, the Department of Health, Education, and Welfare, and the Surgeon General to conduct an international cooperative program in health research, training and planning. It envisions a scientist-to-scientist relationship on an international basis, the mobilization of the medical researchers of the world in an assault upon all the dread diseases that plague mankind. This, I would say, is along the road to peace, progress and universal goodwill. You may be sure your vote was aye.

PUBLIC LAW 611

S. 747: Des Plaines conservation

Public Law 611 gives to the State of Illinois for wildlife, conservation and recreation some 2,200 acres at Des Plaines formerly part of the Joliet Arsenal Military Reservation, 946 acres at a consideration of $303 an acre (total, $286,638), 1,500 acres directly contiguous thereto as an outright gift, subject to use by the Government in event of emergency. I received many letters from conservationists and sportsmen, introduced in the House a companion bill to Senator DOUGLAS' and appeared at committee hearings. While we were unsuccessful in getting the exact land we wished, due to the adamant position of the Defense Department, the compromise at least served the general purpose of protecting much of the surplus area from private encroachment and turning it over to all the people as part of their outdoors domain.

PUBLIC LAW 612

At present there are 496 retired Foreign Service officers and 118 widows receiving annuities. Public Law 612 boosts the annuities 10 percent.

PUBLIC LAW 613

S. 1233: Protection of children from poisoning

In one year there are 200,000 poisonings in the United States, with 5,000 deaths, from common household products, such as polishers, bleaches and cleaners. An estimated 600,000 children under 15 annually swallow poisonous substances. Illinois is one of eight States that have enacted State legislation requiring warning labeling of all hazardous substances for household use. Public Law 613 requires and regulates the labeling of such products in interstate commerce. Of course, your vote was aye.

PUBLIC LAW 614

United States has participated in the International Bureau for the Protection of Industrial Property since 1887. Chief work of the bureau is in the field of patents and trademarks. Public Law 614 (introduced by Congressman LIBONATI of Chicago) authorizes a back payment of $10,514 and an annual payment of $7,500 as Uncle Sam's contribution to the bureau.

PUBLIC LAW 615

This grants "grandfather rights" to motor carriers, freight forwarders and water carriers in Alaska. That means they can continue operation of transportation services on the accustomed lines.

PUBLIC LAW 616

Public Law 616 (1) permits Army and Air Force involuntarily to retire permanent colonels and lieutenant colonels who have three or more times failed of promotion, and (2) provides boards to separate officers for moral, professional, or security dereliction. Armed Services Committee states purpose was to improve officer quality, not create vacancies.

PULIC LAW 617

Public Law 617 increases from $250,000 to $500,000 the authorization for the appropriation for the Gorgas Memorial Laboratory in Panama to construct new facilities. This will make possible long-range studies of insects and the malaria, yellow fever and virus (among others) diseases they transmit. The laboratory is under American auspices, our chief such center in tropical America.

PUBLIC LAW 618

Protection of the health of the American people is the constant concern of the Congress. We like color in everything, including our foods, drugs, and cosmetics, where danger can lurk. Public Law 618 permits the use of suitable color additives but only after they have complied with rigid regulations (including maximum tolerances) and have been declared safe. Your vote always has supported health legislation.

PUBLIC LAW 619

This merely makes uniform the law fixing the terms of office of members of regulatory agencies of the Government.

PUBLIC LAW 620

Alaska University has 100,000 acres of land granted by the former territory. Public Law 620 permits its sale or lease by sealed competitive bids.

How Ripe Is United States for Plucking?

EXTENSION OF REMARKS

OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, August 22, 1960

Mrs. ST. GEORGE. Mr. Speaker, in another place in today's RECORD, I have inserted Mr. Leslie Gould's article on the outflow of gold from the United States.

On Sunday, August 21, the following article by Mr. Robert W. Stoddard appeared in the New York Herald Tribune.

Mr. Stoddard shows us very plainly the road we are following, whether through stupidity or conviction, or both.

It is the road envisaged for us by Lenin and Marx, and both big business and big labor—typified by the bosses who are now all-powerful—will be equally to blame if they lead us into the infero of inflation, from which there is little possibility of salvation.

The article follows:

HOW RIPE IS UNITED STATES FOR PLUCKING?

(By Robert W. Stoddard)

More than 35 years ago, Lenin outlined the Communist plan for taking over the world, as follows: "First, we will take Eastern Europe, then the masses of Asia; then we will encircle the United States, which will be the last bastion of capitalism. We will not have to attack. It will fall like an overripe fruit into our hands."

Lenin also said: "The way to destroy capitalism is to debauch the currency. Through a continuing process of inflation, the govern ment can quietly and unobservedly confiscate the wealth of its citizens."

A few years later, the principal Socialist paper, "The New Leader," was urging its followers to appreciate the fact that they could not expect a Socialist revolution in America but that socialism could be effectively promoted by gradually increasing the size of the government and its control over business. This program was labeled "Encroaching Control."

Norman Thomas, for years the acknowledged leader of American Socialists and their perennial candidate for President, has said many times in recent years that most of the basic principles and hopes of the Socialist Party of 25 years ago have already been

adopted by both of the leading political parties in our country.

HANGOVER IDEAS

And just 4 years ago, Dr. Charles Schottland, then Commissioner of Social Security, appointed by President Eisenhower, made this incredible statement in the course of a speech: "Saving for the rainy day of old age and the cultural beliefs about individual responsibility are hangover ideas of an earlier economic era which hinder the fullest use of social legislation."

As a businessman expected to write a column having to do with industry or finance, I find it extremely difficult to concentrate on these problems as I become more and more concerned as to just how ripe we have become and when we shall fall.

The current political show affords a good opportunity to look at the record of the last third of a century, and when we review this objectively, all at one time, we cannot help but be shocked at how it coincides with the Communist-Socialist objectives.

As an industrialist, I am forced to admit that the business world must shoulder a lot of blame. Our sins have not been so much those of commission as those of omission; those of failure to resist, with the lame excuse that it is inevitable, rather than take a firm positive stand for the maintenance of fundamental business principles. Too many times we are willing to accept the opportunistic solution, looking to our balance sheets and profit-and-loss statements at the end of the year, rather than to consider the problems we are creating for our successors a few years hence, or what we are doing to the national economy as a whole.

LABOR'S POWER GROWS

The most powerful single group in our country today is organized labor. It is utterly unrealistic to expect that this power will be used judiciously and fairly or that it will be voluntarily given up. Excessive power in the hands of any group has always been abused. It was abused by business when it enjoyed unbridled power, and that power had to be taken away by means of legislation. When that power was taken away, it did not kill business, it provided new opportunities for the development of all business, large and small.

Similarly, the removal of the unwarranted power of labor unions today, the hysterical cries of labor officials to the contrary notwithstanding, is not with any purpose of killing the labor movement. It is merely an attempt to give equal freedom and protection to all citizens, individuals or groups, by whatever names they call themselves.

It is my philosophy that all individuals and all groups, be they business groups or labor groups, professional groups, racial groups, religious groups, or what not, should all enjoy the same privileges and be subject to the same obligations. The laws on our statute books should apply equally to all. There should be special privilege for none.

There are some labor officials whose avowed goal is the creation of a Socialist America and their efforts, of course, are clearly in that direction. There are other honest union leaders who claim not to be Socialists and who proclaim the virtues of our free economy, and yet they give evidence to the fact that, if they care, they simply do not understand the fundamental economic principles which originally built our economy into the greatest in the world and provided their own membership with the highest standards ever enjoyed by mankind anywhere.

The political platforms of both parties give us cause for continuing concern. There are some differences, but they seem to be minor and are more differences in degree than in principle. Neither offers any hope of an honest attempt to solve the labor problem.

The continued increase in governmental power, which can be expected regardless of who is elected, through continuing Federal aid to all groups of people in all parts of the land can result only in a further increase in the size of the Federal bureaucracy and a continuing extension of its control over the daily lives of all citizens.

We know that most of our leaders are not Communists or Socialists and yet it is absolutely incredible how the pieces of the puzzle which we have been putting together for the last 30 years all seem to fall into place and coincide with the program advocated for so long by those who would destroy us.

And so I say to those of us interested in business and financial affairs, if we do not concern ourselves seriously and actively with the trend of our economy and if we do not have the courage to stand forthrighty for the fundamental economic principles which our business experience tells us are sound, we will indeed fall like the overripe fruit that Lenin predicted, and we will have to accept more of the blame for that tragedy than probably any other segment of our economy.

It was Lenin who also said that the capitalist would sell his soul for a profit. I hope we may yet prove how wrong he was.

Police Science and Administration Curriculum Established at Temple University's Community College

---

EXTENSION OF REMARKS

OF

HON. HERMAN TOLL

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 22, 1960

Mr. TOLL. Mr. Speaker, in the field of law enforcement, the first curriculum in police science and administration has been established at Temple University's Community College. The announcement and the program may interest many Members of Congress. I have therefore included the announcement and the summary of the conference so that the Members can examine the material which may lead to better law observance and law enforcement at least in those communities which are making an effort to improve the situation:

POLICE SCIENCE AND ADMINISTRATION CURRICULUM ESTABLISHED AT TEMPLE

A curriculum in police science and administration, the first of its kind in this area, has been established at Temple University's Community College.

The announcement was made jointly by Dr. Millard E. Gladfelter, president of Temple University; Mr. Harry D. Shargel, chairman of the Federal Bar Association's Law Observance Committee; Dr. Allen H. Wetter, superintendent of schools; Philadelphia Police Commissioner Thomas J. Gibbons; Mr. Dennis W. Gealer, president of the Delaware Valley Association of Professional Police Officials; and Superintendent Francis C. Deegan, Fairmount Park Police.

Beginning in September, courses in police supervision and leadership, criminal investigation, criminal law and procedure, and social aspects of police administration will be offered in the evening by the university's Community College. A full curriculum will be offered in February 1961.

Students successfully completing eight courses in the curriculum will be eligible for a professional certificate in police science and administration. An associate degree will be awarded to those who complete 60 semester hours of combined professional and academic courses. Plans are being made for a baccalaureate degree program in police science and administration for students with associate degrees who continue their education.

The idea for the curriculum was suggested by law enforcement officials at a Federal Bar Association law observance conference last May. A committee of local education and law enforcement officials drafted the plans for the new curriculum. Members of the committee are: Mr. Shargel, chairman; Lt. Col. Henry Bassetti, provost marshal of the Philadelphia Quartermaster Center; Detective Capt. Joseph Bonner, secretary, Delaware Valley Association of Professional Police Officials; Capt. Philip J. Cella, Fairmount Park Police; Mr. Dalibor W. Kralovec, Philadelphia Board of Education; Staff Inspector James McNamee, Philadelphia Police Department; William A. Schrag, dean of the Community College and Technical Institute of Temple University; and Staff Inspector Edwin S. Schriver, Philadelphia Police Department.

SUMMARY OF CONFERENCE REGARDING ESTABLISHMENT OF POLICE SCIENCE AND ADMINISTRATION COURSE

Present: Lt. Col. Henry Bassetti, provost marshal, Philadelphia Quartermaster Depot; Capt. Joseph Bonner, Philadelphia Police Department, North Central Detective Division and secretary, Delaware Valley Association of Professional Police Officials; Capt. Philip J. Cella, Fairmount Park Police; Mr. Dalibor W. Kralovec, Philadelphia Board of Education; Staff Inspector James J. McNamee, Philadelphia Police Department; Dean William A. Schrag, Community College and Technical Institute, Temple University; Staff Inspector Edwin S. Schriver, Philadelphia Police Department; Harry D. Shargel, Esq., chairman, Law Observance Committee, Federal Bar Association.

Date and time: July 1, 1960, 12 noon.

Location: M.C. & T.S.A., Philadelphia Quartermaster Depot, 2800 South 20th Street, Philadelphia, Pa.

The conferees agreed on the attached list of courses.

Four courses will be given initially commencing September 1960, as follows: Police supervision and leadership, criminal investigation, criminal law and procedure, social aspects of police administration (ethics, community relations, racial characteristics and environment).

However, in February of 1961, the entire program will be made available.

Approximately 20 students will be required for each course and the cost will be $23 per credit. The completion of eight of the police science and administration courses will entitle the student to a professional certificate in police science and administration. An associate degree in police science and administration will be awarded to those who complete 60 semester hours of combined professional and academic courses. The courses taken under the certificate program would be applicable for credit towards the associate degree. A baccalaureate degree in police science and administration will be available to those who finish their associate degree program and complete the last 2 years of a 4-year program.

The police members of the committee will immediately furnish additional description of the scope of each course and determine the sequence in which the courses are to be taken. The police will also immediately nominate instructors for all professional police courses. As soon as the police have completed the description of the courses and nominated the instructors, the university

will appoint the instructors and publish a brochure. The police members of the committee will publicize the courses among law enforcement agencies and all professional police associations in the area. The Federal Bar Association will publicize the courses among the attorneys. The Federal Bar Association will endeavor to interest public officials in promoting the program.

The board of education will publicize the courses to the high school students both as an available program of study and as a career field. Mr. Kralovec will also secure nominees from the board of education as instructors in the professional courses. The board of education will also afford general publicity for the program.

Mr. Shargel will act as temporary chairman of a scholarship committee. The other members of the committee are Mr. Dalibor W. Kralovec, Inspector Schriver, and William M. Gillin, personnel development adviser, personnel department, city of Philadelphia. Additional members will be added as they become available.

Dean Schrag was appointed chairman of an advisory committee to be formed for the purpose of advising the university in the development of the police science and administration program.

Mr. Shargel was authorized to issue a press release representing a joint announcement under the names of the following: Dr. Millard E. Gladfelter, president, Temple University; Dennis W. Gealer, president of the Delaware Valley Association of Professional Police Officials; Thomas J. Gibbons, police commissioner of Philadelphia; and Francis C. Deegan, superintendent, Fairmount Park Police.

POLICE SCIENCE AND ADMINISTRATION

Leading to an associate degree in police science and administration.

Elect eight of the following professional courses:

Police science—police supervision and leadership.

Police science—criminal investigation.

Police science—criminal law and procedure.

Police science—social aspects of police administration (ethics, community relations, racial characteristics, and environment).

Police science—general administration of justice.

Police science—police organization and administration.

Police science—juvenile crime and delinquency.

Police science—introduction to criminology.

Police science—vice control, narcotic control.

Police science—evidence and court procedure.

Police science—traffic control and laws.

Police science—probation and parole administration.

Business—business organization and management.

Business—workshop in business management.

Business—personal finance.

Business—mathematics of business.

Business—law of business contracts.

Business—law of negotiable instruments.

English—written communications (two courses).

English—public speaking.

English—periodical literature.

Psychology—personal psychology.

Psychology—human relations in business.

Secretarial—elementary typing.

Social science—American political institutions.

Social science—contemporary social problems.

Electives[1] (12 credit hours).

[1] Any academic or professional course offered by Community College. Each course except personal psychology involves 2 credit hours. Personal psychology involves 4 credit hours.

Second-Class Citizens?

EXTENSION OF REMARKS

OF

HON. FRANK J. BECKER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, August 22, 1960

Mr. BECKER. Mr. Speaker, I insert herewith an editorial appearing in the well-known Catholic publication, the Tablet, in its issue of Saturday, August 20. I am also inserting an article in the same issue dealing with the subject of "Federal Aid to Education."

Both the editorial and the article pointed out very clearly the arguments that aid to private schools must and should be a part of any Federal aid to education legislation for public schools.

I commend this to the reading and study of all Members of Congress during this particular session:

[From the Tablet, Aug. 20, 1960]

NEARLY 6,800,000 SECOND-CLASS CITIZENS

The eyes of the Nation are trained on Washington where our legislators are convened in a special session filled with import for the future of the country. A series of bills covering basic national issues have been introduced and each party is maneuvering fiercely to pass its list of "must" legislation.

One of the most important areas is in the Federal aid to education bills which seem to have a good chance of passage for the first time since Federal funds for school aid were originally sought by educators 90 years ago.

The Murray-Metcalf bill would provide Federal funds for teachers' salaries as well as for school construction. The Monroney amendment to the McNamara bill, which was approved by the Senate, allows each State $20 per year for every child of school age (5 to 17 years). All children residing in a State will count but Federal funds will be divided among public schools only, resulting in the ridiculous paradox of giving more Federal aid to public schools where more of the community's children attend the independent schools.

Where did this idea to steal from one American child to give to another originate? Is the basic idea not only to secure an additional source of funds but to drive all Protestant, Catholic, Jewish and private schools out of existence? Is it a desire for a single, monolithic structure of education, governed only by the State as it is in totalitarian countries, which will brook no competition? One can only speculate.

The Federal Government has under a variety of educational programs subsidized millions of American students of all faiths in the schools of their choice. The GI bills after World War II and the Korean war, the War Orphans Education Act and sections of the National Defense Education Act are cases in point. The current situation therefore results in a tragic step backward on the Federal level. There are about 6,800,000 children attending the Nation's independent schools who would in effect be made second-class students by these proposed bills, 1 out of every 6 on the elementary level. And, according to the U.S. Commissioner of Education, the nonpublic schools are growing at a fantastic 21 percent faster pace than the public schools.

We are told by proponents of the bills that sound educational standards are now necessary for national survival and that therefore money is needed. How then in the name of logic can they argue against applying this same yardstick to the child who attends the independent school? Haven't they seen the annual list of State scholarship winners that are so well sprinkled with the names of children from the nonpublic schools? Would they possibly argue against the insanity of such a monstrous waste of our most important natural resource at a time when the very future of the Republic is gravely threatened?

The means to correct this grave inequity are readily at hand. The Congress could, if it must pass Federal aid at all, establish a system of grants comparable to that given under the GI bill of rights which would go to the child, not to the school. Or, as the President's Committee on Education beyond the High School, in urging support of the tax credit plan (one form of personal subsidy) said, the plan could be adopted "without raising the issue of church-State relations."

Politicians are practical people; they have to be. Certainly they are familiar with the way the people rose in their wrath in both Maine and Connecticut recently when their children, attending the independent schools, could not even get transportation. Certainly they know by what overwhelming majorities of both parties the New York State Legislature approved the Speno-Brennan transportation bill. If a mighty wave of communications from an army of outraged parents reaches our Congressmen and Senators immediately this grave injustice can still be righted.

It is fitting to remember the famous precept uttered by the great Chief Justice Marshall early in the days of the Republic: "The power to tax is the power to destroy." Let's not sit fiddling while our educational house burns down.

[From the Tablet, Aug. 20, 1960]

PRIVATE SCHOOL GROWTH EXCEEDS PUBLIC SCHOOLS—BUT CHILDREN AT INDEPENDENT SCHOOLS BEING IGNORED BY SENATE AND HOUSE—IN FEDERAL AID BILLS—CATHOLIC SCHOOL ENROLLMENT PUT AT OVER 5,500,000 FOR SEPTEMBER TERM

While Congress is considering Federal aid to education bills which discriminate against children in nonpublic schools, the U.S. Education Commissioner has released statistics which show that independent schools are growing 21 percent faster than public schools.

Those opponents of the Federal aid measure who claim that it is aimed, consciously or not, to hamper nonpublic schools, point out that the latter have an estimated September enrollment of 6,800,000 on the elementary and secondary levels.

SECOND-CLASS CITIZENS?

They will become 6,800,000 second-class citizens if the Federal-aid legislation is passed in its present form.

While the public schools naturally show a much larger increase, 1,400,000 to 300,000

for the independent schools, the public school of growth is only 3.8 percent compared to 4.6 percent for the nonpublic schools.

More than one of every nine secondary school pupils attend a nonpublic school (11.6 percent this fall, a jump from the 11.4 of 1959 and the 11.2 of 1958) and almost one out of six on the elementary level (16.2 this year, as contrasted with 16.1 in 1959 and 15.8 in 1958.)

About 5,539,750 students will enroll in U.S. Catholic colleges, high schools and elementary schools this fall, setting another record high total.

The totals estimated in a report made here are:

Grade schools: 4,389,963, an increase of 127,863 over last year.

High schools: 849,850, an increase of 24,753.

Colleges and universities: 299,937 in regular sessions, an increase of 14,283.

These estimates were released here by the Department of Education of the National Catholic Welfare Conference. The department will issue an actual count of October enrollment next spring.

THIRTEEN PERCENT OF U.S. PUPILS

The estimated total of 5,239,813 students to enroll in Catholic elementary and secondary schools indicates these youngsters will account for about 13 percent of all students in the United States between the ages of 5 and 17 years.

Public schools this fall, from kindergarten through grade 12, will enroll an estimated 37,600,000 students, according to a report from the United States Office of Education of the Department of Health, Education, and Welfare.

The Federal education office estimated that 6,800,000 children will be in nonpublic elementary and secondary schools. Its report does not break this down into the number attending Catholic schools and the number in other independent educational institutions.

In April of this year, the NCWC department reported that for the first time, the combined total enrollment in Catholic grade and high schools had passed the 5 million mark, a total of 5,087,197.

This total and the expected increase this fall represents continuation of an enrollment trend in Catholic schools that has been especially strong since 1945, the year marked unofficially as the beginning of the current "enrollment boom."

This past academic year, grade schools marked a 100-percent increase in enrollment since the end of World War II. High schools undoubtedly will achieve the same distinction this school year. They need an enrollment of 841,414 to double since 1945 and the fall estimate is 849,850.

NEARLY 166,330 SCHOOLS

No estimates on new teachers or school buildings or additions were made in the NCWC department's statement of enrollment estimates.

However, in the department's 1959 "Summary of Catholic Education," a booklet of school statistics, it reports that in October 1959, there were 10,278 Catholic grade schools staffed by 102,622 teachers. The number includes 77,172 religious and 24,450 lay teachers.

In the same summary, the department reports 2,390 secondary schools staffed by 40,708 teachers, of whom 31,280 are religious and 9,428 are lay teachers.

The department counted 231 universities and colleges in 1959. The total number of teachers was set at 23,000 of which 8,557 are religious and 14,443 are lay people.

The department's summary sells for $1 a copy. The publisher's address is NCWC Department of Education, 1321 Massachusetts Avenue NW., Washington, D.C.

A Minimum Wage Law Does Not Square With Our U.S. Constitution

EXTENSION OF REMARKS
OF
HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1960

Mr. JENSEN. Mr. Speaker, several years ago when the bill that placed the minimum wage at $1 per hour was voted on in the House, I voted for it, but after observing the operation of that law I have come to the conclusion I made a mistake in so doing.

The other body has recently passed a bill to raise the minimum to $1.25 per hour by degrees and to cover, under the law, some 4 million additional employees in private industry of most every nature, all of which in my studied opinion does not square with our free competitive private enterprise system.

From early boyhood and until I was elected to Congress, I worked for wages—as a farmhand, a muleskinner on a bridge building gang, a pearl button cutter, a tile ditch digger with a spade, a grocery clerk, a lumberyard man, and as manager of a retail lumberyard. Yes, and as a soldier for Uncle Sam, and since 46 years of age as a hired man in Congress for the people of the Seventh Iowa District and the Nation.

I know something about working for wages, so it is very natural that in the acid test, you will always find me in the hard working wage earner's corner.

Mr. Speaker, I learned early in life that there was no substitute for work, and that the only right and sure way to get a pay raise was to do a little more each day than the boss expected me to do. This holds true today, just as it has from the signing of our U.S. Constitution, which established our free competitive enterprise system, for not only the boss but for the hired man as well, and which made it possible for all men to be the masters of their own destiny—free to work and progress and enjoy the blessings of liberty; yes, or even to idle, go broke and suffer mental anguish, but not at the expense of the other fellow.

Let us not forget that when we place a floor under wages, by that very act we place a ceiling on wages for millions of employees who deserve more pay, especially in small businesses.

Many, many employers will be forced to make a choice under this new minimum wage law of either laying off the necessary number of lowest paid and lowest producers, or reduce the wages of the highest paid and highest producing employees in order to hold overhead down to the necessary point of enabling them to stay in business or, of course, he has the third choice of closing shop. Even that is still one of our American privileges.

Mr. Speaker, before the conference report on the wage hour bill comes back to the House for a vote, I invite all of my colleagues to ask one or a hundred wage earners who are now getting over $1.25 per hour, and they are in the great majority, if they would be willing to have their wages reduced in order to raise the pay of others now getting less than $1.25 per hour.

Remember, most every American wants to win his own spurs.

"King of the Aviators"—In Life and in Death John Bevins Moisant Achieved Historic Aviation First Half a Century Ago

EXTENSION OF REMARKS
OF
HON. F. EDWARD HÉBERT
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1960

Mr. HÉBERT. Mr. Speaker, the great International Airport in New Orleans is named after a most extraordinary man—John Bevins Moisant who died on the site of the airport which bears his name.

Moisant was an extraordinary adventurer and man of many talents; he was successively a farmer, a revolutionary, a banker, a mechanic, a designer, but most of all he was—"King of the Aviators."

Jerry Hopkins, a staff reporter for the New Orleans Times-Picayune, has written a most entertaining piece about Moisant. The author is a journalism graduate of Washington and Lee University and Columbia University. He also worked on newspapers in Virginia, North Carolina, and New York, covering everything from politics to the DAR.

Here is his story on Moisant:

[From the Air Force magazine, August 1960]

Fifty years ago last month, an American aviator named John Bevins Moisant presented himself in Paris and requested permission to compete in the Circuit de l'Est, a major air show being held there.

"How long have you been flying?" an official asked.

Smiling, Moisant replied that he had been up only twice. The application was denied.

Then came the day of the show. A large crowd arrived early and waited impatiently through what seemed an interminable period of preparation and engine warming.

Suddenly, a shout rose.

Just as the contestants were climbing into their kitelike flying machines, a small Bleriot monoplane appeared above the Parisian rooftops. Closer and closer it came, then eased down to a graceful landing at the center of the field. Out stepped Moisant.

The young American beamed and clasped his hands above his head. Then a passenger emerged from the craft. The crowd let out a tremendous roar. In that era, the carrying of aerial passengers was most unusual. His third time in the air, Moisant had become the first aviator to fly a passenger over a city. He had, in fact, staged a characteristic entrance into the field of aviation—with daring and bold imagination.

Here was a man of many parts—a 20th-century renaissance character. He was a designer and mechanic as well as a brash pilot. Before coming to Paris, he had spent months in Cannes developing his own steel

and aluminum monoplane. When he was finished, he had what amounted to a racing plane—a rather advanced model in view of the fact that he was yet to take his first flight. That came next.

"When I left the ground, my machine shot upward so fast I lost control," Moisant recalled of that initial experience. "So I just cut off the motor and let her drop. I figured it was better to fall 90 feet than 300 or 400 feet."

He also decided at that point to learn how to fly a slower airplane before again trying his metal racer.

Shortly after stunning Parisans at the Circuit de l'Est Moisant again flew over the French capital in his Bleroit. This time he took Flier Roland Garros along. This was the second time a pilot had flown a passenger over a city.

Next, Moisant became the first man to fly from Paris to London by compass. His seventh time in the air, he made this historic flight guided by a glycerine-floated compass he had borrowed. The instrument was balanced on Moisant's knee during the 200-mile trip. His mechanic accompanied him on the flight. It was the first crossing of the channel with a passenger.

Moisant was born to French-Canadian parents in Kankakee, Ill., in 1873. At 19, he left home for California, where he and his three brothers purchased a farm. Then they drifted to Latin America, acquiring a sugar plantation near San Salvador. While there, he designed a cheap irrigation system that enabled him and his brothers to prosper and expand their holding to several thousand acres.

Then in 1907, government troops swooped into the plantation ranchhouse and confiscated 17 rifles. Two of his brothers were thrown into jail on charges of inciting revolution. Moisant escaped, however, and appealed to the U.S. State Department. Dissatisfied with the answers from Washington, he concluded that as long as he had the name, he might as well play the game. He joined the rebels.

In his first action, he led 100 of the Nicaraguan Army and 200 Indian natives in an amphibious attack on the government strong point. Following debarkation from a gunboat, Moisant and his force, in 5 minutes of battle, captured a well-fortified garrison, took the commander prisoner, and recruited 100 more rebels from the government troops.

Moisant then went up to San Francisco, possibly to seek funds, friends, or firearms. Whatever the outcome of this venture, we next find him in the banking business in Guatemala, once more in partnership with his brothers; the two who had been jailed were now out.

Meanwhile, Moisant remained in contact with revolutionary friends in Nicaragua. In 1910, he went to France on their behalf to look into the possibility of buying airplanes for use in another revolt. Latin American political affairs seemed forgotten, however, when he arrived in Cannes and began experimenting with his own plane. Next stop, as we have seen, was Paris.

After his startling flying successes in Paris, Moisant returned to the United States. An aviation competition was scheduled that fall at Belmont Park race track on Long Island. On the first day of competition, October 29, 1910, Moisant crashed. Helped from his damaged plane, he shook off the dust and said, "Hurt? No, not at all. Nothing ever happens to anybody flying."

The next day, Belmont scheduled the "Most Colossal Race of the Decade." An industrialist-millionaire had put up $10,000 for the flier who clocked the best time in a 36-mile round trip between the field and the Statue of Liberty out in New York Bay.

First, there were to be several warmup flights. Moisant was one of the first in the air, piloting his hastily repaired Bleriot. He crashed again. Miraculously, again he was unhurt. But it appeared, with his craft once more smashed up, he would miss the Statue of Liberty race.

Moisant tried desperately to find another machine. He went from plane to plane on the field, trying to find one available for his immediate use.

The race started. Claude Grahame-White of Britain and Count Jacques deLesseps of France soared into the air. The Englishman took the lead. Moisant was still on the ground. Then, in a Perils of Pauline turn of events, Moisant found a plane, jumped aboard, and took off after them.

He knew he couldn't overtake the Briton and Frenchman in a straight race. So he tried to outwit them. As the others headed south to follow the Long Island shoreline, Moisant selected a different route. He flew west over Brooklyn, then over the East River and the Battery at the southernmost tip of Manhattan Island. He rounded the statue, turned, and headed for home—then got momentarily lost. He had confused elevated subway tracks for the Long Island Railroad. Now he found the Long Island Railroad and followed its tracks back to Belmont Park.

The race judges calculated elapsed time. As Moisant thawed from the cold, the announcement came that he had beaten the Englishman by a mere 43 seconds, covering the 36 miles in 34 minutes, 38.4 seconds. He also had set a new straightaway airspeed record, the last 3½ miles at 104.2 miles an hour.

Shortly afterward, Moisant left New York and started a cross-country tour. In December he was in Memphis, Tenn., setting a 2.4-second record for turning a full circle in the air. He turned so sharply his wings pointed almost vertically. René Simon, a Frenchman whose aerial antics had earned him the sobriquet "the fool flyer," ran into a hangar, refusing to watch.

On December 8, Moisant, by then himself dubbed "king of the aviators," challenged the U.S. Navy to a duel. After flying directly over the U.S. gunboat *Aphitrite*, anchored on the Mississippi River, he openly declared:

"As I swung over the warship, I could look down on her decks very distinctly. How easy it would have been to have dropped a detonating explosive on that big expanse. I have often said that a passenger-carrying, bomb-dropping airplane would put a warship out of commission 10 minutes after sighting it. From my own observations, I am perfectly willing to take my chances any day if they'll take theirs—that is, they can shoot at me all they want to if they'll let me retaliate and drop a bomb on them."

The Navy declined the offer.

Soon after that, Moisant was on his way to New Orleans for an international competition with aviators from the United States, France, Switzerland, and Ireland. The day before the show was to begin, a California group offered Moisant $100,000 to stage a rival flying show in San Francisco. New Orleans was offering only $10,000, but Moisant kept his word. He flew to Louisiana—and the end of his spectacular career.

On December 24, Moisant took off from New Orleans' City Park racetrack. He headed over the city, circling the business district four times. On the streets below, throngs of Christmas shoppers looked up and saw him. When Moisant returned to the field, with just 3 pints of gas left in the tank, his 46-minute flight was hailed as the longest sustained flight over a major city. Also, it was his 14th cross-city flight, a greater number than had been flown by any other two aviators of the era combined.

The next 5 days Moisant raced his plane against small automobiles, performed a daring glide from 9,000 feet, braved a 60-mile-an-hour gale, and tuned his 50-horsepower engine for a contest with a 150-horsepower Fiat racing car. On December 30, he lost a 5-mile race with the high-powered Fiat by a hair. Then he took time out for an interview with a local newspaper reporter.

"Don't you worry about getting killed when you try those crazy stunts?" he was asked.

"I do not expect to die in an airplane," Moisant was quoted in reply.

On December 31, Moisant and four other pilots competed for the $4,000 Michelin Prize, to be awarded to the pilot who stayed in the air longest. The world's record was 7 hours, 45 minutes. Moisant figured he could stay aloft for 8 hours.

Moisant passed up the red-painted monoplane he had designed in Cannes and had his mechanics roll out the Bleriot he had crashed twice in New York. The craft had been completely reworked and was in top flying condition. An extra 35-gallon gas tank had been installed under the frame.

Moisant took off in midmorning. Waving to the spectators who lined the city park field, he headed for another field just outside New Orleans on a practice hop.

He circled the practice field three times at a 200-foot altitude and prepared to land. But rough air at 25 feet caused the plane to dip sharply. It almost stood on its nose. Moisant was thrown from the cockpit. He landed in a clump of bushes, his back broken. Within minutes the man they called the "King of the Aviators" was dead.

Ironically, even in death Moisant set a mark in flying. Scientific American magazine reported that he was the first aviator to be thrown from his plane in such a fatal accident.

In New Orleans, where he died 50 years ago, Moisant has not been forgotten. In 1946, the city opened a new airport not far from the scene of Moisant's death. The field is called Moisant International Airport. Jimmy Doolittle was present for the dedication ceremonies. He unveiled a monument which reads:

"In commemoration of a pioneer in aviation, John Bevins Moisant, who lost his life in an airplane accident near this site December 31, 1910. He was the first pilot to carry a passenger across the English Channel, inventor of the early all-metal airplane, a man of lovable character whose tragic death was a great loss to aviation."

In This Time of Challenge

EXTENSION OF REMARKS

OF

HON. DONALD J. IRWIN

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, August 22, 1960

Mr. IRWIN. Mr. Speaker, at this time of challenge in the world, with its demand for increased education, more and more attention is focused on the means for providing this education, with the emphasis generally on physical facilities. It is heartening to see that attention is also paid to another vital aspect of education and that is its leadership. An example of this was provided in an editorial in the New York Times of August 10 which commented on the appointment of Thomas Henry Carroll as new president of George Washington University. The comments will serve to underscore the fact that able, qualified and experienced leadership is being provided.

The editorial:

G.W.'s NEW PRESIDENT

George Washington University has a new president. The qualifications of Thomas Henry Carroll make him one of the most outstanding and certainly one of the most capable citizens to head this university. Upon hearing of his unanimous appointment, Dr. Carroll welcomed the "distinctive challenge of a university serving the Nation's Capital."

But G.W., as it is called by Washingtonians, is more than a university serving the Nation's Capital. It is a leading institution serving, through its graduates, a world filled with complex and certainly disorderly problems. The university is well known for both its law and medical schools. A great number of its graduates have become famous lawmakers, as evidenced by the many esteemed Senators and Congressmen with degrees from George Washington.

Dr. Carroll is the thirteenth president of this university. His credentials point up an outstanding career as an authority in furthering economic programs for the Ford Foundation, of which he is now vice president. His academic background, as dean at Syracuse University and the University of North Carolina, has given him diverse experience with what students of today face in a challenging world.

Let Us Be Helpful To Our Mentally Retarded Children

EXTENSION OF REMARKS
OF
HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Monday, August 22, 1960

Mr. JENSEN. Mr. Speaker, under leave to extend my own remarks in the RECORD, I am pleased to include a report of the midwestern regional workshop section on mental retardation on special education and rehabilitation which explains the urgent need for additional facilities and teachers for our mentally retarded children. I commend James C. Purkhiser, the director of education and training of the Glenwood State School for Retarded Children at Glenwood, Iowa, for this splendid report and for setting out the need for these unfortunate Americans.

Surely we can and must assist them in every way we possibly can and by so doing Almighty God will bless our good works:

GLENWOOD, STATE SCHOOL,
Glenwood, Iowa, August 2, 1960.

BEN F. JENSEN,
Congress of the United States,
House of Representatives,
Washington, D.C.

DEAR MR. JENSEN: Received your letter containing the public laws. Thank you so much.

I am enclosing a copy of the report which I made to the board of control, on the congressional subcommittee meeting, which I attended in Chicago. Sorry to be so long getting it mailed to you.

Sincerely yours,
JAMES C. PURKHISER,
Director, Education and Training.

REPORT OF THE MIDWESTERN REGIONAL WORKSHOP SECTION ON MENTAL RETARDATION ON SPECIAL EDUCATION AND REHABILITATION, MAY 11–12, 1960, AT CHICAGO, ILL.

First, we who attended this section (approximately 300—25 in special education) expressed our thanks and commended Congress for allowing us to relate our ideas to them and paid special tribute to Public Law 565 and Public Law 85–926, which has, in a relatively short time, had a marked effect upon improving the quality and quantity of professional personnel for services to the mentally retarded throughout the United States. Our section gave consideration only to the problems which we felt should be considered by Congress. These are:

1. Shortage of professional personnel.
2. Consultant services within and to the States.
3. Out-of-school programs.
4. Research.

1. SHORTAGE OF PROFESSIONAL PERSONNEL

A major problem deterring the development of programs for the mentally retarded is the procurement of an adequate supply of professional personnel.

This shortage of personnel is evidenced by the following fact: Kansas and Michigan are now serving only approximately 20 percent of their mentally retarded. Illinois is serving 7 percent of their trainable mentally retarded and 25 percent of their educable mentally retarded. Many more could be served if qualified teachers were available.

Although Public Law 85–926 provides for the training of personnel at the leadership level, it does not provide for the training of teachers of the mentally retarded.

It is recommended that Public Law 85–926 be amended and interpreted to include the training of teachers at both the undergraduate and graduate levels.

2. CONSULTANT SERVICES WITHIN AND TO THE STATES

A major problem accompanying the growth of educational programs for the mentally retarded is in providing supervisory and consultant services at the State level. Many communities experience considerable difficulty in establishing and maintaining these programs. These programs might be more efficient and effective if consultant services were provided them through State educational agencies.

Kansas has only one consultant in this area. Michigan has one part-time consultant serving the entire State; Illinois has two and Wisconsin has three consultants.

It is recommended that Congress provide funds to the States to provide consultant services through State educational agencies. These funds should be available for a limited number of years to the States to serve as an incentive to provide there own consultant staffs.

At present the limited staff of the Office of Education is unable to meet the demands and requests made from the States for information and consultant service in the area of mental retardation.

In order to increase the effectiveness of the Office of Education it is recommended that Congress provide funds to increase the consultant service available. Additional staff would assist in increasing the effectiveness of State and local programs for the mentally retarded.

3. OUT-OF-SCHOOL PROGRAMS

It has been demonstrated in a number of community programs throughout the Nation that in order to effectively and economically habilitate or rehabilitate the mentally retarded so that they can become independent and productive citizens, vocational rehabilitation services must be provided to them prior to their leaving school.

Under present programs less than 10 percent of the mentally retarded are now receiving services through the vocational rehabilitation programs. Current laws and regulations do not presently permit the Office of Vocational Rehabilitation to extend its program or services to the mentally retarded under 16 years of age or if they are still in school attendance.

It is recommended that Congress provide, through appropriate legislation, the regulations which would permit the Office of Education and the Office of Vocational Rehabilitation to serve the mentally retarded at whatever age is most suitable to meet the needs of the mentally retarded. The services and programs to be provided under this recommendation would be similar to those now available to out-of-school individuals or those over 16 years of age.

Excluded from these two programs and services are a significant number of mentally retarded individuals who can profit by specialized programs. These programs are designed to delay or eliminate the need for institutionalization. It permits the families to retain their mentally retarded child at home.

In many cases sheltered workshops are able to make the mentally retarded individual at least partially self-supporting. Recreational activities can assist the individual in making a more satisfactory home and community adjustment.

It is recommended that Congress provide funds for the Office of Vocational Rehabilitation to conduct day care centers, sheltered workshops, independent living services, and recreational facilities for these mentally retarded individuals who have been excluded from public school programs and do not meet the feasibility requirements of vocational rehabilitation and are over 16 years of age. These funds should support personnel, materials, supplies, and equipment for such programs.

4. RESEARCH

It is recognized that Congress has in recent years actively supported research in the biological and behavioral aspects of mental retardation through its various constituents in the Department of Health, Education, and Welfare.

It is the opinion of this workshop section that the major obstacle to the extension of research in vocational rehabilitation and special education in mental retardation falls into two general area: (1) the shortage of qualified research personnel in vocational rehabilitation and special education in mental retardation, and (2) the shortage of facilities to conduct research in the behaviroal aspects of mental retardation.

Public Law 85–926 now provides fellowship grants for the training of college teachers and supervisors for educational programs in mental retardation.

It is recommended that Congress amend Public Law 85–926 to include fellowship grants for the training of research personnel in the behavioral aspects of mental retardation. This would assist in increasing the number of research personnel in this area.

Many State-supported residential institutions for the mentally retarded have presently available personnel and populations which could be effectively utilized to facilitate and augment research and the training of professional personnel in the area of vocational rehabilitation and special education.

State residential institutions for the mentally retarded, with few exceptions, are now located considerable distances from centers of higher learning. This has been a distinct handicap and a deterrent to conducting research and the training of professional personnel in this area.

It is unlikely that this situation will be altered within the next century unless the Federal Government provides incentives to the States through facilities—construction grants to build new facilities for the mentally retarded adjacent to those centers of higher learning which have programs in research and training of professional personnel in vocational rehabilitation and in special education in mental retardation.

It is recommended that the Hill-Burton Hospital Construction Act be amended and an appropriation be made to assist the States in the construction of residential facilities for the mentally retarded adjacent to qualified institutions of higher learning for the purpose of stimulating and facilitating research and the training of professional personnel in these areas.

CONCLUSION

The workship section on mental retardation wishes to express its deep appreciation for the opportunity to participate in the workshop and being afforded the opportunity to present its conclusions to the Subcommittee on Special Education and Rehabilitation.

Monroe Doctrine Remains Basic

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1960

Mr. FLOOD. Mr. Speaker, in a succession of addresses to the House dealing with the Caribbean situation now converging on the Panama Canal as its key objective, I have repeatedly stressed the necessity for reaffirmation and extension of the Monroe Doctrine to include subversion.

To this end, on January 6, 1960, I introduced House Concurrent Resolution 445, 86th Congress, and on May 3, 1960, an identical measure, House Resolution 515, both of which are still in committee.

Though the Congress has not acted, it has been gratifying to note an awakening among the people to the true situation now confronting us.

Among the recent contributions is a thoughtful editorial by John V. Horner in the July 17, 1960, edition of the Sunday Star, Washington, D.C.:

MONROE DOCTRINE REMAINS BASIC

(By John V. Horner)

Both Russia and Cuba were directly involved in the events that led to the proclamation of the Monroe Doctrine 137 years ago, just as both were involved last week, when the United States reaffirmed this basic policy. The nature of involvement, however, was different.

The doctrine enunciated by James Monroe, fifth President of the United States, made clear that this country would tolerate no colonization and no interference in Western Hemisphere affairs by the nations of Europe.

Over the years the words "Monroe Doctrine" have had various meanings. But generally the term is accepted to mean there must be no intervention by governments in the Americas and no exercise of preponderant influence in Latin America.

Before the American Revolution, all of the colonial areas in Central America, the Caribbean and South America were simply possessions of their European suzerains. They shared the religion, the law, the institutions and foreign policies of their mother countries.

The Revolution resulted in the creation here of the first independent American State. This inspired the other colonies to seek freedom. Gradually they began dropping away from the mother countries, notably Spain and Portugal.

The people of the United States felt a natural interest in this movement and enjoyed the exhiliration of having pioneered in the democratic way of life and a new kind of independent government. The new nations demanded and received recognition by Washington.

After the Congress of Vienna in 1815, the "Holy Alliance"—czarist Russia, Austria, and Prussia—with the support of France openly made plans to preserve the colonial status quo in Latin America.

INTERVENTION FEARED

The United States feared France would claim Cuba, securing a foothold in America and giving that European nation the rich island just off our mainland.

About the same time, Russia was claiming rights along the northwest coastline of North America from Alaska to California. The czar also asserted a right to keep vessels of other powers out of the northern Pacific.

The United States had long followed a policy of isolation laid down by George Washington, Alexander Hamilton, Thomas Jefferson, John Adams and others. This country was taking no part in European politics or European wars and wanted Europeans to stay out of the Western Hemisphere.

On the urging of John Quincy Adams, then Secretary of State, President Monroe sent a message to Congress in December 1823, which enunciated the Monroe Doctrine. Succeeding Presidents and various Secretaries of State have given different interpretations to the basic policy, which has stood up very well down through the years.

The United States even saw to the inclusion in the Covenant of the League of Nations a clause which seemed to bind the signatories to the doctrine. This clause read as follows:

"The Covenant does not affect the validity of international engagements such as treaties or arbitration or regional understandings like the Monroe Doctrine, for securing the maintenance of peace."

In developing the inter-American system during the 20th century, the United States has sought to implement the doctrine.

The Rio Treaty, adopted in 1947, condemns war and the threat or use of force in any manner inconsistent with the Charter of the United Nations. It pledges the American countries to try to settle all disputes between themselves by peaceful means, before referring the disputes to the U.N.

IGNORED BY CUBA

The latter provision is one that Cuba ignored last week in asking the U.N. Security Council to take up a charge that the United States has interfered in its internal affairs and has committed economic aggression.

Under the Rio Treaty, the 21 American Republics agreed on a joint defense of any of these states which is attacked in its own territory.

In 1954, the American governments adopted the Caracas Resolution proposed by the late Secretary of State John Foster Dulles. This deals specifically with the threat of international communism to the Western Hemisphere. The resolution condemned activities of the international Communist movement and declared specifically that:

"International communism, by its undemocratic nature and its interventionist tendency, is incompatible with the concept of American freedom."

The governments declared that Communist control or domination of any of the American states would constitute a threat to their sovereignty and political independence, endangering peace. In the face of any such threat, the governments agreed, they would call a meeting of consultation of foreign ministers to adopt appropriate action in accordance with existing treaties.

Congressman Levering Holds Conferences in District

EXTENSION OF REMARKS
OF
HON. ROBERT W. LEVERING
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1960

Mr. LEVERING. Mr. Speaker, from the beginning of my service in Congress, I have tried in every way possible to maintain a close contact with the people of the 17th Congressional District of Ohio, who elected me to represent them.

From the first days of the 86th Congress, I have made regular radio speeches to my people, filling them in on the problems of government from week to week. I have circulated a weekly newsletter to the newspapers of my district so that the editors and the people would be able to understand the issues and the many views relating to them. I have had personal contact with thousands of members of the public from my district. I have corresponded with other thousands.

Last year I sat down with my constituents in every county of our district and listened to their views on national and international problems, as well as those of a personal nature. Because these grassroots conferences were so highly successful, I am again arranging a series of meetings in the courthouses of the seven counties of the district and I am urging members of the public to come to these meetings and to talk over any and all subjects they choose. I am convinced that only by personally contacting the people I serve, can I do the best possible job for them in the Congress of the United States.

I will be in the courthouses from 9 a.m. to 4 p.m. on the dates and at the places set forth in the following schedule:

Tuesday, September 6, Millersburg, Holmes County.

Wednesday, September 7, Ashland, Ashland County.

Thursday, September 8, Coshocton, Coshocton, County.

Friday, September 9, Mount Vernon, Knox County.

Monday, September 12, Delaware, Delaware County.

Tuesday, September 27, Newark, Licking County.

Thursday, September 29, Mansfield, Richland County.

I not only welcome visitors at these conferences, I urge individuals, regardless of political party or how they may have voted in the past, to come to see me. I am striving to represent all the people of the 17th District, regardless of their beliefs about any political or legislative issue, and I know that it is a great

help for a Congressman to talk over personal, national and international problems with the people at home—problems on which he must make decisions from day to day that affect the lives of every person in our country.

I also invite the many fine young men throughout my district, who are interested in entering the various service academies, to call on me in order that I might have the opportunity to know them and to discuss their qualifications for appointment to the academy of their choice.

No appointments are necessary. I hope to see a large number of persons. The discussions can help me to serve them better and it can help them to understand my problems in striving to do the best possible job for all of the people in my district.

Problems of Small Business

EXTENSION OF REMARKS
OF

HON. FRED SCHWENGEL

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 22, 1960

Mr. SCHWENGEL. Mr. Speaker, for the past 3 years my research team at the University of Iowa, under the direction of Dr. Russell Ross, has conducted a study on the problems of small business. This study has been very interesting and worthwhile. This study has pointed up a need for certain legislation that will materially help resolve some of their problems about which I should like to comment briefly today.

Our study also reveals and it should be noted that American small business has grown, prospered, and gained more strength in 7 years of the Eisenhower administration than at any time during the previous 20 years. Today there are 4,666,000 businesses in the United States, an alltime high, and 95 percent of them are small enterprises.

This Republican administration recognizes that little businesses are the red corpuscles of the American free enterprise system. It has acted effectively to foster them. They must be kept healthy and vigorous and they must grow in numbers commensurate with the national growth.

To assist owners and managers of small firms improve their management techniques, the Small Business Administration cosponsors management extension courses with universities and colleges across the country. These courses are carried on at virtually no expense to the taxpayers, and to date about 700 courses have been conducted at 275 or more educational institutions. More than 22,000 students have attended.

Also as part of its management assistance activities, SBA publishes three series of leaflets for the benefit of small businessmen. These are titled "Management Aids for Small Manufacturers," "Technical Aids for Small Manufacturers" and "Small Marketers Aids." Distribution of SBA's aid leaflets has exceeded the 7-million mark.

Although much has been accomplished during the Eisenhower administration to foster and encourage small business enterprise and keep the doors of opportunity open to new businesses, there is urgent need for additional Government action directed at aiding small business firms to successfully solve their management problems in this age of rapid change and keen competition.

The need for such action is clearly demonstrated by the results of private surveys which time after time indicate that 9 out of 10 business failures in this country are attributable to incompetent or inexperienced management.

Let us examine for a moment the business failures record during 1959.

More than 95 percent of the 4.7 million businesses in operation in the United States are small. Yet it is among this group that most failures occur, and where the financial burden of loss is most severe. In 1959 the bulk of the failures was found in those business activities where small businesses are concentrated. For example, 39.6 percent of the failures occurred among the following industry groups:

Rank by number of failures:

Industry group:	*Number of failures*
1. Eating and drinking places	1,334
2. Retail food and liquor group	1,113
3. Retail automotive group	1,015
4. Retail apparel and accessories	1,011
5. Lumber and lumber products—manufacturing	503
6. Textile mill products and apparel—manufacturing	420
7. Food and kindred products—manufacturing	176

More than 28 percent of the total money loss was suffered by investors in these unsuccessful firms.

Recent Dun & Bradstreet reports with respect to the business failure experience of the American economy reveal that in 1959 approximately 14,053 businesses failed with a $692,808,000 loss to creditors. Thus, of every 10,000 businesses in operation in 1959, 52 failed, with a consequent average loss of $49,300 each. More than 60 percent of these failures had liabilities of less than $25,000, a relatively small amount in this land of multimillion-dollar corporations.

In the aggregate small business suffers by comparison with large and medium sized business when sales and profits are considered. Even at this time, when sales volumes generally are up, profits are down.

Since 1947 the annual rate of earnings on stockholders' equity has been consistently lower for manufacturing corporations with assets under $1 million than it has been for the larger ones. This may be attributed partly to the fact that industries in which small manufacturing corporations predominate, such as the textile, apparel, lumber and food groups, are characterized by relatively lower earnings. On the other hand, groups noted for large corporations, such as aircraft, electrical machinery, instruments, chemicals and drugs, and automobile manufacture, are characterized by relatively higher earnings. Nevertheless, when industry as a whole is considered, the earnings position of small manufacturing corporations has declined in the past decade. For these smaller corporations earnings before taxes in 1951 amounted to $2,027 million compared to $1,527 million last year—a drop of almost 25 percent. During the same period manufacturing corporations with over $1 million in assets increased their earnings from $25,592 million to $28,167 million, a 10-percent gain. Obviously, as the bigs get bigger, the smalls have to struggle harder and harder just to stay even.

Despite the danger of failure or the prospect of small profit, the desire of thousands of men and women to enter the competitive busines field is as strong as ever. This is reflected in the vigorous growth of our business population in recent months. During 1959 over 70,000 businesses were added to our growing business population. Virtually all of these were small with the greatest number of entries being made in the retail, service, and contract construction fields which are particularly characteristic of the small firm. Because Dun & Bradstreet tells us that over 57 percent of the firms which fail do so in the first 5 years, it is of paramount importance that these firms receive assistance.

The program that I have presented in H.R. 13039 is designed to provide such assistance.

Just what is the problem?

A simple answer to this question is difficult to state. But the general objective we are trying to achieve is to make it possible for a small enterpriser to establish a business and operate it profitably, without fear of being squeezed out of the market. We must provide the small businessman the help he wants and needs.

What does the small businessman need?

Management help, aid, and assistance is a primary need of our small businessman today. Dun & Bradstreet tells us that over 44 percent of the business failures in 1959 can be attributed directly to the incompetence of management. Lack of sufficient, balanced managerial experience accounts for an additional 35 percent of the failures, while unfamiliarity with the product line adds another 12 percent to the record. Thus, over 90 percent of the failures in 1959 can be attributed to one or more phases of management incompetency or inexperience.

Despite efforts on the part of Small Business Administration officials and employees, which have produced substantive results, much remains to be done. General Government experts can do only so much, and there are not enough of them to put more than a dent in a problem of such magnitude.

My bill will alleviate this problem. Small business advisers operating out of the business centers in the United States will be immediately available to the small businessman for on-the-spot consultation whenever problems arise. This adviser, using his skill, experience, and know-how, will provide sound man-

agement advice and technical assistance to any small businessman who seeks it. He will have at his beck-and-call—on a when-actually-employed basis—the literally hundreds of retired, successful businessmen who are concerned with the economic prosperity of their local communities, and who would be willing and anxious to assist the adviser when he is faced with problems beyond his comprehension or competence. These retired men have been owners, managers, production specialists and technicians who can give the technological aid so necessary for efficient operation of a plant or store; they have been financial specialists or operators who know how to raise and manage capital and operating funds; they have been marketing and distribution men who already have solved many of the mysteries of that important phase of business operation. Advisers, moreover, will have an intimate knowledge of Federal Government publications, technical bulletins and management aids, and sources of technical data. They will be able to help the small businessman exploit the almost limitless information resources already available, but of which he is presently unaware.

In our enterprising Nation where such rapid advances in science and technology are being made, new products and processes appear almost daily. Of course, this leads to increased obsolescence of plants, equipment, and products. Unfortunately, the small businessman is unable to enjoy the fruits of this research and development. He cannot afford to undertake a research and development program on his own account. He has neither the time nor the ability to evaluate the profit potential of a product or process discovered and developed by someone else. In this regard he cannot hope to compete with a large concern. Here the small business adviser will be most helpful. He will direct the attention of the small businessman to new developments affecting that businessman's field of operations. He will make available information with respect to new products and processes that can be manufactured or employed by the businessman.

These small business advisers will be performing an important and useful service and eventually, I know, will become dependable, invaluable cogs in the machine we call our economy. Small business will benefit, and the American people as a whole will profit.

Public Laws 621 to and Including 642

EXTENSION OF REMARKS

OF

HON. BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 22, 1960

Mr. O'HARA of Illinois. Mr. Speaker, by unanimous consent I am extending my remarks to include a digest of Public Laws 621 to and including 642 as reported by me to my constituents in the Second District of Illinois, as follows:

PUBLIC LAW 621

Bankruptcy lawyers, take note. False financial statement no longer is grounds for denial of discharge to a nonbusiness bankrupt. Public Law 621 provides, however, that obligations incurred by its use will not be discharged.

PUBLIC LAW 622

This exempts from future retirement contribution by civil service employees who remain with the Government after they have put in enough years to retire with an annuity of 80 percent of their salaries.

PUBLIC LAW 623

This is bigger news in Crawford in Nebraska than it is in Chicago. It permits sale of some land for $500 to the village of Crawford. It could not have been done without an act of Congress.

PUBLIC LAW 624

Public Law 624 is the Hawaii omnibus measure making complete and perfect the admission of Hawaii into the Union. It gathers up the loose ends of transition from territorial status to statehood, in many acts of Congress changes "Territory of Hawaii" to "State of Hawaii," in others includes the new state in grants-in-aid and other programs. Just a housekeeping job of rearranging the furniture.

PUBLIC LAW 625

In 1888 the Federal Government started contributing to the support of State homes for veterans. It gave $100 a year for each veteran. Now there are 33 State homes in 28 States and VA has been paying $700 annually for each veteran. Public Law 625 changes the rate from $700 a year to $2.50 a day, a 30 percent boost.

PUBLIC LAW 626

H.R. 11776: Independent offices appropriations

Public Law 626 is the annual appropriation act for the independent executive bureaus and agencies among which are the Veterans' Administration, National Science Foundation, Housing and Home Finance Agency and many others. It carries total appropriations for fiscal 1961 of $8,307,964,900, or about $109 million under the budget estimate.

PUBLIC LAW 627

Public Law 627 permits air carriers to give free or reduced rates transportation to (1) employees, present and retired, and their families, (2) widows and minor children of employees who died in air duty, (3) persons injured in air crashes, families, doctors and others in connection with the crashes, and (4) persons giving relief in times of pestilence or similar emergency.

PUBLIC LAW 628

H.R. 12232: 1961 legislative appropriations

Public Law 628 appropriates $129,470,410 for fiscal 1961 for the legislative department. This is $3,943,075 under the budget.

PUBLIC LAW 629

H.R. 1157: Ryukyu Islands

Our relationship with the Ryukyu Islands is unique in the history of the United States. I think you will share my interest in Public Law 629, which resulted from the studies of Congressman MELVIN PRICE, of Illinois, and bears his name, the Price Act. MEL was a buck private when we were at war with Japan, now is a veteran member of the Armed Services Committee.

Okinawa is the largest of 63 islands in the Ryukyu group, about midway between Tokyo and Manila. It is the base of our Pacific defense. Under the peace treaty with Japan the United States exercises all powers of administration, legislation, and jurisdiction. Yet the islands are not American possessions, eligible to share in what we do for our own. Neither are they foreign territory, eligible under our foreign aid program.

Problem is to build up the welfare and well-being of the Ryukyuan people with the objective of making them self-sustaining. Population density is among the world's highest, 1,000 persons per square mile.

Public Law 629 (1) authorizes an annual appropriation of $6 million (about equal to Japan's subsidy in pre-war years), and (2) turns over to the government of the Ryukyu Islands receipts from taxes and other sources much as is done with our own Guam and our own Virgin Islands.

PUBLIC LAW 630

H.R. 12231: Military construction appropriation

Public Law 630 carries fiscal 1961 appropriations for military construction, at home and overseas, housing, hospitals, missile, and other facilities of all military kinds. They total $994,855,000. This is $193,145,000 under the budget.

PUBLIC LAW 631

Chapter XIII of the Bankruptcy Act concerns only wage earners. Public Law 631 reduces the number of reports to the Treasury Department required of other bankrupts to a single notice to the regional internal revenue office of the first meeting of creditors.

PUBLIC LAW 632

Public Law 632 clarifies and strengths reemployment rights under the Reserve and Universal Military Training Acts. Among other things it specifies National Guardsmen are included. Employers, inductees, reservists, and others affected probably will wish to familiarize themselves with the provisions.

PUBLIC LAW 633

Court-Martial Manual automatically reduces to lowest pay grade an enlisted service person when convicted by court-martial. Court of Military Justice in the Sampson case said this held only when pay reduction was ordered by the court. Comptroller General, controlling the purse strings, sided with the manual. Congress quiets the confusion with Public Law 633. It (1) reduces pay to grade E–1 on conviction, and (2) restores former pay if court-martial sentence is set aside or pay reduction is not specifically included in the sentence.

PUBLIC LAW 634

Public Law 634 is another evidence of the amends the Congress is making for past trespasses upon the rights and dignity of the American Indian. It prohibits (1) the defacing or destruction of boundary markers on Indian reservations, and (2) the hunting, trapping, or fishing on Indian lands without permit. Penalties of both fine and imprisonment are provided.

PUBLIC LAW 635

Very important to our defense are the Polaris nuclear submarines. They are operated on a 2-crew plan, under which the crews rotate between sea duty and rehabilitation and training ashore. Public Law 635 extends extra incentive pay to the period both at sea and ashore.

PUBLIC LAW 636

Public Law 636 turns over to the Navajo Indian Tribe the irrigation project on its reservation in New Mexico. The Government will train tribal personnel and assist in operating project until trained tribesmen can take over.

PUBLIC LAW 637

In April of 1960 the Comptroller General reported a sampling of 13 oversea shipments by commercial air of household goods of officers of the armed services that cost the Federal Government $125,470 whereas the

cost by water would have been $23,000. Two months later Public Law 637 had been drawn, passed by the Congress and signed by the President. It provides that hereafter no shipments, except in emergencies, shall be made by air if the cost is greater than by water or other means.

PUBLIC LAW 638

Public Law 638 puts reserve officers retiring after 8 years' service on the same basis as regular officers as regards travel pay to the places they have selected as their new homes.

PUBLIC LAW 639

Public Law 639 permits VA to furnish medical services for a non-service-connected disability, (1) in preparation for admission to hospital, and (2) in completion of treatment after leaving hospital. It is expected to accelerate patient turnover rate, partially check growing waiting lines as veteran population ages.

PUBLIC LAW 640

Grand Valley project in Colorado is one of the oldest and most successful of the Federal reclamation developments in the West. Public Law 640 permits the use (after operating expenses and payments to the Federal Government) of its revenues from power to meet its obligations for rehabilitation and improvements.

PUBLIC LAW 641

When a member of the armed services dies without a will (15 percent of the cases), settlement of his accrued pay cannot be made without approval of the General Accounting Office. That means a long delay, often pretty hard on a family with current bills to meet. Public Law 641 sensibly does away with reference to GA, except in unusual cases.

PUBLIC LAW 642

H.R. 11389: Executive Office appropriations

Public Law 642 appropriates $10,872,500 for fiscal 1961 for the Executive Office. The President is given $2,398,500 for personnel and expenses of the White House office, $1,500,000 for special staff assistants, $505,000 for upkeep of the White House itself, and $100,000 for White House repairs and furnishings.

Has Congress the Power To Investigate the Port of New York Authority?

EXTENSION OF REMARKS

OF

HON. ALFRED E. SANTANGELO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, August 22, 1960

Mr. SANTANGELO. Mr. Speaker, on Sunday, August 14, 1960, I had the privilege of being a panelist on the program "Metropolitan Probe"—WNEW-TV, channel 5, 7:30 to 8 p.m.—with Gov. Robert B. Meyner; Councilman Stanley Isaacs, representative of New York; and the moderator, William Peer. We discussed the question of the authority of Congress to investigate the activities of the Port of New York Authority and the justification for its investigation.

This matter will be considered by the Congress, in view of the fact that the full House Committee on the Judiciary has voted to cite three members of the authority for contempt for refusing to produce the records of the Port of New York Authority.

The Port of New York Authority was created in 1921 with the consent of Congress. Without the consent of Congress, this bistate agency could not have come into being or into operation. This was the first bistate agency in the United States. Since then many other bistate agencies have come into being. These agencies operate in a manner which affects interstate commerce and, consequently, would be encroaching upon Federal authority if Congress had not approved the compact and the scope of its activities. The original compact of 1921, approved by the 67th Congress in chapter 77 of session 1, set forth the port authority's purposes, its scope, its powers. The resolution of Congress granted consent to the agreement for the creation of the port of New York district and for the establishment of the Port of New York Authority for the comprehensive development of the port of New York.

The Congress in its approving resolution declared as follows:

That the consent of Congress is hereby given to the said Government, and to each and every part and article thereof: *Provided*, That nothing herein contained shall be construed as impairing or in any manner affecting any right or jurisdiction of the United States in and over the region which forms the subject of said agreement.

SEC. 2. That the right to alter, amend, or repeal this resolution is hereby expressly reserved.

Approved August 23, 1921.

Again in 1922 when the 67th Congress, 2d session, granted consent and authority to the Port of New York Authority to execute the comprehensive plan approved by the States of New York and New Jersey by chapter 43, Laws of New York, 1922, and chapter 9, Laws of New Jersey, 1922, it stated in section 2:

That the right to alter, amend, or repeal this resolution is hereby expressly reserved.

This matter shortly coming before Congress is a very important one. It is fundamental and far reaching. I am attaching a copy of the TV broadcast in which I was a panelist. This broadcast will provide certain information to my colleagues, and I trust it will to a certain extent be helpful to them in arriving at a correct decision on the question whether the port authority representatives are in contempt of Congress.

The broadcast follows:

PEER. Good evening. This is Bill Peer with another session of "Metropolitan Probe." Tonight another inquiry into the way our most powerful leaders fulfill the responsibilities that necessarily go with power. Our guest tonight is a distinguished visitor from across the Hudson River, Gov. Robert Meyner, of New Jersey. Governor Meyner is in the middle of a hot dispute over a current congressional investigation of the Port of New York Authority, the agency which handles the operation of port facilities on both sides of the river and the huge airfields that serve the metropolitan area. Tonight we probe into Governor Meyner's reasons for opposing this investigation, commuter problems of New York and New Jersey, and Governor Meyner's own political future. Our panelists for this evening, on my right, Councilman Stanley Isaacs, of Manhattan, the only Republican in the city council. And on my left, Congressman ALFRED SANTANGELO, Democrat, of Manhattan. Councilman Isaacs, I believe the first question this evening is yours.

ISAACS. Governor Meyner, I understand that in connection with this controversy that Mr. Peer has mentioned, you wrote a letter to the various Governors of the States and Members of Congress, asking their support in your dispute with Congressman CELLER Can you tell me why so few have responded?

MEYNER. Well I might say, Councilman Isaacs, that practically every Governor feels favorable to the proposition. I was out at Glacier National Park at the national Governors conference, and it was there that a resolution was presented which in essence opposes the very thing Congress is trying to do. This resolution was passed unanimously. Now to date I have probably had about six Governors answer me personally and not one has taken the side of the congressional leaders. And quite a number of Congressmen have replied and many of those are favorable. Of course Congress hasn't gotten back to Washington and many of the replies are coming from secretaries, saying, "When the Congressman comes in I am sure he will give serious consideration to your letter." I think the response has been excellent. I know that practically all of the governors are opposed to the proposition of probing into the internal records. I want to make it clear that we are not trying to prevent Congress from looking into the areas Congress is expected to look into. What we are objecting to is that they look at the internal records. For instance, we might as a port authority look into the question of whether a contractor is fit to do business. Look into his financial responsibility. Get a lot of internal confidential information. I don't think that should be available. We might check the employment record of a person who is to be employed or promoted. We don't think that should be the subject of a record. As a matter of fact when the subpena was issued aaginst the three people from the port authority they took seven packing cases of information down there. And apparently the subcommittee was more interested at the moment in establishing a record to hold these people in contempt. Even the Congressmen who might be favorable to a probe in the sense that they want some of these internal records, say that there ought to be some method by which we ought to determine this controversy without holding reputable citizens in criminal contempt.

ISAACS. You do feel that Congress of course has general power over interstate commerce and foreign commerce and is interested in the substance of what the port authority does. Is there anything in the original act which gave you and the Governor of the State of New York the power to organize this commission originally? And to continue to appoint its members? Is there anything in that act that gives Congress continued supervision over its details?

MEYNER. Congress takes the attitude that they do have this continuing supervision. We say it is not supervision. We say that they have the power to give consent. Now I think what happened was originally when the Constitution was formed, the Thirteen States didn't want two or three States developing a competing sort of government. To that extent this limitation was put in the Constitution that said, "No contract between the States can be entered into without the consent of Congress." I think what the framers were thinking "Well we don't want these two or three States developing a competing form of government." Now I say if they—if the Government gives us money for airways or for airport they can come in and check our records to see that we use the money properly. If we are engaged in some type of enterprise by which commerce is affected they can come in and look at that. But I don't think that they can come in and look into the internal administration of the port authority. The port authority is carrying on functions that

a city or a State could be carrying on. For instance, New York City has a marine division where they build piers and rent them.

We don't think Congress will come in and say to them "Now let's look at all of your detailed records in this area." And by the same token when we are doing something that is properly a State function and which we think can be done better with the two States through the port authority that this power of infinitesimal investigation should go on.

ISAACS. I see.

PEER. Congressman SANTANGELO.

SANTANGELO. Governor, I am glad to see that you feel that Congress has the power to investigate the port authority if the conditions warrant. Your position apparently is diametrically opposite to that taken by the attorney general of the State of New York who has sent letters and briefs to the Congressmen to the position, to the effect, that Congress does not have the power to investigate the port authority, and that it is a bistate agency. And so I am very happy to see that you feel that we have the right if conditions warrant.

MEYNER. I don't think I am in disagreement with the attorney general of New York. I think that this particular investigation is a fishing expedition. After all I don't see any resolution of Congress on the record saying that we want to check this phase of interstate commerce, or we want to check customs, or we want to check the aviation problems. They want a staff study by which they are going into all ramifications. There is no pending resolution before Congress, as I see it, which says that there is some problem here we've got to look into. I think it is a fishing expedition that they are interested in right now.

SANTANGELO. Well of course we haven't heard from the Congress in the full House the reasons why the investigation is wanted. But it is a fact, is it not that since 1921 when the compact between the State of New York and the State of New Jersey was entered into with the consent of the Congress of the United States that not one investigation, or one inquiry, into the inner workings of the port authority has taken place.

MEYNER. I can't say that that is a fact.

SANTANGELO. I know that in 1954 when I was in the State Senate I introduced a resolution to the effect that we should investigate the exploitation of the motorists who were compelled to pay 50 cents for crossing the bridges and the tunnels when the original bonds which had constructed these had been paid off. And it was at that time the port authority approached me and said that this was a bistate investigation, or a congressional investigation and therefore should not be done by one particular State, or one particular legislature. Now the question is whether or not this investigation should take place. Not whether or not Congress has the power because in the compact of 1921 Congress reserved unto itself the right to repeal, alter or modify the compact.

MEYNER. It reserved the right to withdraw its consent. I fully believe that consent is a lot different from having power. It is my feeling that most of the activity in the port authority is in the area that can be normally done by a State or a municipality or authorized by a State. These are functions that are ordinarily done by we'll say a port like Norfolk or Mobile or New Orleans. It happens that this port is in two States and because it is in two States we get together and do it by compact. And the Constitution only says "consent." It doesn't say a power. It doesn't say you run the thing. And I think it is very much like this. I don't think Congress can go into the President's office and get his records, or into a Cabinet member's office and get his records. If conservation and economic developments are engaged in some program that effects navigable streams they can come in and look at it and we'll give them all the information. But to look any time at general records it seems to me is going a bit too far.

PEER. Governor, the point that Congressman SANTANGELO made about the continuing tolls on the facilities operated by the authorities, tolls not being reduced despite the fact that the original bonds have been retired, do you feel that some of these tolls should be reduced?

MEYNER. I don't see how under existing conditions they can be reduced. For instance, Holland Tunnel has been paid off many years ago. But the revenues that they get from the Holland Tunnel will enable them to build piers.

PEER. The motorist is paying for the piers. That hardly seems fair. Don't you think the motorist is entitled to some relief? We have been told that the authorities have large surpluses for various purposes. Why should they continue to soak the motorist with a 50-cent toll because they want to build piers? That doesn't make a great deal of sense.

MEYNER. Well, I should like to point out to you for instance that if the third tube of the Lincoln Tunnel had to pay its way the charge would be a dollar—a dollar and 10 cents. Now they are building a second deck on the George Washington Bridge out of the 50 cents. Now it may take present day costs, they are going to spend for double decking for approaches on the New York and New Jersey side the cost wouldn't be 50 cents for going across but it would be $1 or $1.25. Now the fact that they have these facilities which were built at a lower cost enable them to pledge that revenue to raise more money to take care of additional facilities. And by the same token if they didn't build these modern piers we'd be losing our traffic, or very vital international traffic to some other ports along the eastern seaboard or maybe to the St. Lawrence Seaway. This is vital. Maybe we wouldn't have any jobs to drive to in an automobile. If we didn't develop the New York port—the New York and New Jersey port. I might say in this connection that when we build them we pledge this revenue. We build them and we get money back that pays for them, but this enables us to finance, the port authority through New Jersey and New York has no power, for instance, to levy a tax against the citizens of New York and New Jersey. All they have is this revenue. It is a billion-dollar corporation. But I don't know how the job would be done by the respective States if we didn't have this agency and I might say that it is a bipartisan agency. It was started out by Alfred E. Smith and Walter Edge, a Democratic and Republican Governor of the respective States. It subsisted even though we've had Republican Governors and Democratic Governors in New York and New Jersey, and Republican and Democratic legislators. And any time it is not being operated properly it is subject to investigation by the Legislatures of New York and New Jersey. I am sure, Congressman, that at times it resisted some investigation but the power is always there for the Governor to ask for any information and on the part of both branches of the State legislature to do it, and I don't see any overwhelming sentiment of Congress to do it. Of course, you are a Congressman, you may encounter different sentiment.

PEER. Councilman Isaacs.

ISAACS. I'd like to bring up a different subject. You mentioned the George Washington Bridge and the new level being built. When that was originally designed as I understand it it was intended for rapid transit at least in part. But that has been abandoned. And of course you are interested in all your residents whether they work in New York or not. Here people arrive at the other side of the river by all of the railroads or they have no connection today in most cases with New York City where they want to work. So far too many people, from my point of view, come in by bus and by cars. That is encouraged and everything else seems to be excluded today by the port authority. That is true of the Narrows bid in their proposal. Isn't it time that someone persuaded the port authority—I'll put it that way—to build an underground railroad connecting all the railroads in New Jersey at their terminals and swinging in either through the Hudson tube or through the Narrows Bridge or the George Washington Bridge or what have you, carrying them by rail into our city. It is infinitely better for us to have people come in underground and connect with our local transit than it is to have our streets flooded with busses and automobiles.

MEYNER. I couldn't agree with you more, Councilman Isaacs, but I am afraid that you put the cart before the horse. Before we persuade the port authority I think we've got to persuade the traveling public. The traveling public somehow would much rather jump in a car parked outside of their respective apartment or home and travel into a crowded, congested city and pay the costs of parking. By the same token because a bus carries fewer passengers but gives more frequent service we want to use the busses. I think something must be done to counter this trend because I think if it continues we'll have nothing but chaos. And we try to counter it by setting up a division of transportation in our highway department so that we say to the highway builders "Well now look at Rapid Transit. The port authority whether you want to criticize them rightly or wrongly have merely followed this public trend of people getting into cars and busses and they furnishing the facilities for those people who want to go into cars and busses.

ISAACS. But they have encouraged the trend.

MEYNER. Well, on the other hand, on the other hand, any of these propositions that have been developed cost money—$400 million, $600 million, and there isn't in any of those studies any indication that you can make them pay for themselves. It may be that we can ask the port authority to be sensible about this thing and get the public to support them to subsidize this rail transportation which is much more efficient. You can travel and occupy much less space but how to sell the public on this? Places like Los Angeles where I think 60 percent of the downtown section is occupied by parking lots or streets are just clogged, all you have to do is get one or two cars stuck and everybody is jammed up for an hour or two especially at the rush hour. They are looking for something that we got and we should retain. I agree with you that there ought to be some method but first we've got to sell the public on using these facilities.

SANTANGELO. Governor, the purpose of the port authority was to enhance the transportation facilities of interstate commerce between States and between nations and also to aid in the general mass transportation. Since the last 10 years the port authority or the business in the port of New York which includes New Jersey and New York has been falling down and you may recall within the last 2 years in New York, the New Jersey Legislature the port authority opposed the bills that had been proposed in the New Jersey Legislature to have them take over transit facilities and cooperate in trying to streamline the transportation between the States. Now why is it that the port authority which has as its purpose improving the transportation facilities, encouraging transportation, comes into New

Jersey and opposes aiding in the transit facilities of railroads and other transit facilities and at the same time their major objective, to increase the travel and cargo shipments out of the port of New York has been falling off? For example within the last several months we have heard through Governor Rockefeller that the wheat shipments through the port of New York have dropped to the lowest point since 1953. The port authority seems to be going into all other businesses. It has been labeled an octopus extending its tentacles throughout the State of New York. It has gone into Newburgh, 90 miles from the port of New York, and opened up a hotel. It is running a bowling alley. It is doing every other thing in real estate. Much of its business is going into areas unrelated to transportation, unrelated to the motorist, unrelated to the port. Do you think, Governor, that all this extension into areas which are not their primary concern and which prevent them from reducing the toll of the motorists who are financing and paying for the port authority revenue is fair? And should something be done about this? And don't you think an investigation by the Congress of the United States should inquire into this area to see whether they are applying their funds for the purposes of transportation into State commerce and don't you think that Congressman CELLER's resolution to investigate along these lines is appropriate?

MEYNER. Does that question really call for an answer?

SANTANGELO. It certainly does.

MEYNER. It is the kind of question that starts off like "When did you last beat your wife." No I think you have got to differentiate here. I think obviously that originally it was thought that rail transportation would become important and that the port authority would move in this area. But I call your attention to the fact that in Boston, in Los Angeles, in San Francisco in Chicago, transportation by rail became a rather difficult kind of thing because people couldn't make money at it. People were leaving rail transportation and going to bus or to motor vehicle. Now the port authority representing the view of the public—the public wanted these facilities. I didn't hear any objection to building an extra tube on the Lincoln Tunnel or building a Lincoln Tunnel or any of the bridges that have been built. I haven't heard one. The public wanted them. They were responding to it. If any objection can be made of the port authority it is that it is conducted as a successful business. They always look for the successful projects rather than for those which would be subsidized. I think what they are worried about and remember you have got six reputable citizens in New Jersey, six from New York, and these people realize that they can only exist and build new projects which they feel will serve both States, if those projects will be paying propositions. Now if they have too many on the subsidy side they are going to be in difficulty. I think we found out long ago in transportation in New York City that it is a losing proposition. And they have been reluctant to take over. The Governor of New Jersey and the Governor of New York are interested in trying to get them to take some of these facilities over. I think we are making progress in that direction, but we can't saddle too much of a burden on them. Now with respect to these independent enterprises it has been—there are cases where they own airports and where they have to control the land which is the flight of the plane, the actual runway. Now they have leased some of that to private enterprise. They say they are leasing it as comparable rates charged other people. And the money they get from that enables them to maintain the services. Now this was written in their original constitution—their original laws. The legislature of New Jersey and New York can withdraw this authority to build a hotel out at an airport or to maintain piers. They can withdraw that. As I say we might have to furnish them the money somewhere else to replace what revenue they get there.

SANTANGELO. That's $5 million for the hotel over in Idlewild and there is a bowling alley that they are operating and also a plan on the part of them to take over with $300 million all the East Side of New York. Don't forget this is a tax-exempt corporation. It pays no taxes. Interest on the bonds are tax exempt.

MEYNER. By the same token we don't take any of our revenues from the State of New Jersey or New York to appropriate them to the port authority to maintain bridges and piers.

PEER. Now, Governor Meyner, to get away from the——

MEYNER. I brought piers in here too often.

PEER. You know several of them. To get away from the port authority for a little while, let's get around to Gov. Robert Meyner. There was some criticism of you, you probably have suspected or heard, at the Los Angeles convention for keeping your delegates to what appeared to be a commitment to go along with you as a favorite son. What do you feel that has done to your political future?

MEYNER. I don't know what it has done to my political future.

PEER. What is your political future?

MEYNER. The political leaders in New Jersey decided early in January in 1960 that they wanted me to be a favorite son. The delegates were elected on that basis. We went to the convention on that basis. I assured all of the contenders that it looked to me as though I would be the favorite son on the first ballot. And KENNEDY would get most of the votes on the second ballot. We lived up to the assurances we gave to everybody. We gave any of those people who felt they had an opportunity after the first ballot to get their bandwagon rolling. We lived up to what we said to all of the delegates was going to happen. We didn't change at the last minute.

PEER. Now, Governor, under the New Jersey law you cannot succeed yourself as governor, can you?

MEYNER. I cannot.

PEER. What are your political plans from here on in?

MEYNER. I plan to be as strong a voice as I can present for the Democratic Party in New Jersey. I have given, or will have given 8 years of my life to State government. And we have tried to establish integrity in government. We have tried to establish a 21-county party. We have tried to make our politics synonymous with good government. I am going to try to exercise what influence I have—little or great—for the future to keep that kind of a party and that kind of government in New Jersey.

PEER. If the Democratic ticket is successful in November, do you feel that you may be a member of the Cabinet of the incoming President?

MEYNER. I won't be in a position to accept any job openings until January 1962.

PEER. Until 1962?

MEYNER. That's right. I go a year beyond——

PEER. I see. Well then is there any possibility that you may run for the Senate?

MEYNER. I have always found that jobs are available when you don't seek them too fervently.

PEER. And that is your position at this time? You are not seeking fervently but you sort of hope that it comes along?

MEYNER. Well I love public life. It gives more satisfaction, I think, than having a lot of money or being an outstanding person in your profession, or running a successful business.

PEER. Governor, I wish we had more time to go into a great many aspects of our discussion, but that is all the time we have on this session of "Metropolitan Probe." Thank you, Governor Meyner.

Cuba, Down the Red Road

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Monday, August 22, 1960

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial broadcast over WDSU–TV and WDSU radio on August 9, 1960:

CUBA, DOWN THE RED ROAD

(Editorial was broadcast over WDSU–TV and WDSU radio on Aug. 9, 1960)

Cuba is still marching down the road toward communism. Under the guise of retaliating against the United States, the Government continues to seize private property. Under the guise of protecting a revolution that once flew the banner of democracy, the Government continues to rule at the point of a rifle, choking off all liberties, keeping hundreds of political prisoners waiting in crowded cells for an uncertain fate.

Every comment about the United States by a Cuban official is bitter. Every word about Russia drips with affection. Moscow and Havana join in threatening the United States with Soviet rockets.

Like other Iron Curtain countries, Cuba today is a place lovers of freedom have to escape from—the latest, Dr. Raul Chibas, one of the early leaders of the Castro movement. We wonder how many people would flee Cuba if it didn't have to be done by plane or boat.

The situation grows grimmer with the secrecy shrouded illness of Fidel Castro, raising the possibility that control may pass to two more violent radicals, his 29-year-old brother Raul and the Argentine-born Che Guevara, both foaming-at-the-mouth haters of this country. Raul runs the army. Guevara runs the so-called people's militia. Both in recent months have been moving their men into more and more areas of Cuban life—labor, education, mass communications, among others.

What to do about this revolution which has been kidnaped by the Communists and delivered to Khrushchev? Treaties and good sense and regard for the opinion of our Latin neighbors all argue that we avoid muscling into Cuba and taking over.

There are factors working against the Cuban regime. One is the apparent physical decline of Fidel Castro, the popular idol of the revolution. The Catholic church is another. Economic troubles are a third.

In the opinion of this station, the only role for the United States is to continue to expose Cuba's Communist affiliation * * * to move with other American countries toward the isolation of Cuba * * * and to prevent Communist contagion by working with Latin neighbors toward more democracy and higher living standards in this hemisphere.

Military Action in Cuba—When?

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1960

Mr. FLOOD. Mr. Speaker, for many months, in and out of Congress, I have endeavored to alert the Nation and the Congress to the growing threat to the south of us, with particular reference to the Caribbean area and the necessity for remedial action.

Even though these efforts have not yet led to the decisive measures required, it has been gratifying to recognize a growing public understanding in the form of thoughtful articles in the press. This causes thoughtful persons to inquire why the Congress does not take the lead in the trying situation and not wait for the public to enforce congressional action?

A recent contribution by David Lawrence in the July 8, 1960, issue of the Evening Star of Washington, D.C., entitled, "Military Action in Cuba—When?" is most timely. It quotes significant passages of the 1954 Declaration of Caracas and cites other precedents.

The indicated article, which is commended for reading by all concerned with the security of the United States, follows:

MILITARY ACTION IN CUBA—WHEN?—UNITED STATES SEEN OBLIGATED TO PROTECT RIGHTS OF ITS OWN AND OTHER FOREIGN CITIZENS

(By David Lawrence)

The time for action on the Cuban problem has come. The patience of the U.S. Government is not unlimited.

Dealing with an erratic individual like Fidel Castro requires precautionary measures. So Americans are rapidly getting out of Cuba. In a little while they may all have been evacuated, though no formal warning to leave Cuba has as yet been issued by the Department of State here. Out of the 6,000 Americans living there, nearly 3,000 have already departed with their families.

Is all this the forerunner of military action? Not unless Castro provokes such a crisis. But if he does, he will find no hesitation on the part of the United States to employ its military power to protect the lives and properties of its citizens.

The Castro Government has confiscated the property of Americans, British, and other Europeans involving hundreds of millions of dollars, and threatens more seizures. Confiscation in itself is not a basis for military action, but, if the property is actually stolen and nothing but worthless notes are issued in exchange, the American Government is justified in taking over the properties and retaining possession until such time as a free government comes into office which will respect the rights of Americans and other foreign citizens in Cuba.

The U.S. Government has an obligation not only to its own citizens, but to those of other governments. For ever since the Monroe Doctrine was proclaimed in the early days of our Republic, the United States has acted as a trustee for the citizens of other countries. The doctrine was deisgned as a warning to European governments not to seek to establish a foothold in this hemisphere by annexing or dominating territory not previously colonized by them. The Soviet Government, by gaining control of the Castro regime, is today flagrantly disregarding the Monroe Doctrine.

In recent years the Monroe Doctrine has been accepted as an international obligation of all the Pan American States. In 1954 at Caracas, Venezuela, the 10th Inter-American Conference, attended by members of the Organization of American States, adopted a resolution which declared:

"That the domination or control of the political institutions of any American State by the international Communist movement, extending to this hemisphere the political system of an extra continental power, would constitute a threat to the sovereignty and political independence of the American States, endangering the peace of America, and would call for a meeting of consultation to consider the adoption of appropriate action in accordance with existing treaties."

Such a consultation does not require unanimous action. Indeed, it may be just an intermediate step before a decision is made by the United States, along with several other countries, to use military force as authorized under article 51 of the United Nations Charter. The only requirement is that the United Nations Security Council be given proper notice of the steps taken.

It will be recalled that back in June, 1940, there was a threat of Nazi conquest of the French, British, and Dutch possessions in this hemisphere. President Franklin D. Roosevelt secured the adoption by Congress of a joint resolution implementing a document previously signed by the foreign ministers of the American Republics. Congress served notice then that no such transfer of sovereignty would be recognized and declared that, if such transfer seemed likely, the United States "in addition to other measures" would consult with the American Republics "to determine on the steps which should be taken to safeguard their common interests."

Inasmuch as this is a campaign year, it is quite possible that President Eisenhower will feel impelled to ask Congress for a joint resolution authorizing him to take certain steps to prevent the Soviets from getting a foothold in Cuba. The possible shipment of Soviet arms to Cuba has already been reported. It was precisely to avoid a similar situation in 1914 that President Wilson ordered a ship carrying German arms to Mexico to be halted and turned back to its point of origin. To accomplish this, the customs house at Vera Cruz was seized by U.S. Marines.

The United States is not anxious to become involved in a military way in Cuba, but there have been hints by the Castro government of possible seizure of the U.S. naval base at Guantanamo, which is maintained under a Cuban-American treaty of many years' standing. Certainly any attempt to interfere with the operation of that naval base would be resisted by U.S. forces.

Castro can have peace and he can do what he pleases internally. But the moment he confiscates foreign properties, does not pay for them and threatens the safety of foreign citizens, the United States will not hesitate to use force to secure redress and protection, not only for its citizens, but for those of Britain and other countries whose lives and property have also been threatened.

The Plight of Small Business

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1960

Mrs. ST. GEORGE. Mr. Speaker, the following letter gives a very clear picture of the plight of small business in this country today, of the harassments to which they are subjected by Government, of the bureaucratic redtape that strangles them, of the price squeezes that finally ruin them.

Now, Mr. Speaker, the big corporations and the big money can cope with all this and get by, but the small businessman, who up to now has been the backbone of American business, is being ruined by these methods. True, he cannot deliver a big vote, like the big labor bosses who work for the large corporations, nor can he buy elections—and that can also be done in this day and age.

Are these to be the "American way of the future?"

The letter follows:

As a small subcontractor who has been trying to make a decent living doing defense work for the past 16 years, I want to ask you to please vote against the Senate amendments to H.R. 11207.

I don't understand much about politics, but I do know that if the Small Business Administration gets control of subcontracting, this isn't going to help us any. There is already so much redtape doing business as a subcontractor, that any more of it will be more than we can take.

The prime contractors get our quotations, but they tell us our prices have to be just as low as some incompetent junk shop which gets half of its work rejected. When you work 16 years to build up a company with skilled workers and quality control, you at least expect to get enough for your work to cover your honest costs—and not have to chisel your price. If we have to keep bidding against the cheapest outfit in town, you know we would have to cheapen the quality of work we do ourselves. How they expect to make better airplanes and missiles that way is beyond me.

Every competent small subcontractor I know around here is in the same boat. The less work there is to do, the more we are told that Congress keeps insisting that they have to give the work to the lowest bidder. I read where one of you people in Congress said this was the American way. Well, if it is American to always buy the cheapest thing, then something has gone wrong with America.

We don't want any handouts. We just want to go back to doing business where the buyer is permitted to use his intelligence where a man's quality means something. A businessman understands these things—I sure hope you do, because a lot of your friends in Congress don't seem to.

Should Foreign Imports Be Permitted To Ruin American Industry?—Eliminate Jobs for U.S. Citizens?

EXTENSION OF REMARKS
OF
HON. WILLIAM K. VAN PELT
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1960

Mr. VAN PELT. Mr. Speaker, there are hundreds of small industries in this country that are being injured by a flood of imports that are the products of cheap labor. I am submitting herewith a statement by Alfred E. McMillan, secretary-treasurer of the Tile Council of America made before the U.S. Tariff Commission conducting a peril point in-

vestigation. It is an excellent account of how one small industry—and there are many others—must fight to keep their domestic markets in the face of these cheap foreign imports. Mr. McMillan's remarks reveal in detail how the ceramic mosaic tile manufacturers have created a market for their products through a cooperative effort, only to see it threatened by a flood of cheap imports.

Mr. McMillan's remarks deserve the careful consideration of all Members of Congress and citizens generally. His statement follows:

My name is Alfred E. McMillan, and I am secretary-treasurer of the Tile Council of America. The Tile Council is a trade association of ceramic tile manufacturers who produce most of the ceramic floor and wall tile in this country. With your permission, I would like to explain in some detail the function of this unusual organization, because it has a significant bearing on the case which we are developing here today.

The Tile Council was formed in 1945 as World War II drew to a close. Its formation and the programs that the domestic manufacturers have developed and supported in the ensuing years forms the backdrop against which our case should be viewed. It is the objective of the Tile Council, and, therefore, the domestic industry, to create, expand, and maintain the market for ceramic tile in this country. Now, that's not an unusual objective for a trade association; there are hundreds of associations in this country that espouse the same objectives. What we want to emphasize here is that ours has been a unique effort in the field of building products. The market we are discussing is a created market. It was developed, expanded, and nurtured through the expenditure of the time and treasure of the domestic tile manufacturers, working together and individually. It was created and expanded by a far-seeing, comprehensive campaign undertaken 15 years ago by the domestic industry.

When I say that we created the market in this country it is literally true. Granted, ceramic mosaic tile was sold in the United States before the founding of the Tile Council of America. Before World War II, however, ceramic tile was available in only a limited number of shapes and colors. It was generally considered a bathroom surfacing material—its application was limited.

Since World War II, and the formation of the Tile Council, ceramic tile is being used creatively in many other sections of the home, commercial buildings and public buildings—on exteriors as well as interiors. It is now available in many colors and shapes and in an infinite number of design patterns.

This new and expanded market for ceramic tile didn't just happen by accident, gentlemen, it was made to happen. And therein lies the story of the domestic ceramic mosaic tile industry and the market it created. And, likewise, therein lies the reason we highly resent the disruptive intrusion into this market by the products of cheap foreign labor. It is one of the basic reasons we vigorously oppose the flood of products into this market from sources that have not made one single contribution to its creation, its expansion or its maintenance. As a matter of fact, just the reverse is true. The major contribution of these foreign producers to this created market has been a destructive one. They participate on the basis of price, alone, because of their supply of cheap labor. They reap, but they do not sow; they consume, but they do not contribute; they carry off a growing share of the market, but bear none of its burden. We resent this as a matter of justice, and I shall attempt here to outline the underlying reasons for our resentment.

The foregoing should not be construed as a negative attitude by the domestic industry, for ours has always been a positive program. If it were not positive, there would be no created market; either for ourselves or the foreign producers. These programs, which have created, expanded and maintained the market, fall into three general categories: architectural, advertising and promotion, and research. All of them have been supported by the domestic producers, alone.

Our architectural program, for both present and future architects, is unique in the building products industry. We concern ourselves, for example, not only with the practicing architect, of today, but also the architect of tomorrow through our scholarship program. Twenty-seven leading institutions have so far been recipients of our scholarship grants. The funds are extended on a rotating basis. Each school administers its own program, choosing its own scholarship students. A portion of the funds are employed to improve teaching facilities in courses on building materials. Another portion is in direct aid to outstanding students of architecture according to the program developed by the individual schools. The Tile Council hopes that eventually every school of architecture in the country will someday participate in the program. It is believed that our project is the only one of its kind to be conducted by an industrywide building material group for architectural students.

As an aid to the practicing architect, and at the same time to lend stability to the industry, the domestic manufacturers, through the Tile Council, have taken the lead in developing standard specifications for the use of ceramic mosaic tile. A great deal of time-consuming effort and expense were required before the standard specifications were approved by the American Standards Association. The standards are of immense help to the busy architect, but, at the same time, they permit him to use ceramic tile in new and creative designs. And, in doing so, he automatically expands the market for ceramic tile in this country. Our service to the architect does not end there, however. The Tile Council maintains an architectural inquiry service. By mail, telephone, and sometimes in person, answers—authoritative answers—are given to a multitude of questions coming in from the field. They may be questions dealing with a skyscraper or a swimming pool; they are all answered. We likewise promote the architectural profession itself through our advertising and promotion activities, and I'll say more about that later. In short, we care about the architectural profession in this country.

One of the programs in which the domestic industry takes great pride is its activities in basic research. For many years we conducted our research program at the School of Ceramics at Rutgers University. In 1958, however, we opened our half-a-million-dollar research center at Princeton, N.J. It is from the scientists at the research center that have come many of the new ideas which have so improved the installation methods and new uses for ceramic mosaic tile. Since its inception in 1952, the domestic industry—as a cooperative effort—has spent more than $2 million on this research program. One of the latest developments has been the thin-set dry curing mortars. These new mortars have served to reduce the time and cost of both interior and exterior applications. While these mortars are still relatively new, it is estimated that more than 50 million square feet of tile was set with them last year—a dramatic example of how basic research has paid off on the jobsite. We are currently conducting research on new grouting materials—the cement used to fill the joints between the individual tiles. Should this research be successful, and we now believe it will be, it will open up even more new areas to the use of this colorful building product. The specifications which I mentioned previously owe much to the research center activities, and our scientists are constantly seeking new and better ways to use ceramic mosaic tile. It must be added that all of the developments that have taken place in our industry in the last 15 years have been made through the efforts of the domestic industry. Not one single advancement in the application of ceramic mosaic tile has come from abroad. They have copied well, but they have not created.

Another example of creativity in the domestic ceramic mosaic industry is the new back-mounting process. For many years ceramic mosaics have been face-mounted on sheets of paper, approximately 1 foot by 2 feet, to facilitate installation. After the tiles are installed, the paper is wetted and stripped away. However, the domestic ceramic mosaic producers have now developed a method for mounting the tiles on the back, thereby reducing the installation operations and at the same time giving a better appearing installation, since the tile mechanic can make adjustments in the sheets immediately. It is just one example of how the domestic ceramic mosaic producers are constantly seeking better ways and less expensive methods for installing their material. So far, none of the foreign producers have figured out how to copy this new back-mounting method. I expect it is something we can look forward to.

If a market is to be created, and then expanded, an essential ingredient is advertising and promotion. Before a building product can gain universal acceptance, it must be brought to the attention of the consuming public; be it an architect, a builder or a homeowner. An advertising and promotion campaign generally has a number of objectives, and these objectives must include acquainting the consumer with the product and at the same time create a desire in him to acquire it. Since its inception the Tile Council has carried on a comprehensive campaign of national advertising and promotion. This, perhaps, is the key to the expanded created market for ceramic mosaic tile in this country.

At the present time the domestic industry, through the Tile Council, is spending at the rate of nearly a quarter of a million dollars a year on its national advertising program. We believe ours is a unique program in the field of building products for institutional advertising. The designs created for our advertising bear some of the brightest names in American architecture. Such world famous architects as Welton Becket, Marcel Breuer, Charles Goodman, Walter Gropius, George Nelson, Perkins & Will, and Edward D. Stone, to name just a few, have created original designs for our advertising program—all featuring ceramic tile. Our ads have appeared in all of the leading shelter magazines, builder publications, and architectural journals.

We are presenting for the Commission's inspection samples of the Tile Council's national advertising program. These are a part of the campaign supported on an industrywide basis.

Since its inception, the council has expended more than $8 million on its advertising and promotional programs. I think you will agree that this is a considerable sum for an industry with the limited resources of ours.

Our promotional campaign has been the envy of the entire building products industry for many years. Last year, for example, there were more than 125,000 stories about

ceramic tile printed in the Nation's newspapers, from the largest metropolitan daily to the smallest country weekly. Stories about tile were printed in 125 magazine articles, and it was talked about on radio and television. This has been a continuing promotional campaign dating back to the very beginning of the Tile Council. It is the wants created by this comprehensive and hard-hitting campaign that constitute the market for ceramic mosaics in this country. As I said before, this expanded market did not happen just by accident, it was made to happen. It was made to happen because through the promotional efforts of the Tile Council national magazines that never considered ceramic mosaic tile as a worthwhile subject suddenly found that new and dramatic creations were being devised with this old and respected building product. Editors were made aware that something exciting was being done with what had once been considered a pedestrian, unexciting material. The result? The readers of the mass circulation publications soon were becoming aware of the design, decorative and other qualities of ceramic mosaic tile. That, gentlemen, is how a market is created. It is done through the day-in, day-out efforts of the domestic manufacturers over a period of years. It is a campaign that is both qualitative and quantitative.

And our programs do not end there. We have produced a bookshelf full of brochures that have been made available to all of the consuming public. We have produced filmstrips that have been viewed by school board members, public officials, architects, students, tile contractors, and the general public. The average cost and distribution of a single filmstrip is approximately $10,000. These, too, help us create and expand a market. I can't help but ask, How many filmstrips have been produced for the American consumer in Japan, in Mexico, or in Italy? The answer, of course, is "None." The domestic industry, individually and through the Tile Council, has worked closely with the Nation's tile contractors and their organizations. We have kept them abreast of the latest developments in the industry, assisted them in their promotions on the local level, prepared programs for them; yes, we've even helped them write their speeches—all in the interest of maintaining, promoting, and expanding a ceramic mosaic tile market in this country.

What has been the contribution of our foreign competitors to this program? The answer is one word—"cheap," cheap tile that is the product of cheap labor. They have one program, and one program only: to pour as many feet of cheap ceramic mosaic tile into our created market as they possibly can. We care about our market, because we created it; they do not. Their method of nurturing this carefully developed market has been to destroy the entire competitive price structure. Their service to the architectural profession has been to offer only one thing: a cheap price. Their method of expanding the market is to pirate up an ever-increasing share of the market we developed—driving us into this chair before you today. It is indeed distressing to me that a proud, progressive United States industry must plead for succor with its own Government to continue its existence.

To a degree, our present plight stems from two contrasting characteristics of the American people: our supreme ability to wage war and our magnificent benevolence in peace. In the case of Japan, our Air Force obliterated the obsolescence of their factories in World War II. In the years since, through the largess of our Department of State and the courtesy of the American taxpayers we have assisted them in building new and modern ceramic tile plants and provided them with the technical know-how of production. The net result has been a flood of their cheap products that threatens to inundate an established, useful domestic industry.

Our previous speaker, Mr. Phillips, could tell you of an experience he had involving this strange concept devised by the Department of State. In 1958, Mr. Phillips received a request from an agency of the International Cooperation Administration asking if a group of Japanese industrial experts could visit his plant to learn the know-how of quality control in the manufacture of ceramic mosaics. Here we have a picture of a Government agency asking a company in an industry that is fighting to survive to divulge its most precious secrets to its foreign competition. We have seen other cases of Government-sponsored trade missions advising the Japanese on how to sell in our markets. What an inspiration for other small industries seeking to follow the pattern of the domestic ceramic tile industry by developing new markets. We are constrained to ask the question: Are all small industries to go on the choppingblock of foreign trade? Is there no longer a place in this country for small industry? We have heard much in recent months about our national growth rates. If the present policies are allowed to remain in effect, we will be "grown" to death.

The import threat has even reached the point in our industry where State Department pressure is applied upon authorities within the Federal Housing Administration. This is not hearsay.

The fact is that recently we were informed by FHA authorities themselves that they were advised by the State Department to ignore FHA's own quality standards in order to allow the use of grossly inferior imported ceramic mosaics in FHA projects.

The ability of our foreign competitors to copy our colors and designs are well known; they copy while our industry innovates. We had a situation last year where a tile contractor in Texas offered U.S. Naval construction authorities samples of domestic ceramic mosaics for color selection. However, when the tile for the floors showed up on the job, they were of Japanese manufacture. But, the construction superintendent couldn't tell the difference; the Japanese tile was identical in color and pattern. We have seen case after case, throughout the country, where our so-called bread and butter colors and patterns have been duplicated by the Japanese.

The appetites of our foreign competitors for our markets are voracious. Every economic signpost points out that they will not be satisfied until they have consumed our entire market and driven our domestic companies from the industrial scene.

Ceramic mosaic imports were once largely confined to areas in and around ports of entry. This is no longer the case. We find them in Dallas and Des Moines, in Boise and Buffalo. They move freely in the channels of distribution throughout the United States. What are the objectives of the foreign producer with his supply of low-cost labor? We have seen previously what the trend has been by Mr. Phillips' statement and the charts. I think we can gain another insight from a statement recently published in Oriental America magazine, a magazine published in Japan and widely circulated on our Pacific coast. On page 16 of the April 1960 issue the editor, in conducting a survey, reports this quote from a Japanese exporter to the United States:

"Since it is now claimed that Japanese products are quality at a low price we suggest that the United States and Canada refrain from producing merchandise that is made in Japan."

This Japanese exporter apparently feels that the North American Continent is some sort of private marketing grounds where the products of their cheap labor can be dumped with impunity. If we made a similar recommendation to the Japanese, we would probably be greeted with the familiar "Yankee, go home," with the cheering section led by a member of our own State Department.

As we see it, it is the obvious intent of the foreign ceramic mosaic producers to engulf our entire market; to wipe out the domestic industry. We cannot, on the basis of both the facts and our experiences, come to any other conclusion. Nowhere does the record indicate that the foreign producers show any regard to the conditions in the marketplace. I must emphasize again that they see only one commodity: price. Price based on some of the cheapest labor in the world.

It should be apparent by now that the domestic ceramic tile producers have a strong sense of responsibility to the market they have created. They are constantly seeking new ways to make the products more usable and more desirable to the building industry. This is as it should be. But, gentlemen, this is a futile effort if they continue to see their market swallowed by their foreign competitors who contribute nothing but a cheap price.

The Tile Council this year is operating with an advertising and promotion budget below that of 1959. It appears now that the budget will be further reduced in 1961, and there is no doubt that this unfortunate trend can be traced directly to the flood of cheap imports.

The service performed to the building industry and the consuming public—the many constructive programs I have outlined in the foregoing—cannot be maintained and strengthened by a dying industry. This is stating the obvious; the conclusion is inescapable. Permit me to state the obvious, because I think the results would be tragic: If this domestic industry is destroyed there will be no more service to architects; scholarship programs for the architects of the future, basic research, advertising and promotion, and assistance to the tile contractors. These will be wiped out, just as sure as I'm sitting here. They will pass into oblivion, with nothing to take their place, because we are just as positive that the foreign producers have no inclination to institute the programs and functions now performed by the Tile Council of America.

We must remember that when we see vast wall areas in schools and hospitals surfaced with colorful ceramic mosaic tile, when we see beautiful new buildings rising with ceramic mosaics on the exterior we must remember that this did not happen by accident; it was made to happen. We believe it would be tragedy of the first magnitude if the created market of the domestic ceramic mosaic industry is turned over to the foreign producer purely because of his ability to employ cheap labor. We believe, and we think you believe, that this tragedy should not be permitted to happen.

Camp Wigwam for Boys—A Half Century of Service to the Youth of America

EXTENSION OF REMARKS

OF

HON. LUDWIG TELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, August 22, 1960

Mr. TELLER. Mr. Speaker, with the close of the 1960 camping season, Camp Wigwam for Boys, located in Harrison, Maine, will have completed a half century of service to the youth of America. Established in 1910 by Arnold M. Leh-

man and Abraham Mandelstam, this outstanding camp is still piloted under the direction of its founders, and it has deservedly gained an enviable nationwide reputation as one of the leading private camps of our country. The engaging and implementing talents, characteristics, and abilities of "Pop" Lehman and "Mandy" have been sources of delightful jibe and playful comment by Wigwam staff members and generations of Wigwam campers, who have come away from their experience at Wigwam with lifelong respect for these two great educators and the ideas which they have put to work at their renowned Camp Wigwam. I served as a staff member at Wigwam for several years in the 1930's, and I recall my association with the camp as a worthful and many-faceted experience.

By the early introduction of cultural and artistic interests to go hand in hand with the physical and recreational aspects of the camping experience, Camp Wigwam has proved to be in the fullest and truest sense a pioneer that has now grown to be a tremendously important phase in the life of America's youth. It has blazed trails where there were once no trails at all, thus laying the foundation for a movement of national proportions in the field of education. It has taught the importance of active and democratic participation in community affairs. It has encouraged the development of leadership qualities, and it has thereby contributed to the greatness of our Nation and its freedom loving people.

Almost every State in the Union is today represented by the Camp Wigwam's alumni. Included among many others are such persons as Richard Rogers, composer and producer; Frank Loesser, librettist, composer, lyricist, and producer; William Zeckendorf, Sr., of the real estate firm of Webb and Knapp; Arthur Loesser, head of the Cleveland Conservatory of Music; and U.S. District Court Judge Charles Wyzanski, of Boston.

Among Camp Wigwam's staff members have been Mortimer Adler, educator and author; Dr. Leon J. Saul, author and internationally prominent psychiatrist; the late Clyde Fisher, curator in chief of the American Museum of Natural History; and Prof. Richard B. Morris, head of the History Department, Columbia University, and editor of the Encyclopedia of American History. Among the distinguished individuals who have spent entire seasons as honored guests at Camp Wigwam are the late Leopold Godowsky, composer and pianist; the late Josef Hofmann, world famous pianist. Another distinguished person who has visited at Camp Wigwam is former Premier Mendes-France of France. The two mentioned last entrusted their children to Camp Wigwam as campers.

Founded at a time when psychologists such as Freud, Jung, and Adler were drawing attention to the significance of emotional factors in the education of youth and in the moulding of healthy and well integrated personalities, Camp Wigwam has been among the first camps, if not the very first one, harmoniously to balance a boy's physical activities against his need for appropriate aesthetic outlets and educational interests. This has been accomplished partly through the introduction of art, music, theater, and other means of aesthetic stimulation. In the rustic setting of Camp Wigwam, its founders and directors have been able to inculcate young people with a more sensitive appreciation of those finer values which lead to an integrated life. At the same time, it has provided them with abundant opportunities for thriving physically in a wholesome atmosphere stimulated by closeness to nature. By being fortunate enough to get youngsters at the formative stage of their intellectual and emotional development, Camp Wigwam has been able to guide them into healthy adulthood and to infuse them with a sense of belonging and of sound democratic citizenship. In this manner, it has constantly furthered a tremendously worthwhile national camping movement that today is invested with a broad cultural and educational rather than solely recreational significance, geared to the needs of the individual youngster and his adjustment to conditions prevailing in an ever changing world.

Comments of Paul H. Robbins, Executive Director, National Society of Professional Engineers, in Regard to the Reader's Digest Article "Our Great Big Highway Bungle"

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1960

Mr. SCHWENGEL. Mr. Speaker, as I have pointed out before, there has been a considerable amount of disagreement about the article of Karl Detzer's on "Our Great Big Highway Bungle." Mr. Paul H. Robbins has pointed out some well worth knowing facts in disagreement with Mr. Detzer's article.

Under unanimous consent I insert these remarks in the Appendix of the RECORD for study by my colleagues:

In the implementation of the vast and ambitious public works programs initiated by the Federal Government in recent years, the National Society of Professional Engineers has consistently maintained that the highest quality and most economical design and construction can only result from the proper utilization of the highly qualified members of the engineering profession in all applicable branches of professional endeavor, both in governmental service and in private practice. The NSPE board of directors has recently adopted a policy statement pertinent to this subject:

"NSPE advocates and supports the practice of high-quality engineering services in both Government and private practice, and maintains that engineering services should be under the direction of registered professional engineers. Professional engineers in Government employ should perform the highest quality engineering services for preliminary study, preplanning and budgeting, and essential supervisory management and control of governmentally funded activities. Governmental agencies should contract for engineering services with highly qualified private engineering consultants to the extent consistent with national security, proper continuity of governmental programs and the public interest. NSPE further reaffirms its traditionally stated position that engineers in Government and private practice recognize a need for engineering activities of a complementary nature."

In this light, we are concerned with some of the statements in the July 1960 Reader's Digest article, "Our Great Big Highway Bungle," by Mr. Karl Detzer. The author states in part:

"Mismanagement is evident, too, in the extravagant use of private engineering consultants, instead of State highway employees in designing projects. Such practice is in violation of Federal policy, and it runs into money. The General Accounting Office has found that the costs of Pennsylvania's contracts with private consultants for preliminary engineering alone have been averaging $1 million a month. In New Jersey, in less than 4 years, eight engineering firms have received $8,219,967 in consultant fees for Interstate projects. In Maryland consultants have received more than $24 million on federally aided highways since 1954.

"Usually a consultant is paid a percentage of the cost of the project on which he works. He has a great deal to do with deciding whether the job will be an expensive one or a frugal one. Thus, only a highly developed sense of ethics stand between him and temptation. While rich old Uncle Sam is tossing money around, the temptation to cash in on a large scale is frequently great and sometimes irresistible."

The use of consulting engineers by State highway departments throughout the Nation has been with the full consent, approval, and close scrutiny of State highway engineering departments and the Bureau of Public Roads. The use of private engineers, as well as other elements of private enterprise in the design and construction of public works projects, has proven to be an economical method of doing business. Published facts prove this point without question.

Federal policy, contrary to Mr. Detzer, strongly favors the use of private services when appropriate and available through ordinary business channels.

The statement by Mr. Detzer completely ignores the general governmental policy favoring the use of private enterprise and the authorization for the use of private consulting engineers in the highway program set forth in the regulations of the Bureau of Public Roads, based on the Highway Act. A specific statement in the 1958 Highway Act declares it to be in the public interest to utilize small business enterprises to the fullest extent possible in the construction of the Interstate Highway System.

The engineers of the Bureau of Public Roads and various State highway departments as well as consulting engineers are slandered in the article by innuendos and implications intended to leave the impression that these professional personnel have been negligent or deficient in the performance of their duties. Such sweeping generalizations based on isolated instances in the most massive public works project of history are unjustified. The National Society of Professional Engineers insists that engineers in public service as a group are competent and dedicated professional personnel who perform a vital function in the public interest. Both private consultants and Federal and State engineering employees are an essential element in the planning and execution of the highway program. Inflammatory articles citing only the few bad examples in a program and completely ignor-

ing the overwhelmingly successful portion of the operation can only be harmful to the public by destroying confidence in a much needed program.

Mr. Detzer calls attention to large fees paid to consulting engineers for Interstate Highway projects, but presents no information to indicate the cost and scope of the services required of the consultant to earn those fees. Nor is there any indication regarding the large amount of future construction work which was designed for the fees.

A recently completed factual report prepared by an NSPE task force shows that a total of $72,131,478 was paid to consultants for designing 325 highway projects where total construction cost will be approximately $2,030,665,000. The $72 million in fees is a lot of money, but represents only 3½ percent of the total construction cost, and anyone acquainted with the work involved would know this to be a very equitable reimbursement for engineering effort and expenses involved.

With respect to Mr. Detzer's statements on consulting engineers being subject to the temptation of overdesign in order to increase the fee, many consulting engineers have long objected to contracts for engineering services where engineering fees are based upon a percentage of construction cost, and greatly resent any inference that the ethics of the profession mean little to the average engineer. If a "bad apple" exists in the national reservoir of private or public engineering forces, let him be exposed and let the engineering profession and the courts deal with him. Professional ethics, though played down by Mr. Detzer, is a real force that can and will deal with cases of this nature.

In any program involving such huge outlay of funds as the interstate highway program there are bound to be some cases of misuse of funds and other skulduggery. However, any inference that a few isolated cases prove that the entire program is rotten with recklessness, extravagance, special privilege, thievery, etc., is a great disservice to the great majority of sincere and honest individuals and firms involved in the work, and should be so recognized by the American public.

The Russian Economy

EXTENSION OF REMARKS

OF

HON. HALE BOGGS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 22, 1960

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following remarks by Charles Nutter, managing director of International House:

NEW ORLEANS.—The Associated Press, in its wisdom, recently distributed a story saying that around 15,000 Americans will crack the Iron Curtain and visit the Soviet Union this year. This number may be even greater if hotels and travel agencies can handle the influx. What Khrushchev and Eisenhower think of each other has not blighted the tourist crop to Russia this year.

These visitors will spend a week, a month or 2 hitting the tourist spots in Russia and will come home with a curious confusion of impressions which they will pass along from amateur lecture platforms all over America for the next year or so.

Get ready to hear these scarcely new facts about the Soviet Union: There are some churches open but not many; antireligious museums are hard to enter; posted prices on foodstuffs and clothing are sky high; there are very few automobiles and many pedestrians; lots of new housing is being built; Russian kids like gum and know a little English; women work at everything including day labor; hotels are adequate, but not luxurious; photographic restrictions seem to have disappeared.

Now and then some traveler will regale his listeners with an exciting story, mostly imaginary, of difficulty with the police, losing his passport, or another spicy account of hidden dangers he faced and mastered there beyond Minsk.

These bits of chit-chat will be passed along to Americans who have not seen Russia. They would be harmless enough if the visitors accounts stopped there, or if they dug deeper into the real meaning of the Soviet Union and Communist international which you don't see or read from a hotel window or taxicab.

But unfortunately there will be many otherwise astute observers return with a belief that because of its frontier appearance, high prices and scarcities and lack of many comforts and luxuries, that this is a backward nation and is no economic threat to the United States because it has several generations to go before it catches up with capitalism.

International House of New Orleans recently conducted its 40th Trade and Travel Mission abroad in 15 years; and this time we took 85 persons to Russia, Czechoslovakia and Poland, being behind the Iron Curtain for 2 weeks and in Red Square in Moscow on May Day at the very time that the U–2 incident occurred.

I conducted this trip on behalf of International House and I am as convinced that few trade contacts or opportunities were uncovered as I am that very few of our traveling members grasped or understood the economic facts and threat of communism as we glimpsed it in our brief mission.

The Soviet experiment, now 43 years old, is so vast, so different, so thought provoking and so startlingly successful at last that the Kremlin feels no fear in letting in large numbers of Americans to see their country and openly boasts of its economic plans for us all in the full belief that we cannot comprehend the facts and the danger.

A year or so ago Nikita Khrushchev told us over television that our grandchildren would live under socialism (a sugar-coated word for communism which is used frequently so as not to alarm people too much), and he further declared that "we declare war upon you in the peaceful field of trade. We declare war and we will win over the United States. The threat to the United States is not the ICBM, but in the field of peaceful production. We are relentless in this and it will prove the superiority of our system."

Adolph Hitler in his celebrated book "Mein Kampf" never was more specific in the plans he had for the world than the Communists are and constantly have been for about a century since Karl Marx dreamed in the British Museum in London. So long as these plans were just dreams we could afford to pay little attention; now they are dreams backed by a billion captive people who have become, against their will or approval, economic serfs under an industrial empire which would engulf the world.

The recent trip to the Soviet Union was my second visit there. In 1936–37, at the height of the great purges, I was a foreign correspondent there and saw Russia beginning to emerge from agricultural serfdom into an industrial state. Today, despite a great and disastrous war, the transition is far advanced, and the industrial power of Russia is beginning to roll and menace the world.

This visit to Russia left me with the very definite belief that the real Soviet threat is economic, not military. The Communists, by dint of clever planning, hard work and virtual slave or forced labor of their entire populace, have created an industrial power second only to the United States. In full view of the world but without its realization or alarm, the Kremlin has adapted outlawed and outdated malpractices of capitalism to establish a supreme state monopoly under state capitalism. It is called communism.

The fruits of a labor force which is larger than in the United States and which is surprisingly efficient in many areas and fields doesn't go to improve or help the people; it goes into a gigantic fund for use of the Kremlin, ample financing indeed for world revolution.

Communism in Russia is not communism at all, and probably never was. Today the Soviet Union is one gigantic trust in which the people are and have been exploited beyond the wildest dreams of capitalism in this or any other country. Everything and everybody belong to the state and move and operate at the whim of the state. The state owns every job and every means of making a living, and it owns every living area, every bit of production, all land and factories, and resources, developed and unexploited.

The state controls all wages and salaries and it also controls the cost of living or rather it fixes both. It can raise or lower either overnight, closing or widening the gap without consultation or law, for some 210 million people. It does so, of course, by holding wages down and raising living costs, particularly clothing or food, so that a whole family, including the wife and mother, has to work to make ends meet.

It looked to me as if the Soviet system, communism or so-called socialism in Russia today, economically speaking is a colossal distortion of the company, the company town, and the company store, all monopolies, as we used to know them in the United States, but which have disappeared. The profits of this great all-embracing monopoly, which is nationwide, do not reach the people; they are used instead by the state for political purposes, national and international; ample financing indeed for the worldwide conquest plans which communism espouses.

It is necessary to know and remember that profits and the profit motive didn't disappear in Russia; the Government just took them over and gave them new names that are deceptive and misleading as always.

Profit is a dirty capitalistic word in Russia, something reserved for blasting the capitalistic world. Capitalism also is a dirty word, reserved for enemies of the Soviet Union. Yet there are profits beyond the wildest dream of anyone in the Soviet Union today, and a degree of capitalism that surpasses anything in the free world.

The difference is that under state capitalism, Kremlin style, profits are not distributed to many private owners, the profits go to the sole owner of everything—the state. And this is by no means the workers paradise, for the worker has nothing whatever to say about what goes on.

The high prices which we saw quoted in good stores in Moscow and Leningrad are not necessary or realistic. They are, instead, a subtle form of taxation to drain off any surplus a worker might accumulate. In a monopolistic economic state, prices have no relationship to costs necessarily; prices are not geared to cost but are fixed by political decisions taken in the Kremlin. Shoes need not cost several weeks' salary, for they could be sold for a day's salary or issued free, if desired. But this might leave the individual with cash in hand which the state dislikes. Private accumulation is the first step toward private capitalism.

The worker is left drained dry at all times. He must exert his maximum effort to make ends meet, and this work effort, multiplied

by a hundred million souls, goes to enrich the parent corporation, which uses the labor force's productivity for capital expenditures and goods, for propaganda, for sabotage, espionage, and subversion, for education, for military preparation and adventures, for sputnik and lunik, for training of Communists to work in other countries all over the world, and for any other purpose it sees fit.

Better housing, food, and clothing for the proletariat comes into this scale at whatever level the leader decides. Usually it is near the tail end. It is correct to say though that food and living conditions are improving and are vastly better than they were in the thirties.

The important thing also to remember about Soviet economics is that despite 10 million slogans and claims to the contrary, the workers or proletariat have nothing whatever to say about what goes on; they are as voiceless actually as slaves because there is no way they can make their voices felt or heard.

The proletariat does not control, they comply. There are no real unions, no strikes, no sitdowns, slowdowns, complaints; nothing but obedience or disaster. The world's greatest private corporations never approached this system in power or in numbers of workers. The Soviet Union has complete and absolute mastery over a work force of more than 100 million workers. The proletariat hasn't one thing to say about what jobs they hold, their wages, their rents or food costs, or any like factor. Russia has a dictatorship of state capitalism, big business beyond the wildest dreams of the hated trusts which the Soviet press and leaders are always denouncing.

Behind the curtain and always ready for action against a sullen or unresponsive worker, or a troublesome one, is compulsion. He might lose his work card, or his assigned room to live in, or he might be ordered to a new job thousands of miles distant. Finally there is the secret police and terror. The Soviets have killed more people for economic reasons in trying to uproot humanity and change its habits than they lost in World War II.

Under Secretary of State Dillon, wise to the ways of the Soviets, recently said that "in the thirties the Communists procured foreign capital equipment by exporting grain at prices below an already depressed world market—despite the fact that millions of Russians and Ukranian peasants were dying of starvation." The graves of tens of millions of workers in the so-called workers paradise are the foundation for present industrial successes, and more will suffer and die as necessary to build this success higher.

This is the face of the enemy and the economic war in which we find ourselves. No day passes in Russia, or presumably in China, without millions of printed words exhorting greater production, greater efforts, greater sacrifices so that capitalism and particularly the United States may be surpassed, and then destroyed.

Big business as above-explained now is working well in Russia after more than 40 years, and is moving along rapidly. The people who make it possible, albeit perhaps reluctantly, are not unhappy actually for they are better off than they have been before and feel that their lot and living conditions have improved. This is the important thing always to remember about Russia; not that the people are not as well off as we are, but that they are better off than at any time previously. Things are improving for them and they are satisfied with this.

They really do not know of better things in the world. Ninety percent of the present population grew up under so-called socialism or Bolshevism, know little of the outside world, and are victims and believe in the Soviet's clever, well planned, monopolistic and universal propaganda.

No longer is it useful to dream that in educating the people the Kremlin will create a frankenstein to rise and destroy the master. The Soviets have sold the people on the system, and the alleged danger and threat from the outside, particularly the United States. It is safe to say that the Russian people, naturally friendly and broadminded, have been taught to fear and distrust the United States. They believe that the United States is a grave peace threat to the world, and that it would dstroy Russia if possible.

Absurd as this may seem to Americans, it loses its absurdity and becomes a menacing fact when it is realized that this a genuine fear held deeply in the hearts of people who lost 20 million dead and saw a third of their country laid waste only a generation ago.

Summarizing a little on this phase, the sad fact for us is that the average Russian may not be very well off by our standards, but he doesn't know it and he thinks he is doing better by his standards. And he has actually been taught to believe that America endangers Russia's frontiers and he must work and sacrifice to prevent this.

The average Russian also has no idea the extent of subversion and meddling in world affairs engaged in by the Kremlin, nor of the seriousness of the Communist International plans for world conquest. He is, in other words, providing the sinews and the financing for world conquest without knowing that this is the master plan of Communist planners.

Russia has always been imperialistic to a certain extent but the Russians themselves are not conquest minded. This, though, makes no difference because they have not nor will they be asked their views; here again they are the foils of communism, and they obey.

Meanwhile we are confronted with an inexorable desire by the heads of the Communist International for taking over the world. The important aspect of Soviet foreign economic policies which must never be forgotten is their determination and powerful drive to penetrate and eventually capture the newly developing countries of Asia, Africa, and Latin America through trade and aid techniques. Economic warfare was developed and is thoroughly understood by the Soviet Union; to us it is largely a nuisance well remembered from World War II of which we'd like no more.

Khrushchev has told us openly and repeatedly that the Communists shall fill the needs of backward peoples better than the Americans and consequently shall win their minds, control their lands, their resources, and themselves. We do not seem to understand such language. We understood Pearl Harbor and we finally understood Hitler's Nazi Germany; but we do not seem to gather any alarm from a more determined, more resourceful, better financed and better planned threat from communism.

Under Secretary Dillon once said that "in their offensive economic weapons have been cleverly blended with military assistance, propaganda, and diplomatic moves, to inflame local passions and to create and aggravate situations of crisis. The long range aim is to create climates and attitudes in the newly emerging areas conducive to eventual Communist takeover."

If Soviet penetration, economic subversion or trade succeeds in extending Communist rule in Asia, Africa, the Near East, and Latin America the cost to the Kremlin is nothing compared to the results. Police power will be used to hold the people in line, and to hold control over immense wealth in the world's vital minerals.

Americans have been reluctant to grasp the awful significance of Soviet totalitarian plans, design, and action. We'd rather relax and enjoy an economy that could be toppled by Soviet plans. We cannot or rather we have not understood that human beings can think, act, and work from a set of motives and reasons completely the reverse of our own.

Last year President Eisenhower told the Congress in his state of the Union speech that "We have learned the bitter lesson that international agreements, historically considered by us as sacred, are disregarded in Communist doctrine and in practice as mere scraps of paper. * * * The demonstrated disregard of the Communists "of their own pledges is one of the greatest obstacles to success in substituting the rule of law for rule by force."

There can be no doubt that the Communists live by the law of the jungle; stealing, lying, killing, and destroying are virtues when done for the state. They dishonor their own word their firmest commitments are meaningless. And this is the movement that teaches that Russia keeps its pledges but the United States does not; that Russia wants peace and we want war; that all powers are warmongers except the Communist powers.

For almost 40 years the Soviets have been training nationals of every country in the world in revolutionary tactics; how to destroy and create chaos, how to inflame and arouse peoples against their rulers and leaders. They also have been dumping trade goods into desired areas of the world at giveaway or at extremely low prices. They know how to attack America's export market by dumping of their own goods. And they have the will to do this when they see fit. They also have the financial ability, thanks to very long and successful planning.

The industrial output of the Soviet Union today is very impressive, and is very menacing. Factories still are not as neat, well built and imposing as American factories but in many cases they are as productive; the Soviet workman has become a skilled workman. His productivity can and does rise as high as the American workman. Need is sparked by fear to drive him ever forward.

When we were in Europe Premier Khrushchev announced Russian abolition of income taxes over a 5-year period, starting next year. He made much of the fact that Russia could abolish income taxes while the United States very largely lived on such high taxes. Here is distortion and misrepresentation that takes keen analysis. The Kremlin can in fact abolish all income taxes without losing a single ruble of revenue; it shifts the emphasis to higher priced consumer goods or rents, and collects just as much as ever. But in the remote areas of the world they can brag to an unsophisticated people that they alone can live without income taxes; bane of the capitalistic world (their language).

The Soviet Premier said: "The abolition of taxes on workers and employees in our country is an impressive social gain for the peoples. One cannot speak of it without pride and emotion. This is an enormous gain, dear friends.

"Look at what is happening in the capitalist countries, where taxes are perpetually rising, unemployment reigns and prices are spiraling upward. The insecurity of the working people lies like a heavy weight on the masses.

"When people all over the world see that the living standard in the Soviet Union is regularly improving, that wages and pension benefits are rising, that taxation is being abolished and that the network of free medical, cultural and welfare facilities is expanding, they come to the clear realization that socialism is solving the most urgent problems and is showing the right way to get rid of exploitation, unemployment and poverty."

This kind of talk is for the export trade, not for home consumption since Khrushchev doesn't really care a fig for public opinion at home—that is already captive. He is trying to influence public opinion in the noncommitted countries.

This is "black is white, white is black" at its pinnacle. But this is not the picture the American tourist will bring home. This is the reason that it is dangerous to accept at face value the impressions of tourists traveling in the Soviet Union and the reason that permitting 15,000 or more Americans to travel there this year is in reality part of the master plan to confuse and confound the world. Facts are not always facts in Russia and what you see with your own eyes or hear with your own ears may mean something wholly different than you think.

Travelers going to Russia therefore won't necessarily bring home the truth about that country, and often are dangerously misleading in their reports.

Russia has been called a puzzle, enigma and a riddle but it is none of these. Its purposes and plans are well advertised. It is of course difficult to understand how human beings can become so dedicated to a cruel, inhuman system which feeds on destruction—even of its own architects—but we must recognize there are several million such dedicated Communists in Russia and China.

Our job is to take the economic offensive and prove that the capitalistic system is a superior one to theirs.

Billion in the Black

EXTENSION OF REMARKS
OF
HON. MARGUERITE STITT CHURCH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Monday, August 22, 1960

Mrs. CHURCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I am happy to include an editorial from the Chicago Sun-Times of July 22, 1960. It is my hope that this editorial, significant for sound thinking and deep realization of the need for fiscal responsibility, will receive the widespread reading that it merits. It follows:

BILLION IN THE BLACK

President Eisenhower's announcement of a budget in the black furnishes welcome contrast to the red ink platform drawn up last week by the Democrats.

For the past year, the Eisenhower administration has managed to keep Government spending down. This, and some lucky breaks, made income exceed outgo by $1,100 million. The economy effort required cooperation all the way down the line—21 out of the 26 major agencies of Government spent less than their budgets allowed.

Treasury Secretary Anderson has evinced a healthy regard for the people's money and how it is used. Last year, the Eisenhower administration suffered the largest deficit ($12 billion) since 1946. Most of this was due to the recession that cut down Government income. A large part was due to high farm subsidies. The recovery to a budget surplus this year should be compared to the objective of the Democratic platform. The Democrats are promising to jack spending in every department.

The Democratic program gives the impression that the country is in the midst of a terrible depression and that billions of Federal dollars are needed to put the Nation back on its feet. The fact is the Nation is enjoying an extremely high level of consumer spending and is growing economically at a rate greater than the 5 percent the Democrats say it ought to grow. This is a time for Government thrift, not a time for pouring out a flood of new Federal money.

The Democratic program offers pie in the sky. The Republican accomplishment helps keep a sound dollar in the worker's pocket.

Running the Government Treasury as a big handout station would require one of two things: Either a raise in taxes or a raise in the national debt. (It costs $9 billion a year now for interest on the debt). Senator KENNEDY has made it clear on many occasions in the last few years he would raise taxes, if necessary, to pay for his program. But Congress might be reluctant to do so, if KENNEDY became President.

In that event, the Government would have to operate in the red and every dollar in every paycheck would be cheapened through inflation.

The Republican program of a sound dollar may not have as much glamour as a Democratic program of something for everyone. But everyone who has a dollar in a bank, an insurance policy or a pension program—and that includes virtually every worker in today's prosperous America—should be concerned about keeping it sound.

Between 1944 and 1952, the net spendable average weekly earnings of a worker with three dependents went up from $44.06 to $63.62. But inflation gave him a net loss. His actual buying power went down $2.54.

During President Eisenhower's administration, earnings have gone up to $81.05 (Mar. 1960). Actual buying power has gone up $8.43. Industry has been able to keep paychecks ahead of rising costs.

A continuation of sound dollar policies will continue healthy paychecks. This is the best argument Republicans can make in their platform to counter the Democratic giveaway program.

National Defense in the Nuclear Age

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Monday, August 22, 1960

Mr. VAN ZANDT. Mr. Speaker, it was my privilege to address the July 21 session of the 1960 Pennsylvania State Convention of the American Legion Auxiliary at Philadelphia, Pa., presided over by department president, Mrs. Mary W. Dague, wife of Representative PAUL B. DAGUE of the Ninth Congressional District of Pennsylvania. The convention was well attended and reflected the fine leadership furnished by Mrs. Dague in the role of department president.

My address, titled "National Defense in the Nuclear Age," follows:

NATIONAL DEFENSE IN THE NUCLEAR AGE

(Address delivered by Representative JAMES E. VAN ZANDT, Member of Congress, of the 20th District of Pennsylvania, at the Pennsylvania State Convention of the American Legion Auxiliary, Philadelphia, Pa., on July 21)

It gives me great pleasure to participate in your 1960 convention and to speak to you on a problem in which we are all vitally interested.

As many of you know I have long been active in organized veterandom with the result that I am conscious of the great work which you do to keep shining and bright the ideals and objectives of the American Legion.

They are ideals for which so many of our brethren have given all they could offer at freedom's shrine—their lives.

The efforts of all of us have been directed toward the creation of a better world for all the peoples of the earth.

Here in this decade of 1960—just begun—we have vast horizons before us—horizons of great hope—and horizons of just as great fear and dread.

It used to be—not so very long ago in time—although far distant in space—that we of America knew no such great fears for our future.

We were able to isolate ourselves from the troubles of the rest of the world.

At that time it appeared to be of no immediate concern to us if European nations were devastating each other—or that whites were enslaving blacks in Africa.

We were above the common herd—shielded from the sounds of battle by our great ocean barriers.

We found more time to work out our own domestic problems, to build our Nation, to dream of the future.

Many of you here tonight saw the first sign that our impenetrable defenses were no longer able to assure us safety in 1917.

Residents of this eastern seaboard of the United States could look out and see ships burning—ships sunk by enemy U-boats at our very doorsteps.

Modern technology had breached the walls of "fortress America."

But it took us longer to learn the lessons that "the war to end wars" could teach.

It even took a war far more devastating, catastrophic, and universal, a war that even more of us remember only to well.

World War II witnessed the deaths of 30 million people and great damage to civilization.

But it really took a bright flash of atomic light at Hiroshima on August 6, 1945, to tell us that, like the French Maginot line, our impregnable defenses were now no more useful than a suit of armor against a bazooka. The nuclear age had dawned, with the horizons of new advances for all mankind.

But we also know that as many people as have been killed in all wars that man has undergone for thousands of years now could be turned back into dust and ashes in the time that it takes to hear a sound, look into the sky, and start to pray.

The atom is a substance of such worth and value to a strife-torn world.

But, in the wrong hands it is a weapon that could truly end all wars because there might no longer be anyone alive to fight.

The advent of nuclear weapons in combination with the fact that aggression, conquest, and war were not ended with the destruction of Berlin and the annihilation of Hiroshima and Nagasaki have kept us from retreating back into our shell.

The job of guarding liberty and freedom for all mankind has been placed irrevocably on our shoulders.

There is no turning back.

As the guardian of freemen everywhere we have witnessed with dismay the Red tide that since World War II has engulfed its neighbors, turned them from freemen into slaves, and found one-third of the world behind the curtains of communism.

We are all familiar with Korea, Indochina, Laos, Tibet, Hungary, Berlin, and many more outrages that have been committed in the name of Marxism.

Since Stalin the pace of outright and brawling aggression has slowed a bit because new tactics have been tried.

Premier Khrushchev has posed as the friend of peace but it has been only a shield

behind which the plan of world conquest is just as much of a reality as ever.

We have seen this same Premier Khrushchev deliberately wreck the summit meeting when he knew he could get no concessions from the free world in his efforts to trample on the rights and freedoms of men in Berlin.

We can see right now the efforts of Mao Tse-Tung to forestall any chance of real peace in the Far East.

We can see Communist rioting against the freely elected Government of Japan using student grievances and the desire for peace for Communist purposes.

And right at our doorstep we can view the Cuban revolution gone astray, opening wide its arms to the so-called blessings of Communist dictatorship.

We know that our own defense is permanently tied to the defense of our allies; a danger to one of us is a danger to us all.

The attacks of communism are coming thick and fast and in a variety of shapes and forms.

In the days of Stalin the threats were more readily recognizable.

His imperialism was not nearly as subtle as that of the present Red leadership.

Instead of outright aggression and subversion we now have so-called volunteers, aid programs, trade agreements, technical assistance, defense pacts, and insidious propaganda, all these besides old military and espionage activities.

We have learned that in order to achieve the final victory we must meet the challenge on thousands of military, economic, and psychological battlefields at home and abroad.

Now we come to the question of the specific threats that Red aggression presents to the security of this Nation.

First of all we must be prepared to meet the Russians on every level and in every form of large-scale thermonuclear warfare.

The full-scale world wars that may come in the future will not be fought with bayonets and machineguns, foxholes, and tanks.

Numerical superiority of manpower will not be of decisive importance in determining the outcome of such a war.

Instead, I can see these future global wars—if the come to us—being fought from continent to continent with ICBM's and from mobile bases in the seas to targets in the enemy lands.

I can see the cities of our world being laid waste by a single flash on a beautiful morning.

The whole world will be the battlefield and every human being, whether soldier or civilian, whether combatant or neutral, whether man, woman, or child, will be the potential victim.

The Soviet Union always keeping before it the vision of world conquest through nuclear warfare has bent every effort to the task of srupassing the United States in thermonuclear capability.

These nuclear weapons possess for aggressors like the Soviets many advantages not found in conventional methods of warfare.

From a few mobile and stationary bases it is possible to cover the entire globe.

There is a great ability to shift rapidly from one target to another.

Because there are degrees in levels of nuclear power there is great flexibility in the adaptation of weapons to meet specific strategic requirements.

The use of nuclear weapons offers the potentiality of complete surprise, destroying a nation's defenses before it is able to retaliate.

The use of nuclear weapons also has a great psychological impact upon the potential or actual victims of such a disaster.

And, last but not least, nuclear weapons offer the allurement of cheap world conquest.

The Soviets understand very well how nuclear weapons fit into their plans for world conquest.

They have been building fixed missile bases in the Soviet Union and the satellite countries.

Their recent tests in the Pacific show the potential range of their intercontinental ballistic missiles.

At the same time the Soviets have been continually modernizing and augmenting their air force.

But, most importantly of all, the Russians have been equipping a submarine fleet whose missiles point like daggers at every strategic area in the United States.

In order to guarantee our national survival we must be able to control not only the sea but the world beneath the surface of the sea.

The Reds have more than 450 submarines, 10 times the number of German U-boats which devastated allied transport in World War II.

They have launched a nuclear submarine program, with at least five under construction.

Just a few of these subs, equipped with missiles comparable to our Polaris, will place most of our Nation in danger of complete devastation in the event of war.

We must remember that we are far more vulnerable than the Russians to such a full-scale nuclear attack.

Our industries are far more concentrated—43 of our 50 largest cities and 85 percent of our industrial might is located within 500 miles of our coasts.

The Russians, on the other hand, have dispersed their industry from Minsk to Vladivostok, besides the fact that most of their big cities are located in inland locations far removed from the sea.

The ballistics missile has thus added a new dimension to the threat of submarine warfare.

Not only could attack submarines cripple our Navy and merchant marine, but these new missile subs possess the capacity to launch attacks upon our cities at will.

There is no doubt that America is greatly endangered by this ability of the Russians to launch a full-scale nuclear war at the slightest whim of the Soviet dictatorship.

The Communists know that the rest of the free world will surrender automatically if the United States is conquered; they would have no other choice.

What keeps the Russians from starting such a war?

The only defense we at present possess is our ability to retaliate.

The Russians possess far more freedom of decision than we have.

Our Defense Department cannot just blithely push a button and start a war without any responsibility to the millions of people in the United States whom this act might doom.

We must show the Russians that they would gain no advantage from attacking us.

We cannot be sure that it will do any good to appeal to them on the grounds of the Russian lives that will be lost, we must demonstrate that our retaliation would destroy their power.

The Red Chinese, in particular, have never shown the slightest regard for human lives.

Mao Tse-tung has even boasted that even if 300 million Chinese were to be killed in a nuclear war there would be 300 million left.

The leaders of Red China, without any scruples or regard for human beings, actually regard nuclear war as an advantage.

With the atomic weapons that they will almost certainly develop within the next few years the Red Chinese could very easily initiate the destruction of all mankind in order to satisfy their own lust for power.

Besides the dangers of deliberate aggression there is the danger of accidental warfare.

Marshal Malinovsky, the very conspicuous companion of Khrushchev in Paris, has announced that Soviet missile bases will immediately strike with nuclear missiles at any foreign base sending planes over the Soviet Union.

This means that any trigger-happy Russian enlisted man could conceivably be able to start our destruction merely by pushing a button in a moment of panic.

These dangers are great and the United States must demonstrate that nuclear war would destroy the Communist world as readily as the free.

To prepare our defenses against nuclear war does not mean the abandonment of conventional arms.

We must also be prepared to meet the threats of communism on the level of limited warfare.

Every one of the conflicts, wars, and revolutions instigated by the Communists since World War II has been fought entirely by soldiers with conventional nonnuclear weapons.

Whatever the reasons up to this time the Russians have wished no more than we to turn Korea, Indochina, or any other area of conflict into the site for a nuclear holocaust.

Furthermore, as the Russians increase their arsenal of thermonuclear weapons, and as there is an increasing gradation of weapons power they will be able to take advantage of an increasing number of strategic options.

We must remember that the vaunted reduction of manpower taken by the Russion Army, which has been dictated largely by economic, not strategic, reasons will still leave the communist bloc with a marked numerical superiority in manpower over the armies of the free world.

The Reds have more than 11 million men ready to be used for any size or type of war that may be desired by their leaders.

The satellites, especially China, may be used for limited "safe" wars as in Korea, Indochina, Laos, and Tibet.

We have seen how the Russians have used "volunteers" in the past, the success of such tactics virtually assures that they will be utilized even more extensively in the future.

These armies may not even have to be used their threat could be enough to blackmail smaller powers on the Soviet periphery.

As the fear of nuclear power grows, as the nuclear race becomes more deadlocked, such small-scale aggressions grow ever more likely.

Therefore—we need to maintain our dual capability—it is imperative that we have armed forces with the most modern of conventional weapons that can meet the challenge of communist aggression anywhere in the world.

This, then, is the challenge—a challenge of great power in the hands of unscrupulous tyrants—a challenge that we can and must meet.

What have we done and what should we do?

Congress this year voted an appropriations bill for the Defense Department of more than $40 billion.

Included in this is $17,157 million for the Air Force; $12,109 million for the Navy and Marines; and $9,537 million for the Army.

We have attempted to meet all the complex needs of our national defense through these appropriations.

Included in this was $293 million for an aircraft carrier.

This new carrier—in combination with others that have been or are being built—will provide mobile overseas bases for our planes and missiles.

With fixed oversea bases becoming ever more vulnerable to enemy attack, these carriers, in combination with our submarine fleet, will be able to provide a far-reaching line of defense for our Nation.

Also included was $394 million for the construction of five submarines, with partial funds for starts on seven others.

I introduced a bill in 1958 to provide for the construction of 100 nuclear-powered attack submarines during a 5-year period.

This bill was unfortunately defeated, but we are doing some development of nuclear submarines.

At the same time the Navy has been conducting a highly successful series of Polaris missile tests.

When the United States possesses nuclear submarines capable of cruising under the arctic ice, as our *Skate* and *Nautilus* have already done, and able to fire missiles at the heart of Russia, the United States will have obtained a greater deterrent power.

In this bill was also included $190 million more than the administration request for development of the B–70.

The U–2 flights demonstrated the extreme vulnerability of Soviet defenses at heights over 50,000 feet.

The development of the B–70, which would cruise at 80,000 feet, would give us a full range of power.

In combination with our missile program this development will give us a deterrent power not readily ignored by the Soviets.

The B–70 will strengthen the power of our Strategic Air Command, which at the present is the first line of our air defense.

Congress has also considered the need for armed forces capable of fighting in limited wars.

Included in the appropriations bill was $1,537 million for modernization of the Army.

The Russians are equipping their army to fight both conventional and tactical nuclear wars.

We are at the present time equipping our troops with a wide range of the most modern conventional and tactical atomic weapons.

Research and development of new weapons are being continually carried on.

We have also voted funds for the acceleration of the Midas-Samos satellite programs.

It has long been evident that the United States depends greatly upon our intelligence services.

The Central Intelligence Agency has done a fine job of obtaining information from a nation closed to outsiders.

There is no doubt that the Soviet intelligence service has a far easier time of obtaining our vital secrets in our open society.

As our ambassador to the United Nations, Henry Cabot Lodge has said: "The Russians have spied at heights far les than 70,000 feet."

It take little effort of the memory to recall Alger Hiss, the Rosenbergs, Klaus Fuchs, or many others.

The Russians have used our freedoms to steal our secrets, subvert members of our society, turn our friends and allies against us, and overthrow our own free government by force.

Then to see the Communists don the veil of injured innocence would be almost comical if it were not such a serious matter.

The U–2 incident gave more emphasis to our need for accurate information if we are to survive as a free society.

Its usefulness is probably ended now but we need new sources of information.

The Midas and Samos satellites, equipped with all kinds of detection equipment, will not only help our intelligence, but will point to future uses in inspection of a possible disarmament program.

By these means we will be able to strengthen our Armed Forces for the struggle against communism wherever it may come.

We must be able to deter any type of attack.

For this task it is imperative that we possess the optimum in flexibility.

Therefore, we need a military organization which will be able to shift and maneuver to meet every strategic situation.

I introduced legislation to streamline the Defense Department and better coordinate its policies and practices.

For the organization must match in efficiency and modernity the weapons it dispatches and the men it controls.

The spectacle of Mr. K. at the summit, the ending of the disarmament talks by the Soviet walkout, demonstrate how important all of this is.

The world needs peace, the world needs disarmament.

But an agreement that we can be sure of must include the international control and inspection that the Soviets have thus far refused to concede.

We have had all too often examples of the bad faith and hypocrisy of the Communists in the past few months to accept their word that they have disarmed.

Until the Reds back up talk with constructive action toward peace we can only know them as the totalitarian aggressors—devoted to the task of world conquest—that they have always been.

But this is not all of our task.

It would be too easy to leave the whole job to the 2,800,000 boys in uniform and confine ourselves to remembering the wars in which we fought.

We must press forward the battle against communism on all fronts.

Military action must be augmented by action in other areas as well.

Just as our military power must be one of active deterrence so must we meet the threats of communism in the economic, ideological, and psychological spheres.

This is not the job for any one group but for all of us.

What we do will determine the future course of all mankind.

A great burden has been placed on our shoulders, the burden of billions of free people throughout the world.

We did not ask for it but it has come to us.

We are not defending our Nation alone but all men everywhere.

We cannot rest until there is peace, and happiness, and freedom for everyone.

For only then will we be really free from fear.

Yes, it was a long, long time ago, it seems, that America could go its own way in peace.

So much has happened since then to change the world.

We have seen it happen.

We saw the beginning of the struggle between communism and liberty and freedom but how will it end?

God grant that it does not end in a nuclear holocaust in which there might no longer be men to be either free or enslaved.

Let us dedicate ourselves in this decade of the 1960's to the horizons of hope that lie before us.

We must be ever vigilant until freemen can once again be free of fear.

We can be, we must be, we will be strong.

It is through spiritual and material strength that we can preserve and protect not only our cherished ideals of liberty and freedom but aid in restoring them to many freedom-loving nations now in exile.

Therefore let us dedicate ourselves to America's awesome task hopeful that the day is not too distant when the atom's flash will bring light, not darkness, to the ends of the earth.

Public Laws 643–676

EXTENSION OF REMARKS
OF

HON. BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 22, 1960

Mr. O'HARA of Illinois. Mr. Speaker, this completes my digest of all the public laws of the 2d session of the 86th Congress enacted up to this time as given in my reports to my constituents in the Second District of Illinois:

BARRATT O'HARA'S REPORT FROM CONGRESS

PUBLIC LAW 643

Some 2,000 Americans owe Uncle Sam on notes for money for food and shelter when stranded in the Far East in the war years. Trouble is the notes are in foreign currencies. Example: One note for 16,800 Japanese central reserve bank dollars our GA says has a real American dollar value of $16.80. Public Law 643 enables Uncle Sam's debtors to settle on a realistic formula worked out by the General Accounting Office.

PUBLIC LAW 644

This clarifies special postal rates for educational, cultural and library books and materials. For instance, changes the term "phonograph records" to "sound recordings."

PUBLIC LAW 645

Public Law 645 authorizes $1.5 billion public works projects on rivers and harbors for flood control and improvement of navigation. CalSag, with $5,240,000, is among the approved projects.

Corps of Army Engineers at congressional direction has been a big factor in development and economic growth of the Nation. Our country now has 23,000 miles of navigable river, moving 115 billion ton-miles of traffic a year, 300 flood-protection projects, 32 multiple-purpose projects supplying 20 percent of all the hydroelectric power generated in the United States, 18 large reservoirs that supply 400 billion gallons of water annually for municipalities and industries, 6.1 million acre-feet of water for irrigation.

Congressman JOHN KLUCZYNSKI, of Chicago, with his seniority of five terms, is one of the high ranking and certainly one of the most popular and influential members of the important Committee on Public Works.

PUBLIC LAW 646

Public Law 646 removes the escape clause in the conveyance some years ago of land, no longer needed, to the city of Little Rock in Arkansas. This will enable Little Rock to float bonds for the improvement of its municipal airfield.

PUBLIC LAW 647

Public Law 647 "authorizes" and "requests" the President to issue a proclamation inviting foreign nations to participate in the Pacific Festival at San Francisco September 9 to 18, 1960. Please note the quoted verbs. Congress cannot direct or order the President.

PUBLIC LAW 648

House Joint Resolution 397, refugee resettlement

Since the end of World War II over 2 million refugees have been resettled in the countries of the free world, 711,212 in the

United States, which has only 6 percent of the world's land area.

Public Law 648 marks the participation of the United States in the drive of all free world countries to find new homes for the remaining unsettled refugees. It admits into the United States additional refugees under U.N. mandate in number predicated by the number admitted by cooperating nations. Hope is that refugee camps, after 15 years of exitence, may be closed and brighter horizons of opportunity and contentment opened.

PUBLIC LAW 649

Management of the vast public domain is a big business. Public Law 649 gives to the Bureau of Land Management a greater flexibility of authority in fixing fees (now totaling $1 million annually) to meet inflated costs and use of revenues in expansion and maintenance of roads and forest trails. Logging operators, making heavy use of forest roads, are required to share in cost of preventing deterioration.

PUBLIC LAW 650

Public Law 650 creates a commission to prepare plans for a national celebration of the 175th anniversary of the formation of the Constitution of the United States. Surely an anniversary that all the world will note.

PUBLIC LAW 651

H.R. 12740, supplemental appropriations

Public Law 651 makes supplemental appropriations for fiscal 1961 that total $138,293,740. Among items: (1) $1,500,000 for research to control insects, including the screw worm that causes annual damage to crops estimated between $25 and $125 million, (2) $73,666,700 subscription to International Development Association, (3) $5 million to purchase land near Capitol for new Library building, (4) $2,953,000 for Jefferson Memorial at St. Louis, and (5) $12 million additional for public housing.

PUBLIC LAW 652

St. Augustine in Florida is booming, needs more schools. Public Law 652 permits land conveyed to the city for a park to be used as site of a new schoolhouse.

PUBLIC LAW 653

Public Law 653 confers a Federal charter on the Blue Star Mothers of America, Inc. Membership is limited to mothers, adopted mothers and stepmothers of sons and daughters who served in World War II or in the Korea hostilities or are presently serving with the Armed Forces.

PUBLIC LAW 654

Public Law 654 (1) denies to the District of Columbia the defense of governmental immunity in auto accident claims, and (2) relieves employees of the District from personal liability.

PUBLIC LAW 655

Harpers Ferry in West Virginia was the site of John Brown's famous raid in 1859, was captured by Stonewall Jackson in the Antietam campaign of 1862, and after the Civil War emerged a ghost town, its mills and armory all destroyed. Public Law 655 authorizes an expansion of the Harpers Ferry National Monument to take in John Brown's "Fort" and other lands.

PUBLIC LAW 656

Public Law 656 is another tribute to the immortal memory of the four chaplains who chose to die together on the troopship *Dorchester* that others to whom they gave their lifebelts could live. There is no greater epic of heroism and self-sacrifice in recorded history. Your vote, as I know you devotedly would have willed, was cast for an award posthumously of Congressional Medals to Chaplains George L. Fox, Alexander D. Goode, Clark V. Poling, and John P. Washington.

PUBLIC LAW 657

Public Law 657 authorizes $1 billion a year for fiscal 1962 and 1963 in Federal aid for primary and secondary highway systems and their urban extensions. At present A–B–C highways embrace 790,000 miles and carry 48 percent of the highway traffic of the Nation.

PUBLIC LAW 658

System of land-grant colleges and universities was established in 1862, since 1890 they have received direct Federal appropriations for teaching basic and applied subjects related to agriculture and engineering. These include chemistry, physics, botany, zoology, mathematics, basic English, veterinary medicine, and other subjects. Public Law 658 increases to $11,950,000 the Federal contribution to the land-grant colleges for teaching.

PUBLIC LAW 659

In 1959 Uncle Sam sold some land to the city of Keosauqua in Iowa for a sewage disposal plant and park. Keosauqua is shy of ready cash. So Public Law 659 helps out a good cause by providing 20-year installment payments, with interest.

PUBLIC LAW 660

Motorists, watch your step and test your breath. Public Law 660 establishes with the Secretary of Commerce a national register of names of all persons whose licenses have been revoked for drunken driving or who have been convicted of driving involving loss of life anywhere in the United States of America, including Puerto Rico, District of Columbia, Guam, the Virgin Islands, and the Canal Zone.

George Stewart, of the National Safety Council of Chicago, and Bernard R. Caldwell, of Northwestern's Traffic Institute, were among advocates at House committee hearings. Motor deaths run about 40,000 annually, with 5 million persons injured and property loss of $7 billion.

PUBLIC LAW 661

Public Law 661 is stop-gap legislation authorizing the Civil Aeronautics Board to permit 25 supplemental air carriers (nonscheduled airlines) to conduct limited operations for 12 months, pending further congressional study.

PUBLIC LAW 662

Public Law 662 makes the order of a referee in bankruptcy final unless a petition for review is filed within 10 days.

PUBLIC LAW 663

Public Law 663 increases from $225 to $265 monthly the rate of disability compensation to service-connected veterans who are totally disabled, or permanently housebound. It spells out that he does not necessarily have to require regular aid and attendance.

PUBLIC LAW 664

H.R. 10997, Guam

Pasco de Susana is the site of a public park in the city of Agana in Guam, the farmost territory of the American Union. Part of the area is land filled in by the dumping into Agana Bay of large quantities of debris resulting from the fighting in Agana in the liberation of the island from the Japanese. Public Law 664 turns title to this submerged or filled-in land over to the Government of Guam.

Congressman LEO O'BRIEN, who engineered the admission of Hawaii and Alaska to the Union and is confident that early in the 87th Congress Guam will be voted territorial representation in the House, was the author of Public Law 664. He tells me that favorable action on the measure was helped by Speaker Won Pat, Speaker of the Legislature of Guam, the most far flung legislative body under the Stars and Stripes. Speaker Won Pat is very popular on Capitol Hill. He has done an outstanding job in selling to the Congress that the United States will be judged in the far Pacific area by the warmth of the relationship between continental United States and Guam, its far away sister. With that I am in agreement.

PUBLIC LAW 665

This extends for 2 years the veterans guaranteed and direct loan program and requires that payments and deposits made by veterans shall be held in a trust fund to safeguard against claims of creditors of the seller.

PUBLIC LAW 666

Hydrofoil vessels, faster than vessels of conventional type, are not manufactured in the United States, therefore do not qualify under the law restricting commerce between American ports to American-built vessels. Public Law 666 makes an exception in the case of two hydrofoil vessels upon which the mainland of Puerto Rico depends for quick transportation with the off-lying island of Vieques.

PUBLIC LAW 667

Public Law 667 provides a new exempt category for income tax payments on trusts providing supplemental unemployment compensation benefits.

PUBLIC LAW 668

This relates only to the District of Columbia. It amends the District Narcotic Act to prevent too much dihydrocodeinone getting into a cough sirup to turn it from a medicine to a narcotic drug.

PUBLIC LAW 669

Public Law 669 establishes a National Capitol Transportation Agency for a coordinated system of rail transit, bus service and expanded highway and freeway networks, including portions of Maryland and Virginia, in the Washington metropolitan area.

PUBLIC LAW 670

Public Law 670 affects only veterans of the Indian wars and the War with Spain. My advice to my Spanish War comrades is to look sharply before they leap. It permits them to get as much as $170 a month under Public Law 211 of the first session if helpless or blind to the extent of requiring the regular care and attendance of another person. Rub is that choice once made is irrevocable. If Spanish War vet remains permanently helpless he has made a good deal. But if his helplessness is temporary he cannot on recovery go back to his old Spanish War pension of $101.59 a month, paid regardless of his physical condition.

PUBLIC LAW 671

Public Law 671 is the first substantive change in assessments on banks under the Federal Deposit Insurance Act since 1950 when your representative was a member of the Banking and Currency Committee and carried the burnt of the fight for an extension of the coverage to $10,000 for the protection of bank depositors. Not a cent has been lost by any depositor and the reserve fund is now over $2 billion, will reach an estimated 3 billion by 1968. Former Congressman Wolcott, in 1950, the ranking minority member and later the chairman of the Banking and Currency Committee, is now the head of FIDC.

Public Law 671 simplifies procedures in determining bank assessments and slightly increases FIDC's refund to the banks from net income. The House passed the measure by voice.

PUBLIC LAW 672

Most of the surviving persons who worked for the Government in the digging of the Panama Canal (now 55 to 80 years old) live in poverty on pensions ranging from $15 to $45 a month, graded by years of service, 10 to 30. Public Law 672 increases the pension $10 a month.

PUBLIC LAW 673

Public Law 673 is intended to strengthen the Government's hand in excluding obscene

and fraudulent matter from the mails. It provides for a court order, on showing of reasonable cause by the Postmaster General. The order would tie up the defendant's mail until the investigation is completed.

PUBLIC LAW 674

This reduces from 1 year to 6 months time for filing caveat to a will in the District of Columbia.

PUBLIC LAW 675

Public Law 675 waives the zoning laws to permit the National Society, Daughters of American Colonists to establish its national headquarters at the desired site in Washington.

PUBLIC LAW 676

Another evidence of the intensifying fight against obscenity and pornography. Public Law 676 creates a judicial officer for the Post Office Department to act in all such cases. Congresswoman GRANAHAN whose fight against obscenity has made her name well-known in American homes, including many in our district, is the author.

Properties Abroad Need Protection

EXTENSION OF REMARKS
OF
HON. EDWARD J. DERWINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Monday, August 22, 1960

Mr. DERWINSKI. Mr. Speaker, the following editorial from the August 5 issue of the Chicago Tribune, an outstanding newspaper in the Nation, is, I believe, a most thought provoking commentary on a subject of great concern to all, and I am including it in the RECORD for the consideration of the Members of Congress:

PROPERTIES ABROAD NEED PROTECTION

(By David Lawrence)

WASHINGTON.—After all the big talk at the two national political conventions about the need for a firm foreign policy, Congress next week has an opportunity to do something concrete to protect the lives and properties of American citizens abroad.

There's little sense in appropriating billions for "foreign aid" or for assisting the United Nations to protect the lives of foreigners in such areas as the Congo, when no provision is being made to protect the properties of citizens who already have built their homes and businesses abroad.

Why should American companies be encouraged now or hereafter by our Government to invest capital in foreign countries when, as in the case of Cuba, for instance, such properties are confiscated without satisfactory arrangements for adequate compensation?

The United States is being asked to assist the new Government of the Congo. Yet, in the face of firsthand testimony to the contrary, the Congo Prime Minister says it's a lie that foreign women have been mistreated.

American taxpayers are footing the bill for supplies being sent to the Congo through the United Nations, but there is no sign of any recognition by the Congo Government of its responsibilities to the foreigners.

Indeed, the new Prime Minister, Patrice Lumumba, who was wined and dined only a few days ago in Washington, has just approved an order by his Cabinet whereby all properties abandoned by the Belgians when they fled from the Congo will be grabbed by the Government unless reclaimed within 8 days.

This is a plain case of thievery. It is a result of the action of the Congo Government's own troops, who engaged in the very atrocities which directly cause the flight of thousands of Belgians.

Businessmen in the United States are being importuned nowadays by their Government to invest private capital in the underdeveloped areas, so that the burden of direct aid will be lessened. But American capital is not likely to venture into lands where there is no respect for the rules of international law.

Instead of depending on a World Court to secure protection for the legal rights of American citizens, it would be far better to enter into bilateral agreements with the governments of individual countries that seek American aid, and to require a written understanding that, if disputes arise over confiscation or "nationalization" of businesses, there would come into operation judicial machinery that had been set up in advance.

Failure to abide by such decisions should give the United States, or other countries which follow the same course, the right, granted by treaty beforehand, to use their armed forces to take over any properties confiscated by a foreign government where no proper system of compensation has been established.

If the United Nations, for instance, is to send in joint military forces to police troubled areas, it can use them also to protect property rights.

The President Should Tell Perez-Jimenez What the American People Think of Him

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Monday, August 22, 1960

Mr. PORTER. Mr. Speaker, Marcos Perez-Jimenez was a corrupt and cruel dictator of Venezuela for almost 10 years. He now lives in the United States, first in Florida and now he is visiting in Hawaii, spending money he stole from the Venezuelan people.

How wonderful it would be if the President would make a public statement declaring that Perez-Jimenez was not at all welcome in the United States and that the American people despised him and his type of tyrant.

An article about this man follows:

EX-DICTATOR'S DOUBLETALK

Marcos Perez-Jimenez, visiting in Hawaii, would have us believe that in Latin America dictators are just what the people need and want.

"In our country (of Venezuela) the word 'dictator' has a different meaning than it does in the United States," he says.

That's strange, since after 9 years and 2 months of Perez-Jimenez' tyranny, the oppressed people of Venezuela forced him in January 1958 to flee for his life.

He landed in Dominican Republic, where another dictator, Trujillo, operates an equally rough police state, and then came to the United States. Our Government is trying to deport him, but the Venezuelans don't want him back.

That's understandable—for life in Venezuela under this strong man was pretty miserable. While he and his army buddies lived like kings on Maracaibo oil money, there was—and still is—general poverty.

There was no liberty. The secret police were all powerful and the political prisons were packed.

A U.S. visitor during Perez-Jimenez' rule might have been a bit dazzled by the skyscrapers of Caracas until he saw acre after acre of hovels on the hills.

He would have been "frisked" for weapons if he went to a sports spectacle and he would have had to show his passport if he wanted to fly from one Venezuelan place to another.

He would have found the air heavy with apprehension and anxiety and resentment—as it must be in any land where men and women are muzzled, with graft and corruption rampant at the top.

No, Perez-Jimenez, to the Venezuelans the word "dictator" means just what it does to us. Which is why, after taking your strong-arm tactics for as long as they could, they revolted and threw you out.

Paul Cunningham

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, August 22, 1960

Mr. CELLER. Mr. Speaker, it is with sorrow that I call the attention of the distinguished members of this House to the death on August 14 of Mr. Paul Cunningham, well-known songwriter and author, past president of the American Society of Composers, Authors, and Publishers (ASCAP) and at the time of his death ASCAP's director of public affairs. As a citizen who has long been interested in the musical arts, and as a strong supporter of the rights of all creators of music, serious and popular, I should like to express my profound sorrow at the loss of this courageous and sincere fighter for the rights of musically creative people.

It was a privilege of many Members of the Congress to have known Paul Cunningham personally over the more than a generation during which he championed the rights of composers, authors, and publishers to the fruits of their creative endeavors in the marketplace. I am sure that I reflect the sentiment of a great many of the Members of the Congress, when I pledge to the memory of Paul Cunningham, and the society which he so ably represented, that the efforts he made for the protection of creative musical property shall nto be lost.

A native New Yorker, Mr. Cunningham became interested in songwriting and the theater while attending Manhattan College. With a bachelor of arts degree and experience in staging college shows behind him, he joined the songwriting staff of the Harry Von Tilzer Co. in 1914—the year ASCAP was founded.

In the period immediately following, Mr. Cunningham became an active, triple-threat man—as a singer, songwriter, and song plugger. He collaborated with Mr. Von Tilzer himself on a number of songs, including selections for "The Ziegfeld Follies."

He then began what proved to be a long association with the music-publishing firm of M. Witmark & Sons. During this period, Mr. Cunningham and his wife formed the headline vaudeville act of Cunningham and Bennett.

For several years Mr. and Mrs. Cunningham played the famed Keith circuit, both as performers and as writers. During their days in vaudeville the Cunninghams found themselves called upon to produce and direct stage presentations as well.

In 1928 the duo played the music halls of England and toured the Continent, and Mr. Cunningham wrote some additional material for the English public.

Among the popular songs with a Cunningham credit are "I Am an American," "Please Take a Letter, Miss Brown," "Men of Steel"—(official song of the United Steel Workers of America), "The Shores of Tripoli," "You Can't Make a Fool Out of Me," "Dakota," "Every Night When You Say a Prayer," and "From the Vine Came the Grape."

Among his composer-collaborators he lists Sigmund Romberg, Ernest R. Ball, James Monaco, Joe Burke, Peter DeRose, Earl Carroll, Vaughn Monroe, and Ira Schuster.

Mr. Cunningham became a member of the American Society of Composers, Authors, and Publishers in 1921. He was elected a director of the society in 1945, and served as secretary from 1951 to 1953, as president 1956–59, and as director of public affairs 1959–60. He was responsible for producing many of the shows ASCAP members have presented before various organizations, including an ASCAP oversea unit which toured military installations abroad. As a professional entertainer with a bright sense of humor and a gift for song, he was frequently called upon as an emcee and performer himself. Warm-hearted, simple in habits, with boundless sympathy for the less fortunate of the musical world, Paul Cunningham's example will long remain in the hearts and minds of all of us who believe that the worker in the creative vineyard is entitled to his just rewards.

Steady Gold Loss Proves Uncle Sam Is No Longer "Rich Uncle"

EXTENSION OF REMARKS

OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, August 22, 1960

Mrs. ST. GEORGE. Mr. Speaker, the following article by Mr. Leslie Gould, financial editor of the New York Journal American, appeared in the August 21 issue of this great paper.

At a time when squandor mania seems to have gripped the Congress and a part of the Nation, it may be superfluous to call attention to the steady loss of gold that is going on continuously under our very noses. We are no longer so rich, even if we think we are, and it is time for us to heed the words of widsom and the signs and portents before it is too late.

The above-mentioned article follows:

[From the New York Journal American, Aug. 21, 1960]

STEADY GOLD LOSS PROVES UNCLE SAM IS NO LONGER RICH UNCLE

(By Leslie Gould)

The United States is losing gold again. Stock of the metal are now the lowest since prewar days.

So far this year the gold loss is $424 million, of which $290 million has been in the last 6 weeks.

This is on top of a slightly more than $1 billion loss last year, nearly $2¼ billion in 1958.

From the alltime high of $24,608 million reached in August of 1949, the United States has lost $5,576 million in gold.

The loss last year and in 1958 was due to an unfavorable American balance of payments running at the rate of $3 to $4 billion a year. This resulted from higher imports and declining exports and continued heavy handouts to foreign countries from the U.S. Treasury.

FUNDS SEEK HIGHER RATES

The current loss is due to a flow of American funds to Europe, attracted by much higher interest rates there. The foreign banks in turn are converting the dollar balances so received into gold.

While the surface causes of the two outward gold movements are different, underneath there is the same doubt in foreign minds as to the soundness of the dollar.

EXPORTS OFFSET GIVEAWAYS

The balance-of-payments picture has improved some, with an expansion of American exports. For the first 6 months this year exports have exceeded imports by $2 billion while for the full year 1959 the export surplus was only $1.1 billion.

In prior years the United States had a large export surplus—enough to offset the giveaways. The surplus in 1958 was $3.5 billion and in 1957 $6.5 billion. Ten years ago it was $5.3 billion.

Right after the war and up to 1958, the United States had had little competition in the world markets. The Communist countries were only talking of an economic war, and the former enemy countries—now allies—had yet to build up their industrial potential.

That picture has changed. The Communist world is able to compete in certain markets—oil being the latest. Japan and West Germany have become industrial powerhouses. There are no shortages.

High American wages add to the problem, and partly to offset this more and more American firms are establishing foreign factories. While some may find benefits from such migration illusionary, it is a factor in the unfavorable balance of payments.

DOLLAR VULNERABLE TO RUNS

While there is no "run" on the dollar as of now, one could develop. The U.S. dollar is vulnerable. The so-called gold backing is more a myth than a fact.

Under the present Federal Reserve regulations there must be a reserve of gold equal to 25 percent of the outstanding Federal Reserve banknotes and the deposits at the 12 Reserve banks.

Thus roughly $12 billion in gold must be held for this purpose. That leaves about $7 billion in so-called free gold to meet demands of foreign sources.

DEFICIT IN GOLD SUPPLY

The foreign claims that can be made against this "free" gold are now around $20 billion—these are short-term foreign balances here, foreign holdings of U.S. Government bonds and other short-term paper and obligations. Ten years ago these short-term or liquid dollar asset holdings of foreign sources were less than $10 billion.

In this same period "free" gold has dropped from $13 billion. Ten years ago, the "free" gold exceeded these foreign claims by more than $3 billion. Today there is a deficit of around $13 billion.

The truth of the matter is that the United States is no longer that "rich uncle" with an unlimited bank account.

Sam Reeve, a Remarkable Small Businessman

EXTENSION OF REMARKS

OF

HON. WILLIAM S. BROOMFIELD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, August 22, 1960

Mr. BROOMFIELD. Mr. Speaker, may I urge my colleagues to read a remarkable success story about a remarkable friend of mine who lives in Oakland County, Mich., the congressional district I represent here in Washington.

Mr. Sam Reeve lives a life of giving, not with the thought of receiving, but for givings' sake alone. He has unbounded faith in his fellow human beings, in their fairness, in their judgment and in their ablity to handle their own problems in their own way.

To Sam Reeve, security is not a thing we plan for. It is a state of mind, a way of life lived by the Bible and the passage, "Give, and it shall be given unto you."

Sam Reeve's story appeared in the July edition of Guideposts magazine, and it reads as follows:

ANYONE COULD DO IT—BUT HE DID

(By Semon E. Knudsen)

Last year, after every snowstorm, Sam Reeve plowed out hundreds of his neighbors' driveways—free of charge. I know that he will babysit with a child, or even with a cat; he will pick up your grocery order, get you some ice cream, meet your unexpected guests at the airport 40 miles away, turn on your house lights after dark when you're out of town, and not charge a cent.

Every now and then I like to drop in on this middle-aged, white-haired man who runs a service station here in Birmingham, Mich., just to see what services Sam is giving away now.

Over the years Sam and I have become pretty good friends. I like to pull into his 12-pump station just to watch the activity. Before my car comes to a stop, three men are at work on it. One is wiping the windshield, another is poking around beneath the hood, and the third eventually gets around to asking how much gasoline I would like.

"Fill it up, Mr. Knudsen?"

I am always called by name at Sam Reeve's, even when there is a new man on the pumps. This used to puzzle me until I discovered that Sam has attached a little green tag to my rear license plate. The tag has a code number on it so that in a matter of seconds anyone on the pumps can look up my name. Sam calls each of his 1,500 charge customers by name, particularly meaningful coming from Same Reeve because he doesn't remember names easily. (Not even his own incidentally. His name is Reeve, without an "s," but I've heard him refer to himself as Sam Reeves.)

Once, a few months ago, Sam was asked by President Eisenhower to come to Washington for a conference of small businessmen. The President invited him because he'd heard that Sam had started with nothing (he came to Detroit 22 years ago with $1.50) and that he'd done spectacularly well in the face of grueling competition. Just consider how competitive Sam's business actually is: running out of Detroit is a highway known as Telegraph Road. In a distance of 25 miles there are more than 300 filling stations, all of them selling comparable gasoline. Right at Sam's own intersection there are four of these stations. All are large, bright and efficient, and all carry quality products. Yet in the face of this competition, last year Sam pumped 1,186,477 gallons of gas (as compared to the national average of 20,000 gallons per station) which not only puts him way ahead of his neighbors, but makes him one of the largest Standard Oil dealers in Michigan.

The President wanted to know how Sam did it. Sam paused a long time, and then he gave an answer which is deceptively simple. "I just tried to give away more than my competitors," he said.

When Sam gives, he pays no attention to the profit potential. In fact he thinks nothing of taking a good loss in order to give a customer better service.

"Do you know why I do this?" Sam asked me one day. He pointed his thumb to an old, torn, much scotchtaped Bible which he keeps on his cluttered desk. "That Bible belonged to my dad," he said. "I run this station by this passage." And he read Luke 6: 38: "Give, and it shall be given unto you; good measure, pressed down, and shaken together, and running over, shall men give into your bosom. For with the same measure that ye mete withal it shall be measured to you again."

Sam said the difficulty with this passage, in his experience, was that it was far too easy to "skip over the give part and read with care the part about getting. But I try to solve this problem. I try to find my pleasure in giving, and let the getting part take care of itself."

Being able to "let the getting part take care of itself," was unusually difficult for Sam. He was raised on an Indiana farm which was so poor, that Sam never wore a suit until the day he graduated from high school. He determined to get off the farm as soon as he could. He wanted a different kind of security. He tried to find it by working in the mines. He determined to become the best paid producer in the company, and he almost succeeded until one day a foreman caught him trying to make a coupling on the fly. Sam would dart between two coal cars while they were still moving toward each other, and at just the right moment, he would slip in the coupling pin and jump back out of the way. It speeded up production no end, but there was a certain risk that he might lose his life in the process. The foreman, who had taken a liking to Sam, ran up to him literally with tears in his eyes.

"You get out of the mines, Sam," he said, angrily. "You get out and stay out."

Sam did. He drew his pay, $3, headed North that same day, still looking for security. He arrived in Detroit with $1.50 left in his pocket.

He was bewildered and a bit frightened, but within a few days got a job in one of Detroit's automobile factories. His job paid well, $99 every 2 weeks. This certainly should supply a wonderful security. Sam's room and board cost him $7 a week, and the balance he secreted away in a sock in the bottom of the bureau in his room. He held on, in a pinching fashion, to every penny he could save until he had built up a fund of over $400. This was more cash than he could ever remember his father possessing.

Why was it, then, that he didn't feel secure? He was still thinking about money; he was unable to enjoy the money he did have.

It was right at this point in Sam's life that he made a most interesting discovery, one which, I think, penetrates the real secret of security. Sam had been raised "a good old hardshell Baptist, with lots of church and lots of Bible reading." Away from home he kept his habits, and one evening while he was pondering the Bible he became transfixed by the passage, "Give, and it shall be given unto you."

The answer seemed so clear: "The whole trick in feeling secure," said Sam, "is to enjoy today and not to worry about tomorrow. That's what security is, and you find it by giving, not by receiving. Because when you think about receiving you tend to think about tomorrow, and when you think about giving you tend to think about today. I asked myself what would happen if I started giving today and not worrying about tomorrow. After all, there is the Biblical promise that when you give, it shall be given unto you."

As soon as he could, Sam quit his job at the factory, pulled his savings out of his sock, and bought a half interest in a run-down gasoline station. He was so sure that his future was going to work out all right that he sent off to Indiana, asking his girl friend if she'd come and be his wife. (Cleo says today that her mother was a little dubious about this proposition. "How do I know Sam Reeve's really going to marry you, way up there in that big city?" Cleo came all right, but she arrived with her sister, too. Just to make sure.)

Almost from the day Sam went into business, he began to experiment in giving. He walked across the street and offered a group of Sears, Roebuck employees free parking and free up-to-the-door car delivery in bad weather.

"What's the catch?" the employees wanted to know.

"No catch," said Sam.

"But at least we have to buy our gas from you."

"No," said Sam. "No strings attached."

Many years, and many moves later, Sam was still giving away free service "no strings attached."

In this way, by deliberately giving more service than he will be paid for, Sam sees to it that his giving is never tied up in his mind with receiving. "If you want to know what real security is," says Sam, "try living by Luke 6: 38. Give, and then assume that your needs will be taken care of. Enjoy the present and don't worry about the future. What better definition of security could you find?"

What better definition indeed. I think there is a lesson for businesses, for individuals and even for nations in the tall, white-haired man, with the strong handshake and the inability to remember names, who runs a corner gas station at Maple and Telegraph here in my hometown.

The Changing Face of American Cities—No. 5

EXTENSION OF REMARKS

OF

HON. DONALD J. IRWIN

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, August 22, 1960

Mr. IRWIN. Mr. Speaker, this is the last in a series of insertions I have been making in the RECORD on "The Changing Face of American Cities," and I am including, pursuant to permission previously granted, an excerpt from Forum magazine's survey, "The New Urbanites":

A HOPEFUL AUGURY

Urban experts agree that the future of the slums depends in large measure on the slum dwellers themselves—largely, the new urbanites. Yet, the fate of the new urbanites is in turn tied to the progress of the older generations of Negro city dwellers. In housing, both groups suffer equally from the patterns of residential segregation which have operated for years to compress the poorest racial minorities into the poorest housing in central city slums. No single factor has limited the drive to establish a stable Negro middle class more than residential segregation. Yet there is now real hope that a completely free housing market, which city officials in every northern and western city see as indispensable to Negro progress, is attainable and indeed may become a reality within a generation.

This hopeful augury comes from two directions: (1) The growing experience of builders with interracial housing and coincident dispelling of many of the myths that formerly limited such building, and (2) the growing inclination of governments at all levels to insure more carefully the extension of democratic rights to all persons. The latter is of even more recent vintage than the former although the first privately developed interracial development is less than a quarter century old. Since the Supreme Court made restrictive covenants unenforcible in 1948, government has slowly moved toward recognition of the full constitutional rights of racial minorities, and has even devised legal means of insuring them. New York has been a pioneer in this regard. The State, several years ago, passed a law banning discrimination in the sale or rental of publicly subsidized housing (13 other States have since passed similar legislation), and New York City recently passed the Nation's first law banning discrimination in the sale or rental of private housing. (Pittsburgh has since followed this lead.) Although New York officials admit that such laws have not obliterated bias in one fell swoop, they maintain that they are a critical factor in diminishing discrimination.

Another vital governmental action, since the 1948 decision, has been the elimination of bias in federally insured housing by the Federal Housing Administration and Veterans' Administration. This is a significant reversal of FHA policy, which for years supported the notions of the real estate and homebuilding lobbies that racially integrated neighborhoods were by definition unstable and contributed to declining property values. While FHA has not been so vigorous as many civil rights exponents would like in the prosecution of its no-bias dictum, it is at least in step with the progressive action being taken by many cities and States.

Equally important as these bias-curbing actions by Government has been the building of interracial housing itself. In the postwar years, about 10,000 units (an admittedly small part of the 12-million total) have been built as interracial housing by private developers. Many of these have been sponsored by social-religious groups such as the American Friends Service Committee, and most of the others have been put up with less regard for profit than for social purpose. Still, the profit record of almost all of the 50 interracial projects erected in the United States in the past 2 decades is good, according to a recently published survey "Privately Developed Interracial Housing," by George and Eunice Grier. More important, these projects have laid to rest some closely held myths of the building business:

Whites have bought housing knowing that Negroes would be their neighbors. (Half of

the projects built involved home ownership, 32 percent were cooperatives, and 18 percent were for rental.) In fact, 30 percent of the projects are stabilized with over 59 percent of the units occupied by nonwhites, a much higher percentage of nonwhites than is generally considered feasible.

It is possible, though difficult, to get financing for interracial projects, and in the past year or so, large lenders have become more receptive to such projects in certain northern and west coast areas.

It is possible, though difficult, to find sites which will be attractive not only to nonwhites, whose housing choice is limited, but to whites who have much wider choice. The caliber of housing in an interracial project must generally be higher than in white-only housing at the same price, sometimes to compensate for fewer desirable sites available for such housing.

There has been almost no friction in such interracial projects once occupancy was stabilized. When all occupants are selected strictly in terms of character and credit, the results are no different than those in all-white developments.

It is possible for a development that was once all-Negro to become integrated, without public aid. Hillview, a California rental project with 316 units, once a predominantly Negro neighborhood, now has a majority of white families. In fact, the project was never successful financially until it became interracial.

Probably the best-known builder of interracial housing today is Morris Milgram, president of Modern Community Developers, Inc., in Princeton, N.J. With initial backing from wealthy Philadelphia Quakers, Milgram built several interracial developments near Philadelphia, and has since branched out into the suburbs of other cities. His most famous project is in Deerfield, Ill., near Chicago, where his recent efforts to erect 51 units of high-priced homes to be sold on an interracial basis have met with angry local opposition. Recently, the district court determined that the town of Deerfield was within its constitutional rights in condemning Milgram's land, to be used ostensibly as a town park. Meanwhile, Milgram is continuing with plans to build interracial homes in suburbs of Washington, Wilmington, Del., Waterbury, Conn., and Princeton.

Another myth that has been laid to rest, though some realtors are still fighting a holding action to protect it, is that the entry of nonwhites into white neighborhoods will depress values. Early this year, a pioneer work appeared, called "Property Values and Race," by Luigi Laurenti. Like the Griers' book, this one was issued by the Commission on Race & Housing, a private organization backed by the Fund for the Republic. After studying housing experience in seven different cities, Laurenti concluded that rather than depressing values in areas of racial transition, the entry of nonwhites usually results in a long-term strengthening of property values.

NEEDED: FULL PARTICIPATION

Despite the work of the Griers and Laurenti, and the steadfast willingness of a handful of builders to demonstrate painfully that interracial housing can be profitable, the great majority of businessmen and government officials in the construction industry, those who could solve the critical dilemma of equal housing opportunities for all, still seem unconvinced. In a democratic society, the building industry, or indeed the white majority as a whole, cannot be forced to adhere to democratic principles. But there is growing hope that, even if the building industry cannot devise means or muster the effort to build enough housing to meet the most critical shortages, it can be induced to make its wares available to all comers on a fully equitable basis. This must start in the cities, of course, and indeed it has been in the cities, under the impetus of urban renewal and public housing open-occupancy rules, that a free housing market is already developing. But, as long as the mobility of racial minorities is restricted to central city housing, there can be no ultimate solution, either for the fast-growing Negro middle-income groups, or for the new urbanites who are striving to attain that status.

Negroes themselves are the first to deny that open occupancy in suburban housing would lead to a flood of Negro families to the suburbs. Those families that could afford such housing are generally those that are happily housed in the finest residential areas of the city. There are few Negro families, regardless of how high their incomes or status might be, who would care to face the uncertainty of living in what would most likely be—at least at first—an inimical environment.

The growth pattern of the great metropolitan areas is coalescing the city and the suburbs, and within this framework the role of the new urbanites becomes more meaningful. As the influx of new urbanites slows down, and it already has in most cities, the housing situation in central cities will become more stable. As housing opportunities are opened up, and they are already opening up, middle-income Negroes and other racial minorities will be able to participate fully in the cultural and economic development of the U.S. community. Such participation is not only badly needed today to counterbalance the dangerous tendency toward homogeneity of thought and action in the American community, but it is also vitally needed for the fullest proliferation of the democratic dynamic.

The new urbanite of today, like the European immigrant of half a century ago, seeks in the city that opportunity which is unavailable in his old land. He comes for freedoms formerly denied. That he is at first not discouraged by his environment, the slum, and its inevitable social desolation is only a mark of the sturdiness of his expectations. Aside from all the readily evident evils coincident to the slum ghetto and its perpetuation is the other greater evil that befalls the newcomer whose aspirations become strangled by ignorance and poverty of principle. He can see in his plight only the final tragedy, the negation of the American dream.

For God and Country

EXTENSION OF REMARKS
OF
HON. LEONARD FARBSTEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1960

Mr. FARBSTEIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial written by Harry H. Schlacht for the East Side News, a local publication with wide circulation in the congressional district I have the honor to represent. This editorial was written to salute the Jewish War Veterans of the United States who are presently convening in Miami, Fla. It follows:

FOR GOD AND COUNTRY

(By Harry H. Schlacht)

America salutes the Jewish War Veterans of the United States now holding a convention in Miami.

The convention is being staged in the cavalcade of patriotic splendor.

It is unfolding the scroll of the fighting Jews for America.

The Jewish War Veterans are dedicated—to maintain true allegiance to the United States of America, to foster and perpetuate the principles of Americanism, to combat bigotry and instill the love of God and country, to honor the memory of patriotic service of men of Jewish faith, to inculcate the doctrines of liberty, equal rights and justice to all.

Who does not know the stirring saga of that ancient race of God, Whose immemorial feet the grapes of wrath have trod? When has there ever been, When will there ever be again, An epic having equal power to stir the impulses of men?

The Jews are an ancient people whose spiritual riches were deposited in a literature in the form of the old Bible, revered the world over as an ageless repository of devine inspiration, and of the purest philosophy and wisdom.

They have nurtured a Moses and a Christ.

They were born in freedom, and weaned on the teachings of the Ten Commandments.

They were comforted and sustained by the psalmists, and disciplined by the seers.

They were the couriers of the ethics of Abraham, the songs of David, and the prophecies of Jeremiah to all mankind.

The Jews have been a stalwart people, and their exhibitions of military valor and individual courage have won for them the world's plaudits.

The songs of Deborah burst fourth with martial music.

The battle of Gideon is the battle of heroes.

The dauntlessness of Saul, Jonathan, and David testifies abundantly to the gallantry of the ancient sons of Israel.

They are intertwined with the evolution of civilization.

They have been sturdy champions of liberty in every age and in every clime.

They have enriched the world's literature and sciences.

They have never neglected any standard of principle, any mode of thought or any concepts of philosophy in their grand march of achievements through the centuries.

Yet theirs has been a lonely river in the ocean of mankind.

All the mighty floods of human suffering have never caused it to overflow.

All the fires of cruelty in the furnace of bigotry have never caused it to dry up.

Its waves have rolled crimson for ages with the blood of its martyrs.

It is singularly refreshing to recall that the Jews greatly aided Columbus in the discovery of America.

His caravels were outfitted by Luis de Santangel and his astronomical maps were drawn by Abraham Zacuta.

His ships' physician and surgeon were Bernal and Marco, and his interpreter was Louis de Torres, who was the first to tread American soil.

The Jews have played a glorious role in the development of American history since the birth of the Nation.

They were identified with our colonial growth, and helped finance the Revolution.

They bore a gallant part under the leadership of Gen. George Washington.

They have fought in all the wars of the Republic.

Yes, they have won the highest commendation from every President of our country.

Let us call with pride the roll of those gallant defenders in our Nation's holy cause.

We see the Jews at Valley Forge when the spirit of the American people hung low and only the stout of heart stood fast and constant by Washington.

Of the 3,000 Jews in all the Colonies, 4 of them were lieutenant colonels, 3 majors, 6 captains, and many in the ranks.

Be it noted that Lt. Col. Isaac Frank was aide-de-camp to General Washington.

Hyam Solomon dedicated his entire fortune of $640,000 to the young republic and later died impoverished.

We see them in the War of 1812.

It is inspiring to note that Uriah P. Levy, commander of the brig-o'-war *Argus*, ran the British blockade and destroyed 21 British merchantmen.

With tongue and pen he succeeded in effecting the abolition of bodily punishment in the U.S. Navy, and died a commodore, then the Navy's highest rank.

We see them in the Mexican War—the fight for Texas, and in the Seminole wars.

Again the fighting Jew in action.

Again the healing Jew, in the person of Surg. Gen. David Deleon.

We see them rallying under the inspiration of Abraham Lincoln during the Civil War.

Of the 200,000 Jews in the United States, 10,000 saw active military service and 7 received the Congressional Medal of Honor.

Frederick Knefler, of Indiana, rose to the rank of major general, and Edward S. S. Solomon was brigadier general.

It is interesting to observe that Lincoln named Leopold Newman, of New York, brigadier general while he lay dying of battle wounds received at Chancellorsville.

We see them also with William McKinley Striking the shackles of bondage from a neighboring people and bringing forth an island republic.

America accepted the challenge of Spanish tyranny.

"Remember the *Maine*." Fifteen Jews were on that ill-fated battleship, and Sgt. Maurice Joost, of California, was the first to fall in the attack on Manila.

Five thousand intrepid Jewish volunteers gladly answered the call of their President.

We see these gallant warriors with Woodrow Wilson—fighting to make the world safe for democracy.

Two hundred and fifty thousand Jews were in uniform, constituting 5 percent of the fighting forces.

Ten thousand Jews held commissioned rank, and 1,100 Jews were cited for valor in action.

The greatest epic of courage ever to come out of that war—the exploits of the "Lost Battalion"—was a demonstration of conspicuous bravery.

We see them once more with Franklin Delano Roosevelt—fighting to make democracy safe for the world.

First American penetration of German soil was made by the Third Armored Division, commanded by Maj. Gen. Maurice Rose, of Denver, who gave his life for his country.

First American assault boat to hit the shore of France on D-day was commanded by Lt. Abe Condiotti, of Brooklyn.

The first Japanese battleship sunk in the war was the *Haruna*, sent to the bottom by a plane piloted by Capt. Colin Kelly whose bombardier was Sgt. Meyer Levin.

First American officer killed in the Philippines was Lt. Henry D. Mark of Los Angeles.

First four-medal winner in the American Army in World War II was Lt. Morris Berenson, of Garfield, N.J.

And there are scores of Americans of Jewish faith whose names will live forever in the archives of our Government.

Travel where you may through American cemeteries on a thousand battlefields.

Travel where the delicate poppies carpet the earth with their rich red blossoms or in the glistening white stones rising above the flower-strewn mounds.

There you will see, side by side, one beneath the cross of Christianity and one beneath the star of David.

Jew and Christian pillowed in eternal glory.

Yes, they have fought, bled, worshiped and died together.

May the spirit of America be quickened and renewed.

May the strength that cometh from the hills descend upon us and guide us forever.

"America. America.
God shed his grace on thee,
And crown thy good with brotherhood,
From sea to shiny sea."

Soviet Pattern of Propaganda

EXTENSION OF REMARKS
OF

HON. GORDON H. SCHERER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, August 22, 1960

Mr. SCHERER. Mr. Speaker, more and more people in the United States are becoming cognizant of the many and varied facets of Communist operations and techniques throughout the world. This greater awareness has resulted, in part at least, because distinguished citizens like Julius Fleischmann, of Cincinnati, Ohio, have seen fit to take time and energy to disseminate among key people material dealing with Communist techniques and strategy.

One of Mr. Fleischmann's recent mailings is a letter to the London Times from Mr. William Sargant of the Department of Psychological Medicine, at St. Thomas' Hospital, entitled "Soviet Pattern of Propaganda." It is my feeling that every Member of Congress should have the benefit of this particular phase of Communist propaganda techniques. It is for that reason, Mr. Speaker, that I am asking your permission to insert the letter in the RECORD.

A LESSON FROM PAVLOV—SOVIET PATTERN OF PROPAGANDA

To the EDITOR OF THE TIMES.

SIR: With the summit conference now upon us, and because of the state of disturbed judgment to which Mr. Khrushchev's propaganda exploitation of the recent air spy incident reduced at least some sections of both the public and the press in Britain and America alike, it is becoming more and more important that we should all start to get a better understanding of Russian methods of psychological warfare; otherwise the battle for men's minds being waged so intensively at the present time will result in a resounding defeat for the Western Nations, and this could be far more devastating in its subsequent effects than the outcome of the present race for rocket supremacy.

Obviously, Russian propaganda methods, like others, are based to a large extent on past experience of what works, but, if any expert advice is taken on methods of psychological warfare, it has to come in Russia from scientists versed in Pavlovian theory and practice. This is because in general medicine, and especially in psychological medicine, no other scientific approach is generally considered valid, apart from a Pavlovian one. And it has also, after all, paid some very valuable dividends in recent years in the political field.

Now, Pavlov showed long ago—and this work has been confirmed time and again since—that one of the surest ways of breaking down the nervous stability of the dog and of other animals, and producing in them states of uncontrolled neurotic excitement, which may later lead on to hysterical and submissive behavior, and finally even to depressive apathy, is to give a trained, cooperative but anxious animal a random series of positive and negative conditioned stimuli or signals. A hungry, tense animal, for instance, who has been used to an orderly laboratory existence, in which certain given signals are followed by food, and others by no food, can quickly become neurotic and confused when he tries to sort out a sequence of positive and negative food signals, followed indiscriminately by food or no food, which do not, and were never intended to, make sense to him from the beginning.

This quite simple physiological technique, taken from Pavlov's laboratory, has been found just as applicable to man and has been repeatedly used on British and American politicians, press, and public alike in recent years. For instance, when the original sputnik was launched amidst world excitement, we were first of all told that it had no military significance and was merely an interesting scientific experiment. Then, soon afterwards, we were reminded that it meant that any part of the United States could be wiped off the face of the earth at will. Again we were quickly reassured of its purely pacific intent, and yet later again of the devastating effects of this development on any future war.

Then a dog was dramatically sent up in another sputnik to keep tension at a high level. We were told that it would live, then that it would die, then it was going to live again, and so on alternately for days on end until its death was finally announced. These positive and negative signals were applied with such precision and skill that some of the British and American press and public alike became, temporarily, just as bewildered, confused, and suggestible as did Pavlov's dogs in the presence of a similar barrage of their own special conditioning signals. Numerous other examples could be given of the same technique being used in recent years, and it is unlikely that these have all been just accidental happenings.

Again, before the summit conference, we saw the same sort of method being put into action and we have fallen for it yet again. We know perfectly well that every country uses spies of all sorts, and that there is nothing very abnormal about this. Sensibly, Mr. Khrushchev again chose a particularly violent and dramatic form of positive rocket signal to fire off his present psychological cannonade, and we were afterward also quickly informed of the dire consequences to future cooperation between East and West of this particular air spy happening.

Soon, however, we were told that it need not affect in any way the approaching summit conference. The following day we were again being warned that nations who harbor such American spy bases would be violently attacked. Then again we were told not to worry, but almost immediately afterward warned about atom bombs which could rain on America. And we can quite confidently expect, right through the summit conference and afterward, a series of such positive and negative conditioning signals to be put out quite indiscriminately, which are simply not meant to make any sense at all to those who will vainly try to understand them.

There is one way to avoid neurotic breakdown, the inevitable disturbances of judgment, the increase in hysterical suggestibility which can result from the skilled use of these powerful physiological processes on the nervous systems of either man or animals. This is to deliberately ignore the signals and stop trying to make any sense of them. Pavlov could not break down dogs who took no notice at all of all the experimental flashing lights specially provided for their undoing; it was only the dog who did his best to cooperate with the experimenter and tried to sort

out the signals who was so easily broken down. Unfortunately, the press of both our countries has to relay all these confusing and alternating signals, without also explaining what may really be happening, thus tending unwittingly to play the Russian propaganda game for them.

It is probable that Mr. Macmillan was warned about these techniques before he last visited Russia, for he wisely ignored all the deliberately alternating attitudes adopted by Mr. Khrushchev, who, during the whole of this visit, was blowing so violently hot and cold in a way that must have seemed absolutely bewildering to the Pavlovian uninitiated. But by just ignoring the whole thing, Mr. Macmillan won the day. Let us hope that, with a greater understanding of what is happening, the public, the press and politicians alike will also now try to follow his example.

Yours faithfully,

WILLIAM SARGANT.

People's Success Story: The Eisenhower Era Made Possible the Much Greater Achievements of the People

EXTENSION OF REMARKS
OF
HON. ROBERT J. CORBETT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Monday, August 22, 1960

Mr. CORBETT. Mr. Speaker, as the Members of this body know, I seldom utilize space in the CONGRESSIONAL RECORD to include extraneous matter. But the editorial appearing in the August 1 issue of Life magazine struck me as being such a valuable summation of the Eisenhower administration to date that I thought it should be given the widest possible circulation.

I am confident that every American, Democrat or Republican, will find this editorial to be factual, penetrating, and thought provoking. It is my pleasure to cause this republication:

PEOPLE'S SUCCESS STORY: THE EISENHOWER ERA MADE POSSIBLE THE MUCH GREATER ACHIEVEMENTS OF THE PEOPLE

In Chicago, where he won it from Bob Taft in the acrid battle of 1952, Dwight D. Eisenhower this week surrenders the leadership of the Republican Party. The record of his administration may be only one major campaign issue, since both NIXON and KENNEDY are bound to emphasize new goals and policies for a new age. But Eisenhower's record is well worth inspection.

Of the many flaws the Democrats will find in it, historians will probably agree at least on one. There is some substance to the charge that Ike has rather reigned than ruled. He has tended to assume, as you can in the Army but not in the White House, that an order once given is self-executing; a certain lack of followthrough has marred some of his best intentions, notably the rejuvenation of the Republican Party. He has been an easy boss. But that is not to echo the commoner (and mistaken) charge that he does not make decisions. Ike has made plenty of decisions. And most of them were right.

The duty he saw in taking office was to heal the wounds of 20 years of highly partisan Government and chronic emergency. It was his genius to give the latent unity and goodwill of the American people a chance to recover and grow. He has been the least "divisive" of modern Presidents—and the most widely beloved.

Reinhold Niebuhr, no conservative, said Ike "rebuilt American conservatism into a viable political instrument." He gave a suspicious generation the reassuring experience of living safely and prosperously under a Republican government again—salutary for the people and for the Republican Party, too.

Such a government had to do more correcting than innovating. In our foreign alliances, Ike's long suit, he has preserved and developed previous lines of U.S. policy, but to them he has made two contributions of enormous importance.

The first was to modernize and strengthen our military posture and bring it into the the missile era on a "long-pull" basis—i.e., no more crash emergency programs or budgetary zigs and zags. Though there is room for marginal argument, the essential truth is that when Ike leaves office America will still be, as he found it, the strongest military power in the world.

President Eisenhower's second contribution was to rob the Communists of their most insidious propaganda weapon, Khrushchev's pretended guardianship of world peace. Ike personally shot down that phony Picasso peace dove. He did it by his personal dedication to peace, by his atoms-for-peace offer to the U.N., by his dramatic open-skies proposal at Geneva in 1955, by stopping the Suez war, by his serious pursuit of disarmament, and by his good will travels. He has made the cause of peace so much his own that Jim Farley, only the other day, could accuse him of "peace-at-any-price leadership." That charge won't wash. Ike has twice faced down Communist threats of war in the Formosa Strait. He has not flinched under Russian pressure on Berlin. He took bold action in the Middle East. He has kept the peace without surrendering any point of strength. The Russian Empire is no larger than it was in 1952 (in fact smaller by eastern Austria). The Chinese Empire, though larger by North Vietnam and Tibet, is surrounded by stronger and more alert free neighbors than it was before Ike and John Foster Dulles took charge.

Ike used to be called a lucky President. His luck has run out lately at Sverdlovsk, Paris, and Tokyo. But let not these setbacks be confused with flaws in the solid structure of allied political, military, and economic strength built in the Eisenhower era.

The economic performance has been especially spectacular. Abroad, the Eisenhower policies have encouraged a rebirth of private trade and investment that has lifted the whole Western World and parts of Asia to amazing levels of prosperity. Europe has never been in healthier shape. We still need a new approach to the underdeveloped Southern Hemisphere, but even Latin America has improved politically, if not economically, in Ike's time.

At home the case is open and shut. The Eisenhower economic policy has been virtually a textbook model of how to befriend and stimulate a free-market system. He and his aides have handled two recessions with precise skill. Real wages and consumption have risen steadily, and profits and savings have remained healthy. He has led a tireless war on excessive Government spending which has at last brought inflation under control. The $1.1 billion surplus announced last week is a symbol of this victory for a sound dollar.

Ike's government has helped finance the building industry while it set an alltime record of 8 million new homes in less than 8 years. It has launched a whole new highway system, 23 space satellites and 20 atomic submarines. It has expanded the Union by two new States and created seaports on the Great Lakes.

Ike's government has maintained, not without difficulty, a high standard of integrity in Federal officeholders. His Cabinet has seen some stellar performers (Dulles, Brownell, Rogers, Anderson, Mitchell, et al.) and even the unfortunate Benson deserves respect for his persistent attack on Congress' scandalous farm policy.

Ike's government has appointed more scores of good judges than any previous one. This great improvement in the judiciary, essential to the Nation, is the kind of achievement to which voters and political writers give too little heed.

Ike's government has shifted the rate of Negro political and economic progress into high gear.

But all these achievements are only part of the great story of progress in the Eisenhower era. In a nation with a constitutional government, where freedom to act is left to individuals and unofficial groups, a full evaluation must include credit or blame for how the nation as a whole behaves. The greatest deeds of his era are what the people, responsive to their renewed liberty, have done for and by themselves.

Democrats charge that Ike's preoccupation with the budget has "starved" our public services. Yet total public spending—Federal, State, and local—is nearly twice what it was in Truman's time and most of the increase has been in welfare (nondefense) services. Of our school system, so rightly under scrutiny, an impressive fact is how it has grown in teachers, classrooms, and students, with little Federal aid. But even more important: Scholastic standards have risen sharply.

Not Federal but private and local spending have changed our urban skylines these last 8 years; and distributed more books and music than ever; and produced more goods and services of every kind. The Federal Government did not develop automation, nor discover the Salk vaccine, nor make American architecture a new wonder of the world; nor cause more Americans to travel abroad than ever before; nor double the annual gifts to higher education; nor raise our birth rate to a record height. The American people did all these—and more. They did them under the benign and permissive Eisenhower sun.

A certain dissatisfaction has crept into the last months of the Eisenhower era—the anti-tailfin syndrome, the Puritan nostalgia, the hunger for new national purpose. And that is healthy, for it shows that Americans have not been entirely corrupted by their own success. But let's face it: It is success, not failure, that causes our unease. Ike leaves us reunited, rested, self-enriched, and newly appreciative of our liberty. As a people we are (or should be) firmly prepared for our next testing. The Kennedy or Nixon era will be different. It may be grim or it may be great. It can scarcely be more sunny or fruitful than these Eisenhower years, in which so many age-old visions of the good life first became real.

Dedication of Nation Ford Historical Park

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Monday, August 22, 1960

Mr. HEMPHILL. Mr. Speaker, on Saturday, July 30, 1960, it was my privilege to participate in a magnificent program at Red River, S.C., near Rock Hill, in my district, at the dedication of the

Nation Ford Historical Park. This is one of the most historic spots in York County, S.C. At Nation Ford, on the Catawba River, the Indians and traders crossed as early as 1650. This site is also the traditional site of the battle of Liberty Hill, or Turkey Hill, last conflict between the Catawba and Cherokee Indians. Gen. Thomas Sumter, famed Revolutionary leader of South Carolina, known as the "Gamecock," camped at the spot in July of 1780. Lord Cornwallis, leader of the British forces in the Revolution attempted to cross in October 1780, but the waters were too high.

Here one of the last skirmishes of the War Between the States occurred on April 19, 1865. Confederate President Jefferson and his party crossed April 27, 1865, on his way to find safety west of the Mississippi.

The trestle of the railroad which crosses at this point and which was known as the Charlotte and South Carolina Railroad—now Southern Railway—was completed in 1852. It was burned by Union soldiers on April 19, 1865.

It was fitting that we gathered to pay tribute to this spot and the peoples whose paths have crossed.

Nation Ford Historical Park was established through the cooperation of the York County Historical Commission and the York County Historical Society. I give great credit to Chairman Harper Gault and the members of the York County Historical Commission for establishing this and other parks commemorating great places and evidence in York County, S.C. I also commend President Sam B. Mendenhall, Vice President Neely and the members of the York County Historical Society for their magnificent work. The program was as follows:

Presiding: Col. F. Murray Mack, Fort Mill, S.C., vice chairman, York County Historical Commission.

Invocation: Rev. Olin L. Martin, pastor, Church of God, Red River, S.C.

RECOGNITION OF SPECIAL GUESTS

Acknowledgment of assistance in establishing Nation Ford Park.

Greetings from Fifth Congressional District: Congressman ROBERT W. HEMPHILL, Chester, S.C.

Greetings from Southern Railway: Mr. R. H. Snyder, Columbia, S.C., superintendent of Southern Railway system.

Historical significance of Nation Ford area: Mr. Sam B. Mendenhall, president, New York County Historical Society.

Benediction: Rev. Carl W. Lambert, pastor, Temple Baptist Church, Red River, S.C.

On this occasion all of us were stirred, intrigued, and inspired by the speech made by the Honorable Sam B. Mendenhall, president of the York County Historical Society. I include as part of my remarks that speech which is attached:

SPEECH OF MR. SAM B. MENDENHALL

We have met here this afternoon to dedicate this park which marks one of the most historic spots in York County—Nation Ford. I want to touch briefly on the events which make this place the historic spot that it is.

Nation Ford takes its name from the fact that the Catawba Nation lived nearby. How long the Catawbas have been here, no one knows; however, they were encountered here as early as 1566 by the Spanish explorer, Juan Pardo.

Here at Nation Ford the great western trading path, or Catawba trading path, crossed the river. The origin of this prehistoric trail is lost in the sands of time; but it is known that traders crossed as early as 1650. This trail started in Virginia and came down through North Carolina to the Catawba where it crossed and then forked—one trail going to the Cherokee towns in the northwestern part of this State, the other passing on to the Indian villages near Augusta, Ga. The entire length was about 500 miles.

Here is the traditional site of the Battle of Liberty Hill, or Turkey Hill, as it is sometimes called, the last conflict between the Catawba and Cherokee Indians. According to tradition, the Catawba and the Cherokee had a great battle, each side losing about 1,000 men. After the battle was over, they decided that such fighting was foolish; so they made an agreement that they should fight no more; and that the Catawbas should stay on the east side of the Catawba River, and the Cherokee should stay on the west side of the Broad River, and the territory in between should be no man's land.

In the summer of 1780, when it appeared that the American Revolution in the South was over, and, indeed, the British so boasted, Gen. Thomas Sumter, the "Gamecock," and the band of patriots whom he led, made their camp here. We know that these brave men checked the advance of the British, and through their determined efforts others were moved to rally to the American cause; and the Revolution, which could have easily ended with a British victory, was won by the Colonies.

After the defeat of the British at King's Mountain on October 7, 1780, Cornwallis, who was then in Charlotte, decided to retreat to Winnsboro. He came down to Nation Ford; but when he arrived the river was so swollen that he could not cross. Therefore, he camped nearby at Thomas Spratt's plantation. At least one attempt was made to ford; but finally they had to go down to Landsford to cross.

In 1846, work was begun on the Charlotte & South Carolina Railroad which ran from Charlotte to Augusta. This is now a part of the Southern Railway System. It was decided that the trestle across the Catawba River should be at Nation Ford. This trestle has been described as a "magnificent structure, 1,127 feet long and towering 50 feet above the water." We are told that railroad follows almost identically the Indian Trading Path from Charlotte to Augusta. The railroad was completed in 1852, and in June of that year the first train came through. It is said that all the people from Fort Mill and the surrounding countryside met, had a picnic lunch, and waited to see for the first time the "iron horse." One old countryman, who was a little late in arriving, parked his wagon on the track itself. He was warned by one of his neighbors to move it because the train would not get out of his way. So the man proceeded to do so. But about this time the train, which was then approaching, let out a loud toot on its whistle which scared the man so he jumped from the wagon and left it to the destruction of the train.

At the Cross Roads, near here, where the road from Herron's Ferry to the Saluda Road running to Chester crossed the road running from Nation Ford to Yorkville, the headman of the Catawba Nation, broken in spirit and depleted in numbers, met with representatives of the State of South Carolina in 1840, and ceded to South Carolina their land amounting to 144,000 acres.

Here on April 19, 1865, one of the last battles of the War Between the States was fought. Ten days after Lee's surrender, and 7 days before Johnston's surrender, Maj. E. C. Moderwell, who was then at Lincolnton, was sent with a detachment of Yankee cavalry to burn the railroad bridge across the Catawba River. The bridge was defended by a garrison of about 60 Confederates who had 2 cannon and a number of small arms. The Yankees captured the picket and surprised the guard and the bridge fell without a fight. The Yankees set it afire, one account says by pouring gunpowder and lampoil on it. The whole structure burned in 30 minutes. Aunt Rhoda, one of Mr. Alexander Fewell's slaves, said this about the burning of the bridge: "At first we thought God had sent down de sun on top o' dat bridge; but twain't long fo' we found out dat it be nothing' but de deviltry of dem Yankees ablazing dat bridge."

As soon as the bridge had been set afire, a command of Confederate cavalry came down from Charlotte for the purpose of defending the bridge; but they were too late. However, a spirited engagement took place, the Confederate on the north side, and the Yankees on the South. It is said that the Yankees mounted the captured cannon on the hill overlooking the river. After a fight of about 2 hours, the Yankees left and returned to Dallas, N.C. The Confederates began fording the river to pursue them. When about half had crossed, the other half were in the process of crossing, a locomotive arrived from Charlotte with a Confederate officer carrying a white flag who told them that an armistice had been declared between Johnston and Sherman; so the Yankees were not pursued. Lossing, the northern historian, describes this as "one of the most gallant little exploits of the war."

It is said that when Jim Williams, the Negro, who ran Herron's Ferry, heard the Yankees were coming, he was so overawed by the prospect of being eaten alive by these creatures, that he abandoned the ferry and hid on Mobley's Hill, near the river, from which he watched the battle.

On April 27, 1865, President Jefferson Davis and his party crossed under the charred ruins of the bridge in their "flight into oblivion." Tradition says that he reviewed his troops for the last time at the Cross Roads.

It is said that Gen. Wade Hampton one moonlit night swam his horse across the ford seeking to overtake his fallen leader and persuade him not to give up the Southern cause.

I am sure that there are some present who remember the great flood of 1916. The railroad trestle was again destroyed, this time being washed away on July 17, 1916. It was rebuilt in its present form thereafter.

Nation Ford, abandoned since 1911, can easily be located. On the south side it starts a short distance up river from the trestle, passes under it diagonally, and meets the north side a short distance down river from the trestle.

Here has passed—each in his day—the buffalo, the Indian warrior, the Spanish explorer, the English trader, the pioneer in his oxcart, the stagecoach driver, and the railroad engineer. Modern man no longer needs or uses the place, and the old roads immediately leading to it have fallen again into the stillness of the primeval forest.

Who'll Pay the Taxes

EXTENSION OF REMARKS

OF

HON. FRANK C. OSMERS, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, August 22, 1960

Mr. OSMERS. Mr. Speaker, the tax-free status of cooperatives presents two very serious problems to our economy.

First, the loss of corporate income tax revenue resulting from the expansion of co-ops using capital that has been amassed under their tax-free status; and, second, the destruction of many small businesses resulting from unfair competition from nontaxpaying cooperatives.

The National Small Businessmen's Association has been making a continuing study of this growing problem. The Association, through its officers has advised me that in many parts of the country small businessmen are faced with extinction unless something is done by Congress to protect them from this competition. The rapidly increasing loss of Federal taxes from these tax exempt operations must also be given careful consideration by Congress.

An editorial in the Minneapolis Star of August 5, 1960, points up the problem very clearly. I ask unanimous consent that it be included in the Appendix of the RECORD.

The editorial follows:

WHO'LL PAY THE TAXES?

What is reported to be the largest soybean processing plant in the United States has just been purchased by the Farmers Union Grain Terminal Association, grain marketing cooperative with headquarters in St. Paul. GTA paid in excess of $6 million for the presumably profitable Honeymead Products mill at Mankato. It was an attractive deal for Honeymead, that company's president reported.

Three years ago GTA bought the elevator and feed business of the McCabe Co., Minneapolis, for $5 million. There have been reports of GTA negotiating with another private grain company for another string of country elevators.

Why these sales of privately owned facilities? Does a co-op have some advantages which enable it to operate a business which a private corporation feels compelled to sell? What about taxes?

Both the co-op and the private firm pay the same property taxes. But the private firm pays a 52-percent corporate income tax to the Federal Government. It also pays a 9.3-percent income tax to the State. However, each of these tax payments may be deducted as an expense before paying the other tax. The co-op does not pay a corporate income tax because it distributes its earnings to its members.

The co-op people point out that any business could do the same and without earnings wouldn't be obligated to pay income taxes. But a private company could hardly continue to exist or expand without earnings. The co-op can claim not to have earnings and still have money to expand by giving its members an I O U for their share of the profits and then retaining the money for a number of years.

Some people think this is an unfair advantage over private business. A bill was proposed to Congress last year which would put a tax on retained co-op earnings after 3 years. Such an outcry arose that Congress dropped the subject.

The co-ops point out that the members pay individual income taxes on the earnings returned to them. Even if all of them reported the earnings faithfully, the rate in almost all cases would be much less than the corporate income tax rate.

The corporate income tax accounts for a big share of both Federal and State revenue. But if all corporations became co-ops those billions of dollars would disappear from governmental treasuries. Who would make up the difference? It's an interesting situation to ponder.

Nasser Talking Like Khrushchev

EXTENSION OF REMARKS
OF
HON. LESTER HOLTZMAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1960

Mr. HOLTZMAN. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD I would like to include herewith an article which appeared in the summer issue of "Prevent World War III," published by the Society for the Prevention of World War III, Inc., and entitled "Nasser Talking Like Khrushchev":

NASSER TALKING LIKE KHRUSHCHEV

It is significant that Nasser's tirades against imperialism are a carbon copy of Khrushchev's fulminations against the West.

On May 7, 1960, Egypt's President Nasser spoke at a public rally in Al-Mansurah commemorating the battle against the crusaders in 1250. He seized the occasion to deliver a violent attack against the West in general and the United States in particular. President Nasser did not speak as a responsible leader of his people but as an unscrupulous demagogue employing every kind of trick to poison the minds of his listeners against the Western democracies. His incitement to hate and his deliberate distortion of facts gives clear indication that Nasser is a dedicated opponent of all efforts to reduce tensions in the Middle East and to create an atmosphere of good will and mutual understanding conductive to peace.

It is noteworthy that, while Nasser insulted the United States and cast aspersions on the integrity of the U.S. Senate(he was receiving U.S. assistance running into the tens of millions of dollars. In this year 1960, Egypt is receiving from us $9 million in surplus foods as a gift and many millions as gifts is special asistance, technical cooperation, etc. It was the United States which prodded the World Bank to agree to a loan of more than $56 million to the UAR. It was the United States which supplied the UAR with $12 million for the building of Egypt's first television station. It was the United States which has entered into an agreement whereby U.S. wheat and other agricultural commodities will be sold to Egypt for $120 million payable in Egyptian currency—a currency which is among the softest in the world. It is the United States which contemplates the granting of additional free assistance the value of which runs into the tens of millions of dollars.

Let there be no illusion about President Nasser's vilification of the United States at Al-Mansurah. It was not a temporary emotional outburst. On the contrary, it reflected Nasser's deep-seated hostility toward the United States and its democratic institutions. Unfortunately, the American public at large is unfamiliar with Nasser's real opinions of the United States. As a matter of fact, we doubt whether most Members of Congress are aware of Nasser's speech at Al-Mansurah. In this connection, we must state that the press has failed to publicize Nasser's views adequately. We hope that our readers and Members of Congress will carefully study this speech. We hope that they will bear it in mind when they are told by some of our policymakers that it "pays to be nice to Nasser." Pertinent passages of Nasser's talk are reprinted below:

"Imperialism has always and at all times sought to destroy Arab nationalism, to dominate, and oppress.

"After World War I, the name of democracy was used to deceive the people.

"Today we envisage a great battle in which we are defending our fate, our existence, our freedom, and our nationalism. In this battle we are facing the imperialist states, which are using and arming Israel so that Israel can aggress against you and destroy your nationalism. This is the new means by which they are trying to crush our freedom.

"America has refused to give us any arms since 1952, because it knows that by means of these arms we defend our independence.

"Today, brother citizens, when we see the United States arming Israel, we can never forget under any circumstance that the aim is the same—the aim is our freedom, our will, our nationalism, and our independence.

"I ask these people in the American Senate: Where is the freedom of the peoples? Where is the freedom of Algeria? Where is the freedom of Palestine? Where is the freedom of Oman? Where is the freedom of the South African peoples? These people who spoke in the American Senate and who dressed themselves in thieves' attire and leveled accusations against all Arabs and against the UAR have been deceiving the American people under the pretext of the freedom of navigation.

"Zionism in America is trying to enslave the American people, dominate America, and appoint itself as a power above the American Constitution.

"This is the American Senate, whose Members, or some of whose Members, direct insults against us and who pretend that freedom has touched their consciences and hearts. All the world exposes them, because if they truly spoke of freedom, they should discuss the freedom of all peoples everywhere. We know that the fight against Algeria depends on American weapons and that the killing of the Algerian people is a killing by American weapons.

"The Suez Canal is an Arab canal passing through Arab territory, according to all international treaties and all the agreements dealing with the freedom of navigation through the Suez Canal. All these agreements say that the Suez Canal is an Arab canal and that it is part of the Arab land, and that we have the right to adopt all necessary measures to safeguard its security.

"This, brother citizens, is our reply to the Zionist agents in America, and to these Senators who insulted and threatened us, and whose consciences were touched by Zionist money and Zionist tactics, and who thus rose to threaten us and insult us—we say to them: If you really mean to speak about freedom, we want to hear you in your Senate speak of freedom throughout the world.

"We, brother citizens, say to these people and these Senators in their country: If Israel and Zionism dominate the Senate in America, and if the American people allow themselves to submit to Zionist pressure—because Zionism relies on temptation and bribes, because Zionism controls their livelihood and necks, and because Zionism sets up Zionist organizations in their country—if the American people, who are rich, allow themselves to yield to Zionism, we here, we the Arab people, say to them: We the poor people refuse to submit to America and refuse to submit to Zionism under any circumstance, because we know that we have dignity to defend, that we have freedom for which we shed blood to defend, and that we are ready to shed our blood and souls to liberate our country.

"Zionism in America in 1948 not only dominated the Congress but also dominated the American President, who was at the time the biggest imperialist agent. We all know that. The American people too know this. Some American writers write about it.

"We tell those who talk about withholding aid that we are sorry, but we do not accept aid. We pay the price of the wheat which we take and which we buy from America to the last mil. We buy it with our money. We do not take wheat from America as charity or as aid, but we purchase this wheat for which we pay in local currency. After this, they give us half of this amount as a loan in accordance with an agreement. But this loan, O brethren, is also not charity, because it is a loan which we will settle over 30 years at an interest of 4 percent—according to the methods of Cohen. This means we pay for the wheat and then pay them as much again as the price of the wheat through the interest. This means that we take the wheat for more than its price. If these people think that they have found a means to dominate us, we tell them to remember the lessons of the past. It is impossible for us in any case to accept conditional aid. We have honor and dignity because when we take the wheat we pay its price with our money.

"We feel that the friendship which has brought together the Soviet and the Arab peoples is a firm and strong friendship. It can by no means be shaken by the clouds which appear over the relations between the two countries because of the differences over social and political principles.

"In every Arab's view Israel is the first issue: It is the dagger in the breast of the Arab Nation. Any hand assisting this dagger shares the responsibility. Time is on the side of the Arabs, and not on that of America."

Control Goes With Aid

EXTENSION OF REMARKS
OF
HON. WILLIAM K. VAN PELT
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1960

Mr. VAN PELT. Mr. Speaker, under leave to extend my remarks I include an editorial from Life Lines.

Life Lines is a triweekly publication of Life Line, Inc., Washington, D.C. The publication has become one of the most outspoken advocates of stirring, pro-American information that is presently available in this country.

Much of the material in the publication is used in the daily radio program Life Line which is broadcast over more than 130 stations across the Nation. The speaker for the broadcasts is Wayne Poucher.

The Life Line Foundation is an educational, religious, and patriotic organization. Its broadcasts and publications are worthy of attention by Americans who are concerned about saving freedom in the world. A recent article is of particular interest at this time.

CONTROL GOES WITH AID

Just a century ago a President of the United States, James Buchanan, observed, "Should the time ever come when the State governments shall look to the Federal Treasury for the means of supporting themselves and maintaining their systems of education and internal policy, the character of both governments will be greatly deteriorated."

The practical truth of that statement is today being demonstrated by the increasingly frequent requests from the States for Federal financial assistance. But just how much do the States really gain from aid of this kind?

When the States ask for or accept Federal aid, they are, in effect, asking for Federal control—of education, public improvements, and all the other matters that should be handled on a State or local level. And, besides that, when the Federal Government doles out money to States, it is not exercising any remarkable amount of generosity. After all, the Federal Government has no money of its own. Every cent it hands out belongs to American taxpayers, who also happen to be citizens of the States.

Under such circumstances, as President Buchanan said, the character of both Federal and State Governments becomes greatly deteriorated. Also, to get right down to cases, the taxpayer is being played for a sucker, because substantial deductions are made in Washington for administration and the cost of bureaucracy before his own money is sent back to his State.

These are facts for informed patriots to help spread among the people.

Port of New York Authority

EXTENSION OF REMARKS
OF
HON. EDWIN B. DOOLEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1960

Mr. DOOLEY. Mr. Speaker, I am in complete agreement with the distinguished Representative from New York [JOHN H. RAY], who in his minority report holds that the majority of the Judiciary Committee is in error in recommending that contempt citations be issued against the chairman, S. Sloan Colt; the executive director, Austin J. Tobin; and the secretary, Joseph G. Carty, of the Port of New York Authority.

I agree with Congressman RAY that the action recommended by the majority of the Judiciary Committee would be unprecedented and unwise as a matter of Federal and State relations, as it is not sanctioned by law and might well be held unconstitutional.

The Port of New York Authority, which was created by the States of New York and New Jersey in keeping with an agreement validated by special legislation of each of those States, has been a great boon to the city of New York and to the surrounding metropolitan area. I mention this not because it affects the legality of the actions of the Port of New York Authority officials, but merely to indicate that the accomplishments of the port authority in solving the complex transport problems of a great city have been most effective.

The three men who are being considered for contempt citations by the Congress are extraordinarily outstanding citizens.

S. Sloan Colt not only has behind him a record of success in business enterprises, but has contributed immeasurably to the well-being of the city by his civic work in a number of areas. He works without compensation for the Port of New York Authority.

Austin J. Tobin, who has been with the Port of New York Authority for many years and is perhaps its most indispensable official, is a man of fine intellect and rare talent. His capacity for business administration is most unusual. His vision and imagination have done much to implement the objectives of the port authority, and New York is a better city because of his presence in it.

I do not know Joseph G. Carty personally, but it is fair to presume that, since he is an official of the port authority, he is a man of fine character and integrity.

When one recalls that Congress did not initiate or create the port authority, but merely gave its consent to the making of the compact, it appears that the Congress is stretching its authority in trying to supervise or regulate the activities of this bi-State agency.

Congress did reserve the right to amend, alter or repeal its resolution consenting to the compact, but it must be remembered that the compact itself can be altered only at the instance of the two States involved.

It must be remembered, too, that the three officials mentioned above appeared before the Judiciary Committee and delivered to that body all the minutes, financial reports, records, et cetera, authorizing official action. It was on the instructions of the Governors of the two States, New York and New Jersey, that the port authority officials declined to furnish the working papers and other internal studies which the committee requested. The Governors were acting in their lawful capacity as heads of two sovereign States.

It appears to me that the action recommended by the Judiciary Committee is in contradiction of the constitutional rights of the States concerned, and the committee therefore appears to be in error.

Commonwealth Club Vote Favors Emergency Legislation To Admit Refugees, but, 12 to 4, Would Limit Total Number

EXTENSION OF REMARKS
OF
HON. J. ARTHUR YOUNGER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1960

Mr. YOUNGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following article taken from the August 12 issue of the Commonwealth, a publication by the Commonwealth Club of California:

COMMONWEALTH CLUB VOTE FAVORS EMERGENCY LEGISLATION TO ADMIT REFUGEES, BUT 12 TO 4, WOULD LIMIT TOTAL NUMBER

Here's how our club members have voted on refugee immigration after reading club's recent published study report on the subject as prepared by our immigration section (Bruce G. Barber, chairman):

1. Should Congress make any provision for admitting into the United States refugees who cannot now be admitted because of immigration quota limitations? Yes, 1,006; no, 737.

2. (a) Should the United States admit refugees only within existing immigration

quotas[1] established for each nation under the general immigration statute? Yes, 759; no, 923.

(b) If this is done, should refugees be accorded any preference within existing immigration quotas?[1] Yes, 567; no, 765.

3. Should any special refugee legislation limit the total number of refugees who may be admitted? Yes, 1,235; no, 423.

4. (a) Assuming refugee legislation is enacted, should it deal with the refugee problem as a continuing one? (719); or

(b) Should such legislation be of an emergency nature dealing with the problems that exist today? (969).

5. Except as to quota limitations, should all refugees admitted to the United States be subject to the same security checks and other qualifications now required of all immigrants? Yes, 1,661; no, 80.

6. Should any refugee legislation enacted by Congress include a provision to accept a specified number of refugees now barred because aged, ill, or otherwise unable to become self-supporting? Yes, 758; no, 938.

[1] Under the present quota system, immigration each year from countries outside the Western Hemisphere is limited to one-sixth of 1 percent of the number of natives of that country who were residing in the United States according to the census of 1920. Existing U.S. immigration quota limits as of January 1, 1960, prescribed by the McCarran-Walter Act are 100 per year for each nation outside the Western Hemisphere except the following: (a) quotas currently available to applicants—Belgium, 1,297; Germany, 25,814; Great Britain, 65,361; Ireland, 17,756; Sweden, 3,295; (d) quotas oversubscribed—Austria, 1,405; Czechoslovakia, 2,859; Denmark, 1,175; Estonia, 115; Finland, 566; France, 3,069; Greece, 308; Hungary, 865; Italy, 5,666; Latvia, 235; Lithuania, 384; Netherlands, 3,136; Norway, 2,364; Poland, 6,488; Portugal, 438; Rumania, 289; Spain, 250; Switzerland, 1,698; Turkey, 255; U.S.S.R. 2,697; Yugoslavia, 942.

The Connally Amendment

EXTENSION OF REMARKS

OF

HON. GORDON H. SCHERER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, August 22, 1960

Mr. SCHERER. Mr. Speaker, there is some effort being made to again bring about the repeal of the Connally amendment during this session of the Congress. To do so would be disastrous for many reasons.

The Cincinnati Enquirer in an editorial on Friday, August 12 and its able and discerning writer, Forrest Davis, in a series of articles, discuss not only the hisory of the Connally amendment but the dire consequences of its repeal to the United States. I believe that all Members of Congress should have the benefit of this keen analysis of the various facets involved in the question of repeal.

The editorial and articles follow:

[From the Cincinnati Enquirer, Aug. 12, 1960]

CONNALLY AMENDMENT AGAIN

There is reason to suspect that one of the items to be called up for consideration during the renewed session of Congress will be Senate bill 94 whose aim is the repeal of the Connally amendment and the end of the reservations to the U.S. participation in the World Court.

First proposed by Senator Tom Connally, of Texas, during his service as chairman of the Senate Foreign Relations Committee, the Connally amendment exempts from the jurisdiction of the World Court any matter that the United States may regard as internal in character.

Ever since its adoption as an amendment to the measure through which the United States subscribed to the World Court, there has been a vigorous campaign for its elimination—a campaign that has been renewed in recent weeks as Congress prepared to resume its work.

There is one crucial difference, we think, between the World Court, on the one hand, and the various domestic courts with which Americans are familiar, on the other. That difference is this: At all levels in the United States, there is a clearly existing body of law for the courts to interpret. In most cases, the law was created first, the court second. On the international level, by way of contrast, there is no unquestioned body of law. Whatever international law the World Court would be called upon to interpret and apply to the solution of specific problems, consequently, would largely be law of its own making.

That consideration—combined with the wholly political manner in which World Court judges are elected—makes it unwise, we think, for the United States to choose this particular moment for giving the World Court unreserved powers in cases in which the United States is a party. The case for the Connally amendment's retention seems doubly strong in view of the fact that the Soviet Union insists upon similar reservations.

[From the Cincinnati Enquirer, Aug. 12, 1960]

CONNALLY'S "SIX LITTLE WORDS" AND THE WORLD COURT

(By Forrest Davis)

WASHINGTON.—The prophets of the Republic's decay would do well to lift their sights from fin-tailed, two-toned jalopies to a tendency corrosive not only of the national will but of the traditional good sense of the American people. I refer to the substitution among the liberal enlightenment of cliche, or slogan, phrasemaking for cool, ad hoc reasoning on political issues as they evolve week by week, month by month.

The argument by cliche is especially obfuscating in foreign affairs, which, while vital to every man, woman, and chick, may only be seen by nonprofessionals through a glass darkly on account of geography, the bewildering cultural differences among races, peoples, and systems, and the obscurity frequently veiling the interests involved.

The Congo affair looms at the moment as a terrible judgment on the light-minded democratic fetish of one head, one vote. What a caricature of the liberal dogmas of self-determination, the "rights" of all peoples everywhere to enjoy political freedom via the ballot box irrespective of what the process visits in the way of rapine, social disintegration, bankruptcy, and hunger upon the innocent in suddenly liberated areas and their neighbors.

The transcendence of slogans over judgment is no new thing with us. Witness "making the world safe for democracy," under which banner we fought World War I. Witness the stupefying nonsense of Wendell Willkie's proclamation of one-worldism. Consider the persistent fallacy that the United States must negotiate with Moscow, whenever Moscow bids, despite the bleak record of successive retreats into which the council table has ushered us since Pearl Harbor. The operative slogan here is that "it is better to talk than to fight," a piece of casuistry flying in the face of the record; a record demonstrating that our defeats at the hand of the Soviet Empire have all resulted from talk.

Specifically, I am concerned with the current attempt to cozen and delude the public into a delivery of our liberties to an exotic World Court in the name of such cliches as "universal justice" and "world order under law." Underpinning these chimerical slogans is the extraordinary delusion that permanent peace will come about if, as, and when the United States shows the way to the Communist empire by "trusting" the Court at The Hague with complete jurisdiction over its justiciable affairs, domestic as well as foreign.

Should our Senate waive the Connally amendment, the pitch goes, all other states will gladly yield their own sovereignties, the cold war will dissolve as Nikita S. Khrushchev and Mao Tse-tung refer their ambitions in Berlin, the Middle East, Latin America, Tibet, the Straits of Formosa, Korea, etc., to quiet adjudication by the Court of International Justice.

The fact that Moscow contemptuously declines to recognize the Court's jurisdiction whatsoever does not discourage the newly sprung but powerful lobby agitating for repeal of the Connally amendment. The fact that the Connally reservation does not deny the Court's jurisdiction in litigation over issues truly international, merely safeguarding Americans from the Court's intrusion into our domestic concerns, is steadily minimized by advocates of repeal.

What is the Connally amendment? It is a brief addendum, six little words, to a resolution introduced by Senator WAYNE L. MORSE, Democrat of Oregon, binding the United States to the compulsory jurisdiction of the World Court. The six little words conclude the amendment, which stipulates that acceptance of the Court's jurisdiction "shall not apply to disputes with regard to matters which are essentially within the jurisdiction of the United States, as determined by the United States."

Former Senator Tom Connally, Democrat of Texas, chairman of the Foreign Relations Committee, introduced the reservation. As amended the resolution carried by 51–12 votes on August 3, 1946, the minority agreeing with MORSE that the United States cede to a new, untested court exclusive determination over its competence to hear any or all cases brought against us at whatever cost to our sovereignty.

Because the questions opened in this debate are so vital to the preservation of the American constitutional system, so varied, so affected by the determination of the United Nations bureaucracy to create a universal state, they call for far more extensive discussion than the space of one column affords. The great questions, such as whether the World Court is in fact a court or merely a political arm of the U.N., are to be ventilated hereafter.

[From the Cincinnati Enquirer, Aug. 15, 1960]

WHAT MAKES THE WORLD COURT LOBBY RUN?

(By Forrest Davis)

WASHINGTON.—The coincidence of Nikita S. Khrushchev's rancorous renewal of the cold war and the emergence of a powerful lobby in behalf of repeal of the Connally reservation and total submission of the United States to the International Court of Justice at The Hague (the World Court) is perhaps purely fortuitous. Senator HUBERT H. HUMPHREY, Democrat, of Minnesota, scarcely could have foreseen Khrushchev's squalidly profane provocation at the May summit, when last December, he introduced his resolution for repeal of the Connally amendment of 1946 reserving to the United

States determination of whether matters raised against it at The Hague were of domestic or international import.

Nor could Charles S. Rhyne have been aware that the implacable rift between the two worlds of Washington and Moscow would be so dramatically disclosed in 1960 when he began his lobbying activity for "world peace through law." Mr. Rhyne, an energetic, youngish Washington attorney, a former president of the American Bar Association, is chairman of a special committee of the bar association functioning under the foregoing title.

Operating munificently under grants of $375,000 from the Ford Foundation and $225,000 from the International Cooperation Administration, Chairman Rhyne has made of his committee an influential force on public opinion. Mr. Rhyne's promise, that lawful settlements of international disputes beat war is fairly unassailable. As president of the bar association in 1958, Mr. Rhyne procured the designation of May 1 each year as Law Day. The purpose of the nationwide observance is to inculcate a new public understanding of and respect for the central function of the law to a civilized community.

It is when Mr. Rhyne, his coadjutors, allies and disciples, attempt to apply the precedent of the United States, where recourse to the courts and an accepted body of law are habitual, to a grievously divided, revolutionary and anarchic world, that his counsel degenerates into sheer nonsense. The ideal of a world court founded on a universal concept of law, commanding the trust of all human societies and deciding issues with urbane objectivity, is one which in the obvious nature of things must be long deferred.

The ideal inspires the casual adherence of all men of good will. President Eisenhower, former President Truman, Vice President Richard M. Nixon, many other public men, eminent jurists and the academic and communicating intelligentsia subscribe to that ideal. The trouble arises when Rhyne and others attempt the impossible leap from aspiration to here-and-now fulfillment.

Rhyne goes so far as to assert that, but for the Connally amendment, the World Court could now function as a keeper of the peace among nations. That amendment, limiting the U.S. submission to the compulsory jurisdiction of an untested arm of the United Nations, speaking with many tongues out of widely contrasted legal systems, Rhyne describes as a "sham." Thoughtful analysts of Rhyne's exaggerated naievete suspect that it is his refusal to acknowledge the simple facts pertaining to the World Court which constitutes a "sham" before the American people.

The lobby failed last winter in the Senate. Hearings called by Chairman J. WILLIAM FULBRIGHT of the Foreign Relations Committee on the Humphrey repealer produced such intelligently adverse testimony that the committee failed to act. FULBRIGHT, who swallows every nostrum put forward as a palliative for the cruel malignity of the world struggle, announced the committee's refusal to report with regret.

Yet we may expect a new assault on the amendment in the next Senate. The campaign, abetted by the New York Times, the Washington Post and other liberal journals characteristically mistaking ends for means, is being stepped up. A committee, to which the venerable and respected Judge Learned Hand lends his name, has moved into the field.

What makes the World Court lobby run? What circumstances have arisen changing the Senate's objections to a Court for which a power-hungry U.N. bureaucracy is the sole legislature? In succeeding articles I shall endeavor to cite those objections and present the contra arguments of the lobby.

[From the Cincinnati Enquirer, Aug. 16, 1960]

THE OBJECTIONS TO AN ALL-POWERFUL WORLD COURT

(By Forrest Davis)

WASHINGTON.—The Court of International Justice, established as an annex to the United Nations in the charter promulgated at San Francisco on June 26, 1945, posed no overt threat to American institutions and historic liberties. According to chapter XIV of the charter, the World Court was to have no compulsory jurisdiction. It was, further, excluded from jurisdiction over purely domestic matters in the member states. Members, indeed, although all could refer internatioal differences to the Court, were ceded the right to specify the extent to which they wished to acknowledge the Court's competence by means of formal declarations of acceptance.

The Connally amendment to the United States declaration of acceptance, reserving to this Government the say as to what issues were international, which domestic, grew out of two major objections to compulsory jurisdictions. The first was general, the second specifically alarming.

As to the second, the U.N. itself through the General Assembly alerted the Senate in February of 1946 to a tendency toward power-grabbing at the expense of member states. The assembly successively adopted conventions conferring immunities on the U.N. and its agencies. It thereupon provided for enforcement of these immunities through the World Court. As the Court had been set up it could deal only with disputes between or among states. Moreover, it had no enforcement arm. The Security Council, hedged by the veto, could not enforce Court decisions and, in any case, the idea of mandatory action by the U.N. or the Court outside of narrow limits was repugnant to the text and spirit of the charter.

There was a provision for advisory opinions, meaning just that, from the Court. But the Assembly, seeking to strengthen itself and its agencies, legislated that in case of a dispute between itself and a member, either side could request an advisory opinion which when given, should "be accepted as decisive by the parties." This, of course, established a form of compulsory jurisdiction through the back door over all sorts of unpredictable differences between the ambitious agencies and members.

The factor weighed with the Senate in August of 1946. The Senate had adopted the U.N. charter in 1945 with only two dissenting votes. In July of 1946, the Foreign Relations Committee, still taking the charter at face value, recommended passage of a declaration of acceptance moved by Senator WAYNE L. MORSE, Democrat, of Oregon, without reservation. In floor debate, however a more prudent counsel made its appearance and the Senate finally, by 51 to 12, accepted the amendment offered by Chairman Tom Connally, Democrat, of Texas, of the Foreign Relations Committee. Most of the committee had reconsidered.

A more compelling factor, however, was a growing dubiety about the nature and competence of the Court itself. The Court, although consisting of 15 judges politically pointed as to region and bloc, should base its decisions upon a recognized body of law. International law, diffusive and organic, had no constitutional nor statutory warrant. It was, in effect, Western law, evolving through the centuries from treaties, conventions, declarations and scholarly assertions. That was the law of consent to which the International Court at The Hague before and after World War I had deferred.

But the U.N. Court contained among its judges two from Communist countries, the U.S.S.R. and Poland, bound to reject all Western jurisprudence as "bourgeois." Two judges were from Moslem lands, Egypt and Pakistan, where Islamic law prevails. Four judges were Latin American, one Chinese, one each from France, Greece, and Norway.

Only three of the judges derived from British common law countries: The United States, Great Britain, and Australia.

The question confronting the Senate then and now is whose law will the World Court administer? Additionally, after adoption of the Connally amendment, the U.N.'s agencies launched on a course of enacting international law by treaty, much of which powerfully cut across American concepts and vested liberties. This process we shall examine in the next installment.

Chester Koch Makes Patriotism His Life

EXTENSION OF REMARKS

OF

HON. MICHAEL A. FEIGHAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, August 22, 1960

Mr. FEIGHAN. Mr. Speaker, by leave previously obtained, I insert in the RECORD an article which appeared in the Cleveland Plain Dealer on May 30, regarding my very good friend, Chester Koch, who is the steadfast, faithful, abiding friend of all war veterans. I know of no one in whom the flame of patriotism burns more constantly than in Chester Koch. He is a veteran of World War I whose prime mission in life appears to be to do an act of kindness for someone else, and especially for men who have served their country in time of conflict. Chester Koch is a distinguished citizen of Cleveland and of Ohio. He is held in high esteem in Cleveland and beloved by all veterans, particularly those who have come to him with their problems and whose difficulties he has helped to resolve. He has worked long and untiringly for adequate hospital facilities for veterans, and he has been an inspiration to veterans groups in working out plans for patriotic celebrations. Veterans in Cleveland, and in Ohio, as well as many other parts of the United States, will agree that—Chester Koch makes patriotism his life.

The article follows:

CHESTER KOCH MAKES PATRIOTISM HIS LIFE

(By Don Sabath)

When Chester J. Koch urges everyone to stay home over Memorial Day he is not making a pitch for traffic safety.

He is promoting patriotism.

For Koch reasons that if nobody goes out of town, everybody will go downtown and pack public music hall for the Memorial Day pageant.

He is the city's coordinator of patriotic activities. Not only that, but he is the only one in the world.

Koch also holds office in or is a member of 33 organizations of veterans and is even an honorary member of the Navy Mothers Clubs of America.

FULL-TIME JOB

He devotes every moment of his time to patriotism, service men and women and veterans—often at his own expense.

His reason: "I guess it just runs in your blood."

At the start of induction preceding World War II, Koch, a clerk at the city's division street pumping station, saw a group of draftees trudging gloomily and unnoticed to the railroad station.

Then and there he decided that all should be given a proper farewell.

In March, 1941, city council recognized the importance of what he was doing and created his present post. Later the job was made full time and he was moved to room 44 in city hall. He has been there ever since.

SAW 400,000 OFF

Koch estimates he has helped send off more than 400,000 men to training camps since the beginning of World War II.

"I still visit the induction center in the Standard Building," he added, "but there are not too many men leaving because of smaller draft quotas."

One day Koch accompanied a group of draftees to Fort Benjamin Harrison, Ind. He almost didn't return.

A young draftee asked him to call his mother before the train departed a small Indiana town. Koch did. But he forgot his overcoat in the train. It was January and cold.

FORTY MILES ON OUTSIDE

When Koch returned to the coach for his coat the train began to pull out of the station. He grabbed an outside railing, but the door was locked. He could not get in.

He rode the train, holding onto the icy railing, for 40 miles until someone noticed him standing on the step.

"Boy, was I cold," he said.

During World War II, Koch arranged gifts for servicemen, set up a canteen on Public Square, and answered every request from servicemen.

Mementoes of the work he has done are piled high in his office at city hall. Clippings and other information are everywhere.

ONE THOUSAND HOURS AT CRILE

But he does not spend much time in his office. He is usually attending a veterans' meeting or dinner or some other military function. He has been awarded a 1,000-hour voluntary pin from Crile Veterans' Administration Hospital.

Koch estimates he spends 25 percent of his salary for veteran activities. He has no expense account or secretary.

Since he is constantly traveling about the State and country, he keeps his suitcases packed with basic, essential items. He has to add only shirts and personal items.

On a recent trip to a Nike demonstration at Fort Bliss, Tex., he unloaded his odds and ends from a suitcase.

PINS AND STRING

Included were such vital items as extra pairs of shoelaces, wads of string, and safety pins.

"Never know when I'll have to tie a package for someone," he said.

One safety pin that he carries in his lapel pocket dates back to World War I. It is from a gas mask canister.

"I've lent that pin to people all over the country for assorted reasons," he said. "It always returns."

Partial to dark blue or gray suits, Koch usually wears a blue tie with a red stickpin. On his lapel are four service pins: left to right, from the American Legion, Catholic War Veterans, Veterans of Foreign Wars, and Army-Navy Union.

Perennial chief of staff or marshal of parades, he cannot begin to estimate the number of parades he has organized and led. He is usually seen riding on the back seat of a police motorcycle up and down the parade route.

When someone wants a question answered about the American flag, he is the one to answer it. He seems to be a walking encyclopedia on the flag.

Another part of his equipment is a white oversea cap, decked with tiny medals. It signifies he is national press officer for the Army-Navy Union. He carries it in his briefcase.

HE'LL BE 70 IN 1962

Koch lives with his son, Ray, in an apartment in Lakewood. He has a daughter, Mrs. Robert Hutter, and four grandchildren. His wife, Mary Irene, died in 1952.

Koch was born in Louisville 68 years ago. He is looking forward to 2 more years of work in his position.

"I reach 70 in 1962," he said, "and then it will be up to the mayor to decide if I should continue. I'm not going to worry about it. I'm just going to keep doing my job."

Koch entered service early in 1918 with the 308th Motor Supply Train of Ohio's 83d Infantry Division, and went to France that spring as a mess sergeant.

When he is dining out with friends he often comments that he ran the best mess in France.

Medical Care for the Aged

EXTENSION OF REMARKS

OF

HON. JOHN H. DENT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 22, 1960

Mr. DENT. Mr. Speaker, in view of the great amount of interest in pending legislation dealing with the question of medical care for the aged, I ask that the following newspaper article by my old friend and top-flight newspaperman, John H. Baer who is staff writer for the Patriot, be printed in the RECORD.

The story on Pennsylvania's program of medical care for the aged under a joint Federal-State financed program will give the Members of Congress a preview of the kind of care and treatment the aged will receive if this Republican administration's medical program is given support by this Congress.

In fact, Mr. Speaker, the administration's program is even worse since it will force every participant in the medicare program to pay yearly dues of $24 as well as the first $250 of the medical expenses.

The story shows that the average amount spent for medical care and other aids for the aged in Pennsylvania amount to about $160 per year. This then proves what we have been saying all along and that the administration's medicare plan won't help anyone who really needs help, but will in fact, add millions of dollars in general fund taxes for an army of Government employees whose main job will be to keep the needy and sick from getting the aid we're paying for.

Following is the complete text of John H. Baer's story as it appeared in the Harrisburg Patriot on August 15, 1960.

STATE NOW PAYING $5 MILLION YEARLY IN MEDICAL BENEFITS

(By John H. Baer)

Pennsylvania is paying about $5 million a year in medical care and nursing home benefits for its aged needy while Congress debates—with an overtone of politics—the issue of Federal medical aid to old persons.

MOSTLY SUBSIDIZED

Approximately 61 percent of the State's medical relief program for the aged comes from Federal subsidies.

The needy aged can also get artificial limbs, braces, crutches, special shoes, and similar aids to normal living for the handicapped.

Hearing aids used to be given, but the high cost of relief forced the State to abandon this phase of the program several years ago. In some cases, however, the county board of assistance have been able to provide reconditioned aids.

Eyeglasses are available free to the aged only if their sight is so critical as to put them into the "blind" category.

DENTAL SERVICE

Free dental service is available for the oldsters on relief—if they can find a dentist participating in the plan. Only about 700 of some 6,300 practicing dentists in the State are active in the aid program.

The complaint of the dental profession, according to Ray Cobaugh, executive secretary of the Pennsylvania Dental Association, is the fixed fees paid for dentures. The dentists say they have no control over the laboratory fees they must pay for making the plates.

MAXIMUM FEES

For a full upper or lower denture, for instance, the relief program puts up a maximum of $50. Laboratory costs alone are at least $30 and may run as high as $45, the dentists say.

Other dental fees fixed by the State include: first tooth pulled on each visit, $2, plus $1 for each additional yank; a single silver filling, $2; a synthetic porcelain filling, $3.

Biggest complaint on dental fees allowed is the $7 for repairing a broken denture. The dentists say the lab fee equals or exceeds this amount.

Nursing and clinical services also are available to the old people on relief. So is ambulance service, up to $40 a trip, at the rate of 40 cents a mile.

FEW LIKE IT

But to get this aid they must virtually take a pauper's oath and put any real estate they own into hock with the Commonwealth. Their insurance is limited, and every effort is made to have close relatives contribute to their support.

Few people—except the genuine needy in the old age brackets—are enthusiastic about the program.

For one thing, only 20 percent of the doctors are participating. Within this limitation the patient has a "free choice" of his own physician. This is because the $1.50 per office call and $2.50 per house call allowed under the relief program "does not pay the overhead of the physician" a spokesman for the Pennsylvania Medical Society said.

Druggists, who get a 50-percent markup on the cost of relief prescriptions, or 90 percent of the list price—whichever is less—now get about half of the total amount spent for medical relief. They also would like to see some adjustments in the program.

MEDICAL PHASE

About one-fourth of the 50,000 persons 65 and over on relief also benefit at any one time from the medical phase of the public aid program, the Department of Public Welfare said.

Usually, when a person in this age bracket goes on public assistance it's for life, and the State aid program includes limited burial costs. The aid plan has been in existence since 1934, with Federal help since 1936.

Average annual cost of State medical care for the aged, with one fourth of the relief clients in this category receiving benefits was put at $160 per person, compared to $177 a year in medical expenses for the average oldster, and $84 a year spent by the average American on medical care.

For nursing home care the Commonwealth will pay from $100 to $165 a month—plus $5 for personal items—depending on the type of care required and whether it is administered by practical or registered nurses.

In homes where practical nurses take care of patients, a needy aged person able to get around on his own and requiring a minimum of attention will get $100 a month from the State—plus the $5 for incidentals. Those requiring more care get $125.

Nursing home patients under the care of registered nurses will have their bills paid at $150 a month for normal care and at $165 for around-the-clock close supervisory nursing.

If a nursing home resident needs doctor's care or drugs this is provided as an extra item in addition to the care cost at the home.

Medical care is not limited to the aged. Last year it cost $3.4 million for all types of medical relief classifications. This included more than $2 million for the aged; old people in nursing homes, on the basis of 1958 figures—the latest available—drew $2,900,000 for maintenance and medical care.

For the aged on relief and unable to pay hospital bills, free care is provided in a State-owned or State-aided hospital.

DRUG RULES

Bills for drugs and most other items in the medical relief program costing $10 or more require approval of the county assistance office. If the item exceeds $25, the State office of public assistance must approve it.

Visiting nurse service is paid for by the State at a maximum of $2 for a home visit and 50 cents for an office visit. Such nursing care must be prescribed by the attending physician.

To get the wide range of care offered needy old people, the individual must give the Commonwealth a lien on any real estate he owns; cannot have more than $500 in life insurance, for burial purposes; not hold personal property in excess of such household furniture required for daily living.

He may have $500 on deposit at a bank, in lieu of life insurance, on condition that its use is restricted to his burial.

KIN'S LIABILITY

Money received from relatives is charged against relief allocations as income. Children are liable for support of their parents under State support laws, on a scale established by the State. For instance, a man making between $410 and $429 a month, with a wife and child of his own to support, is expected to contribute $20 a month for the support of a parent not living with him.

This phase of the relief law is admittedly difficult to enforce. Court orders can be obtained, but irresponsible individuals can also find ways to duck them, officials point out.

In this day of personal transportation emphasis, the person on relief is allowed to keep a car if it is 5 years old or older and not worth more than $500. Those going to relief with better cars are given 6 months to get rid of them.

DILL FAILED

An effort to blanket the medically needy into the relief program under a purchase-of-care plan failed enactment in the 1959 legislature.

At present, outside of the relief plan, the legislature has allocated $28 million for the 1959–61 biennium to 187 hospitals at the rate of $10 a day per patient for free care on a subsidy.

The legislation proposed by the merger committee which mapped consolidation of the old departments of welfare and public assistance into a department of public welfare would have discontinued the subsidy system and substituted the purchase-of-care plan.

Although only 3,500 of the 16,000 physicians in Pennsylvania participated in the medical relief program, many more doctors give free treatment to the needy. A move to increase the physician fee rates is now underway—coupled with a program to get more appropriations for this service.

WANTS SURVEY

"We realize this is a special category of medical care," a representative of the medical society said, "and want the program evaluated," including another look at physician fees not changed since 1948.

From the start of the medical care program in 1934 until 1945, physicians were paid indirectly from relief allocation made to those on aid for the cost of this care.

In 1945 provisions were made for direct payments to the medical arts practitioners. Another revision in 1948 reimbursed doctors for the actual cost of medication dispensed at the home of the relief patient or in the office.

Pennsylvania and 41 other States will spend about $290 million to help oldsters medically this year, it is estimated, compared to some $230 million in 1959.

SOME ABUSE IT

There have been some abuses of the program in Pennsylvania. Recently a Philadelphia doctor and a druggist were banned from further participation in the plan after investigators found them operating a prescription mill.

Rows of unopened bottles of medicine and pills were found in the homes of relief clients in the area—all prescribed from a small doctor's office over the drugstore involved.

Under present State law drugs prescribed by brand name must be compounded that way, unless the doctor gives his permission for a generic substitution, using the same drug put out under another brand name.

The State is looking into the possibility of designating drugs by their generic rather than trade names in the relief program, but the healing arts people—divided on the issue—have not yet agreed with the department on this big economy move.

The medical aid program in the State of Washington allows most drugs to be prescribed by their generic designations. California is experimenting along the same lines.

One California authority contends that 100 tablets of a drug can be obtained under its generic designation for as little as 80 cents, while big-selling trade-named tablets of the same quality and quantity cost as much as $4.50.

During winter months some drugstores write in excess of $2,000 worth of relief prescriptions in a 30-day period, but this covers the entire program, not just the aged.

Of the $8,404,674.51 spent from the medical fund last year, pharmacists received $4,426,208.82; physicians, $1,995,694.13; dentists, $1,167,489.55; clinics, $592,343.84; nurses, $213,335.32 and ambulance services, $9,512.85.

Foreign Imports and the American Carpet Industry

EXTENSION OF REMARKS

OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 22, 1960

Mr. PHILBIN. Mr. Speaker, under unanimous consent I include herein a very able statement recently made by Mr. Paul M. Jones, president of the American Carpet Institute, Inc., before the Committee for Reciprocity Information.

Mr. Jones' argument that foreign imports are destroying the American carpet industry is unanswerable and I do not see how any fairminded person could deny, let alone challenge, his basic claims for an equitable solution to the problems of this great American industry.

It should be said—and most vehemently—that the carpet industry is but one of many basic American industries threatened with extinction by trade policies directly antagonistic and inimical to the interests of the American economy and the American people. When will this Nation and this Congress awaken to these great dangers to our way of life, prosperity, and well-being?

STATEMENT BY PAUL M. JONES, PRESIDENT OF AMERICAN CARPET INSTITUTE, INC., BEFORE THE COMMITTEE FOR RECIPROCITY INFORMATION, JULY 22, 1960

Mr. Chairman, and members of the committee, I appreciate this opportunity to make a brief oral statement on the application of the domestic Wilton and velvet carpet industry for withdrawal of present tariff concessions on imported Wilton and velvet carpets as permitted by article XXVIII of GATT.

We have summarized in a small leaflet the basic information relating to the very serious import problem this industry faces, copies of which have been given you.

You can readily see from chart No. 1 on the front page of this leaflet that we have a gravely serious problem facing us. Despite our making full use of the peril point procedures, rates of duty on Wilton and velvet carpets have been successively lowered over the years. Following each reduction the volume of imports has risen sharply.

The increased imports have been the direct result of the low prices at which imported carpets can be sold in this country. At the present time, the average per square yard invoice value of imported Wilton and velvet carpet is $3.42, to which approximately $1 is added to cover handling and duty for a total of $4.42 per square yard. The average invoice value of Japanese imports is $2.95 per square yard and the average for Belgian imports is $3.80 per square yard. These carpets compete with domestic carpets having an average wholesale per square yard value of $7, a difference of about $2.60 per yard.

The reason for lower prices on imported carpets is primarily one of lower labor costs, which apply not only to the direct manufacture of carpet, but to indirect costs, such as buildings, supplies, raw materials, transportation within the exporting country, taxes, fringe benefits, and many other factors which are essential in arriving at the total cost of manufacturing.

All the carpet wool and most of the backing material used by the domestic industry are imported. The importation of finished carpets is therefore principally an importation of foreign labor at the expense of the domestic labor force.

Neither the Belgian nor Japanese industry has made any contribution to product development or product styling. Both industries are producing the best selling styles, colors, and textures established by the American industry. This is another reason why the effects of the import competition have been so pernicious.

Prior to World War II the duty was 60 percent ad valorem. At that time less than 200,000 square yards of Wilton and velvet carpet were imported into this country.

Based on actual imports during the first 5 months of this year, 10 million square yards will come into our market this year. This volume of low-priced imports has seriously depressed carpet prices in most major markets, thus intensifying the serious injury caused by the direct loss of a large portion of the domestic market to imports.

Chart No. 2 shows that Belgium and Japan are the chief exporters to this country. Neither of these nations depended upon our American market prior to World War II. Belgium had a carpet industry prewar, but it has grown significantly during the past several years. Up until World War II there was no Wilton and velvet industry in Japan.

I point this out to you so that you can fully appreciate the fact that Wilton and velvet carpet imports are a new commercial development and do not rest upon an historical industrial pattern in world commerce. It is significant to note in this respect the current emergence of the Japanese industry.

I quote briefly from a consular report, a copy of which is available for you if you would like it. It is dated September 22, 1958.

"The Wilton and velvet carpet industry of Japan obtained its start from orders placed by U.S. forces stationed in Japan after World War II. Exports to the United States were undertaken with the departure of the troops, beginning in 1955, and have grown 270 square feet in that year to over 3,500,000 square feet * * * in 1957."

The same report also stated that the Japanese producers, under the administrative guidance of the Ministry of International Trade and Industry * * * have voluntarily agreed not to increase their productive capacity for Wilton and velvet carpeting."

Testimony before the Tariff Commission in 1958 also indicated that the Japanese industry would not grow beyond its then capacity. Events since that time have proven such representations to be utterly without foundation. Japanese imports increased 230 percent in 1959 and continue to grow at a phenomenal rate this year.

In 1958, when imports has reached 12 percent of domestic production and there seemed to be absolutely no limiting factors on the horizon to halt, or slow down, the rate of import growth, the industry instituted action under the escape clause provision of the Reciprocal Trade Act. After extensive investigations by the Tariff Commission and week-long public hearings, the industry was denied relief by a vote of three to two. Apparently the majority of the Commission felt that the industry was not being seriously injured at that time, nor was it "threatened" with serious injury. Two members of the Commission believed the industry was suffering injury with imports at 12 percent of domestic shipments.

You will note that in the short space of 1 year since the Tariff Commission decision imports have grown from 12 percent of domestic shipments to 23 percent of domestic shipments. During 1959 imports rose 52 percent; during the first quarter of 1960 they rose 60 percent over 1959, and the figures for the last 2 months reflect a continuance of this trend.

It now has become unmistakably clear to our industry that we must have relief from import competition or, simply stated, we are doomed to extinction.

Article XXVIII of GATT, under which we are seeking relief, permits any GATT participant to modify or withdraw previously made concessions before the expiration of any 3-year period, beginning on January 1, 1958. The current period of so-called firm validity expires December 31 this year. We believe this is a proper means by which our Government can afford some relief to our industry. It is certainly the best means for immediate correction of an intolerable situation.

If article XXVIII of the GATT agreement means what it says, it would seem our industry would present a classic case for the application of this article.

The concessions made by our Government were made when Belgium was the only major exporting country. Belgium labor costs average approximately 39 cents an hour, which compare with an average labor rate in our industry of $1.75 per hour. Japan is now a major factor in this situation, and their average wage rate is 19 cents an hour.

The volume of imports in yards and dollars and the volume of imports in relation to domestic production all have drastically changed since the last concessions were made, and it is now evident that a 21 percent duty gives no protection to the domestic industry.

We believe that our industry is entitled to the following:

Imports, at the current 21 percent ad valorem rate, should be limited to 5 percent of domestic shipments.

On imports above 5 percent, a duty of 40 percent ad valorem should be imposed.

If it is felt desirable that the initial 5 percent should be allocated among exporting countries, our industry has no objection to this being done.

We feel this is an equitable solution to our problem which will enable the domestic industry to grow and prosper, will not deny a fair share of the market to importers, and will allow importers to participate in the growth of the domestic market.

This concludes my statement. Thank you.

The Eleventh Hour

EXTENSION OF REMARKS
OF
HON. CHARLES B. HOEVEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1960

Mr. HOEVEN. Mr. Speaker, under leave to extend my remarks in Appendix of the RECORD, I include the following article by Chester Lauck, of Houston, Tex., entitled "The Eleventh Hour," which appeared in August 1960 issue of the Journal of the Iowa State Medical Society:

THE ELEVENTH HOUR
(By Chester Lauck)

At the Second World Medical Association meeting in Switzerland in 1948, an Irishman said in substance, "When an individual is indoctrinated with the philosophy that he no longer has a responsibility to himself or his family, you are striking at the very roots of democracy. When you turn to government for everything, free enterprise is lost. If you accept this philosophy, then you must change your religious concepts. You can no longer believe in a God-made heaven in the hereafter; you must believe in a man-made heaven here on earth and let me admonish you to be very, very sure that the guardian angels in the man-made heaven don't turn out to be the secret police." We must learn that there is not such thing as something for nothing. There seems to be a widespread delusion existing today that money coming from Washington, for some strange reason, doesn't cost anybody anything.

America is riding the crest of a wave of prosperity never before dreamed of on this earth. Although we represent about 6 percent of the world's population and 7 percent of the world's land area, we produce and consume over one-third of the world's goods and services. We manufacture nearly one-half of the world's products.

Yet, in spite of this prosperity, we suddenly find ourselves $295 billion in debt. We owe more money in this country than all the other nations on earth put together. Why? Simply because we have been spending more than our income. We have become involved in a deficit spending program for a number of years because people will not realize that the Government does not have a stockpile of funds back in Washington which they can dispense or distribute at will.

Thomas Jefferson, in 1816, said, "I place economy among the first and most important of Republican virtues and public debt as the greatest of the dangers to be feared."

Andrew Jackson said in 1824, "If a national debt is considered a national blessing, then we can get on by borrowing, but, as I believe, it is a national curse. My vow would be to pay the national debt."

In 1932, Franklin Delano Roosevelt said, "Let us have the courage to stop borrowing to meet continuing deficits. Stop the deficit."

Mr. Khrushchev has declared that the Soviet Union no longer expects to defeat the United States on the battlefield of the military but rather has elected to destroy us on the battlefield of economy. The Russians are aiming directly at the strength and stability of our American dollar. It is their hope that we will spend ourselves into bankruptcy and if we continue our deficit spending program, we are aiding and abetting their cause.

WE, OURSELVES, ARE TO BLAME

Washington is not entirely at fault. Let's put the blame where it belongs—on ourselves. We have not assumed our responsibility of citizenship. We asked for it. Every project we undertake—whether it is for a rural community, a village, city, county, or State, or whether the project be an overpass, underpass, bridge, airport, or even urban renewal—the first question usually asked is, "How much government aid can we get?" It is generally asked without any regard or consideration as to where the funds might be coming from.

We have forgotten how to do things for ourselves. We forgot that with grants-in-aid come government controls, and with government controls we cannot embrace the free and competitive enterprise system—the system that brought about this prosperity and made America so outstandingly great. William Graham Sumner said it: "He who depends upon the state for protection, must pay for it by limitations on liberty. By every new demand when he makes upon his government, he increases its function and the burden of it on himself."

Last year we spent $83 billion, including $43 billion on national defense. We want national defense at any cost—even with the waste. But let's talk about the other $40 billion. Ten years ago, in 1948, it cost $23 billion to administer our Government. That is an increase of $17 billion, nearly double the cost in 10 years.

Early in the present administration, Herbert Hoover was called out of retirement and asked to head a committee to make a thorough study of the administration of our Government and determine whether some savings could be effected. This committee was known as the Hoover Commission. The group made an exhaustive study at a cost of several million dollars to the taxpayers. The result of its findings, as made in its report and recommendations, showed that by eliminating unnecessary bureaus and agencies, a colossal $7½ billion could be saved annually.

This Hoover Commission report was made nearly 7 years ago. If the recommendations

had been adopted, we could have reduced our national debt by some $50 billion. Instead, we have increased our debt over $30 billion during that same period of time. Last year more than 30 million people received checks from our Government. One dollar out of every $5 spent in the United States for both services and goods was spent by either Federal, State, or local government agencies.

Someone recently said, "We have been living mighty high on the hog, but it 'ain't' our hog—it belongs to our children." Are we just going to drop this $295 billion debt in their laps and ask them to scramble out from under it the best way they can? Our children and future generations are entitled to inherit this Republic as we found it—with freedom and opportunity, intact and unmortgaged.

WE HAVE BEEN ADEQUATELY WARNED

Down through the annals of history, for 7,000 years nations have risen to great heights of prosperity and then have crumbled and fallen—not from marching legions but from internal decay, complacency, and too much government. Because of their prosperity, the people grew a little fat. And when they got fat, they got lazy. When they got lazy, they said "Let the government do it." And their government got bigger and bigger and the people got smaller and smaller, and finally the people were almost nothing at all. Read the history of China, of the great Roman Empire, of Greece, or of France. Remember what happened in Germany only a few years ago. That country was a highly industrialized and prosperous nation operating under a constitutional government. And recall how suddenly she collapsed. Is there any reason to believe that it cannot happen to us? Let's not wait and try to read the handwriting on the wall after we have our backs to it.

Some economists say we are beyond the point of no return. This is hard to believe. We must realize, however, that this is the eleventh hour. We must realize the direction toward which we are drifting and do something about it now. We have got to concern ourselves with government matters—to get into politics. Too many for too long have been saying, "I don't know anything about politics; I leave that up to the politicians." The result is that a handful of people have been running this country. And our $295 billion debt, socialistic welfare programs, and the present threat against our free and competitive enterprise system indicate quite clearly how they have been running it.

ALL OF US MUST TAKE A HAND IN POLITICS

We must begin at the grassroots. Attend your local precinct meetings. Find out what candidates for office stand for—not whether they are Democrats or Republicans, but what kind of Democrats, what kind of Republicans. We have too many Democratic Congressmen and too many Republican Congressmen in Washington and not enough U.S. Congressmen.

It is not too late to put the love of our country above partisanship interests by selecting conservative candidates for office and then supporting them with all our strength and influence. In this way, and only in this way, can we hope to preserve our Constitution and the American way of life. There are enough conservative members in both parties if they would but assert themselves and assume leadership.

We can and must select men for office who will think of the next generation rather than the next election—men who will dedicate themselves to the preservation of our Constitution and our individual freedom—freedom of every man to stand on his own feet and be himself and become, God willing, whatever thing his vision, his manhood, and his faith can combine to make him.

When considering the problem of founding a new government, the American patriots who had been in the forefront of the Revolutionary War to separate the colonies from Great Britain, warned against creating a central government which, under the pretense of helping the people, might use the substance of the people to enslave them. It would be interesting to know what our forefathers must think of us and the way we have dissipated our inheritance—those pioneers who came to these shores only a few generations ago and carved this civilization out of a wilderness. They came here seeking freedom and opportunity. They did not ask for old-age pensions, workmen's compensation, social security, unemployment insurance, minimum hours, maximum wages. Come to think about it, they didn't ask for anything.

They realized that their future and the future of their families were their own responsibility and not that of their government. And with nothing more than a crooked stick for a plow, they rolled up their sleeves and, looking toward Heaven, said, "Thank you God; I'll take it from here."

These were our forefathers from whom we descended, the freedom-loving folks who founded this great Nation of ours. Now we must prove that we are of that same sturdy stock by assuming the responsibility of preserving the heritage they willed us. This is the 11th hour.

PHYSICIANS HAVE A SPECIAL RESPONSIBILITY

The doctors who go to make up the American Medical Association are dedicated men, highly regarded in their respective communities. Their counsel and advice is quite often sought. Thus the doctors of America have a great opportunity to persuade its citizens to think and realize the direction toward which we are drifting and to stop this trend which can only lead to our destruction. We are facing a crisis. It is the only real threat to our economic security we have ever experienced. The members of the American Medical Association as individuals must stand up and be counted and exercise the influence which their position in their communities places upon them, and the American Medical Association must stand as a body to defend our free enterprise system and to ward off the threat of socialized medicine.

There are two things with which we need to be concerned. We need roots to hold us firm and we need sky to hold us up, and in between, a living process. Because, out of our beliefs we perform deeds, and out of our deeds we form habits, and from our habits grow our character, and on our character we build our destiny.

Resolution by Virginia Pharmaceutical Association

EXTENSION OF REMARKS

OF

HON. WATKINS M. ABBITT

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 22, 1960

Mr. ABBITT. Mr. Speaker, one of the legislative matters now pending before the Congress is the so-called Federal-aid-to-the-aged legislation. This is a politically inspired proposal and is one of several measures wherein certain groups hope to induce various segments of our society to support for public office those who offer the most by way of public welfare statism.

Many elements of our society are striving mightily to have the Government supplant private enterprise and take over the control and care of our citizens from the cradle to the grave. This group is engaged in an all-out effort to socialize our Nation and make the Government responsible for the welfare of our citizens. At the same time, however, they would siphon off all individual initiative along with channeling all wealth into the Government Treasury, thereby making the Government the master and the people its slaves.

We are rapidly moving into welfare statism, with the people becoming more and more dependent upon the Government and less willing to support themselves. The spirit of paternalism will soon destroy our great private enterprise system unless a halt is called in the near future to our race toward welfare statism.

Because of this I oppose socialized medicine in any form. I opposed the Forand Bill as well as the bill that was passed recently by the House of Representatives. The house of delegates of the Virginia Pharmaceutical Association at its 79th annual convention, held recently at Virginia Beach, adopted a resolution which points out cogently the issues facing the Nation today, the importance of preserving the free enterprise system that has made America great and the evil of socialism. Because of the great principles involved, the timeliness of the resolution, as well as the truths pointed out therein, I hereby include with my remarks the resolution adopted by the house of representatives of the Virginia Pharmaceutical Association which is as follows:

Whereas the free enterprise system has been the keystone of our Republic and of our way of life is today under constant attack;

Whereas the institution of a welfare state is the true goal of many who profess concern for the welfare of one group or another in today's society;

Whereas both major political parties are currently advcoating socialistic plans designed to make the Federal Government responsible for the health and hospital care of citizens over the age of 65;

Whereas all such proposals substitute the principles of socialism for the principles of individual responsibility and self-determination, and inherent within them are the seeds of destruction that will ultimately affect all our freedoms;

Whereas the statutory recognition of groups and classes of citizens for the purpose of bestowing special benefits from tax revenues is contrary to our precepts of government and anti-American in its basic tenets; and

Whereas whatever problems of medical care that may exist among the aged population can best be met, adequately and without recourse to socialistic concepts, by adherence to two historic American principles; namely, free enterprise and State and local responsibility for indigent persons: Now, therefore, be it

Resolved, That the Virginia Pharmaceutical Association hereby records its unalterable opposition to any and all socialistic schemes for the solution of health care problems and urges upon Members of the Congress that they remember, in this important matter as in all matters coming before them, that their primary responsibility is to preserve and de-

fend the great Republic created by our Constitution; and also be it

Resolved, That our fellow Virginians, and all Americans who would resist the continued encroachment of paternal federalism on our rights and liberties, are urged to lend their support to the solving of the problems of the aged, the indigent, or any other of our citizens, within the framework of our constitutional Republic and without recourse to divisive class legislation or other socialistic ideologies; and be it further

Resolved, That copies of this resolution shall be printed and distributed to all Members of the U.S. Senate and House of Representatives.

Edwin Popp: Faithful Public Servant

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1960

Mr. PHILBIN. Mr. Speaker, under unanimous consent I include for the RECORD a very moving tribute by the distinguished Rev. Howard P. Davis at the funeral of my dear and late lamented friend, Edwin Popp, for many years rural carrier at Bolton, Mass., in my district.

Reverend Davis has so completely encompassed the qualities and contributions of Eddie Popp that I would not presume to add to his eloquent eulogy. Eddie Popp was a neighbor and boyhood friend of mine, and I have never known a finer human being, a more devoted husband, a more loyal friend or a more faithful public servant. He was the epitome of kindness, thoughtfulness and consideration for others, and a legion of friends mourn his loss.

Serious, painstaking and conscientious in the performance of his duties, he was possessed of a deep, friendly interest in people and an exceptional impulse to help them with their problems. His official service was not only of the highest order of efficiency and capability, but was performed cheerfully and without stint or reservation. Eddie Popp could not do too much for the people he so devotedly served.

He was a man of broad interests, a citizen of highest patriotism. His contributions went far beyond his job to civic, fraternal and patriotic activities, for which he was truly distinguished.

His sudden passing at the full height of his powers came as a great shock to his beloved wife, Alice, his postal associates and his many friends and it leaves a great void in the public service and in the lives and hearts of many people that can never be filled.

To his loving, devoted wife, Alice, his inspiring helpmate throughout the years, and to his bereaved family, I tender my most heartfelt sympathy and expressions of condolence. I hope and pray that they may be strengthened by their trust in the Almighty to bear their irreparable loss with courage, resignation and fortitude.

And may our beloved Eddie Popp find eternal rest and peace in his heavenly home.

Reverend Davis' tribute follows:

One of the first stories we were ever taught from the Bible was the story of Moses and the burning bush. Here was a man who was dutifully engaged tending the flocks of his father-in-law on a mountain side when his attention was suddenly arrested by an unusual spectacle; the spectacle of a flaming bush. The most unusual aspect of the phenomenon was the fact that while it was indeed on fire, it was not consumed. It did not burn up. So, we are told, Moses turned aside to see why the bush was not consumed. It took an unusual event to cause Moses to turn away from his routine duty, but the burning bush was sufficiently unusual to do it.

The tempo of our world is much faster than that in which Moses lived. Furthermore, few of us are engaged in as peaceful a pursuit as was Moses. We still have the same capacity for curiosity at the unusual, but so many unpredictable things have happened in our century on both a small and large scale, that nothing seems very unusual, and there isn't much that makes us turn aside from what we do day to day. When we do turn aside, it is a matter of twisting a dial and listening to a broadcast or a telecast for 5 minutes or so to catch up on the latest unpredictable but not unusual events around the world.

There is still one event, however, that makes us turn aside from everything which is routine and gaze into the mysteries of the unknown. This is death. Death is not unusual as a general human experience, but it happens only once to each of us, and none of us escapes, and it is often unpredictable, and never precisely predictable.

Sometimes death is like a streak of lightning which comes knifing its way down from the upper air without warning and strikes an object with its devastating power, so near us as to shock us even to the point of making us tremble. This was the nature of death's approach to those who were engaged with Ed Popp in the handling of the U.S. mail which came into the town of Bolton last Saturday morning. He came to work with usual punctuality and vigor. He had always exuded strength and vitality. His disciplined body and clear mind marked him off as one of great strength; of body, mind, and will. Nobody was ever impelled to think of him and death at the same time. But the lightning struck, and much to the consternation of those around him, he was seized by death's advance agent—pain—and within a matter of an hour, death had claimed him.

So we, like Moses, have turned aside to contemplate what has happened. A happy marital voyage has been terminated; a small community has lost a strong citizen; a congenial group of postal workers has lost the companionship of a stimulating personality; a fraternal order has lost a faithful brother, and a host of people have lost a friend.

There is nothing we can do about it. It is an accomplished fact in the cosmic scheme of things which cannot be undone, or recalled. Here is something which modern man in all his wisdom has to confront with all the cards stacked against him, man may reach for the moon and make it, but when death stalks a town and reaches for one of its number we must all stand to one side and accept it. But we can think; we can ponder; we can wonder, and we should.

The vacancy left by the departure of a person can never be filled, no matter who he may be. There is only one of each of us. But it is permissible to seek for compensatory reflections and in this case there are many. His suffering, as he passed through the gate was reduced to the minimum. His widow will not be left in want. The memories of those who loved him can never be destroyed. His name is not yoked with dishonor.

But there is something yet more wonderful to think upon. The God who took him is the God of life and love. Death is the human term for God's mechanism of transfer. A man who lived fully, happily, and well, has vacated his earthly tenement and has taken a mysterious journey to an unknown country. But he is in the care of the Eternal Shepherd who will some day come our way, and take us by the hand and lead us through the wilderness of death to the sunlit areas of a larger life.

We share the sorrow of his loved ones, but both they and we must carry on, doing the things we are assigned to do, with the faithfulness and the efficiency so characteristic of Ed Popp, buoyed and strengthened by the faith that though life may be a transient thing here, it is as permanent in the geography of God's kingdom as the life of God Himself.

Alas for him who never sees
The stars shine through his cypress trees;
Who hopeless lays his dead away
And never sees the breaking day
Across the mournful marble play.
Who hath not learned in hours of faith
That truth to sense and flesh unknown,
That life is ever Lord of death,
And love can never lose its own.

U.S. Coast Guard

EXTENSION OF REMARKS
OF
HON. LEONARD FARBSTEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1960

Mr. FARBSTEIN. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following editorial which appeared in the East Side News, a publication with wide circulation in the congressional district, which I have the honor to represent, commemorating the 170th anniversary of the founding of the U.S. Coast Guard:

HAIL TO THE U.S. COAST GUARD
(By Harry H. Schlacht)

"So here's the Coast Guard battle song.
We fight on land and sea
Through howling gale and shot and shell
To win our victory.

"Semper Paratus is our guide,
Our pledge, our motto, too.
We're always ready, to do or die.
Aye! Coast Guard, we fight for you.

"Aye, we're been always ready
To do, fight or die,
Write glory to the shield we wear
In letters to the sky.

"To sink the foe or save the maimed
Our mission and our pride.
We'll carry on 'til kingdom come
Ideals for which we've died.

"From North and South and East and West
The Coast Guard is in the fight
Busting subs and landing troops
The Axis feels our might.

"For we're the first invaders
On every fighting field,
From Arctic zone to tropic shore
You'll find our silver shield.

"So here's the Coast Guard marching song,
Through surf and storm and howling gale,
High shall our purpose be.

"Semper Paratus is our guide,
Our fame, our glory, too.
To fight, to save or fight and die.
Aye! Coast Guard, we are for you."

This week America salutes the U.S. Coast Guard. We commemorate the 170th anniversary of its founding by Alexander Hamilton, our first Secretary of Treasury. The U.S. Coast Guard serves in times of peace under the Treasury Department, and in time of war as part of the U.S. Navy.

We congratulate the wearers of the silver shield. We celebrate their gallant record in the service of our country. We are eternally grateful, for America is a monument to their eternal spirit.

The Coast Guard was born at the birth of our Nation. It was nursed in the arms of lovers of Liberty. It was destined to play a brilliant role in our history.

The Coast Guard's endurance has been tested by suffering and hardship. Its patriotic self-sacrifice has reached its noblest manifestation. Its historic road has been marked with great and gallant milestones in the cause of our Nation. Its patriotism is the most beautiful picture that hangs in the galleries of our memories.

The Coast Guard has been endowed with a glorious tradition. It is an epic of adventure and drama of the sea. It has a unique record of selflessness. It has served with distinction, in peace and war, all humanity.

The Coast Guard has played a valiant role in the wars of our country. It has been the emergency arm of the Navy. It has participated in all the landings—in the Pacific from Guadalcanal to Okinawa, in Africa, Sicily, Italy, and Normandy.

Heroes and heroines of humanity, guardians of the sea, you have never failed to inspire us. You have served America nobly.

What are the stirring words of the Coast Guard marching song? It is "Semper Paratus"—"Always Ready." It is their official anthem. It is known 'round the world.

It was composed by Capt. Francis S. Van Boskerck, U.S.C.G. It captures all the glory, honor, and tradition of the service. It speaks of the ideals and heritage for which every guardsman lives and fights, to make men free.

U.S. Coast Guard: America marches forward with thee under the inspiration of your marching melody, on this, your glorious anniversary, guided by freedom's holy light for a nobler humanity.

Monuments of stone and bronze will be erected to perpetuate your valorous deeds to humanity. But after the last of these shall have crumpled into dust and eroded to nothingness, your contributions to mankind will remain imperishables as long as men love liberty.

Joyce Epic on the Great Bill Cunningham

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1960

Mr. PHILBIN. Mr. Speaker, under unanimous consent to revise and extend my remarks in the RECORD, I include therein a very touching and impressive poem entitled, "Coronach for Bill Cunningham," by the great American writer and newspaperman, my esteemed and dear friend, Patrick Joyce, of the knowledgeable Chicago newspaper, Southtown Economist.

It is appropriate indeed that Mr. Joyce's gifted pen should write this real epic honoring the great and beloved Bill Cunningham, who left us all a precious legacy of Americanism, achievement, and courage:

CORONACH FOR BILL CUNNINGHAM
(By Patrick Joyce)

Blow softly, bugles, now, blow soft and low.
Blow for the tears they feel but cannot show.
Blow for the stalwart men who cannot weep
For one they loved called to eternal sleep.
Bugles that blew when life was young and strong
Loud notes and clear as for a battle song,
Blaring the brazen challenge of the brave:
Blow softly now your tears across his grave.
Blow softly, bugles, for his voice is stilled
Whose trumpet tones rang of the strong and skilled.
Men of high heart who found upon a field
Measure of a manhood nothing else could yield.
Blow softly, softly, bugles, soft and low,
For he has gone the road all men must go.
Herald of heroes, bravest of the brave:
Blow softly now your tears across his grave.

The Consumer Always Pays

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1960

Mr. MICHEL. Mr. Speaker, under leave to extend my remarks, I would like to insert an editorial from the Peoria Journal Star of August 19, 1960:

THE CONSUMER ALWAYS PAYS

The gasoline industry published an ad recently pointing out that the tax you pay on 10 gallons of gas is 90 cents, that gas taxes are in fact a 50 percent sales tax, and that this is more tax than is charged on a mink coat or other luxuries.

For the average person, they point out, this means $70 a year paid in gas taxes alone—and they protest that they are tired of collecting taxes for the Government when they feel the tax is far too high.

Bravo.

This is only one such item.

The plain fact is that the greatest standing trick of modern government is to invent taxes that are collected by somebody else—thus the middleman can take the public dissatisfaction and the politician who is responsible for the abuse can dodge while grabbing credit for the programs for which the money is spent.

Every sensible man knows, of course, that every tax is paid by Mr. Average Man, the consumer, and the notion that it is being paid by some company or corporation or other middleman is purely a political bit of slight of hand, and pure nonsense.

Every tax on business is simply added to the total cost of doing business and hence by the simple laws of economics is forced to be a part of the pricing structure of that business whether it be selling Caterpillar tractors or penny matchboxes.

The tax money added to costs is simply money that either cannot be paid out in wages or that must be brought in by higher prices.

Excise taxes are a prime example. Franchise taxes are another. Every spending spree, no matter how it is billed, winds up coming out of the pockets of the consumers of the Nation—all of us.

Sales tax is simply more direct and honest than others in this regard, and that was a political accident. The politicians expected taxes to be figured into price and not charged separately. It made no difference in the cash loss to you, but they preferred that you did not realize it was for them.

We need to quit falling for trick taxes and start worrying about the real source of trouble—irresponsible spending.

As it stands, the tragic fact is that public resistance centers on direct taxes—the least offender of all—and cripples the most important basic functions of government and those most intimate. Schools, law enforcement, fire protection, and sewage sanitation do not keep pace with modern needs, while a variety of hair-brained schemes aimed at vote catching are financed by millions and billions sneaked out of our pocketbooks by trickery.

When they get done with the inroads on take-home pay and direct taxes, they've only started. Then come the real thieves of buying power.

Every time you wonder, "Where did the money go?" take time to answer the question. It went, usually, in a very large part to those twin thieves of inflation and indirect taxes.

C. L. DANCEY.

Robert H. Goddard: First Great Wayfarer on the Fateful Seas of Space

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1960

Mr. PHILBIN. Mr. Speaker, under unanimous consent I include in the RECORD some biographical data concerning the great pioneer rocket scientist and inventor, that illustrious man of genius, Dr. Robert Hutchings Goddard.

This data which was prepared in part by his loving wife, Mrs. Esther C. Goddard of Worcester, Mass., is a statement in tabular form of his experiences and explorations. It supplements some of the material appearing in previous addresses which I have made regarding Dr. Goddard and the epochal significance of his illustrious career.

Perhaps because of her closeness to this great man, Mrs. Goddard has been pardonably modest and humble about his exploits. Since I am under no restraint in this direction but am merely interested in presenting the facts I desire once again to hail and salute this first of all real space adventurers who blazed a trail that will lead to the planets and wend its spatial way as the beacon light of civilization in the ages to come.

Not long ago, the Congress passed the bill which I introduced providing for the striking of a gold medal in honor of this great scientific explorer. The design of the medal has been completed and the medal itself will shortly be finished. I am hoping sincerely that it can be arranged to have the President present this medal to his wife, Mrs. Goddard, who was so much a part of his great work, and I hope that suitable exercises can be arranged as an additional mark of honor to the great Dr. Goddard.

The country has alas all too long ignored and overlooked the ageless and

vital contributions of the great American, Robert H. Goddard. It is greatly to be deplored that there has been such ghastly failure on the part of American officialdom and particularly American service officialdom to realize the true meaning of his experiments and thus implement them for the benefit of our national defense as well as for space exploration. At last the country is waking up to Professor Goddard's greatness and the least we can do is to admit our mistakes in not recognizing him before as we move to pay fitting tribute and honor to this first great wayfarer on the fateful seas of space.

The bigraphical data follow:

BIOGRAPHICAL DATA ON DR. ROBERT HUTCHINGS GODDARD, AMERICAN PHYSICIST, PIONEER OF MODERN ROCKETRY AND SPACE FLIGHT (1882–1945)

Dr. Robert Hutchings Goddard, American physicist and engineer, was the pioneer scientist and engineer who laid down the technical foundations for most of today's prodigious developments in long-range rockets, missiles, earth satellites, and space flight. He founded a whole new field of science and engineering, now grown into a multibillion-dollar industry.

In th course of his pioneering work, Dr. Goddard—

1. Was first to develop a rocket motor using liquid propellants (liquid oxygen and gasoline) (1920–25).

2. Was first to develop and launch a liquid-fuel rocket (March 16, 1926, at Auburn, Mass.).

3. Was first to launching a liquid-fuel rocket which attained a speed greater than that of sound (mach 1) (1935, near Roswell, N. Mex.).

4. First developed gyro stabilization apparatus for rockets (1932).

5. First used deflector vanes in the blast of the rocket motor as a method of stabilizing and guiding rockets (1932).

6. Received the first U.S. patent on the idea of multistage rockets (1914).

7. First explored mathematically the practicality of using rocket power to reach high altitudes and escape velocity (1912).

8. Was first to publish in the United States a basic mathematical theory underlying rocket propulsion and rocket flight (1919).

9. First proved experimentally that a rocket will provide thrust in a vacuum (1915).

10. Developed and demonstrated the basic idea of the bazooka during World War I (1918), though his plans lay unused in the U.S. Army files until they were put to use in World War II.

11. First developed pumps suitable for rocket fuels, self-cooling rocket motors, variable-thrust rocket motors, practical rocket landing devices, and forecast jet-driven airplanes, rocket-borne mail and express, and travel in space.

At his rocket proving range near Roswell, N. Mex., Dr. Goddard developed during the 1930's large and successful rockets which anticipated many features of the later German V–2 rockets, including gyroscopic control, steering by means of vanes in the jet stream of the rocket motor, gimbal-steering, power-driven propellant pumps and other devices.

A crowning irony is that if his countrymen had listened to Dr. Goddard, the United States today would be far ahead of its present position in the international space race. There might, in fact, have been no race. Several times in his career, and especially in 1940, he tried to interest our Armed Forces in the potential of rockets, but met only with courteous inaction.

Dr. Goddard began his pioneer experiments in rocketry long before other scientists or engineers in the United States or Europe had perceived the full value and promise of the rocket. He continued until his death in 1945, at which time he was engaged in developing jet-assisted takeoff and variable thrust liquid propellant rocket motors for the U.S. Navy.

Dr. Goddard was born in Worcester, Mass., on October 5, 1882. He was graduated from Worcester Polytechnic Institute in 1908. Upon graduation he obtained a position as an instructor of physics at W.P.I., and at the same time began graduate work at Clark University. He received his M.A. from Clark in 1910, his Ph. D. in 1911. He was a research fellow in physics at Princeton University in 1912–13, and the following year joined the faculty of Clark University, where he became a full professor in 1919.

He began his interest in rockets at the age of 17, in 1899. As early as 1908 he carried out static tests with small solid-fuel rockets at Worcester Polytechnic Institute. In 1912 he worked out the detailed mathematical theory of rocket propulsion, and showed that the rocket, because it needs no air to push against, could be sent to the moon or into space, provided an efficient motor could be developed.

Upon returning to Clark University in 1914, he began to experiment with larger rockets. By 1916, he had reached the limit of what he could do on his own resources. The Smithsonian Institution came to his aid, and with this help he was able not only to continue his work on solid-propellant rockets, but to begin the development of liquid-propellant rockets as well.

After the entry of the United States into the first World War in 1917, Dr. Goddard volunteered his services to the Nation, and was set by the U.S. Signal Corps to the task of exploring the military possibilities of rockets.

He succeeded in developing several types of solid-propellent rockets intended to be fired at tanks or other military objectives, from a launching tube held in the hands or steadied by two short legs—devices similar in many respects to the bazooka of World War II. These developments he successfully demonstrated at Aberdeen Proving Grounds a few days before the close of the First World War. They were the basis of the great U.S. developments in solid-propellent rockets in the Second World War.

In 1919 he summarized his mathematical explorations, the results of his solid propellent research, and some of his space flight ideas, in a classic paper entitled "A Method of Reaching Extreme Altitudes," published by the Smithsonian Institution. That paper today is one of the basic documents in technical rocket and jet propulsion literature, and the source of numerous developments that have come about since its appearance.

In the following two decades he produced a number of large liquid-propellent rockets at his shop and rocket range at Roswell, N. Mex. These rockets are now in the National Air Museum, Washington, D.C. Other early components are displayed at the museum at Roswell, N. Mex.

This research work was made possible by financial assistance from the Smithsonian Institution, Daniel Guggenheim, and the Daniel and Florence Guggenheim Foundation. In the mid–1930's he reported on the progress of his liquid propellent work in "Liquid Propellant Rocket Development," published by the Smithsonian Institution in 1936. The work in New Mexico was described in further detail in 1948 in a book edited posthumously from Dr. Goddard's notes, and published by Prentice-Hall, Inc., under the title "Rocket Development."

He again offered his services in the Second World War, and was assigned by the U.S. Navy to the development of practical jet-assisted takeoff, and liquid propellent rocket motors capable of variable thrust. In both areas he was successful, and demonstrated the resulting devices in tests at Annapolis. The work continued until his death in 1945.

Dr. Goddard was the first modern scientist who both perceived the possibilities of rockets and space flight, and undertook the enormous work of bringing them to practical realization. He lived to see his dream of rocket power come to fruition. His idea of the ultimate in rocket development—flight into space—has now become a reality. His contributions are recognized as among the most important technical achievements of modern times, marking as they do a turning point in the history of mankind.

Medical Care for the Aged

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Monday, August 22, 1960

Mr. CURTIS of Missouri. Mr. Speaker, in the Washington Insurance Newsletter of August 8, editor, Mr. Al Goldsmith, are my remarks on the outlook for medical-care-for-the-aged legislation in the rump session of this Congress. Under leave to extend my remarks in the RECORD, I wish to include this portion of Mr. Goldsmith's newsletter:

OUTLOOK FOR MEDICAL CARE FOR THE AGED LEGISLATION OF THE RUMP SESSION OF THE 86TH CONGRESS

(By Representative THOMAS B. CURTIS, Republican, of Missouri)

There is the usual flurry of predictions of what the Congress will do about health care for the aged when it reconvenes for its August rump session. They do not vary greatly from the predictions that were extant during the months of April, May, and June.

There is nothing fundamental about these predictions because they are all based upon a cynical approach to the subject. The presumption is that the entire matter will be decided upon the basis of what will get the most votes in the November election. The question of what might be best for the aged, their families, and our society as a whole does not enter into the discussions.

There is no question that some politicians in both political parties are treating the matter of health care for the aged in this fashion. Nonetheless, this is not the complete story.

There is a strong body of political opinion in both political parties that the question of health care for the aged should be decided upon what is best for the aged and our society as a whole, and not upon momentary political advantage.

Nor does this approach stem from a group of legislators who have taken a stand-pat position on the problems of the aged or, indeed, on the problems of our people in any area, in the past. It is headed by the chairman and the ranking minority member of the Social Security Subcommittee of the House Ways and Means Committee. They believe that nothing should be done in this area in 1960.

Here are the background facts about the 1960 amendments to the Social Security Act which passed the House before the July recess and included a program of increased Federal participation in health care for the aged.

In the fall of 1959, the Social Security Subcommittee of the Ways and Means Committee held extensive public hearings on the subject of proposed amendments to the Social Security Act. This subcommittee went into the whole broad field of social security except for one specific area, health care for the aged.

The reason this area was set aside was because the Congress, in 1958, passed the Fogarty resolution requiring the executive branch of the Government to conduct extensive studies into the entire field of the problems of the aged. Under the resolution, the White House Conference for the Aging had been set up and its work scheduled, with a conference to consider these studies and make recommendations for courses of action to be held in January 1961.

The Social Security Subcommittee of the Ways and Means Committee made a unanimous report to the Ways and Means Committee, based upon its studies. In conjunction with the unanimous report, a bill was introduced by the chairman of the subcommitte which embodied the recommendations of the subcommittee for extensive and broad amendments to the Social Security Act. These amendments correct many inequities, liberalize and extend many of the programs, and improve their administration.

The full Ways and Means Committee held executive sessions on the subcommittee's report and bill and, within a week or 10 days, had agreed to almost every proposal. There were some additional proposals made for amending the act which met with the unanimous approval of the subcommittee and the full committee. The subcommittee's work and its additional proposals became the basis of H.R. 12580.

At this point, however, the highly controversial subject of health care for the aged was injected into the full committee's executive sessions. It was the view of the majority of the committee that the subject of health care for the aged should not be interjected into the comprehensive bill for social security amendments which had received unanimous approval.

However, due to pressures from outside the committee proceeded without the benefit of public hearings in executive session to consider various proposals for health care for the aged.

The Forand bill, as one proposal in this area, was early rejected by a vote of 17 to 8. It was rejected by the same vote several times later in the executive sessions. Other proposals, including the one finally recommended by the administration, were likewise voted down from time to time.

Throughout these executive sessions, which lasted almost 3 months, not one witness outside the Department of Health, Education, and Welfare was called to give the committee information, on any phase of the subject. Time and again, the witnesses for the Department of Health, Education, and Welfare admitted that they just did not have the data or information requested by members of the committee relating to the points under consideration. Time and again, requests were made by members of the committee to obtain additional information, much of which was available.

It was quite clear throughout these executive sessions that the real question was not what program might be good for the aged and our society, but rather, what the political heat would be if this or that bill on health care for the aged were passed out, or no bill at all.

In other words, this performance was not one of a legislative committee at work. It was an example of legislating under outside pressures based upon ignorance, not knowledge.

Who indeed can predict what a servile Congress will do? One which does not base its decisions upon committee studies, public hearings, honest executive sessions, honest committee reports and forthright debate on the floor of the House and Senate, but rather, upon outside pressures?

There is no point to go to the legislators and the legislative halls to make predictions of what such legislative bodies will or will not do. Go to the source, to those who are wielding the political pressures to find out what decisions they have made.

Will the Senate of the United States pass out without hearings or study or meaningful debate a health care for the aged bill tied to the social security "insurance" system?

Will the House conferees accept the Senate version?

Then the question becomes, Will the President veto the bill containing all the good and the unanimously approved amendments to the Social Security program, in order to block the ill-conceived health care for the aged features in the bill?

Will the decision be made upon the impact on the coming election or upon the balanced consideration of what is best for our people?

We reached a point of servility in the Congress of the United States on several issues in 1960, not just the issue of health care for the aged. Once it is established that votes can be bought for daily bread in a society, and the power of those legislators who wish to preserve an independent Congress is insufficient to stand against this protestation, the day of the Caesars cannot be far away.

Vice President Nixon's Acceptance Speech in Chicago on July 28, 1960

EXTENSION OF REMARKS

OF

HON. LAURENCE CURTIS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 22, 1960

Mr. CURTIS of Massachusetts. Mr. Speaker, in extension of my remarks I include the outstanding acceptance speech of Vice President NIXON at the Republican Convention in Chicago:

Mr. Chairman, delegates to this convention, my fellow Americans, I have made many speeches in my life, and never have I found it more difficult to find the words adequate to express what I feel, as I find them tonight.

To stand here before this great convention, to hear your expression of affection for me, for Pat, for our daughters, for my mother, for all of us who are representing our party, is, of course, the greatest moment of my life.

And I just want you to know that my only prayer as I stand here is that in the months ahead I may be in some way worthy of the affection and the trust which you have presented to me on this occasion, in everything that I say, in everything that I do, in everything that I think in this campaign and afterwards.

PROUD OF PARTY

May I also say that I have been wanting to come to this convention, but because of the protocol that makes it necessary for a candidate not to attend the convention until the nominations are over, I have had to watch it on television. And I want all of you to know that I have never been so proud of my party as I have been in these last 3 days as I compared this convention, the conduct of our delegates and our speakers, with what went on in my native State of California, just 2 weeks ago. I congratulate Chairman HALLECK and Chairman MORTON and all of those who have helped to make this convention one that will stand in the annals of our party forever as one of the finest we have ever held.

Have you ever stopped to think of the memories you will take away from this convention? The things that run through my mind are these: That first day, with the magnificent speeches—Mr. Hoover with his great lessons for the American people; WALTER JUDD, with one of the most outstanding keynote addresses in either party in history and last night our beloved, fighting President, making the greatest speech I ever heard him make, before this convention.

Your platform and its magnificent presentation by Chuck Percy, the chairman. For these and for so many other things I want to congratulate you tonight and to thank you from the bottom of my heart and on behalf of Americans—not just Republicans, but Americans—everywhere for making us proud of our country and of our two-party system for what you have done.

WORLD STATESMAN

Tonight, too, I particularly want to thank this convention for nominating as my running mate a world statesman of the first rank, my friend and colleague, Henry Cabot Lodge of Massachusetts. In refreshing contrast to what happened in Los Angeles you nominated a man who shares my views on the great issues and who will work with me and not against me in carrying out our magnificent platform.

And, may I say that during this week we Republicans with strong convictions about our party and about our country had our differences—but as the speech by Senator GOLDWATER indicated yesterday, and the elegant and gracious remarks of my friend, Nelson Rockefeller, indicated tonight, we know that the differences that divided us were infinitesimal compared to the gulf between us and what the Democrats would put upon us as a result of what they did at Los Angeles during their convention 2 weeks ago.

It was only 8 years ago that I stood in this very place after you had nominated as our candidate for the President one of the great men of our century; and I say to you tonight that for generations to come Americans, regardless of party, will gratefully remember Dwight Eisenhower as the man who brought peace to America, as the man under whose leadership Americans enjoyed the greatest progress and prosperity in history. Above all, they will remember him as the man who restored honesty, integrity and dignity to the conduct of Government in the highest office of this land.

NEW PROBLEMS

And, my fellow Americans, I know now that you will understand what I am about to say, because the next President of the United States will have Dwight Eisenhower's great example to follow in confronting new and challenging world problems of utmost gravity. This truly is the time for greatness in America's leadership.

I am sure you will understand why I do not say tonight that I alone am the man who can furnish that leadership. That question is not for me to decide, but for you—and I only ask that the thousands in this hall and the millions listening to me on television make that decision in the most thoughtful way you possibly can, because what you decide this November will not only affect your lives and your future, it will affect the future of millions throughout the world. I urge you to study the records of the candidates, to listen to my speeches and my opponent's and Mr. Lodge's and his opponent's, and then, after you have studied our records and listened to our speeches, decide. Decide on the basis of what we say and what we believe who is best qualified to lead America and the free world in this critical period.

To help you make this decision I would like to discuss tonight some of the great problems which will confront the next President of the United States and the policies that I believe should be adopted to meet them.

QUESTION OF SURVIVAL

One hundred years ago, in this very city, Abraham Lincoln was nominated for President of the United States. The problems which will confront our next President will be even greater than those that confronted Lincoln. The question then was freedom for the slaves and survival of the Nation. The question now is freedom for all mankind and the survival of civilizations, and the choice that each of you listening to me makes this November can affect the answer to that question.

What should your choice be? Well, let us first examine what our opponents offered in Los Angeles 2 weeks ago. They claimed theirs was a new program, but you know what it was. It was simply the same old proposition that a political party should be all things to all men, and nothing more than that, and they promised everything to everybody with one exception: they didn't promise to pay the bill.

And I say tonight that with their convention, their platform, and their ticket, they composed a symphony of political cynicism which is out of harmony with our times today.

DISASTROUS PROGRAM

Now, we come to the key question, What should our answer be? And some might say to do as they do—out-promise them because that is the only way to win. And I want to tell you my answer. I happen to believe that their program would be disastrous for America, that it would wreck our economy, and that it would dash our people's high hopes for a better life. And I serve notice here and now that whatever the political consequences, we are not going to try to out-promise our opponents in this campaign.

We are not going to make promises we cannot and should not keep, and we are not going to try to buy the people's votes with their own money. And to those who say that this position will mean political defeat, my answer is this: We have more faith than that in the good sense of the American people, provided the people know the facts, and here is where we come in.

I pledge to you tonight that we will bring the facts home to the American people, and we will do it with a campaign such as this country has never seen before.

I have been asked all week long by the newsmen sitting on my right and left, "When is this campaign going to begin, Mr. Vice President? On Labor Day or one of the other traditional starting dates?" And this is my answer: This campaign begins tonight, here and now, and this campaign will continue from now until November 8 without any letup.

CAMPAIGN EVERYWHERE

I have also been asked by my friends in the press, "Mr. Vice President, where are you going to concentrate? What States are you going to visit?" And this is my answer: In this campaign we are going to take no States for granted, and we are not going to concede any States to the opposition.

I announce to you tonight, and I pledge to you, that I personally will carry this campaign into every one of the 50 States of this Nation between now and November 8. And in this campaign I make a prediction—I say that just as in 1952 and 1956 millions of Democrats will join us, not because they are deserting their party, but because their party deserted them at Los Angeles 2 weeks ago.

Now, I have suggested to you what our friends of the opposition offered to the American people. What do we offer? First, we are proud to offer the best 8-year record of any administration in the history of this country. But, my fellow Americans, that isn't all and that isn't enough, because we happen to believe that a record is not something to stand on, but something to build on; and in building on the record of this administration we shall build a better America, we shall build an America in which we shall see the realization of the dreams of millions of people not only in America but throughout the world for a fuller, freer, richer life than men have ever known in the history of mankind.

Let me tell you something of the goals of this better America toward which we will strive. In this America, our older citizens shall not only have adequate protection against the hazards of ill health, but a greater opportunity to lead a useful and productive life by participating to the extent they are able in the Nation's exciting work rather than sitting on the sidelines. And in the better America, young Americans shall not only have the best basic education in America, but every boy and girl of ability, regardless of his financial circumstances, shall have the opportunity to develop his intellectual capabilities to the full. Our wage earners shall enjoy increasingly higher wages in honest dollars, with better protection against the hazards of unemployment and old age. And, for those millions of Americans who are still denied equality of rights and opportunity, I say there shall be the greatest progress in human rights since the days of Lincoln 100 years ago.

WILL HELP FARMERS

And America's farmers, to whose hard work and almost incredible efficiency we owe the fact that we are the best fed, best clothed people in the world, I say America's farmers must and will receive what they do not have today, and what they deserve—a fair share of America's ever-increasing prosperity. To accomplish these things we will develop to the full the untapped natural resources, our water, our minerals, our power with which we are so fortunate to be blessed in this rich land of ours. And we shall provide for our scientists the support they need for the research that will open exciting new highways into a future in which we shall have progress which we cannot even dream of today. Above all, in this decade of decision and progress we will witness the continued revitalization of America's moral and spiritual strength, with a renewed faith in the eternal ideals of freedom and justice under God which are our priceless heritage as a people.

Now, I am sure that many of you in this hall, and many of you watching on television, might well ask, "But Mr. NIXON, don't our opponents favor just such goals as this?" And my answer is, Yes, of course. All Americans regardless of party want a better life for our people. What is the difference then? I will tell you what it is. The difference is in the way we propose to reach these goals, and the record shows that our way works and theirs doesn't and we are going to prove it in this campaign.

We produce on the promises that they make. We succeed where they fail.

Do you know why? Because, as Governor Rockefeller said in his remarks, we put our primary reliance not upon government but upon people for progress in America. That is why we will succeed.

We must never forget that the strength of America is not in its Government, but in its people. And we say tonight there is no limit to the goals America can reach, provided we stay true to the great American traditions.

GOVERNMENT HAS ROLE

A government has a role, and a very important one, but the role of government is not to take responsibility from people, but to put responsibility on them. It is not to dictate to people, but to encourage and stimulate the creative productivity of 180 million free Americans. That is the way to progress in America.

In other words, we have faith in the people, and because our programs for progress are based on that faith, we shall succeed where our opponents will fail, in building the better America that I have described.

But if these goals are to be reached, the next President of the United States must have the wisdom to choose between the things government should and should not do. He must have the courage to stand against the pressures of the few for the good of the many. And he must have the vision to press forward on all fronts for the better life our people want.

Now, I have spoken to you of the responsibilities of our next President at home. Those which he will face abroad will be infinitely greater. But before I look to the future, let me say a word about the past.

At Los Angeles 2 weeks ago, we heard the United States, our Government, blamed for Mr. Khrushchev's sabotage of the Paris Conference. We heard the United States blamed for the actions of Communist-led mobs in Caracas and Tokyo. We heard that American education and American scientists are inferior. We heard that America militarily and economically is a second-rate country We heard that American prestige is at an alltime low.

This is my answer: I say that at a time the Communists are running us down abroad, it is time to speak up for America at home.

CRITICISM ESSENTIAL

And my friends, let us recognize that America has its weaknesses, and constructive criticism of those weaknesses is essential—essential so that we can correct our weaknesses in the best traditions of our democratic process.

But let us also recognize this: While it is dangerous to see nothing wrong in America, it is just as wrong to refuse to recognize what is right about America.

And tonight I say to you no criticism should be allowed to obscure the truth either at home or abroad that today America is the strongest nation militarily, economically, ideologically in the world; and we have the will and the stamina and the resources to maintain that strength in the years ahead.

Now, turning to the future. We must recognize that the foreign policy problems of the 1960's will be different and they will be vastly more difficult than those of the 1950's through which we have just passed.

We are in a race tonight, my fellow Americans, a race for survival in which our lives, our fortunes, our liberties are at stake. We are ahead now, but the only way to stay ahead in a race is to move ahead; and the next President will make decisions which will determine whether we win or whether we lose this race.

What must he do? These things I believe: he must resolve first and above all that the United States must never settle for second best in anything.

Let us look at the specifics. Militarily, the security of the United States must be put before all other considerations. Why? Not only because this is necessary to deter aggression, but becaues we must make sure that we are never in a poistion at the conference table where Mr. Khrushchev or his successor is able to coerce an American President because of his strength and our weakness.

MUST BE FIRM

Diplomatically, let us look at what the problem is. Diplomatically, our next President must be firm—firm on principles; but he must never be belligerent, he must never

engage in a war of words which might heat up the international climate to the igniting point of nuclear catastrophe.

But while he must never answer insults in kind, he must leave no doubt at any time that in Berlin or in Cuba or anywhere else in the world, America will not tolerate being pushed around by anybody, because we have already paid a terrible price in lives and resources to learn that appeasement leads not to peace but to war. It will indeed take great leadership to steer us through these years, avoiding the extremes of belligerency on the one hand, and appeasement on the other.

Now, Mr. KENNEDY has suggested that what the world needs is young leadership; and, understandably this has great appeal, because it is true that youth does bring boldness and imagination and drive to leadership, and we need all those things. But I think most people will agree with me tonight when I say that President De Gaulle, Prime Minister Macmillan, and Chancellor Adenauer may not be young men—but we are indeed fortunate in that we have their wisdom and their experience and their courage on our side in the struggle for freedom today in the world.

And I might suggest that as we consider the relative merits of youth and age it is only fair to point out that it was not Mr. De Gaulle or Mr. Macmillan, Mr. Adenauer, but Mr. KENNEDY who made the rash and impulsive suggestion that President Eisenhower could have apologized or sent regrets to Mr. Khrushchev for the U–2 flights which the President had ordered to save our country from surprise attack.

But formidable as will be the diplomatic and military problems confronting the next President, far more difficult and critical will be the decisions he must make to meet and defeat the enemies of freedom in an entirely different kind of struggle. And here I want to speak to you of another kind of aggression, aggression without war, where the aggressor comes not as a conqueror, but as a champion of peace, of freedom, offering progress and plenty and hope to the unfortunates of the earth.

A DIFFICULT ASSIGNMENT

I say tonight that the major problem confronting the next President of the United States will be to inform the people of the character of this kind of aggression, to arouse the people to the mortal danger it presents, and to inspire the people to meet that danger. And he must develop a brand-new strategy which will win the battle for freedom for all men and win it without a war. That is the great task of the next President of the United States. And this will be a difficult task, difficult because at times our next President must tell the people, not what they want to hear, but what they need to hear. Why, for example, it may be just as essential to the national interest to build a dam in India as in California.

It will be difficult, too, because, you know, we Americans have always been able to see and understand the danger presented by missiles and airplanes and bombs; but we have found it hard to recognize the even more deadly danger of the propaganda that warps the mind, the economic offensive that softens a nation, the subversion that destroys the will of a people to resist tyranny.

And yet, I say tonight that while this threat is, as I believe it to be, the greatest danger we have ever confronted, this is no reason for lack of confidence in the outcome.

Do you know why? Because there is one great theme that runs through our history as a Nation: "Americans are always at their best when the challenge is greatest."

And I say tonight that we Americans shall rise to our greatest heights in this decade of the sixties as we mount the offensive to meet those forces which threaten the peace and the rights of freemen everywhere.

But there are some things we can do and some things we must do, and I would like to list them for you tonight:

First, we must take the necessary steps which will assure that the American economy grows at a maximum rate so that we can maintain our present massive lead over the Communist bloc. How do we do this? There isn't any magic formula by which government in a free nation can bring this about. The way to assure maximum growth in America is not by expanding the functions of government, but by increasing the opportunities for investment and creative enterprise for millions of individual Americans.

WON'T TURN TOWARD REDS

And at a time when the Communists have found it necessary to turn to decentralization of their economy and to turn to the use of individual incentives to increase productivity—at a time, in other words, when they are turning our way—I say we must and we will not make the mistake of turning their way.

There is another step that we must take: our Government activities must be reorganized, reorganized to take the initiative from the Communists and to develop and carry out a worldwide strategy and offensive for peace and freedom.

The complex of agencies which have grown up through the years for exchange of persons, for technical assistance, for information, for loans and grants—all these must be welded together into one powerful economic and ideological striking force under the direct supervision and leadership of the United States.

Because what we must do, you see, is to wage the battles for peace and freedom with the same unified direction and dedication with which we wage battles in war. And if these activities are to succeed, we must develop a better training program for the men and women who will represent our country at home and abroad. What we need are men with a broad knowledge of the intricacies and techniques of the strategies of the Communists, with the keen knowledge of the great principles for which free people stand, and, above all, men who with a zeal and dedication which the Communists cannot match will outthink, outwork and outlast the enemies of freedom wherever they meet them anywhere in the world. This is the kind of men we must train.

NEED ALL FREE PEOPLE

And we must recognize that government cannot do this job alone. The most effective proponents of freedom are not governments, but free people; and this means that every American—every one of you listening tonight—who works or travels abroad, must represent his country at its best in everything that he does.

The United States, big as it is, strong as it is, cannot do this job alone. The best brains, the fullest resources of free nations, which have as great a stake in freedom as we have, must be mobilized to participate with us in this task to the extent they are able.

But do you know what is most important of all? Above all, we must recognize that the greatest economic strength that we can imagine, and the finest government organization—all this will fail if we are not united and inspired by a great idea, an idea which will be a battle cry for a grand offensive to win the minds and the hearts and the souls of men. Do we have such an idea?

The Communists proclaim over and over again that their aim is the victory of communism throughout the world. It is not enough for us to reply that our aim is to contain communism, to defend the free world against communism, to hold the line against communism; the only answer to a strategy of victory for the Communist world is a strategy of victory for the free world.

But let the victory we seek be not victory over any other nation or any other people. Let it be the victory of freedom over tyranny, of plenty over hunger, of health over disease, in every country of the world.

When Mr. Khrushchev says our grandchildren will live under communism, let us say his grandchildren will live in freedom. When Mr. Khrushchev says the Monroe Doctrine is dead in the Americas, we say the doctrine of freedom applies everywhere in the world.

WELCOME CHALLENGE

And I say tonight let us welcome Mr. Khrushchev's challenge to peaceful competition of our systems; but let us reply, "Let us compete in the Communist world as well as in the free world," because Communist dictators must not be allowed the privileged sanctuary from which to launch their guerilla attacks on the citadels of freedom.

And, we say further, extend this competition, extend it to include not only food and factories as he has suggested but extend it to include the great spiritual and moral values which characterize our civilization.

Also, my friends, let us welcome the challenge, not be disconcerted by it nor fail to meet it, but welcome the challenge presented by the revolution of peaceful peoples' aspirations in South America, in Africa.

We cannot fail in this mission. We cannot fail to assist them in finding a way to progress with freedom so that they will be faced with the terrible alternative of turning to communism with its promise of progress at the cost of freedom.

Let us make it clear to them that our aim in helping them is not merely to stop communism, but that in the great American tradition of concern for those less fortunate than we are that we welcome the opportunity to work with people everywhere in helping them to achieve their aspirations for a life of human dignity. And this means that our primary aim must be not to help governments but to help people, to help people attain the life they deserve.

In essence, what I am saying tonight is that our answer to the threat of the Communist revolution is renewed devotion to the great ideals of the American Revolution, ideals that caught the imagination of the world 180 years ago and that still live in the minds and hearts of people everywhere.

I could tell you tonight that all you need to do to bring about these things that I have just described is to elect the right man as President of this country and leave these tasks to him. But, my fellow Americans, America demands more than that of me and of you.

ALL MUST WORK

When I visited the Soviet Union, in every factory there was a huge sign which read, "Work for the victory of communism," and what America needs today is not just a President, not just a few leaders, but millions of Americans working for the victory of freedom. Each American must make a personal and total commitment to the cause of freedom and all it stands for. It means wage earners and employers making an extra effort to increase the productivity of our factories. It means our students in schools striving for increasing excellence rather than adjusting to mediocrity.

It means supporting and encouraging our scientists to explore the unknown, not just for what we can get but for what we can learn, and it means each American assuming a personal responsibility to make this country which we love a proud example of freedom for all the world; each of us for example, doing our part in ending the prejudice which 100 years after Lincoln, to our shame, still embarrasses us abroad and saps our strength at home; each of us participat-

ing in this and other political campaigns not just by going to the polls and voting but working for the candidate of your choice. And, my fellow Americans, it means sacrifice—not the grim sacrifice of desperation but the rewarding sacrifice of choice which lifts us out of the humdrum life in which we live and gives us the supreme satisfaction which comes from working together in a cause greater than ourselves, greater than our Nation, as great as the whole world itself.

What I propose tonight is not new, it is as old as America, and as young at America, because America will never grow old. You will remember that Thomas Jefferson said, "We act not for ourselves alone, but for the whole human race." Lincoln said, "In giving freedom to these slaves we assure freedom to the free. We shall nobly save or meanly loose the last best hope of the earth." And Teddy Roosevelt said, "Our first duty as citizens of the Nation is owed to the United States, but if we are true to our principles we must also think of serving the interests of mankind at large." And Woodrow Wilson said, "A patriotic American is never so proud of the flag under which he lives as when it comes to mean to others, as well as himself, a symbol of hope and liberty."

We say today that a young America shall fulfill her destiny by helping to build a new world in which men can live together in peace and justice and freedom with each other. But there is a difference today, an exciting difference, and the difference is because of the dramatic breakthrough in science for the first time in human history. We have the resources, the resources to wage a winning war against poverty, misery and disease wherever it exists in the world.

BELIEVES IN AMERICA

And upon the next President of the United States will rest the responsibility to inspire and to lead the forces of freedom toward this goal.

I am sure now that you understand why I said at the beginning that it would be difficult for any man to say that he was qualified to provide this kind of leadership. I can only say to you tonight that I believe in the American dream because I have seen it come true in my own life. I know something of the threat which confronts us and I know something of the effort which will be needed to meet it. I have seen hate for America, not only in the Kremlin, but in the eyes of Communists in our own country, and on the ugly face of a mob in Caracas.

I have heard doubts about America expressed, not just by Communists, but by sincere students and labor leaders in other countries searching for the way to a better life and wondering if we had lost the way. And I have also seen love for America in countries throughout the world, in a crowd in Chicago, in Bogota, in the heart of Siberia, and in Warsaw—250,000 people on the streets on a Sunday afternoon singing, crying with tear running down their cheeks and shouting "Niech Zyje America"—Long live the United States.

And my fellow Americans, I know that we must resist the hate, we must remove the doubts, but above all we must be worthy of the love and the trust of millions on this earth for whom America is the hope of the world.

A hundred years ago, Abraham Lincoln was asked during the dark days of the tragic War Between the States whether he thought God was on his side. His answer was, "My concern is not whether God is on our side, but whether we are on God's side." My fellow Americans, may that ever be our prayer for our country. And in that spirit, with faith in America, with faith in her ideals and in her people, I accept your nomination for President of the United States.

Thirtieth Anniversary of the Establishment of the Veterans' Administration

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 22, 1960

Mr. VAN ZANDT. Mr. Speaker, personnel of the Veterans' Administration Hospital, Altoona, Pa., under the leadership of Mr. Bernard E. Leighton, manager of the hospital, celebrated the 30th anniversary of the establishment of the Veterans' Administration at an enjoyable outing held at Lakemont Park, July 21, 1960, at 6:30 p.m.

During the fine program, it was my privilege to deliver the following address in keeping with the anniversary celebration:

ADDRESS DELIVERED BY JAMES E. VAN ZANDT, MEMBER OF CONGRESS, 20TH DISTRICT OF PENNSYLVANIA, IN CELEBRATION OF THE 30TH ANNIVERSARY OF THE ESTABLISHMENT OF THE VETERANS' ADMINISTRATION, JULY 21, 1960, 6:30 P.M., LAKEMONT PARK, ALTOONA, PA.

Thirty years have passed since the founding of the Veterans' Administration, and these three decades provide a record rich in human service.

For this reason, it gives me the greatest pleasure to appear before you today and to add my praise to those of many others throughout the country for the splendid accomplishments of the Veterans' Administration.

Before the Executive order was issued July 21, 1930, establishing the Veterans' Administration—many of us will recall the cumbersome manner in which veterans' laws were administered because of the lack of one central agency.

It was apparent after the armistice in 1918 that some means should be found to meet the growing needs of American veterans whose ranks were increased by the 4,744,000 veterans who—according to records of the Veterans' Administration—served in World War I.

From the close of World War I until 1930 there were numerous bureaus and agencies concerned in the administration of laws providing benefits for veterans.

The Executive order of July 21, 1930, was the result of the act of July 3, 1930, which authorized the President to consolidate and coordinate the Federal agencies especially created for or concerned with the administration of veterans' laws.

As a result, the Veterans' Administration was born for the purpose of placing the administration of veterans affairs "under one roof."

To those of us who recall the operation of the old agencies such as the Pension Bureau, the National Home for Volunteer Soldiers, and the Veterans Bureau, the creation of the Veterans' Administration was a master stroke for efficiency and service.

It would be difficult indeed to pick one program of the many sponsored by the Veterans' Administration as the most valuable or most successful.

If, for the sake of discussion, I were to single out one activity, however, I think few would quarrel with my choosing the hospital and medical care program of the Veterans' Administration, as one of the most essential.

We in Altoona have had good occasion to experience first hand the importance of the Veterans' Administration hospital program.

We are fortunate to have an excellent Veterans' Administration hospital in our community under the management of Mr. Bernard E. Leighton, who is recognized as one of the finest hospital managers among Veterans' Administration personnel.

The excellent medical care obtained at the Altoona Veterans' Administration hospital is due to the personal interest taken by Manager Leighton and the highly trained and efficient medical and nursing staffs and hospital personnel.

We are also deeply aware of the vital role a Veterans' Administration hospital can play in raising the health standards of the entire community.

This it does in two ways:

First of all, the Veterans' Administration hospitals and the medical care program take care of those service-connected disabilities incurred by former members of the Armed Forces.

It would be difficult—if not impossible in many cases—for veterans to obtain and finance care for these ailments in any other way.

The number of veterans in this country now stands at more than 22 million.

As the percentage of this group aged 65 and over has continued to grow—their health problems have become increasingly severe.

It is clearly to the advantage of the entire community that certain of the medical problems of this group be treated in special facilities at Government expense.

A second major advantage to the community of the Veterans' Administration hospital program lies in the inevitable interdependence of all the facets of a community's health services.

The excellence of each component contributes to the excellence of the whole.

Thus—many communities now boast improved hospital facilities as a partial result of the high level of care in Veterans' Administration hospitals.

Since the veteran is eligible for medical and dental care for service-connected disabilities from private physicians and dentists on a fee-for-service basis—the medical program of the Veterans' Administration is further integrated into that of the rest of the community through private practitioners.

The Veterans' Administration also authorizes care in other public and private hospitals and homes when this is necessary.

We can view the improvement in medical care for veterans as part of a larger picture—the tremendous advance in hospital care for the entire population.

We know that some provision has been made for the medical care of former members of the Armed Forces as far back as—and before—Civil War days.

We read of the founding of sanitary commission homes for sick and disabled soldiers and sailors in 1861.

But when we investigate the hospital conditions of that time, we can be more grateful than ever for Veterans' Administration and other hospitals of today.

Apparently a popular saying a century ago was—"Be born at home and die at home."

Hospitals of that era were a combination of pest houses and almshouses with a tremendously high death rate.

The mortality from amputations in the hospital hovered between the figure of 40 and 60 percent—a much higher number than those performed in private homes.

In addition—the lack of paying patients meant that hospitals faced a constant struggle to keep their doors open.

I understand that during the Civil War the Government stepped in to pay 94 cents a day per soldier patient.

A mere rundown of advances since that time makes my head swim.

There have been major revolutions in every conceivable facet of hospital operation

from personnel to equipment—to methods of treatment.

Veterans' Administration hospitals account for about eight percent of the Nation's average daily patient load and hospital beds.

This significant segment of the Nation's hospital plant has become the center for the world's most remarkable and advanced medical care—along with the rest of the hospitals of this country.

The evolution of the modern hospital is vividly described in a report presented to the House Committee on Ways and Means in April 1959—by the Department of Health, Education, and Welfare, on the subject of hospitalization insurance for social security beneficiaries.

The report states in part:

"The hospital of today is as unlike the hospital of 20 or 30 years ago as the 1958 automobile is unlike the model T.

"You pay more but also get more.

"The hospital of today stands for the oxygen tent—the blood bank—the operating room—and the other instruments through which modern medicine demonstrates its ability to save life.

"It is also where the laboratory and radiographic procedures and radioactive elements are available for diagnostic procedures.

"It is a complicated organization of services most of which must be available for use on a moment's notice."

When we focus our attention specifically on the medical program of the Veterans' Administration—we note an amazing capacity for growth in excellence even in its development occurred shortly after World War II when the Department of Medicine and Surgery was first organized.

An aspect of the changed procedures which interests me particularly is the organization at that time of a sysem of cooperation between Veterans' Administration hospitals and the rest of the medical community.

Based on the assumption that the finest of medical practice can be found in an atmosphere of teaching and research—committees composed of deans and the heads of major departments in participating medical schools give advice in staffing—education and research to the managers and staffs of Veterans' Administration hospitals.

There have been two vitally important by-products of this system.

One is the high level of care in Veterans' Administration hospitals made possible by access to the most enlightened and advanced medical opinion.

The other is the atmosphere of acceptance and understanding between practicing and teaching physicians and Veterans' Administration personnel.

Both groups are aware that they are working toward the same goal of better medical care for all the people of this great Nation.

In the field of medical research, too—collaboration with other Government agencies and private groups has resulted in a vital, successful Veterans' Administration program.

Many medical specialists have been attracted to the staffs of Veterans' Administration hospitals by the opportunity for research—and this has worked to the benefit of patients in these hospitals.

In addition—the program has yielded many worthwhile results—such as the development of a successful plan for the treatment of tuberculosis by chemotherapy.

This revolutionary development has shortened the period of hospitalization for tubercular patients and has substantially reduced the morbidity and mortality from this disease.

There is yet another aspect of the development of the Veterans' Administration hospital program which I find particularly encouraging.

This is the solution recently settled upon by the President—on request from the Administrator of Veterans' Affairs—to the problem of regulating the overall total of Veterans' Administration hospital beds.

The President set the total for Veterans' Administration beds at 125,000 and—at the same time—provided that—within the limit—beds could be shifted from one use to another or from one geographical area to another depending on medical needs.

This decision resolved two difficult questions in the Veterans' Administration hospital program.

First it removed the possibility that the total number of beds would continue to expand responding to pressures of all kinds—regardless of the number of unused or little used beds in certain areas.

The fixed total requires the most responsible kind of constant and continued evaluation to determine where and how Veterans' Administration beds may be most profitably used.

The resulting administrative stability will lead to better medical care.

Secondly, this policy decision clarified the issue of how much care would be available for veterans with non-service-connected illnesses.

It had previously been understood that such veterans could receive care if they were unable to pay for it otherwise—and if a bed were available.

But the possibility of demands for this type of care constantly expanding the total number of Veterans' Administration beds was not a pleasant one.

It is now clear that there will be an upper limit to the number of non-service-connected cases which can be cared for at Government expense after that.

In addition to constant improvement of its hospital care program—the Veterans' Administration has continued to meet the changing demands in medical problems of the veteran population.

Significant changes in medical practice have made it possible to increase the use of outpatient services and thereby to reduce hospitalization.

As the number of veterans suffering from permanent or chronic disabilities continues to grow—the domiciliary program becomes increasingly important.

Great advances in rehabilitation have opened up new possibilities for extending the productive life of disabled veterans.

We see in the medical program of the Veterans' Administration a living example of the gratitude of an enlightened society to those men who gave up valuable years of their lives and often their health to the service of their country.

We see not a grudging dole or a fixed pension—as if this debt could be repaid in any set dollar amount—but a changing, flexible program suited to meet the most urgent needs of the veteran.

We can also see a healthy attitude of self-evaluation on the part of the Veterans' Administration—A recognition that the problems of the veteran must be matched against the problems of other members of our society—that the requirements of the veteran are subject to continual change—and that this change must be reflected in the Veterans' Administration program.

In 1929 President Hoover commented in his state of the Union message on the advantages of a strong—unified agency to administer veterans' benefits.

He stated: "I am convinced that we will gain in efficiency—economy—and more uniform administration and better definition of national policies—if the Pension Bureau—The National Home for Volunteer Soldiers—and the Veterans Bureau are brought together in a single agency."

Thirty years have—I believe—confirmed his predictions.

Whether it is the veterans' hospital in our own community of Altoona—or the assistance to a disabled veteran or the home loan program of the Veterans' Administration—we are struck by the vigor and responsible attitude of a program designed to serve the veteran and the Nation.

Therefore, in concluding my remarks on this happy occasion, I wish to commend against Manager Bernard E. Leighton and the doctors, nurses, and professional employees—as well as all other hospital personnel—for the part they have played in maintaining the high standards of the Altoona Veterans' Administration Hospital.

In this connection, let it be remembered that all employees of the Altoona Veterans' Administration Hospital, regardless of the type of their employment, share in the credit being given for a well-staffed and efficiently operated hospital.

For that reason, all of you can "take a bow" because your contribution added to those of your fellow-employees, making it possible for the Altoona Veterans' Administration Hospital to maintain such a fine rating for efficient service, and excellent medical and hospital care.

It is my sincere hope that continued success will be the result of such highly dedicated service in the constant effort to alleviate human suffering and to restore peace and contentment to troubled minds.

What Gallup Left Out

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, August 22, 1960

Mr. MULTER. Mr. Speaker, there are polls and polls. Some are rigged, some are just poorly conducted. Others are just badly analyzed. Without further comment, I am pleased to call attention to a good review of a bad poll. It was written by Joseph Alsop and appeared in the New York Herald Tribune of August 22, 1960:

WHAT GALLUP LEFT OUT

(By Joseph Alsop)

WASHINGTON.—In the newspaper trade, it is usually considered bad form for one wretched scribbler to make remarks in print about the work of another. Yet an exception seems to be justified in the case of the inquiring Dr. George Gallup's important first poll after the national conventions. What is left out needs to be put back in.

The political community was both excited and amazed by this poll, showing 50 percent of the decided pollees choosing Vice President RICHARD M. NIXON, 44 percent of the decided choosing Senator JOHN F. KENNEDY, and 6 percent of the pollees undecided. NIXON'S lead caused the excitement. The almost incredibly low percentage of undecided voters caused the amazement.

But the voters so positively described as decided by Dr. Gallup were by no means unanimously decided in the true sense of that word. In the total sample, 6 percent of the pollees specifically stated they were undecided about their votes, but later admitted or indicated that they were leaning to one candidate or another. These leaners—a familiar phenomenon to every doorbell ringer—were somewhat oddly lumped in with the truly decided in the published poll.

According to Paul Perry, chief statistician of the Gallup organization, this undisclosed disposition of the "leaners" benefited the Democrats. He said that the Kennedy-

Johnson ticket got approximately 54 percent of all the leaners.

The Democrats rather conspicuously failed to benefit, however, by two other unseen dispositions made by Dr. Gallup and his staff. The first and most remarkable was the simple cancellation of about 20 percent of all the ballots collected by Dr. Gallup's field-workers.

Apparently this winnowing of goats from sheep is standard Gallup practice. Suspected nonvoters are spotted by such indicators as failure to vote last time, failure to register thus far, and so on. The suspects' ballots are then thrown out of the sample—which is the other half of the secret of Dr. Gallup's amazingly low percentage of undecided voters.

Statistician Perry stated that he "did not have" the actual split of the suspects thrown out of the recently published poll; but he added that the discarded ballots were "regularly more Democratic." In addition, important numbers of Democratic votes were apparently light weighted by Dr. Gallup's special system of synthesizing his national percentage figures.

Like the throwout of suspected nonvoters, this synthetic character of Dr. Gallup's published national percentages may well be known to sociologists and other students. Statistician Perry made no bones about it, when questioned. But it is certainly unknown in the political community, where the Gallup results are therefore misunderstood.

Briefly, then, every Gallup poll is divided into four regions—eastern, midwestern, southern, and western. Voting habits in the regions differ. The aim is to forecast, not the victor in the election, but the popular vote. Thus the polling samples from each region are given a "weight" proportional to that region's contribution to the popular vote in 1956. The national averages are then synthesized from the weighted samples.

The region that suffers from this system is the South, where the popular vote is always low in national elections. The 13 States in Dr. Gallup's southern region have just under a quarter of the population of the United States. More important, they have 27.2 percent of the electoral college votes, which decide the presidential choice. But in Dr. Gallup's percentage synthesis, the 1956 yardstick gave the South a "weight" of only 16.6 percent. Thus every southerner in Dr. Gallup's recent sample got only about three-fifths of a vote in the final count.

Although Dr. Gallup frequently publishes regional breakdowns, he is not doing so this time. Hence statistician Perry refused to disclose the split of the latest southern sample. Rather hesitantly, he merely said that the Republicans were doing better in the South than they have done in the past, "except in 1928, 1952, and 1956"—which were the only years when the Republicans got to first base in the South.

It seems likely, therefore, that the Gallup sample from the southern region showed a small but significant Democratic majority, which was then downgraded by the "weighting" system. Add the probable Democratic majority among the thrown out ballots of suspected nonvoters. It then seems a fair bet that the Democrats actually had a modest overall majority in Dr. Gallup's unprocessed ballots.

A handful of votes would produce such a majority, because of the narrow base of Dr. Gallup's famous percentages. In the last poll, the nationwide sample was about 1,600 ballots. About 20 percent were thrown out, and the final sample was under 1,300 ballots. A single Gallup percentage point would, therefore, represent not more than 13 votes. And the mere transfer of 39 votes either way would have altered Dr. Gallup's nationwide percentages, to show Kennedy running dead-even with Nixon, or to show Nixon leading Kennedy, 53–41.

All this is not intended to suggest that Dr. Gallup has been cooking his poll. He has not been doing anything of the sort. Yet the facts have to be faced that this poll has become a fairly major, extra-legal institution of American politics. For this reason, such things as unannounced transformations of "leaners" into "decideds" do not serve the public interest.

Dr. Gallup's industrial and commercial clients may be best served by facts carefully processed and homogenized in the undoubtedly expert Gallup manner, but the public interest demands something more when Dr. Gallup puts on his political-institutional hat. In this role, Dr. Gallup also ought to provide all the unprocessed facts. Indeed, he might start this time.

Impact of Foreign Imports on American Small Business

EXTENSION OF REMARKS

OF

HON. JOHN H. DENT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 22, 1960

Mr. DENT. Mr. Speaker, as a follow-up on my presentation to this House on the practices of buy American and the injurious affect upon the American economy of this administration's policies, I present the following correspondence and information that, in my opinion, is both timely and apropos.

The time is running out for our American dollar, our American worker, our American main street businessman and in fact, for our America as an industrial giant amongst the production nations.

The following material and information is of utmost importance to all of us:

UNION INSTRUMENT CORP.,
Plainfield, N.J., June 27, 1960.

Congressman JOHN DENT,
House of Representatives, House Office Building, Washington, D.C.

DEAR CONGRESSMAN DENT: Congressman SANTANGELO has sent me a copy of his letter to the Small Business Administration protesting their proposed changes in regulations to allow foreign products on preferential small business set-aside procurements, for which I am grateful. This letter states that this matter was discussed with you and Congressman ABRAHAM MULTER.

On June 16, 1960, my counsel, Arthur Chodosh, and I attended the hearing held by the U.S. Senate Committee on Small Business, "on the impact of foreign imports on American small business." We were invited to submit a statement for the hearing record, a copy of which we enclose, containing our opinions on the effects of foreign imports.

We were shocked by the callous attitude of some members of the committee, in telling several manufacturers suffering seriously from foreign imports, that the work of their factories must be sacrificed to foreign imports, in the interest of foreign policy. Note my comments in our statement on pages 7 and 8.

Congresswoman FLORENCE DWYER and Senator HARRISON A. WILLIAMS, JR., have also taken interest in this matter and have registered objections with the Small Business Administration to their proposed changes.

I remember my conversation with you on my visit to Washington. This information is being furnished to you with the hope that you can find time to bring this matter to the attention of other members of the House before adjournment.

We are enclosing some typical articles on the matter of foreign imports, indicating the serious proportions of this subject.

Your interest in small business manufacturers in the United States is greatly appreciated.

Respectfully yours,

UNION INSTRUMENT CORP.
S. SCAVUZZO, *President.*

STATEMENT TO U.S. SENATE SMALL BUSINESS COMMITTEE HEARING, JUNE 16, 1960, WASHINGTON, D.C.

Our company is engaged in the manufacture of precision mathematical and engineering instruments. We have suffered a loss of about 60 percent of our sales by reason of foreign imports on the principal items which we sell to the commercial trade, which consists of metal T-squares, straight edges, protractors, proportional dividers, and triangles. Not only has the dollar volume of our business on these items shrunk drastically, but the remaining business which we have accepted to keep these facilities open, are taken at much lower prices than 10 years ago, although our production costs have risen at least 25 percent. We have had to drop many items. All these conditions have been caused by the impact of foreign imports.

The history of the drawing instrument manufacturers in our industry well illustrates the impact of foreign imports. There were more than 12 such manufacturers in 1945, now only 2 remain. A number have gone out of business entirely. The others have ceased manufacturing drawing instruments and are now importing. The two remaining manufacturers are still in business because they manufacture instruments of an unusual character and quality, not of interest to foreign producers. The foreign producers, through their agents, now control more than 95 percent of this market. This has resulted from the lowering of the protective tariff from 45 to 19½ percent and reduction of the "Buy American Act" preferential provision from 25 to 6 percent.

Our company has been able to survive because we have been able to develop items for the Department of Defense and in that connection, the protection received through the Small Business Act, has been of substantial aid. This protection and aid are now being seriously threatened by a trend to relax the original intent of the Small Business Act, and the set-aside procurement regulations.

Our company recently submitted a bid on a Defense Department invitation, which contained in part the following conditions:

"NOTICE OF SMALL BUSINESS SET-ASIDE"

"Bids or proposals under this procurement are solicited from small business concerns only * * *. This action * * * is in the interest of maintaining or mobilizing the Nation's full productive capacity, in the interest of war or national defense programs, * * * a manufacturer or a regular dealer submitting bids or proposals in its own name must agree to furnish in the performance of the contract, supplies manufactured or produced in the United States * * * by small concerns."

Despite the clarity of the foregoing conditions, requiring a manufacturer or dealer to furnish supplies manufactured or produced in the United States, the Small Business Administration has ruled that the proposal of an importer who intends to furnish supplies which are to be almost wholly fabricated in a foreign countrry, complies with the conditions referred to.

As a manufacturer submitting the lowest bid for furnishing products produced and manufactured in the United States, we protested this ruling. An official of the Small

Business Administration cited the following small business set-aside interpretations in explaining their action in our case:

"(a) A bidder offered to furnish a quantity of cable to the U.S. Government. The only work to be done on this cable in the United States was to add a tip, representing 4 percent of the value of the finished product. The Small Business Administration qualified this product as being produced in the United States.

"(b) A hypothetical example was offered that a broker could import foreign-made pencils, and they could qualify as having been produced in the United States by simply sharpening the points."

Existing Small Business Administration regulation, section 121.3–8(b)(2): "Definition of small business nonmanufacture," provides that "In the case of Government procurement, reserved for or involving the preferential treatment of small business * * *, such nonmanufacturer shall furnish in the performance of the contract, the products of a small business or producer, which products are manufactured or produced in the United States."

While this requirement clearly specifies the restrictions applicable to a nonmanufacturer, requiring a nonmanufacturer to furnish products manufactured or produced in the United States, nothing specific is spelled out in the Small Business Administration regulations with respect to the manufacturer or producer who proposes to furnish products to the Government directly. If nonmanufacturers are required to furnish products of a small business manufacturer or producer, which are manufactured in the United States, it certainly follows that the same restrictions apply with equal force to manufacturers furnishing products directly to the U.S. Government.

Congress in passing the Small Business Act, declared it to be the policy that the Government should aid, assist, and protect small business concerns, and that a fair proportion of Government purchases should be set aside for concerns falling into the small business category.

Section 127.15 of the rules and regulations issued under the Small Business Act, reads in part as follows:

"SEC. 15. * * * To effectuate the purposes of this act, small business concerns * * * shall receive any award * * * as to which it is determined * * * (1) to be in the interest of maintaining or mobilizing the Nation's full protective capacity, (2) to be in the interest of war or national defense programs."

In advancement of the purposes of the Small Business Act, and the rules and regulations issued under the act, the Small Business Administration and the armed services have until very recently reserved procurements of supplies to products manufactured or produced by small business concerns in the United States.

In a proposed amendment to the definition of small business concerns (Federal Register, p. 33411.13 CFR, pt. 121, Apr. 16, 1960), the Small Business Administration recommends the addition to existing regulations of a paragraph defining a "domestic product" as one in which the cost of foreign materials or components does not exceed 50 percent of the cost of all materials used in such products.

Such changes in the small business setasides regulations will result in a tremendous increase in the volume of foreign-produced items being purchased by the U.S. Government, and will further reduce the volume of manufactured goods of the American producer, which will inevitably cause many concerns to go out of business, with resultant unemployment. This defeats the intent of Congress to maintain the Nation's productive capacity for security reasons, and the purpose of the Small Business Act, which was established to assist and protect small manufacturers in the United States.

Even the proposed change to limit the allowable percentage of foreign materials to 50 percent will not place American manufacturers in a position to successfully compete on Government procurements of products which are partially manufactured in a foreign country, where labor costs are approximately 20 percent of American labor costs.

The relaxation of the protection of the small business set-aside procurement regulations can only result in greater distress to manufacturers in the United States, already hardpressed by foreign imports. We feel the original purpose of the Small Business Act to aid and protect small business, and maintain small production facilities in the United States, are being defeated by these actions. If the regulations are to be changed, they should be changed in favor of small American business manufacturers, in order to carry out the original purposes of the Small Business Act, and to enable the small American manufacturer to continue in business.

Importers, brokers, and foreign manufacturers have enjoyed advantages because of the large reductions in import customs tariffs, and the reduction in preferential treatment under the buy American provisions. By reason of this, great inroads have been made in the volume of goods manufactured in the United States. The present expanding economic and production booms in foreign lands, particularly Germany, certainly reveals that further concessions to foreign-made products are unnecessary.

The last remaining protection to manufacturers through small business set-aside program is now being weakened. The volume of set-aside procurements is a small part of the defense spending, and the small manufacturer and worker in the United State who pay their share of all defense spending, should be entitled to a full measure of preference in order to perpetuate the original purposes of the Small Business Act.

An authoritative source in discussing small business, stated that there were 15,000 small business failures in 1958, the greatest number since 1939. Certainly a great number of these failures can be attributed to foreign imports. Changes tending to further favor the import of foreign merchandise should be halted. The American manufacturer does not ask for advantages over foreign competition but it wants to eliminate the several disadvantages under which it must work.

This statement has been revised since the writer's attendance at the hearing on June 16. We therefore wish to comment on facts presented at that time.

It was emphasized at the hearing, that the United States expects to export $18 billion while it will import $16 billion in 1960. It was stated that we must increase imports to equal exports, in the interest of the philosophy of our present foreign policy.

Measured in volume of goods, rather than in dollars, imports far exceed exports since goods produced in foreign lands are manufactured at labor cost of 10 to 20 percent of the labor costs in the United States.

At the hearing, several small manufacturers were told to use their ingenuity to develop new products for their factories, to replace the productions of products lost to foreign imports. All this was based on the theory that our foreign policy required these sacrifices to be made. Some of the heads of the manufacturing firms presenting their plights, resulting from foreign imports, likely devoted most of their lives in developing their small plants and businesses.

The process of inventing and developing, transforming the facilities of their factories and finding markets for these products are enormous and beyond the means and capabilities of most small business firms.

Insofar as small businesses are concerned, this suggestion is not a practical solution to the problem of competing with low priced imports.

Your committee requested of several speakers their suggestions of a solution to the problems presented. Our suggestions to aid the small business manufacturers is to adhere to the purposes and intent of Congress in establishing the Small Business Act, which reads in part:

"It is the declared policy of the Congress that the Government should aid, counsel, assist and protect insofar as is possible, the interests of small business concerns in order to preserve free competitive enterprises to insure that a fair portion of the total purchases and contracts for property and services for the Government * * * be placed with small business enterprises, to insure that a fair proportion of the total sales of Government property be made to such enterprises, and to maintain and strengthen the overall economy of the Nation."

The intent and purposes of this act can be carried out by requiring the Small Business Administration and the procuring agencies of the Government to promulgate and to interpret and define its regulations under the small business set-aside provisions so that such procurements are restricted to products manufactured wholly by small business concerns in the United States, wherever possible.

We have discussed the foregoing matters with others in our industry, and in presenting this statement, we feel certain our position is not unique, but represents the position of thousands of other small manufacturers in the United States.

Your committee is requested to consider the above facts.

Respectfully yours,

UNION INSTRUMENT CORP.,
S. SCAUVZZO, *President.*

Postal Reappraisal

EXTENSION OF REMARKS
OF
HON. WALTER M. MUMMA
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Monday, August 22, 1960

Mr. MUMMA. Mr. Speaker, I have always been interested and have taken my stand in support of fiscal responsibility in government.

Recently, there appeared two editorials—one in the Patriot of July 7, 1960, and one in the Evening News of July 4, 1960, both Harrisburg, Pa., newspapers. Now these are directly related to the cost of government and particularly the Post Office Department.

Postmaster General Summerfield has modernized postal activities and reorganized to exact greater efficiency and economy. However, it is through no fault of his own that the postal books do not balance. Instead of diminishing the deficit it has increased from the former million-dollar-a-day deficit, this despite the President's veto.

These newspapers rightly call for a reappraisal of the postal situation.

Here are the two editorials to which I refer:

[From the Patriot, July 1, 1960]

POST OFFICE DEFICIT IS YET TO BE LICKED

President Eisenhower's proposals to square away the financing of the postal service, like so much else, have wound up in the dead letter office.

This election year Congress not only has refused to go along on the administration's postal rate increase proposal, it has made the Post Office Department deficit worse—for what's left of the Eisenhower era and for the start of a new administration next January.

Unlike 2 years ago, when another election year Congress matched a major pay raise for postal workers with the new revenue to pay for it, this House and Senate have just rammed through another big pay raise, overriding the President's veto; but refused to consider the need for new revenue.

This new spending will send the annual Post Office deficit on its way toward the $1 billion mark. And this will come on top of a postal deficit that has climbed to $6.8 billion since the end of World War II.

At a time in history when the United States is called up to maintain a defense establishment on a par with wartime and at the same time maintain its traditional civilian services and face up to the towering new needs of an exploding population—for education, for health, for so very much else—there just isn't enough Government money to go around. Because there isn't, too little or nothing is being done on too many fronts.

In the face of this stern fiscal reality, the concept of the Post Office Department as a public service which does not require a balanced budget demands reappraisal. The billion dollars a year now going out of the General Treasury, as subsidy paid by all taxpayers to the users of the mails, could go a long way toward meeting the needs of schools, slum clearance, health care for the aged. Somehow and someway, these needs inevitably must be met. To get at least a part of the financing required for them, the postal deficit should be wiped out and the Post Office Department should pay its own way.

But that is not about to come to pass when the Congress returns from the presidential conventions to close out so very much legislation still hanging fire. A House committee has completed hearings on the administration proposals for postal rate increases to bring in another $550 million a year—now not enough to balance the books. But it has refused to clear the proposal for floor action, and there isn't a chance that it will in the political circus atmosphere that will prevail. The Representatives and Senators aren't about to raise the price of stamps in an election campaign year.

Yet most of them seeking reelection and the two presidential candidates will be pledging their support to new spending for various worthy causes and programs. They also should be counting on an annual postal deficit approaching $1 billion a year. Do they think new spending in this amount should be postponed, or new taxes imposed, or mail rates increased to balance the postal books? This is a good question even if many politicians and most candidates won't answer it.

[From the Evening News, July 4, 1960]

PLAYING IT POLITICALLY SAFE

When President Eisenhower vetoed the Federal pay raise bill he characterized it as "indefensible and irresponsible legislation."

Congress now has compounded its "irresponsible actions" by going over the President's head to make the pay raise law.

There is no valid argument that Federal employees should not have received some increase in pay, but there is valid argument against the loose manner in which the bill was drawn, passed, and put through over the President's veto in a shameful exhibition of congressional cave-in in the face of a riptide of pressure in a political year.

The bill did not make an equitable distribution of money to the Federal employees, one of the chief points in the President's message of veto. These were the President's words:

"The bill totally ignores the recognized precept that the only sound basis for setting Federal salaries is reasonable comparability to rates paid for similar work in private industry. * * * There is reason to believe * * * that a number of Federal salaries already exceed private rates of pay for similar work and, conversely, that other Federal salaries are below corresponding private compensation. H.R. 9983 in no respect addresses itself to these disparities and, in fact, perpetuates and intensifies them. * * * The inequities already present in our Federal pay structure would be sharply accentuated by H.R. 9083."

This is not all the President had to say, but it is the nub of the reasoning that brought him to the decision to veto the bill. Whether the modest increase proposed by the President was enough is not now at issue, but the fact remains that it followed his line of reasoning that, whatever increase was given, it should eliminate the disparity to which he referred in his veto message.

It is all too obvious that Congress voted with an eye on the ballot box. Every House Member and half the Senators face the electorate this year, and they want to keep as many of them thinking kind thoughts of their legislators as possible. But if it is the popular way, it also is the cowardly approach.

Two of our own Congressmen, WALTER MUMMA and HERMAN SCHNEEBELI, joined those supporting the President. Their courage will cost them votes, and in SCHNEEBELI's case may bring defeat in the November election. He barely squeezed through in the special election in April. As for Pennsylvania's junior Senator, who faces no election test for 4 years, he played it safe.

That's politics.

Bernard Baruch at 90

EXTENSION OF REMARKS

OF

HON. GORDON CANFIELD

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, August 22, 1960

Mr. CANFIELD. Mr. Speaker, last Friday, August 19, America's elder statesman, Mr. Bernard M. Baruch, observed his 90th birthday anniversary, receiving congratulatory messages from his host of friends throughout the world.

During my many years in the Congress, both in periods of war and peace, I have on numerous occasions called on Mr. Baruch for his advice and he always gave it to me most promptly and helpfully.

Mr. Baruch is a very dear friend of Mr. Harry B. Haines, publisher of the Paterson (N.J.) Evening News, and whenever I visit Mr. Haines in his editorial sanctum I note some striking picture of Mr. Baruch hanging on the wall along with some personally autographed messages.

The Paterson Evening News last Friday carried the following editorial tribute to Mr. Baruch:

BERNARD BARUCH AT 90

Park-bench sage, adviser to Presidents, financier, bon vivant, philanthropist, sportsman, industrialist—Bernard M. Baruch, has appeared before the 20th Century America in so many roles that it is impossible to subject the man to definition except as All-American. Much is being made these days of public images; if one were inclined to choose for the elder statesman who celebrates his 90th birthday today, it certainly would be that of the astute and kindly uncle.

"Some men and women start out early in life knowing what they want to be, and their lives become tales of how they made their ambitions come true," he tells us in his memoirs. "That, plainly, has not been true of my career. In my personal ambitions I have been constantly beset by conflicting desires. The turns my life took have been determined as much as anything by the rush of events."

The story starts in Camden, S.C., when young Bernard was born on August 19, 1870, the son of a German Jew who had migrated from Posen and who had served in the Civil War as a Confederate surgeon. The first 11 years of Bernard's life were spent in South Carolina; he maintains a luxurious estate there today. The family moved because the father hoped to find wider opportunities in New York.

Bernard Baruch was graduated from the College of the City of New York at the age of 19. He soon found his way to Wall Street; stock speculation made him a multimillionaire by the time he was 31.

The details of his career as speculator—a title he still proudly clings to—are spelled out in the memoirs and in loving detail in a biography, but the more important story of Baruch the public man began when he met President Woodrow Wilson.

The financier at first aided in the quest of the new freedom with advice and financial contributions. Came World War I and—at 47—he was called to public service as a member and later chairman of the War Industries Board.

Since then Mr. Baruch has given advice to every succeeding President, advice more often than not neglected. Most notably he was a senior consultant—though not a confidant—of Franklin D. Roosevelt. His most significant official policy contribution probably was the 1946 Baruch plan for international control of atomic energy. This won U.N. General Assembly endorsement but was not acceptable to Moscow. If it had been, the world would have been on the path to peace instead of present day perils.

Baruch in 1948 refused to serve as chairman of the Democratic National Finance Committee, and thereafter his relations with President Truman were strained. Four years later he switched parties to support General Eisenhower. But Eisenhower as President refused to be influenced by Baruch's repeated advocacy of standby economic controls for war.

The years, meanwhile, have been kind to Baruch. A favorite avocation is watching the horses, and his beloved Saratoga has named a stakes race for him. In honor of his birthday, his favorite bench in Lafayette Park—across from the White House—was this week marked with a bronze plaque designating it as the "Bernard Baruch Bench of Inspiration." As for Baruch the hard-headed philosopher, he'd probably stand on a last line from the first volume of the memoirs: "I believe in reason not because of the wisdom that men have demonstrated in the past but because it remains man's best tool for governing himself."

Happy birthday from all of us to one who typifies Mr. American Citizen No. 1.

The New York Times editorialized last Friday as follows:

NINETY USEFUL YEARS

Reaching the age of 90 in reasonably good health and spirits is an achievement all by itself. We doubt, however, that Bernard M. Baruch, whose 90th birthday falls today, ever gave much thought to living to a grand old age. His ambition, we suspect, was to be active in mind and body and to get useful work done. In this he has succeeded.

Mr. Baruch did well enough in his private business in his earlier years to enable him to give most of his later years to the service of his country. He would be remembered for his achievements as head of the War Industries Board during the First World War, but he did countless useful things between the two World Wars and after the Second World War and down to this very day.

Whether or not he likes to be associated with the old tradition of the bench on which he sat and to which eminent persons came to seek his advice we are not sure. We do know that his advice was always based on intelligence, experience, and goodwill. When he disagreed with anybody he said so and when he agreed he said so. He went part of the way but not all of the way with President Franklin D. Roosevelt, as with other Presidents before and since.

We wish this were Mr. Baruch's 50th or 60th birthday rather than his 90th. But we hope the physical constituion he inherited from his good physician father, Simon B. Baruch, will permit him to be with us and to give us good advice in years to come.

Port of New York Authority

EXTENSION OF REMARKS
OF
HON. FRANK C. OSMERS, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1960

Mr. OSMERS. Mr. Speaker, the Judiciary Committee of the House of Representatives has under consideration a contempt citation of certain officials of the Port of New York Authority. I ask unanimous consent to insert in the Appendix of the RECORD two news stories and an editorial on the subject which appeared in the Newark (N.J.) Star-Ledger, of August 11 and 12, 1960:

[From the Newark Star-Ledger, Aug. 11, 1960]

CONGRESSMAN REBUKES CELLER ON PORT AUTHORITY PROBE

Representative DOMINICK V. DANIELS, Democrat, 14th District, said yesterday the New Jersey congressional delegation never asked for a sweeping investigation of the Port of New York Authority.

The Jersey City Congressman repudiated the statement of Representative EMANUEL CELLER, Democrat, New York, chairman of a House Judiciary Subcommittee, that the current probe of the port authority was launched at the request of the entire New Jersey congressional delegation.

DANIELS said the delegation merely asked for a congressional study of the port authority's power to build its proposed jetport in Morris County.

He also joined four other members of the New Jersey delegation in opposing the CELLER subcommittee's recommendation that three port authority officials be cited for contempt of Congress for refusing, on instructions of Governors Meyner and Rockefeller, to turn over all its records to the subcommittee. The others are Senators CASE and WILLIAMS and Representatives FRANK THOMSON and FRANK OSMERS.

"It has been stated that the judiciary committee's investigation into the internal affairs of the port authority resulted from a request of the entire New Jersey congressional delegation that it be conducted," DANIELS said in a statement without mentioning CELLER's name.

"So far as I am concerned that statement is not accurate. New Jersey Members of Congress have expressed concern as to the authority's study of a potential jetport in Morris County.

"In that connection they suggested the House Judiciary Committee conduct a staff study of the power of the port authority with respect to the construction of a jetport in Morris County.

"It is obvious that a request for such a study is no justification for a broadside blanket investigation of all the activities of the port authority nor for the subpenaing of practically all the files of the port authority covering the period for the last 15 years.

"I have never suggested and I am firmly opposed to the idea that port authority officials should be subjected to criminal prosecution for complying with the instructions of the Governors of the States, who are their superior officers."

[From the Newark Star-Ledger, Aug. 12, 1960]

PORT AUTHORITY PROBE GOING FURTHER THAN WANTED: WIDNALL

Representative WILLIAM B. WIDNALL, Republican, Saddle River, said yesterday the current House investigation of the port authority has gone further than the New Jersey congressional delegation wanted.

"As I recall, WIDNALL said, "the delegation voted unanimously to ask the House Judiciary Committee to conduct a staff study to fix the scope of the port authority's jurisdiction.

"We were interested in finding out if the port authority was exceeding its jurisdiction in doing things like erecting commercial buildings at Teterboro Airport and planning a jetport on Morris County land outside the boundary lines of the port district.

"We were not, as I recall, interested in either the internal affairs of the port authority or its handling of matters which are obviously within its scope and jurisdiction.

WIDNALL added, however, that he was certain the House was within its constitutional rights in investigating the agency.

As far as his vote on contempt citations pending against three top officials of the port authority, WIDNALL said he would vote in line with the original purpose of the New Jersey delegation.

"If a study of the subpenas indicates the investigators were after records concerned with setting the scope of the port authority, I would support the contempt recommendations. If the subpenas appeared to be in the nature of a fishing expedition, I would vote against them," WIDNALL said.

WIDNALL became the fifth member of the State's 14-member House to take issue with Judiciary Committee Chairman EMANUEL CELLER's statement that he was pursuing the investigation at the request of the New Jersey delegation.

WIDNALL, FRANK OSMERS, Jr., Republican, of Tenafly, CORNELIUS GALLAGHER, Democrat, of Bayonne, FRANK THOMPSON, Jr., Democrat, of Trenton, and DOMINICK DANIELS, Democrat, of Jersey City, are those opposed to the "sweeping" inquiry now underway.

[From the Newark Star-Ledger, Aug. 12, 1960]

MORE THAN THEY BARGAINED FOR

The New Jersey congressional delegation, in asking for a congressional investigation of the port authority, stand to get much more than they asked for—and at least some Congressmen are disturbed by the prospect.

The request for Congress to look into the port authority came in the wake of the port authority proposal for a jetport in Morris County. Perhaps it was a reflex action for Congressmen to ask for a probe.

What they intended, some of them now say, was an investigation into the port authority's action in connection with the jetport proposal. What they apparently had in mind was the fact that the port authority was asking for a facility which was located outside its jurisdiction.

What they got from Representative CELLER, who is conducting the probe, is a full-scale war on the port authority. And CELLER has armed himself with broadened subpena powers by which to try and get all port authority records from the inception of the authority. Certainly these records would not be needed for an investigation limited to the jetport proposal.

The prospect now is for a broadside, fired by the congressional committee, which could have damaging effects on the port authority and its future usefulness to the metropolitan area. If that happens, it would be tragic for everyone concerned—principally for the millions of persons in the area who benefit from facilities developed by the port authority.

The Congressmen are rightfully worried about this prospect. Governors Meyner and Rockefeller, also worried about the same prospect, have been warning of the dangers. The Governors' warnings have had little effect on CELLER. But the fact that his investigation is being virtually repudiated by some of the Congressmen who asked for a probe should help put it in its proper perspective.

"Woes of the Atlas"; Magazine Article Points Up Great Lag in Missile Program

EXTENSION OF REMARKS
OF
HON. FRANK KOWALSKI
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1960

Mr. KOWALSKI. Mr. Speaker, the frightening lag in our missile program is cause for extremely serious concern.

We need missiles—operational missiles—and we need them quickly. We will not get them if the administration is content with only "pep talks," such as the one the Secretary of Defense delivered recently to the defense contractors who are building the Atlas missile and constructing the launching sites. At this meeting the Secretary conceded that our missile program is far behind schedule, but he gave no indication of the sense of urgency which alone will give us missiles instead of words.

To get the missiles and the launching sites that are required, there must be an end to the "business as usual" approach of the administration. There must be a unified program, not just transfers of authority from one unit to another as the Secretary of Defense has been doing.

With our very security at stake, I say we should establish 24-hour-a-day working schedules if necessary. We can negotiate with the Soviet Union only from a position of strength, and just as long as the administration is content with second place in the missile race the

Russians will continue to hold the initiative in world affairs.

The extent of the U.S. missile lag is brought out in an article in the current issue of Time magazine, which reports that we now have only six operational Atlas intercontinental ballistic missiles, although the schedule which the Department of Defense told the country would be faithfully followed called for 18 missiles by this time according to Time magazine.

Later this year, says Time, there will be 12 Atlases operational, but the schedule calls for 30.

I submit, Mr. Speaker, that these ominous figures mean that more than "pep talks" by administration spokesmen are needed.

I bring to the attention of the House the text of the article on the missile lag in Time:

WOES OF THE ATLAS

The biggest bottleneck in the U.S. missile program is not the development or testing of the giant birds—which have been firing successfully—but construction of the bases that would be needed to send them winging against an enemy. The United States now has 6 operational Atlas intercontinental ballistic missiles—and by schedule should now have 18. Later this year 12 Atlases will be operational, whereas there should be more than 30. Last week 56 top executives of companies that make the Atlas and its launching sites returned home from Washington after a rousing pep talk from Defense Secretary Thomas S. Gates, Jr., urging them to get the Atlas back on schedule. The chief problem, conceded Air Force Brig. Gen. William E. Leonhard, a deputy commander of the Ballistic Missile Division, is "the difficulties of doing a wartime task under peacetime conditions and authority."

LIKE BUILDING DAMS?

The Atlas' woes show that it takes more than a big budget and brainy scientists to win the missile race. One of the chief difficulties has been the lack of central direction. The Air Force Ballistic Missile Division, after approving the plans of the prime contractor, turns the job of letting construction contracts over to the U.S. Army Corps of Engineers. The Air Force and the Army Engineers each blame the other for the delays. The Army charges that the Air Force makes imposible demands, frequently changes its mind; the Air Force replies that the Army Engineers are trying to build bases as they build dams.

Both the Army and the Air Force give the contractors poor marks. The Convair division of General Dynamics Corp., one of the prime contractors for the Atlas, has come under criticism for placing so much stress on test shots at Cape Canaveral that it has not put enough effort into preparing missile bases. Construction contractors selected by the Corps of Engineers often farmed the work to subcontractors who underestimated the task, sometimes buckled under the pressure. At Offutt Air Force Base near Omaha, where Atlas launching sites are 3 months behind schedule, New York's Malan-Grove Construction Co. gave 90 percent of the work to 46 subcontractors. Two of them ran into financial difficulties and are now being operated by bonding companies. At the Offutt launching sites, nine concrete pedestals intended for support of liquid-oxygen lines had to be replaced because they had inadequate supporting steel. Warren Air Force Base in Cheyenne, Wyo., scheduled to be the first operational tactical missile base by last spring, will not be ready until fall, largely because contractors could not fulfill their commitments.

NO READY MIX

For their part, the contractors complain bitterly that they are often not paid on time for their work, are burdened by the complexity of the new sites (some 4,000 miles of wire and 25,000 connections) and by whole chains of changes that are set off when something new is discovered during a missile firing. The changes are necessary if the United States is to keep its bases as sophisticated as its developing missiles, but they can play hob with schedules. At Offutt Base, more than 50 site changes have been ordered, ranging from "a few dollars to more than a million dollars." The Warren Base, originally scheduled to cost $65 million, is now expected to cost $100 million because of numerous modifications.

Also contributing to the slowdowns are labor unions which have squabbled with the military, the contractors, and among themselves. In the past 2 years there have been 22 labor disputes at Warren, ranging from cement masons and plasterers striking against the use of ready-mix concrete to ironworkers protesting because spot welding was done by other unions. Jurisdictional disputes and strikes have cost the Atlas program 20,370 man-days in the first 6 months of 1960 alone at Warren, Offutt, and Vandenberg Air Force Bases.

To bring the Atlas back on schedule, Secretary Gates has transferred the missile-site command from the Air Force Research and Development Command to the Air Materiel Command, placed the Army engineers under one nationwide project officer instead of under district engineers. Both the Army and the Air Force have been warned to be more selective in letting base building contracts and the Labor Department is drawing up a list of standards to determine what kind of workers should be used on specific missile-base jobs. The goal: more than 100 operational Atlases by 1962.

Jane Addams and World Peace

EXTENSION OF REMARKS

OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 22, 1960

Mr. PHILBIN. Mr. Speaker, at this time when the Nation and the world are yearning for peace and many of us are fervently dedicated to that cherished end, it is appropriate to dwell thoughtfully on the great contributions of the famous humantarian, Jane Addams.

I will not here detail the brilliant career of this great woman, but would like to bring to the attention of the House by way of a reminder her heroic efforts for world peace.

As long ago as 1904 at the convention of the National Peace Societies held at Boston in my home State, Jane Addams spoke and worked for universal peace between nations.

In her "Newer Ideals of Peace" published in 1907 she sought and urged moral substitutes for war.

During World War I she worked to try to prevent the spread of that great conflict and the provoking of the most primitive antagonisms associated with it.

Her efforts to secure a conference of neutrals many leaders had urged were sustained with the same vigor and ability that typified her activities in conserving the food supply, in distributing food to allay hunger, suffering, and privation.

Jane Addams was a nonconformist in the sense that she possessed the courage to differ with the main stream of public opinion whenever she thought it wise or in the interests of the Nation to do so.

She was a controversial figure to be sure, because she spoke her own mind—and it was a great mind—and because she set her judgment against that of statesmen and other leaders who were more concerned about waging war than in trying to prevent it before it started, or end it when it had commenced.

One of her last comments on war ranks with her best:

> The worst thing about war is not the poison gas which wipes out lives and destroys cities, but the poison it spreads in the minds of men. * * * We must be ready not only with political institutions but with an educated public opinion which shall fight this poison's spread. Only thus—

She wrote—

> will people be able to come into friendly relationships with ever larger and larger groups, and to live constantly a more extended life.

It was inevitable that catch phrases, labels, and even epithets should be applied to those who were seeking peace while the Nation was at war. An incited and patriotic public was inclined to sweep away as unworthy and base every utterance or gesture for peace. It cannot be denied, of course, that when the Nation was fighting for its survival against cruel and ruthless aggressors that it could ill afford time to debate the merits of peace, let alone permit spies and traitors to weaken the national purpose by conspiring against the preparedness and readiness of our fighting forces to defend our liberties and win the war.

Notwithstanding that fact, it is clear that peace is not only a sacred goal, but it is a dire necessity, if freedom and civilization are to be sustained.

No campaign of terrorism appealing to fainthearted people and urging national helplessness and fostering doctrines of appeasement can successfully becloud the fact that while the American people mean to preserve their free heritage and will never surrender it, they are nevertheless willing to stand courageously for every practicable measure to lessen international tensions and promote international control of nuclear substances and weapons, effective disarmament and enduring peace.

While the goal has not changed since Jane Addams' day, it has become infinitely more desirable and critical. To reach it, wholehearted international efforts are imperative. Every nation must join earnestly and wholeheartedly in the quest for the sacred grail of peace.

To the extent that some nations are refusing to abandon their oft-expressed ambition to suppress freedom and dominate the world this problem becomes more difficult, if not impossible of accomplishment, until those nations have a change of heart. But that fact must never deter us from fighting as fiercely in the moral sense as we would fight a war to protect our shores and our homes

and our liberties, for a just consideration and a just resolution of the problems that must be solved before peace can become a reality in this cruelly divided world.

Let not despair possess us, nor courage forsake us, in this fight. If the price of peace is loss of our freedom and a form of serfdom more abominable than death itself then by all means let us die in a fiery holocaust of destruction before we forfeit or surrender our God-given rights to be free men and women. But let us strive prayerfully and courageously for universal peace.

Among rational people, if there be such in the Communist world, there is no necessity for such a choice. The people of the world can and should make the choice now before they are engulfed by nuclear conflict, and they should never tolerate the machinations of communism, or any other ideology or bloc, to thwart the progress, freedom and security of man.

Jane Addams accomplished many things in her long, useful, life, and her work for peace was not the least of these. We can well recall today her thesis that consent should be substituted for coercion and a will to peace for a belief in war—that justice and love of humanity, brotherhood and devotion to the living God should prevail in the world.

Wrong Schooling Emphasis, by Vice Adm. H. G. Rickover

EXTENSION OF REMARKS

OF

HON. FRANK C. OSMERS, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, August 22, 1960

Mr. OSMERS. Mr. Speaker, quite understandably, there is always a vigorous debate on what should be taught in our public schools.

Because of my own interest in the subject matter, I have introduced a resolution (H.J. Res. 395) urging that a commission be established to determine what our standards of education should be.

One of the most outspoken Americans in the field of education is Vice Adm. H. G. Rickover. In the Newark Sunday News for August 21, 1960, a very challenging article by Admiral Rickover appeared. Under unanimous consent I include it in the Appendix of the RECORD:

WRONG SCHOOLING EMPHASIS

(By Vice Adm. H. G. Rickover)

We and we alone among all modern democracies have devalued our educational currency.

We have downgraded the high school diploma to a point where it does not even promise competence in elementary subjects. Witness the many college freshmen who have to take remedial courses in reading, writing and arithmetic. Abroad these courses are mastered in the first 8 years of schooling.

Russia's real threat to us will come through their educational and not through their military processes. Military systems and techniques are transitory—they now change every few years. An intelligent and well-educated body of citizens is something you will have forever.

VALUE RECOGNIZED

This is where the Russians are smarter than we. They have recognized the full value of a good education and they are hellbent on giving it to as many of their youngsters as they can coax into taking it.

This is about the best comparison I can make; almost half of Russia's children, graduating at 17 after but 10 years of schooling, do as well—by the record—as many of our children after 14 years of schooling, two of them in college.

Neither I nor other critics have ever recommended that we take over the Russian educational system. We do urge that we consider Russian educational achievements as the minimum standard for our own educational objectives.

SUICIDAL

We warn it would be suicidal if we allowed scholastic levels in our schools permanently to drop below this minimum standard. We flatly reject the claim that since ours is mass education it must, therefore, be mediocre, or that democratic education can never be as good as education in an authoritarian state.

What I have said about Russia applies even more so to the Western European nations.

Abroad, a liberal education comparing favorably with what Americans acquire in 16 years of school and college takes from 12 to 13 years. Europeans are by that much ahead of Americans when they begin to study for a learned profession, such as medicine or law.

NOT UNDEMOCRATIC

We seem bemused by the claims of the educationists that it is undemocratic for other Western nations to separate their children after elementary school, and to put them into different types of secondary schools according to their mental abilities and vocational aims.

We do not say it is undemocratic that nurses go to nursing school and doctors to medical school, and that each obtains a different diploma. Nor do we send enlisted personnel to the same schools as officers.

Why do we get angry at Europeans for weeding out the dullards from the talented children and sending them to separate secondary schools? What good would it do the dullards to be admitted to a school where they would just sit around and understand nothing?

What is democratic about penalizing God-given talent by letting it go to waste so average children won't feel a sense of inferiority?

BEGUILING, PERHAPS

It may be beguiling in theory to think of all our children going to school together. But will it really serve their best interests to send them to schools where the child with an IQ of 70 sits beside one with an IQ of 170, and where the morally weak child freely associates with the child who has been carefully raised to distinguish right from wrong and to conduct himself responsibly?

To say this is advocating that only an elite shall be well educated while the rest of our children receive an inferior education, making them forever hewers of wood and carriers of water, is highly irresponsible demagoguery.

To me there is nothing more important than to change our educational system in such a manner that it will provide the best possible education for every child: slow, average, and talented.

At present, few get a really good public education.

SPECIFICATIONS NEEDED

As an engineer would say the first thing we must do is set up specifications: what we want our high school graduates to know when they finish at the age of 18. The minute you do that, you put courses in etiquette and baton twirling in their proper place; you begin to see that perhaps you ought not to pay an athletic coach a higher salary than a teacher of trigonometry.

There is nothing in our form of government to prevent Congress from setting up some sort of commission or council and giving it the task of working out different sets of educational goals for our public schools.

The schools could disregard them if they so wished, and if the parents in the community did not force them to pay attention. But, by having a national set of standards, everyone could judge where the local school stood.

We could get a statement of policy: "This is what we think is a good education." Such a statement would give the parents a yardstick by which to measure what their children should learn and have learned in school.

EDUCATION OR TRAINING

This would give an enormous advantage to parents who are really interested in having their children educated in contrast to having them merely trained.

To allow a child to choose typewriting instead of physics, or machine shop instead of history or a foreign language, is to let a minor make a decision which will effect the whole course of his future life, a decision he is too young to make intelligently.

How can we expect children to choose higher mathematics when their classmates are having fun learning how to play canasta, cook or find a mate? Why should an eighth grader tacke a hard subject when next door the kids are happily whizzing through a course in home and family living? Why should he take tough examinations, when others get promoted on the basis of true-false tests posing such difficult problems as "should boys use deodorants?" or "can one use cake soap for shampooing?"

In other modern democracies, vocational subjects are to some slight extent taught in schools attended by children who are not academically talented, but they are never considered a substitute for general education. In this country we stop teaching basic subjets to slow learners too soon, we shift them too early from education into training.

What has happened in America is that many parents have abdicated their responsibilities and have let the schools assume them.

The schools are trying to do everything, and they do nothing well. They are trying to perform the functions of the church and the home, as well as their own.

To become educated takes sustained effort, hard work, excellent instruction by teachers who themselves are excellently educated and who know their subjects thoroughly.

American educationists keep assuring us that our schools are the best in the world. The evidence at hand shows all too clearly that this is an illusion. Nothing prevents us from changing this illusion into a reality.

Doctors' Committee for Nixon

EXTENSION OF REMARKS

OF

HON. STEVEN B. DEROUNIAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, August 22, 1960

Mr. DEROUNIAN. Mr. Speaker, the Nassau County Medical Society, after thorough consideration of the 1960 plat-

forms of our two great parties, and of the records made by the candidates of both, has announced its support of RICHARD M. NIXON and Henry Cabot Lodge for President and Vice President of the United States.

I am very proud to submit for the attention of the Members of the House of Representatives the position of the Nassau County Medical Society as presented by Ralph S. Emerson, M.D.:

WAKE UP, DOCTOR

The elections in November 1960 will have a profound effect and determine in a large measure the future of American medicine. Doctors have traditionally shunned partisan politics and find it distasteful, but times have changed. The survival of the freedom of medical practice is in jeopardy. Even though doctors, as individuals, and are not prone to run with the flock, they will fight when their country or their profession is in jeopardy.

For the first time in our history the issues of medical care are spelled out in each party's platform. It behooves every physician to be cognizant of the differences and the subsequent effect on medicine. The Republicans endorsed a medical care plan for the aged embracing both private and State participation. However, they would not use the compulsory social security system. It would be voluntary and apply only when the financial need exists. The Democrats bowed to organized labor and approved a compulsory social security plan to finance, through higher taxes, health care benefits for the aged whether they were in financial need or not. Senator JOHN KENNEDY has pledged an all-out fight for the social security health plan. The AMA and the New York State Medical Society have opposed the Democratic plan. Our combined voices apparently do not carry sufficient political weight in an election year when pressure voting blocs are all important.

It is indeed disturbing that the Democratic Party has plotted the course of medical care along the socialistic road via social security. Fortunately there are many fine Democrats who do not believe their party platform is right in this regard and have the courage to stand up for their convictions even in an election year. We hope this coalition of Democrats and Republicans will be sufficient to uphold the traditional ideals of medical practice.

If history is any lesson in Government maneuvers, we can be sure this effort is merely the beginning of a frustrating battle for the doctors against the Government's expanding intrusion in the field of medical care. We have seen the end results in England, France, Belgium, Austria, New Zealand, etc., to name only a few. At the present time our colleagues in Canada are experiencing an advanced stage of Government planning in medical care. The outlook is dismal unless we wake up to this fact and do something to counteract this trend. We must be in politics, whether we like it or not.

The stake in this election is so great that it transcends all other considerations except national defense. Fortunately, experience and capability in foreign affairs and defense are the strongest forte in the Republican ticket and further justifies our wholehearted support of the free enterprise concept of the Republican Party, as opposed to the expanding centralized Government control of the dominant forces of the Democratic Party.

It is lamentable that large factions of the Democratic Party have strayed so far from the true Jeffersonian Democratic philosophy. Today we have new power blocs which control the regime, and not one of them is friendly to medical freedom. The blueprint of the future medical care program of the Democratic Party is one of expanding third party control by Government agencies, with a powerful assist from organized labor. Unfortunately, our profession is on the trading block, being a pawn in the game of power politics at the public's expense.

When a crisis such as this confronts us, we must rise and be counted as a unit, fighting not only to save medicine but our patient's welfare. Many of us in the past have voted Democratic or have been independent. Previous political affiliation is not the issue this time. The domestic issue is whether medicine will remain free or go down the drain. The doctor's united effort can make the difference as an independent voting bloc. Do you realize a few thousand votes have decided presidential elections in the past? New York State is a key State, and the independent vote of the doctors and our patients can turn the tide to a Republican victory. The Nassau County Medical Society polled the local candidates regarding the Forand bill, which is the best indicator of a person's philosophy. The local Democratic candidates were either for the bill or responded with doubletalk. The local Republican candidates were unanimously against the Forand bill. Vice President RICHARD NIXON is a staunch and avid opponent of the Forand bill, while Senator JACK KENNEDY is for the bill.

Gentlemen, the lineup this year is clear cut. We know who will support us, and we also know who will emasculate us, if given the chance. We must have friends in Congress and the State legislature. Every physician must be a nucleus of support to elect our friends. We need their help during the next 4 years, and the only way they can help us is to be successful in the November election. Politics is a two-way street, and now is the time to support them. They need our help not only in votes but in financial assistance in their political campaigns. If every physician and his wife would convert 20 independent voters to vote Republican in November, we could turn the tide in our favor. This is no time to be sitting on our hands and giving lip service. We should be talking to our patients, service organization, church groups, and at social gatherings to get out the vote.

Gentlemen, in 1949 Truman proposed a compulsory health program. At that time only 20 percent of the aged 65 years and over had voluntary health insurance, while today 65 percent of the aged have some coverage. It is also predicted in 5 years 80 percent of the aged will not only have voluntary health insurance, but they will have more comprehensive coverage. There will be even less need for compulsory health insurance under social security in 1965, and that is one of the reasons the pressure groups are working so frantically to have it enacted now. They know they will have to win by 1965.

In 1949 the doctors went to work on the Truman proposal, and it didn't even get to a vote in Congress. This year we have the hysteria, confusion, and doubletalk of elections which cloud the real issue. Therefore, it behooves every physician to go right to the grassroots and convince our patients not to buy this pig-in-a-poke program and to vote against the Democrats who are sponsoring it. We did it once, we can do it again.

Whenever a crisis develops which adversely affects the doctors, we are bombarded with the question "Why doesn't the medical society do something about it?" You as an individual are the medical society, and here is an opportunity for you to do something about it. We have presented the facts as they affect medicine, and now it is up to you to carry the ball.

Join the Doctors' Committee for NIXON. Vote Republican.

Mr. William Robert Fuoss of Tyrone, Pa., Speaking as a Jeffersonian Democrat Warmly Praises Former President Herbert Clark Hoover for His Depth of Character and His Many Outstanding Qualities

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Monday, August 22, 1960

Mr. VAN ZANDT. Mr. Speaker, the recent celebration by former President Herbert C. Hoover of the 86th anniversary of his birth resulted in an avalanche of verbal and written tributes to one of America's most distinguished citizens. Editorials in numerous newspapers and periodicals acclaimed the qualities and virtues of the former President of the United States who during and after his tenure of office has conducted himself with the dignity befitting the great office he had the honor to occupy for a term of four years and during his long career in the service of the Federal Government.

On August 10 on the floor of the U.S. Senate there were many fine tributes to former President Hoover by members of both major political parties. Senator MIKE MANSFIELD, Democrat, of Montana, and majority whip of the Senate, said:

Everyone knows that for a great many years Herbert Hoover was a favorite target of the Democrats. He was blamed for many things for which he was not responsible. He is now looked upon as a revered elder statesman; and we are delighted that he is continuing to make so many fine contributions to the welfare of his country and that he is remaining so active during the declining years of his life. In the light of history I believe he was a great President; and I think future historians will bear out that statement.

Among the many fine tributes tendered former President Hoover none of them excel in warmth and sincerity the well-earned expressions from the pen of William Robert Fuoss of Tyrone, Pa. Mr. Fuoss is a former newspaperman in the Keystone State where he also enjoys the reputation of being a forceful and convincing orator. As an ardent admirer of former President Thomas Jefferson, Mr. Fuoss is dedicated to the highest ideals of good government and proudly proclaims the fact that his political philosophy is that of a Jeffersonian Democrat. Prominent in the affairs of the American Legion at the State and National levels, Mr. Fuoss is dedicated to preserving the American form of government and is always in the forefront of the titanic struggle against foreign isms that seek to destroy every vestige of our liberty and freedom.

Mr. Fuoss who is in great demand as a public speaker in Pennsylvania selected the Altoona Mirror, one of the popular daily newspapers in the Keystone State as the medium to express

his great respect and admiration of former President Hoover.

Mr. Fuoss' fine tribute appeared in the August 1 issue of the Altoona Mirror and is as follows:

IN PRAISE OF HOOVER

(By William Robert Fuoss)

EDITOR OF THE ALTOONA MIRROR:

No matter what anybody's preference may be in the election, like millions of my fellow Americans, I listened intently to ex-President Hoover's notable address at the Republican Convention and at the age of 85 he still commands attention of all people, regardless of party.

His voice may be less strong, and his step a little less sure but his heart was in what he said and his reasoning was sound.

Here, after all these years, is the one remaining link with the glorious past, a link that, despite his many years, is still filled with faith, love, and devotion for not alone this great Nation but every single institution that comes under it. Here, in my belief, is a profound and dedicated man and the impressions he leaves are as unfading as time itself. He is the youngest old man in American history and his ideas are as applicable to today as are those who, seeking the highest office in the land, dare speak of new frontiers and new eras. Herbert Hoover is an old institution in a new age, old in the physical sense, young and vibrant and dynamic in the modern age of science and technology. He has grown with the times, risen even greater than the times.

The Hoover speeches, and they are not ghost-written, are as extraordinary, incisive and penetrating as is the Hoover personality. Here is one man who refuses to grow old mentally and spiritually. He is the busiest octogenarian of our time, far surpassing either Winston Churchill or Konrad Adenauer. So great is his output that eight secretaries are required to take his dictation. His literary output rivals that of some of our youngest and ablest writers, scholars, and educators. Like Charles Elliot of Harvard, he is one man who is consulted for what he knows and loved for what he can do. I need not speak of what this great man has done for that would far surpass the space limits of your valued paper.

Mr. Hoover packs in a single paragraph more solid sense than most men of culture and learning do in a half-dozen pages of single-spaced copy. His reading is extensive, almost voluminous. His touch with world affairs, those who know him intimately tell us, "is beyond the grasp of most men of high caliber and, of course, far, far beyond the comprehension of lesser men." Others speak of new horizons, new ideas and new visions. Herbert Clark Hoover is everything they speak of, dare even allude to. He is versatile and cosmopolitan, possibly the nearest approach in American history to Thomas Jefferson and no one dares question Mr. Jefferson's eminence. Trained under Woodrow Wilson, Herbert Clark Hoover enjoys the added distinction of having risen higher than Mr. Wilson in matters of tolerance, faith and works.

I no longer thrill to long-winded speeches. Staged and time-consuming demonstrations have departed me. The cheap publicity sought by favorite sons, so-called, belong to yesterday. Today is timed of action, businesslike action. The world is in no condition to allow of normal things, circuslike stunts minus horsesense, for it will require only an accidental match to inflame it and all then is lost.

Mr. Hoover was never a politician. That possibly explains why he shared so badly in this thing we call politics. The true stature of the man, this quiet and dignified gentleman, is to be seen and felt in the years that have gone since he served as our President. He has grown with the years and today, despite his age, Mr. Hoover ranks among the great of this universe. Here is, in truth, the matured statesman, the one man whom I shall not nominate for the highest honor of his party but, rather, for the highest honor of the universe. Pardon me, this honor has already been suggested for Mr. Hoover by men far wiser than I. Shall I but second the nomination?

Among my prized possessions is a letter had from Mr. Hoover, written in 1937. I had spoken of my displeasure at Mr. Roosevelt's attempts to purge Senators who differed with him. Yes, I even went so far as to disapprove of the attacks upon the Supreme Court as "nine weary old man." I told him, moreover, I had worked and voted against him. He replied, in his own handwriting, "It took rare courage to write me as you have written and I sincerely thank you for what you have said." He is a sincerely kindly man, as all great men are. Many letters have been exchanged since then and, among them are friendly little hints as to how I might improve upon my own ideas as given to the press from time to time. I am the better for these exchanges. I believe I know Mr. Hoover and, believing so, I genuinely esteem him.

His contemporaries are gone, either by death or the choice of a free people. He alone remains. It is fortunate for our people that he retains the vigor and the depth of sincerity to convey to us once more what rests so deeply in his great heart and abundant soul.

Cold War in Fayette County

EXTENSION OF REMARKS

OF

HON. ADAM C. POWELL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, August 22, 1960

Mr. POWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

[From the Ebony magazine, September 1960]

COLD WAR IN FAYETTE COUNTY—A WHITE MINORITY USES HARSH ECONOMIC POWER IN DESPERATE ATTEMPT TO DRIVE OUT MILITANT NEGRO LEADERS

In Moscow, Tenn., and in nearby Somerville, the seat of Fayette County, men are divided by race, writs, and arithmetic.

A racial cold war has split the county into two warring factions. A white minority, backed against the wall by Federal court writs, is pitting its political know-how and economic power against the hungry hopes and dreams of the black majority. The battle revolves around a simple matter of arithmetic Negroes outnumber whites in Fayette County by a margin of about 7,000. There are 4,600 whites of voting age as compared to 8,990 Negroes. Fortified by the magic of numbers, Fayette County Negroes are pushing a relentless voter registration campaign. If it succeeds they will be in a position to elect black mayors and sheriffs.

In a frantic effort to forestall this possibility, whites have countered with an economic boycott and a crash farm mechanization campaign which they hope will drive out about 1,000 Negro ringleaders. The key instrument in this struggle is the registered voters list. A blacklist of all Negro registered voters has been circulated among merchants in the town by the White Citizens Council. Persons whose names appear on the list cannot buy gasoline for their farm machinery, food for their tables, or medicine for their children. Nor can they negotiate crop loans which are as necessary to the marginal southern farmer as seed.

This strange war, which has attracted national attention is fought out in grocery stores, in banks and at gas stations. Both sides are adamant. Says J. L. Howse, a white Somerville grocer: "We don't care what nobody else out there thinks. There's nobody can help us and nobody can hurt us." John McFerren, a grocer who leads the opposition, is equally firm. "I was born and raised in Fayette County. It was 18 years before I was taken into the army and before I even knowed I had a country, I came back here and made a home. I think it is as important for me to fight a war here as it was for me to go over there and fight. This war is just as important as World War II."

The little war in Fayette County is complicated by ominous facts. Both sides are determined. Both sides are led by proud, independent men who "do not intend to be pushed around." And both sides intend, as one man said, "to see the end."

The determination of the Negro citizens came through one day recently when the doors of the Chancery Court were thrown open for voter registration. Not many Negroes were expected. It was as clear as the Christian Cross on the Somerville water tower that any Negro who attempted to register would find himself in hot water. As a matter of fact, 24 hours before the registration began, the Memphis NAACP had found it necessary to truck in food and clothes for the beleaguered families of registered voters. Under these circumstances, the whites were understandably optimistic. But, at 7 a.m. on registration day, before the sun peeped over the water tower, little knots of Negroes began to gather in the courthouse square. Five hours later, at high noon, some 400 (a conservative estimate) stood quietly in a line that serpentined around one side of the courthouse.

It would be pleasant to report that they were registered. But that would not be true. Fayette County Negroes are opposed by formidable adversaries. At the end of the day, a reported 21 Negroes had been registered.

John McFerren, the grocer who heads the fight as chairman of the Fayette County Civic and Welfare League, does not underestimate the skill of the white leaders of the county. He says, however, that he will try, try again. He is confident that in America a majority will prevail.

"Three Fayette families," he says, "have been operating this county for the last 40 years. They are pressuring some of the other white men to do what they have to do. The whites know that Negroes are not trying to take over this county. But the high supreme ring, which has run this county for 40 years and is still running it, will be broken. The big men are killing the little man in this county, Negroes and whites. Oh, yes, the little white man is being taken, too. I think that when enough Negroes are registered, we've got enough liberal whites in this county to break the ring."

Dr. John W Morris, the largest landowner in the county, makes a different analysis of the situation. "Only about 400 or 500 out of the 15,000 niggers around here are stirred up," he said. "The rest deplore the situation. One man came to me and he said it was scandalous the things he was told in church. Scandalous, that's the word he used."

He sighed and shrugged his shoulders. "Niggers around here have always voted, a few anyways. Most of them just haven't been interested in politics. But an extra couple of hundred votes around here don't matter much, one way or the other. There hasn't been any boycott. This is a matter of credit being withdrawn from undesirable risks at a time when all credit must be tightened up. • • • Signing up to register

don't have anything to do with it, but it got some of us to thinking how maybe they weren't happy around here with things the way they were."

But W. B. Wigglestone, manager of the local bank, admits that there is a blacklist.

"Both my girls out there," he told a free-lance white reporter, "they have copies of it. The men on that list, I won't even talk to, unless they already owe us money and are coming in to pay it off."

NEGROES PLAN COUNTERATTACK

Will the cold war get hot?

This question troubles many men. John McFerren says frankly that he does not know. He points out that the Fayette County Civic and Welfare League is committed to a policy of nonviolence. "If any violence starts," he says, "the whites will start it first and the results—nobody knows."

Close observers of the Fayette scene believe the whites will avoid a violent incident. The white leaders, it is said, believe they can attain their objectives by economic means. Another deterrent in the situation is the fact that the FBI and other Federal agencies are watching the county. Still another deterrent is the fact that whites are outnumbered in a county where many Negroes own land and are prepared to protect themselves.

It seems, therefore, that economics will dominate the struggle which has been going on now for a year. It began, if social conflicts can be said to have a beginning, last August 1. Actually, the conflict had been building up for many years. McFerren says, "There had been no fairness and the way they handled problems in the courthouse I didn't go along with and also a lot of others didn't go along with."

The main problem, McFerren and others say, was law enforcement. Negro citizens, therefore, decided to take a hand in the election for sheriff held August 1, 1959. There were, at that time, about 600 Negro voters, most of whom were backing a liberal white farmer and storekeeper, L. T. Redfearn. On election day, Negroes were barred from the polls. Subsequently, a suit was filed under the Civil Rights Act.

Last April, a consent decree was entered in the Federal Court in Memphis.

The real fight began, with signals being called by the White Citizens Council which meets, reportedly, in the courthouse. At a meeting there last April, the blacklist was drawn up. A dozen Negro leaders were used as a basic list and others were added as they registered to vote. Redfearn says he was the first white man placed on the list. Now, it appears, there are at least a dozen white men being boycotted, along with about 400 Negroes.

"In this county," says Redfearn, "running for office means bucking candidates who have been hand picked by two or three big men. It's a kinfolk deal. Because I went against them, and because I would probably have got into the run-offs if the Negroes had been allowed to register and vote, they're down on me * * * Merchants in all parts of the county have turned down my business, either for cash or credit—men I've been doing business with for years. I couldn't get a tire fixed, I couldn't get my equipment repaired—finally I got the word and I just don't go into Somerville anymore * * * You can't expect a man to extend credit to everybody, but I don't see why a man won't honor the dollar."

Scott Charlie Franklin, who has been subjected to a similar boycott, is a grocer and president of the Fayette County League. He is being boycotted by gas dealers, soft drink distributors, candy salesmen and butchers in Fayette County, Shelby (Memphis) County, and northern Mississippi. Sitting in front of his little store, about 2 miles from the Mississippi border, he said: "Wouldn't a white who knows me look at me if he passed here. People who own stores who wouldn't sell me 10 cents worth, used to come to my place and drink beer for hours at a time, four or five pints, and laugh and talk, and now they won't even speak to me. Men who used to borrow my tractor parts and I would borrow theirs pass me on the street without looking at me."

The Negro in the South, he says, is facing a fight for survival. "There is not but one route of escape for the Negro in the South and that is to get together. Had Negroes in the South with money been thinking they wouldn't have choked us out. We would have had wholesale houses and gas outlets and we could have gone to them."

Franklin revealed that Fayette County Negroes are planning a counterattack. In about 90 days, he said, a counterboycott will be launched. This possibility is feared by Somerville merchants. That it would wreak disaster on the town's economy was admitted by Isaac P. Yancey, mayor and auto dealer.

We sell to both niggers and white folks," he said. "There are more niggers in this county than whites and we just have to do business with them or we aren't in business. What we're afraid of is some unscrupulous politician getting the majority group together and upsetting the welfare of our county—electing a nigger law-enforcement officer, for example."

True Magazine Article by Drew Pearson and Jack Anderson on U–2 Flight

EXTENSION OF REMARKS
OF
HON. FRANK KOWALSKI
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Monday, August 22, 1960

Mr. KOWALSKI. Mr. Speaker, the September issue of True magazine contains an article by Drew Pearson and Jack Anderson which is called "Inside Story of Pilot Powers and His Secret U–2 Spy Flight."

I hope that this article, which the magazine says is based on official Air Force documents and secret reports, will be widely read. I hope especially that it will receive the careful attention of the Members of Congress.

Aside from its revelations about the Powers flight and other U–2 flights, the True article makes a most significant statement on the relationship between the U–2 flights and the administration's defense budget.

Say Mr. Pearson and his associate:

The defense budget of the Eisenhower administration was based on these U–2 flights.

They claim that on the basis of aerial photographs taken on U–2 flights "the administration told Congress we were not too far behind Russia, could afford to cut the budget."

Mr. Speaker, this raises a most serious question. I trust it will be explored fully by the Congress.

Under unanimous consent I present the text of the True magazine article by Messrs. Pearson and Anderson on the U–2 flights:

[From True magazine, September 1960]

INSIDE STORY OF PILOT POWERS AND HIS SECRET U–2 SPY FLIGHT—OFFICIAL AIR FORCE DOCUMENTS AND SECRET REPORTS REVEAL FOR THE FIRST TIME THE TRUE FACTS BEHIND THE SPY-IN-THE-SKY MISSIONS

(By Drew Pearson and Jack Anderson)

All the world knows the broad outline of the U–2 story, the strangest spy story in history. Most of what has been written on it, however, is only intelligent speculation.

Now for the first time, based on official Air Force reports, can be told the inside story of the U–2 missions and how Francis Gary Powers came to be captured, thereby wrecking the most important international conference in this decade. The story is based on secret reports of the monitoring stations which tracked Powers' plane all the way up the backbone of Russia and listened to Russian conversations as they struck at him. From this, plus the tell-tale wreckage which the Russians put on display at Gorki Park, plus the secret instructions given Powers before he departed, intelligence experts have put together a remarkably detailed account of the fateful flight.

Powers left his home at Incirlik, Turkey, near Adana, on April 27 and landed at Peshawar, Pakistan, the famous British fortress city which guards the Khyber Pass to Afghanistan. In Peshawar he waited for good weather. Shortly after dawn on May 1, he filed a routine flight plan giving a course back to Incirlik, Turkey. As far as the Pakistan Government knew this was where he was going—but across his knees in the cockpit there was a startlingly different course.

Other spy planes had penetrated deep into Russia, one sneaking within a few miles of Moscow. But Powers was to be the first to cross the vast Soviet land mass from the Aral to the Barents Seas. His main checkpoints:

1. Tyura Tam, the great Soviet missile center in the desert east of the Aral Sea.
2. The Sverdlovsk rocket sites.
3. The Soviet air and submarine bases at Archangel and Murmansk.

His touchdown on friendly soil would be at Bodo, Norway.

It was known that a monster missile, twice the size of America's 107-foot Atlas, was poised on a launching pad at Tyura Tam. The Central Intelligence Agency desperately wanted photographs of the new missile. They suspected it might be used for a long-hinted May Day space spectacular.

Little did Powers guess that he himself would provide the spectacular, and that his secret mission would become the most publicized flight since Lindbergh flew the Atlantic.

Powers gunned the U-2. As it rushed down the runway, the outrigger wheels supporting the long, drooping wings dropped away. The graceful, glider-like plane climbed quickly, its wings flapping noticeably like those of a great black seagull gaining altitude. Above the ceiling of fighters and bombers, the U-2 soared. An aerodynamic dream, its thin, straight wings, bullet shape, and tall, razor tail made the U-2 a mistress of the skies. Even the rivets were sunk flush to reduce friction drag. At 65,000 feet, Powers leveled off and headed for the Russian border.

The weather on May Day was perfect, either for picnicking or U-2 spying. The sky over Russia had to be cloudless to give the cameras a clear view, and the upper atmosphere had to be dry so the plane would not form giveaway contrails. If the weather had not been ideal, Powers would not have made the May Day flight. Nor would any other flights across Russia have been attempted until President Eisenhower had completed his visit to Russia in mid-June. May 2 had been set as the beginning of a moratorium on

such aerial espionage, and for at least 6 weeks there would be no more.

Powers was not piloting the only U–2 in the air that day. Simultaneously, another U–2 had taken off from Incirlik to fly conspicuously along the Soviet border as a decoy. The pilot deliberately sent meaningless messages over his radio to attract attention and to lure Soviet radar and monitoring stations into following him while Powers slipped into Russia unnoticed. The decoy would continue over Pakistan, then return to Incirlik. The Pakistan authorities, who knew nothing of Powers' secret mission, would be notified that a U–2 had arrived and they would assume it was Powers.

It soon became clear, however, that the Russians had not been fooled by the decoy. American listening and watching stations picked up the frustrated comments of the Soviet defenders who had discovered Powers but were unable to do anything about him.

Soviet jets leaped and snarled at the spy plane which hovered high out of their reach. For a tantalizing moment one interceptor managed to reach the intruder's level. Our monitors could hear the Russian screaming like a banshee with the fury of his efforts. But the short wings could not hold the heavy machine in the thin air.

At the controls of the sleek, dark U–2, Ace Pilot Powers knew he was safe both from the Russian fighters swarming beneath, and from the vaunted Russian antiaircraft rockets peeping through white domes on the outskirts of Sverdlovsk below. His altimeter showed 70,000 feet and neither fighters nor rockets could hurt him at this altitude.

To those daring young men who flew the U–2's, a flight over Sverdlovsk was pretty much a milk run. They called the network of domed rocket launchers below the "House of David."

Powers checked his inertial guidance gear which permitted him to navigate without external radio aids, then swung the U–2's blunt nose toward Murmansk. Suddenly the faint murmur of his J–75 turbojet engine faded away. A glance at the r.p.m. indicator showed the engine was slowing. Anxiously he checked the tailpipe temperature. It was cooling rapidly. He knew his engine was dead. He also knew the only way to start it again would be to swoop deep into the heavier atmosphere where the Soviet fighters were still swarming.

Powers switched off the fuel to keep the engine from flooding, then snapped on his command radio, turned to the emergency "G" channel and barked tersely: "Flameout! Flameout!" These words were heard across the Turkish border 1,200 miles away where a handful of Americans were watching the drama helplessly on radar screens and listening by high-powered radio monitors.

First indication that the Russians were back on the attack came from an excited Russian voice: "He's turning left." Then: "He's coming lower!"

Powers spiraled down to 40,000 feet, then tilted the nose upward to drain the tailpipe and began flipping his air-start ignition switch in a desperate effort to ignite the flame. Nothing happened. At 37,000 feet the Soviet fighters caught up with him, formed a canopy over his head and began forcing him to the ground.

For years to come, arguments will rage around Powers. The spy's code is never to be taken alive, to do the utmost to destroy his equipment. If he is captured, then he must expect neither help nor recognition from his government.

Powers must have pondered all this in the split seconds before he bailed out. He must have pondered the reception awaiting him and whether to use the suicide needle in his escape kit. Grabbing the kit—containing a pistol, currency, gold coins, watches, rings, and that deadly needle—he bailed out.

Graceful to the last, the U–2 fluttered down, mothlike, to make its own belly landing. The air-speed indicator jarred stuck at 340 knots.

The experts aren't quite certain whether Powers tried to destroy his plane or not. Damage in the center section of the wreckage could have been caused by a small dynamite blast he set off. But the experts could tell from the state of the wreckage shown in Gorki Park that the U–2 made a belly landing with its engine dead. The turbine blades were bent backward; they would have been sheared off if the engine had been functioning at the time of the crash. The damage to the underside indicated the plane had scraped along the ground.

Should Powers have used the suicide needle as he floated down? Did he do everything possible to destroy his plane and the incriminating equipment? Should he have confessed so freely to the Russians? Although trained in the espionage trade, Powers was much more a pilot than a spy. His instruments were the real spies. His orders did not require him to commit suicide in the event of failure or imminent capture. The Russians tried his death needle on a dog which died in 30 seconds. But this means of quick death had been included in Powers' escape kit only to avoid torture.

As for keeping his lip buttoned, Powers' instructions in case of capture were to admit promptly what the Russians were bound to find out anyway. His superiors reasoned that sophisticated third-degree methods could force any prisoner into far more damaging statements than the simple truth.

There can be no argument about the need for espionage flights across the Iron Curtain. The Strategic Air Command had to be ready, should war break out, to blast key targets in the Soviet Union. But how could SAC locate the targets?

At first the only information available to SAC came from captured German aerial pictures taken during World War II. The face of Russia was changing rapidly, however. New cities, new industries, new military installations were springing up in the secret heartland. How could these be pinpointed?

All sorts of efforts were made before the high-flying U–2 was produced. The Air Force sent bombers, heavily loaded with cameras and electronic gear, around the rim of Russia to peer over the Communist transom. This began around 1949, despite President Truman's statement that no spy flights were undertaken in his administration. Of 17 shooting incidents along the Soviet border, most involved spy planes trying to photograph what lay across the border.

In addition B–47's and B–57's were sent on hit-and-run reconnaissance raids a few miles inside the border, usually over satellite countries. For these daring observation raids, the pilots were awarded secret medals.

Even camera-carrying balloons were tried. They were launched in Europe when the wind was favorable, to drift across Russia to the Pacific where they could be picked up. However, they came back with more film of Siberian scenery than of military installations. Eventually, the Russians spotted these silent, ghostly snoopers and raised such an international ruckus that the program was dropped.

The continued use of bombers eventually caused a new anxiety. They could be mistaken for hostile warplanes, perhaps carrying H-bombs, thus might trigger a war. To prevent this, the CIA went to Lockheed Aircraft in 1954 with a secret assignment. The cloak-and-dagger agency wanted a civilian plane which could not possibly be mistaken for a bomber but which could penetrate deep into Russia. It must be able to carry heavy electronic, infrared camera equipment at heights which would put it beyond the reach of interceptors or antiaircraft fire. Lockheed got busy. Within 1 year the remarkable U–2 was ready for its first test flights.

By 1956, Lockheed was operating 10 U–2's, ostensibly for the Nation's civilian space agency as gatherers of weather information. Actually the pilots got their orders from the CIA. The space agency received its weather data all right. But this was merely a by-product. The real product was vital pictures from deep in Russia which were sent direct to CIA.

For the first penetration of Soviet territory, trusted foreign pilots were used in case the flights should fail. Reason: if a foreign pilot were forced down in an unmarked plane, it would be difficult to pin the deed upon the United States. But the loyalty program in Congress demanded clean-cut, all-American boys who could pass a rigid security clearance and be able to swear that their grandparents were born in this country.

Lockheed set up a pilot training unit supposedly for high altitude weather research. But the handpicked pilots were given rigorous training in the techniques of modern espionage. Lockheed executives made it a point never to ask questions about the daredevil young men in their school. It was run by close-lipped Clarence "Kelly" Johnson, the company's vice president in charge of advanced development projects.

Not since the first U–2 spread its wings over Russia have the CIA chiefs had any reason to underestimate the risks involved. Any single engine plane flying in lofty loneliness above 65,000 feet is hazard with wings. Flight conditions in the thin air at that altitude are less than ideal. The U–2's special kerosene fuel, refined for high altitude cruising, is particularly difficult to reignite in case of flameout.

Emergencies downed at least four U–2s before Powers finally was forced down in the wrong place at the wrong time. As early as February 1956, a U–2 crashed in Arizona after fire broke out in the cockpit. Pilot Robert J. Everett, like Powers officially on Lockheed's payroll, bailed out at 30,000 feet. Seven months later, another U–2 hit the dirt near Kaiserslautern, West Germany. The pilot, Howard Carey, was also a Lockheed man. The following April, another U–2 crashed in a desolate corner of northwestern Nevada, killing the Lockheed pilot, Robert L. Sieker.

Then on September 24, 1959, a U–2 based at Atsugi, near Tokyo, drifted down for an emergency belly landing at Fugisawa airstrip. As a rescue team rushed to his aid, the pilot remained in his cockpit. Not until a U.S. helicopter disgorged a squad of Americans in civilian clothes did the pilot pull back his canopy and shout, "I'm okay." Curious Japanese noted that the blue-black plane bore no markings; neither did the pilot's flight suit, though he carried a revolver on his hip. The rescue squad drew pistols to keep the Japanese back, which aroused even more curiosity.

Since the flights began in early 1956, U–2s are known to have operated out of Alaska, Japan, Okinawa, the Philippines, England, Germany, Turkey and Pakistan. One of the first U–2 flights over Russia penetrated as far as Kiev, 200 miles inside the Soviet Union, during the first week of July, 1956. Russian defenders spotted the plane but could not knock it down. Their antiaircraft rockets fell short at 60,000 feet—which in itself was valuable information. The Soviet fighters could not hang on at the U–2's cruising level.

Thereafter, U–2 overflights became increasingly frequent until they were going into Russia about once a month. Most U–2s sneaked in and out without detection. One got within 70 miles of Moscow to photograph defense installations at Kolomna.

Before Powers' fateful flight, there had been at least two missions aimed at Sverdlovsk. The first went only half way, then turned back because the clouds made photography difficult. The second

soared all the way to the "House of David" at 65,000 feet and came back at 70,000 feet—completely unseen. The last penetration before the Powers mission was on April 9. The spy plane flew over the Tyura Tam missile center, then hurried back with important photographs. This flight was picked up by frustrated Russian defenders, who were all set for Powers when he showed up on May 1.

Word has leaked out that the Russians, now aware of the full extent of U–2 espionage, are desperately transplanting their missile sites in the greatest military switch since they moved whole industries behind the Urals in World War II.

They are even putting missiles on trains so they will no longer be stationary targets for American bombers. Knowing that we have pictures of their most important installations the Kremlin is making sure, as swiftly as possible, that those photos will be out of date.

With the U–2 now grounded for all flights over Russia, how will the Pentagon keep track of this movement of men, rockets and materiel? This is the most difficult problem facing both our military planners and the airmen who remain on the alert 24 hours a day ready to pilot medium and heavy bombers loaded with nuclear bombs to key targets in the heart of Russia. But with those targets now switched, and with no new photos to show where they have been moved, the 24-hour alert becomes ineffective, eventually almost futile.

Furthermore, the defense budget of the the Eisenhower administration was based on these U–2 flights. The photos showed that Russia had not gone all-out to produce the first generation ICBM in large numbers. The photos showed Russia putting great effort into the second-generation solid-fuel missile similar to our Minuteman, and having developed a liquid-fueled cluster of rockets (similar to our unlaunched Saturn) which has been able to send their giant spaceships into orbit. It was on the basis of these photos that the administration told Congress we were not too far behind Russia, could afford to cut the budget. Now we are not sure where we are. The U–2 photos are out of date.

One day, Samos, the reconnaissance satellite, will circle the earth and send back pictures. But Samos is at least 3 years away. The TV views sent back from Tiros, the experimental weather satellites, are not good enough for military reconnaissance. They were vague and fuzzy. As a stop-gap measure, perhaps cameras can be loaded aboard earlier satellites, and perhaps the films can be dropped back to earth.

Whatever the solution, the age of satellite spying will come. But will it come soon enough? The hope is that it will arrive before the U–2 pictures of Russia are too far out of date. Otherwise, and even worse tragedy may result from our May Day disaster.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided,* That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p.m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p.m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided,* That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided,* That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further,* That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided,* That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

Only the Strong Can Be Free

EXTENSION OF REMARKS
OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 23, 1960

Mr. McCORMACK. Mr. Speaker, on August 8, 9, and 10 the Association of the U.S. Army held its annual meeting here in the city of Washington. At the conclusion of this meeting the association adopted a set of resolutions which constitute a concise and lucid statement of the views of this patriotic organization. I commend these resolutions to the attention of my colleagues as a thought-provoking view of many of the problems which confront our Nation today in the field of national defense.

Under unanimous consent I insert the article in the Appendix of the RECORD:

ONLY THE STRONG CAN BE FREE—RESOLUTIONS, 1960 ANNUAL MEETING, ASSOCIATION OF THE U.S. ARMY, AUGUST 10, 1960

In his message to the Congress on August 8, 1960, President Eisenhower reported "an intensification of Communist truculence." Our response to this, he said, must be vigilance. "Continuing strength, military, economic, spiritual, must remain our reliance. Our basic objective—to secure a permanent peace—is yet to be won."

This continuing danger is of real and vital interest to the Association of the U.S. Army. It is the reason for existence of the association at this time in our national history. To put the events of these times and AUSA's part in them into perspective a review of the cataclysmic events of this century is in order.

The first half of this century was a time of great global wars and revolutions which saw the overthrow of powerful autocracies and the breakup of world-girdling empires built on colonialism.

Submerged races and peoples have risen out of the wreckage to form new nations that are strong in numbers, in undeveloped resources and, most importantly in aspirations and pride.

Out of the carnage of war and revolution has arisen a counterrevolutionary force: the Communist empires of Soviet Russia and Red China. Fervently committed to the overthrow of the rest of the world, these aggressive, ruthless dictatorships have thrown into the effort all of their considerable and growing resources.

Also in this century man has made great scientific advances which have immense peaceful potentialities. Unfortunately these same advances have made possible weapons that evil men could use to destroy the world.

THE RESPONSIBILITIES OF LEADERSHIP

The leadership of the nations opposed to Communist tyranny has been thrust upon the United States. In its strength and in love of freedom the United States has never sought to aggrandize its position at the expense of other peoples.

This leadership is a challenge of utmost magnitude.

To meet it the people of the United States must demonstrate that a free people is able to maintain its freedom while harnessing its great energies and diverse talents in unflagging opposition to tyranny.

Of all the immense responsibilities thrust upon us none is more critical than the obligation to provide for the common defense with armies, navies and air forces capable, with the help of allies, of deterring Communist military aggression.

THE MILITARY PROBLEMS OF THE UNITED STATES

We of the Association of the United States Army hold that the security of the United States and the nations allied with us is fundamental.

We believe that this security is attainable. We can afford it.

The strategy of deterrence and containment through forward deployed forces is essential to free world security, but this strategy does not provide for retaliation if the deterrent fails. In such a case we must be prepared to carry the war to the enemy after the first nuclear strikes and to bring the war to a rapid and successful conclusion.

The 1960's may be the decade of decision in this century of revolution and war. Premier Khrushchev continually indicates his belief that the Soviet Union is militarily superior to the United States and that he can, through threats of annihilation, have his way. If he believes the Communist nations are able to defeat the free nations in war, the chances of war are markedly increased.

We must disabuse him of his idea. Militant communism will be deterred only if it has the certain knowledge that against a strong America it cannot win.

So we must be strong for only the strong can be free.

If we are to leave this planet a place on which our children can work out their own destinies freely, we must be willing to meet the challenges of this fateful century with the same courage, sacrifice, and patriotic belief as those who gave us our way of life.

The Association reaffirms its support of the programs adopted at the preceding annual meetings:

To urge the adoption of career incentives for officers and enlisted personnel to increase the effectiveness of the Army, and to improve the morale and esprit of the members of the Army and their families. These include such matters as: adequate family housing, medical and dental care for dependents, and adequate retired pay;

To continue efforts to increase the number and quality of young men applying for appointment to the U.S. Military Academy;

To proceed with the U.S. Army's memorial at its birthplace in Independence Hall in Philadelphia.

(The Association further pledges itself to continue to work for the best interests of the Army and the Nation. To guide our endeavors we have adopted the following resolutions.)

No. 1. ARMY MANPOWER

Whereas with the continuing threat to the security of the United States and to peace within the free world, it is essential that the United States maintain Army forces in numbers sufficient to provide a deterrent force and to serve as a base for timely mobilization; and

Whereas there can be no reliable assurance that present Army forces as vital elements of a total defense program are sufficient in number to provide an effective deterrent to aggression; and

Whereas such present Army forces would afford an obviously inadequate basis for prompt mobilization to resist an actual attack and thereupon to prosecute any resulting war to a successful conclusion: Now, therefore, be it

Resolved, That the Association of the U.S. Army advocates:

1. An active U.S. Army of not less than 1 million men; and

2. A U.S. Army Reserve of a paid drill strength of not less than 300,000, exclusive of 6-month trainees; and

3. An Army National Guard of a paid drill strength of not less than 400,000, exclusive of 6-month trainees.

No. 2. MODERNIZATION OF THE ARMY

Whereas a high percentage of the weapons and equipment currently in use by the Army is still of World War II design; and

Whereas through technological advances in the intervening years great strides have been made in the development of new and improved weapons and equipment designed to afford the possessor a position of tactical superiority with reduced losses in men; and

Whereas except as such new weapons and equipment are produced and procured by the U.S. Army, the enemy—and not the United States—will have this advantage: Now, therefore, be it

Resolved, That the Association of the U.S. Army advocates that the U.S. Army be immediately modernized by replacing all present obsolete and obsolescent weapons and equipment with new weapons and equipment of the latest design for purposes of immediate training and use, and that there be promptly procured and stockpiled sufficient quantities of such new weapons and equipment to assure U.S. ground forces superiority over any foreseeable enemy.

No. 3. AIRLIFT

Whereas recent public disclosures have demonstrated that the U.S. Army is not assured an airlift which is vital for the movement and initial support of the Army's strategic and tactical forces and for logistical requirements of the Army; and

Whereas any failure to correct this critical shortage by providing an assured availability of such airlift on a committed basis and with modern aircraft and equipment will preclude effective strategic training and could have a crippling effect on U.S. Army operations in the event of national emergency: Now, therefore, be it

Resolved, That the Association of the U.S. Army advocates that there be provided for immediate and assured availability to the U.S. Army sufficient airlift utilizing modern aircraft preallocated on a top priority basis to enable the Army to accomplish its assigned national defense mission.

No. 4. REMOVAL OF COMBAT LIMITATIONS

Whereas the advisability of the removal or modification of existing weight limitations on Army aircraft and limitations on the range and employment of missile systems by Army field commanders has been the subject

of detailed study and consideration within the Department of Defense; and

Whereas there has not yet evolved a definitive program which, giving due weight to all of the factors necessarily to be evaluated, permits full utilization of the Army's mobility and other capabilities in support of the Army's mission in national defense: Now, therefore, be it

Resolved, That the Association of the U.S. Army continues to advocate that the Army be immediately freed of existing weight limitations on Army aircraft and limitations on the range and employment of missile systems.

No. 5. Defense Against Ballistic Missiles

Whereas the threat of ballistic missile attack against continental United States is becoming increasingly a reality; and

Whereas the retaliatory power of our military strength could be in jeopardy in the event of such an attack; and

Whereas the loss of lives and destruction to the American economy that might result from such an attack could be tragically enormous; and

Whereas the development of an active defense system has reached an advanced stage in the form of the Nike-Zeus which is this country's only antimissile defense development now in the hardware stage; and

Whereas the production problems of such a defense system are of such magnitude and complexity that they involve long leadtime factors demanding an immediate initiation of production, but which initiation has continually been delayed pending proof of the design and development effort, thus delaying an effective deployment date: Now, therefore, be it

Resolved, That the Association of the U.S. Army urgently recommends that the development, production, and deployment of the Nike-Zeus antimissile missile system be placed on a national crash basis, and that production and procurement be immediately authorized even though the demonstration of the development results is not fully completed.

No. 6. A Vigorous Army ROTC Program

Whereas the Regular Army, the Army National Guard, and the Army Reserve depend on the ROTC program as a principal source of commissioned officers in both war and peace and as a broad mobilization base in event of war expansion; and

Whereas the ROTC program is vital to the continuing availability of high-caliber officers to meet the qualitative and quantitative leadership requirements of the Army; and

Whereas the training under the ROTC program in high schools and universities is essential to national defense, and also contributes to our national welfare and to the development of leadership, citizenship, and patriotism in young men; and

Whereas the continuing effectiveness and value of the ROTC program requires that it keep apace of the growing population and consequent economic burdens of our educational institutions: Now, therefore, be it

Resolved, That the Association of the U.S. Army recommends that the ROTC program be sustained and strengthened by the continuance of mandatory ROTC training in those institutions currently required to do so, and further by providing adequate Federal assistance for all Army ROTC programs.

No. 7. Mutual Security and Military Assistance Programs

Whereas national security in this era is necessarily dependent in substantial part on the strength of our allies; and

Whereas the mutual security and military assistance programs are vital factors in increasing the strength of our allies, and thus of our own position; and

Whereas the mutual security and military assistance programs are, in effect, our frontline in defense of our freedoms and way of life: Now, therefore, be it

Resolved, That the Association of the U.S. Army fully supports the objectives of the mutual security and military assistance programs, and urges that these programs be sustained with the funds required for adequate support.

No. 8. Coordination of Military and Civil Defense

Whereas the potential aggressor has the capability of launching a devastating missile attack agains the United States; and

Whereas the military forces will operate within the same environment as the civil defense forces and will rely on the civil defense forces, the civilian population, and civilian productive capacities for sustaining military operations; and

Whereas the essential interdependence of civil and military defense requires advance planning and an understanding that military participation in recovery from nuclear attack must not interfere with the combat missions of the Armed Forces: Now, therefore, be it

Resolved, That the Department of Defense and the Office of Civil Defense Mobilization encourage local civil defense authorities and local military authorities to confer and plan together the form of mutual assistance which may be required in the event of attack.

No. 9. Protection Against Chemical and Biological Warfare

Whereas major emphasis on nuclear weapons has overshadowed great military advancements in the development of chemical and biological weapons; and

Whereas chemical and biological weapons can bring about physical and mental incapacitation without necessarily causing death, but possibly causing widespread panic: Now, therefore, be it

Resolved, That the Association of the U.S. Army do all in its power to make the people of the United States aware of the necessity for and unique characteristics of chemical and biological weapons so that they and our forces may be better prepared to protect and defend themselves in the event these chemical and biological weapons are used against us.

No. 10. One Army

Whereas the one-Army conference called by the Secretary of the Army in October 1959 developed objectives for increasing the peacetime spirit of cooperation and coordination among the Active Army, the Army National Guard, and the Army Reserve; and

Whereas a comprehensive and intensive program in support of one-Army objectives has contributed to higher esprit and closer undertsanding among the three components of the U.S. Army; and

Whereas tactical exercises conducted to include the three components have been a means of increasing the integration of these components into a single battle team and in consequence the one-Army program has been instrumental in substantially increasing the combat readiness of the whole U.S. Army: Now, therefore, be it

Resolved, That the Association of the U.S. Army continue to support in every possible way the objectives of the one-Army program and commends the Active Army, the Army National Guard, and the Army Reserve for their significant achievements under the one-Army program.

No. 11. Peaceful Contributions of the Armed Forces of the United States

Whereas the peaceful contributions of the Armed Forces of the United States are seldom heralded or appreciated, the Association of the U.S. Army calls especially to the attention of the American people these contributions of the Armed Forces of the United States during the past 12 months:

The prompt rendering of aid to the earthquake victims of Chile by the Army, Navy, and Air Force, and especially the work of the Army's Medical Corps and Corps of Engineers in carrying out vital missions of mercy with efficiency and dedication;

The contribution to peace of the Armed Forces of the United States and other nations in transporting troops, supplies, and equipment to the Congo in the service of the United Nations;

The continuing contributions of the Armed Forces to the peaceful exploration of space, and especially the smoothness and efficiency with which the Army transferred, in the national good, the unsurpassed team of space scientists and engineers of the Army Ballistic Missile Agency to the National Aeronautics and Space Agency: Now, therefore, be it

Resolved, That the Association of the U.S. Army commends the armed services of the United States for their contributions to the peaceful progress of the world during the past year and directs that copies of this resolution be presented to the President, the Secretary of Defense, and the Secretaries of the Army, Navy, and Air Force.

No. 12. Political Party Platforms

Whereas the Democratic and Republican Parties in their platforms recognized that national defense forces to preserve our national security are the first charge upon our Nation's resources; and

Whereas these party planks call for mobile forces and weapons of sufficient strength "to deter both limited and general aggression" and "to deter or check local aggressions and 'brush fire wars' ": Now, therefore, be it

Resolved, That the Association of the U.S. Army calls upon both political parties to help develop the Army strength in manpower, mobility, and modernization to carry out the full sense of their party platforms.

No. 13. Commendation of Secretary Brucker

Whereas the Honorable Wilber M. Brucker has given over 5 years of dedicated service to his country as Secretary of the Army; and

Whereas he has shown calm wisdom, understanding statesmanship, and indefatigable energy in meeting the many problems that have confronted him in performing the duties of this high position of responsibility; and

Whereas he has fought unceasingly that the real role of the Army in our national defense program be properly recognized, and

Whereas we the members of the Association of the U.S. Army, in convention assembled in Washington, D.C., this 10th day of August, 1960, wish to take note of the contributions made by him to our country's welfare, both as Secretary of the Army and otherwise: Now, therefore, be it

Resolved, That we convey to the Honorable Wilber M. Brucker our sincere thanks, and as a token of our high esteem make this resolution a part of our permanent record and forward a copy of it to him.

No. 14. Pershing Centennial

Whereas September 13 of this year will be the 100th anniversary of the birth of Gen. John J. Pershing; and

Whereas General Pershing earned the esteem of past, present, and future generations of American citizens through his devoted service to his country over a period of 66 years, during which time he repeatedly demonstrated that he was equal to the formidable tasks which confronted him; and

Whereas General Pershing was tendered the rank of General of the Armies—the only officer of this country to hold that designa-

tion—reflecting the highest honor on his lifelong service; and

Whereas by joint resolution approved June 1, 1960, the Congress of the United States requested the President to proclaim September 13, 1960, as a day on which Americans should pay respect to the memory of General Pershing and the men who served under him; and

Whereas the President of the United States issued such a proclamation on June 3, 1960: Now, therefore, be it

Resolved, That the Association of the U.S. Army supports the observance of a day commemorating the birth of this gallant soldier and does enjoin its members to give their enthusiastic support to local ceremonies and observances of General of the Armies John J. Pershing Day on September 13, 1960.

No. 15. ENLISTED RETIRED PAY

Whereas retirement pay for enlisted personnel is now computed on the basis of Federal active duty only; and

Whereas retirement pay for commissioned officers is computed on the basis of total years of service including both active and inactive duty; and

Whereas legislation has been introduced which would give enlisted men retirement credit for service on the same basis as commissioned officers: Now, therefore, be it

Resolved, That the Association of the U.S. Army urges the equalization of the method of computation of retirement pay between enlisted and commissioned personnel of the U.S. Army.

No. 16. EQUALIZATION OF RETIRED PAY

Whereas prior to the enactment of Public Law 85–422 of May 20, 1958, retired personnel of the Armed Forces received pay based on rates in direct relationship to active duty pay; and

Whereas Public Law 85–422 provided for an increase in pay rates for active duty personnel, and for personnel retiring subsequent to passage of the law, but not similarly applicable to personnel retired prior to passage of the law; and

Whereas the President of the United States, the Bureau of the Budget and the Department of Defense have recognized this inequity and recommended that legislation be enacted to correct it; and

Whereas this legislation would be of significant value in terms of increasing the morale, efficiency, and effectiveness of our active duty career personnel as well as avoiding discrimination against retired personnel who have served their country faithfully and well: Now, therefore, be it

Resolved, That the Association of the U.S. Army continues to urge the reestablishment of the traditional relationship between active pay and retired pay.

American Investments Overseas

EXTENSION OF REMARKS

OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Tuesday, August 23, 1960

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement delivered to the Republican National Convention Platform Committee by Maj. Gen. Julius Klein, of Chicago, Ill., a distinguished citizen, who served as delegate at large at the Republican National Convention in Chicago last month.

The subject of General Klein's statement was the vital importance of Government action to protect and encourage private investment abroad. I believe this statement, which was proposed as a policy position in the Republican Party platform, reflects a widespread conviction on the part of our citizenry that the Government must take action without further delay to insure that investments by American business overseas are protected against expropriation by dictators of the Nasser-Castro stripe.

Unfortunately, however, 15 years after the end of World War II, the United States continues to freeze the assets of foreign countries which, although they were enemies at that time, are now among our stanchest free world allies in the present cold war. How can there be mutual understanding between us and them when we continue to refuse to return to them assets which are theirs?

Mr. President, General Klein's statement warrants the attention of my distinguished colleagues in the Congress.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT TO THE PLATFORM COMMITTEE ON MEASURES TO SAFEGUARD PRIVATE PROPERTY RIGHTS IN FOREIGN COUNTRIES, BY MAJ. GEN. JULIUS KLEIN (RETIRED), DELEGATE FROM ILLINOIS TO THE REPUBLICAN NATIONAL CONVENTION

Ladies and gentlemen, my name is Julius Klein. I am a member of the Illinois delegation to this convention. In addition to service in two World Wars, I have had the privilege of serving committees of the U.S. Senate on European study missions relating to our country's military and economic policies abroad.

I am preparing as a founder and member of the Council for Private International Development, an organization that has concerned itself with the formulation of proposals for assuring the safety of private foreign investment. The council has been in communication on this matter with the distinguished chairman of the platform committee, Mr. Charles H. Percy. Gen. Kenneth Buchanan, military secretary for Gen. George C. Marshall during World War II, is secretary of the council and in that capacity forwarded a resolution on this subject to Mr. Percy. The council recommends that this resolution be included in the platform of the Republican National Convention.

I have given careful study to this expression and I fully endorse its objectives. It has been apparent for some time now that private American foreign investment has a crucial role to play in our Government's efforts to match and outstrip the Soviets in the economic challenge they have hurled at us. The basic character of this challenge is a contest between the principles of free economic enterprise and the Marxist doctrine of State-owned and controlled economies. The relationship between how a country conducts its economic life and how it orients its political philosophies is abundantly clear. To win acceptance among the less developed and newly emerging nations of the world of our concepts of private enterprise is to meet and overcome the challenge the Soviets have posed. And to achieve this goal, it is vital that we give practical meaning and worth to President Eisenhower's repeated call for a restoration of the rule of law in relations among the peoples of the world.

There is ample evidence to show that private capital can play an enormously effective role in our country's aid programs to countries in need of capital imports. Unfortunately, there is an equal weight of evidence to demonstrate why American investors hesitate to undertake such commitments. Nasser's grab of the Suez Canal and Castro's expropriations of American- and European-owned enterprises in Cuba are but two of the most recent explanations for the hesitation of venture capital to undertake new risks.

There is a background to this. And, unhappily, our own Government's policies in the past have provided an example we did not foresee.

In its efforts to advance the principle of sanctity of private property throughout the free world, the Council for Private International Development has been confronted with the question: "If the United States is opposed to illegal seizure of private property, why does it still retain properties taken from German and Japanese private citizens and firms during World War II?"

I should like to emphasize that settlement of the war assets problem is not an objective of the council. But the problem does exist and it serves to negate principles we have been urging on others. Nasser in Egypt and Castro in Cuba have taken their cue from this contradiction and have used it to justify their own acts. They have even gone so far as to contend that they have exercised much more moderation than we have in that they have promised restitution in some form while they argue that we have promised none.

They are wrong, of course. The United States has promised restitution on an equitable basis. That pledge was contained in a statement made by President Eisenhower on July 31, 1957. A copy of the President's statement is attached. Unfortunately, no concrete action followed the President's assurance. Executive departments have made halting attempts to carry out the President's wishes and the issue has been a subject of seemingly endless debate in the legislative branch. But the efforts of both branches have been nonproductive until now.

I strongly believe in the adoption by the nations of the free world of adequate measures to provide protection for private foreign investments. The gravity of this problem is underscored by the recent action of the National Foreign Trade Council. This highly reputable and responsible organization has taken sufficient note of the peril to private foreign investment to establish for the first time in its history a special committee to deal exclusively with this subject. It can be expected that in due course the Foreign Trade Council will urge a variety of measures to assure adequate safeguards for private investment rights. I believe our party would serve the Nation well, by showing its awareness of the problem now, so demonstrating the leadership that the country and the world has come to expect of us.

It seems to me imperative for the United States to take the lead in adopting an effective system of international security for private property rights. This is especially justified at a time when we are calling upon our western allies to contribute to the aid programs necessary to assist in raising living standards among less developed nations whose political destinies are still in the making.

It must be admitted that there is a need to resolve the contradiction posed by our present policy with respect to the vested German and Japanese assets. Germany and Japan are two of the nations upon whom we have called to join us in expanding the free world's aid to new and economically weak nations. It seems to me that they are entitled to know from us whether we are prepared to accord those of their nationals whose property is still held here the same degree of justice we ask for our own private investors abroad. I believe we must face up to the issue of the vested assets and re-

solve it at the earliest moment. I would consider this to be an indispensable prelude to a vigorous program under which we would take the lead in mobilizing the economic resources of the free world to meet and overcome the challenge thrown to us by Mr. Khrushchev.

THE WHITE HOUSE,
July 31, 1957.

For some time the administration has been deeply concerned over the unresolved problems relating to the vesting, the liquidation, and the disposition of enemy assets seized as a result of World War II.

The problem of German vested assets and of the claims of American nationals against Germany arising out of World War II has ben a longstanding source of controversy. An increase since June of 1955 in the amount of funds available and, which it is expected will be realized from the liquidation of vested assets, should facilitate an equitable and final solution of these problems.

Consequently, in order to reflect the historic American policy of maintaining the sanctity of private property even in wartime, the administration intends as a matter of priority to submit to the Congress, early in the coming session, a supplementary plan.

It is contemplated that this plan would provide for the payment in full of all legitimate war claims of Americans against Germany and would permit, as an act of grace, an equitable monetary return to former owners of vested assets. Subject to the applicable provisions of law, the present program of liquidating vested assets will be completed at the earliest possible time.

It is hoped that it will also be possible to work out a final solution of the Japanese vested assets problem for presentation to the next session of Congress.

Ease Tax Burden of Sergeant York

EXTENSION OF REMARKS
OF
HON. J. CARLTON LOSER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 23, 1960

Mr. LOSER. Mr. Speaker, under leave to extend my remarks in the RECORD, I am including a letter Mr. Ira J. Looney, 145 Haverford, Nashville, Tenn., wrote the editor of the Nashville Tennessean, concerning the tax burden of Sgt. Alvin C. York, one of America's heroes in World War I.

Sergeant York, according to the Government, owes $85,000 in back taxes, which he is unable to pay. He is now confined to a wheel chair.

To the people of Tennessee it is unthinkable that this great country of ours would let this man, who has been a symbol of courage for so many years, spend the remainder of his life with this indebtedness hanging over his head. Mr. Looney's leter expresses the sentiments of the people of our State, and I hope all of you will read it. The letter follows:

EASE TAX BURDEN OF SERGEANT YORK

To the EDITOR:

One would think, looking down into the melodiously named "Valley of the Three Forks of the Wolf" that it had never known care. One would think, as they crossed the three forks of the Wolf River, before it settled into one deep and gentle stream, that here people were born, reared, and died without ever a ripple being cast on the sea of the vast reaches of the earth about it.

But this was not to be the lot of this valley nestling in the high hills of Tennessee.

Once here a boy had pushed his way through overhanging willows to fish; climbed the hills to hunt.

This boy, when faced with a great problem, climbed the highest hill, looked at his valley, and prayed. Here, the boy became the man. This youth had been an objector to violence, yet World War I had come and his country called.

This youth, once his duty called, became a mighty fury. General Pershing declared him to be America's greatest hero. I as a child faintly remember seeing this great man when he returned to the hoarse cheers of thousands. He was modest, even shy.

Recently I made a pilgrimage to his valley. Nearby rolls his beloved Wolf River, but this great Congressional Medal of Honor winner can neither paint the house nor wet a fishing line. He is confined to a wheelchair.

I did not intrude on "the Sergeant" as he is known by his neighbors, but I stood before his modest home. Not a shack, to be sure, but a house that should have been painted last year, or, perhaps, 2 or 3 years ago.

In some manner Alvin York accumulated an income indebtedness of $85,000. One look at the modest circumstances of this hero and the austere life he has always led leads me to conclude "the Sergeant" never had such funds. If he did, it is gone. His greatest vice was philanthropy, so far as I can learn.

Be that as it may, many people such as Joe Louis were given waivers by the Government.

Before this great hero goes from this valley, let our Government ease York's mind by waiver of his taxes. At $500 per prisoner York captured, the debt is ours, not his.

IRA J. LOONEY.

NASHVILLE.

Death of Leon Swirbul

EXTENSION OF REMARKS
OF
HON. GEORGE A. SMATHERS
OF FLORIDA
IN THE SENATE OF THE UNITED STATES
Tuesday, August 23, 1960

Mr. SMATHERS. Mr. President, on Tuesday, June 28, 1960, just a few days before the 2d session of the 86th Congress was recessed, America and American industry lost a great leader, a patriot, a dedicated citizen and a beloved ex-U.S. Marine. I speak of Leon A. Swirbul, the late president of Grumman Aircraft Engineering Corp. at Bethpage, Long Island, N.Y. I first became aware of Grumman production methods and air combat equipment while serving with the Marine Corps in the South Pacific during World War II. The Grumman-made Navy Wildcats, F-4F; Hellcats, F-5F; and Avengers, TBF, earned a glorious place in Navy and Marine Corps battle history in those grim days. Later, in 1951, I became acquainted with Jake Swirbul when his company established a branch operation at Stuart, Fla. I am sure that all of us who knew Jake Swirbul extend our deepest sympathy to his family.

At this time I ask unanimous consent to have printed in the Appendix of the RECORD the New York Times report of June 30, 1960, on the passing of this great Marine veteran and builder of American fighting power. Undoubtedly, he has made a great contribution to the defense structure of the United States and the free world.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LEON SWIRBUL, 62, OF GRUMMAN DIES—CO-FOUNDER OF THE AIRCRAFT CONCERN, WAS ITS PRESIDENT—SPURRED OUTPUT IN WAR

Leon A. Swirbul, president of the Grumman Aircraft Engineering Corp., of Bethpage, Long Island, died Tuesday night in Memorial Hospital. He was 62 years old and lived in Brookville, Long Island.

He helped to found Grumman in 1929 along with Leroy R. Grumman, for whom the organization is named; William T. Schwendler and several others.

With Mr. Grumman he shared the companys' top posts through its three decades of growth. Mr. Swirbul was vice president and general manager from 1929 to 1946, when he succeeded Mr. Grumman as president—the latter retaining his position as chairman of the board.

While Mr. Swirbul assumed chief responsibility over the years for production and employee relations, Mr. Grumman oversaw design, engineering, and financial aspects of the operation.

Production records set by the Grumman plant during World War II were attributed in large measure to programs and policies laid down by Mr. Swirbul. By V–J Day the company had turned out more than 17,000 planes for the Armed Forces.

His production methods called for a simplified design with a minimum of changes and redtape. Part of his formula was high employee morale. He established one of the industry's first incentive bonus plans based on production rates. He instituted, during the war, an employee service for repairing workers' automobiles and running household errands to combat absenteeism.

COMPANY WON NAVY E

The Grumman company won in 1942 the industry's first Navy E for excellence in war production. In March 1945 the company turned out an industry record of 664 planes in 1 month. Former President Harry S. Truman awarded Messrs. Grumman and Swirbul in 1946 the Presidential Medal for Merit for the plant's war performance.

Much of Grumman's war output was Navy F–4F Wildcat and F–6F Hellcat fighters and Navy TBF Avenger torpedo bombers, planes that figured prominently in Pacific air battles.

One day a Navy official rushed to the Grumman plant to tell the company to expand for Hellcat production.

"We are," announced Mr. Swirbul, pulling a sheaf of blueprints from his desk. When the officer said he would place a rush priority for building steel, Mr. Swirbul replied he already had steel—obtained from the razed Second Avenue elevated structure.

Gregarious, Mr. Swirbul maintained an informal approach to employe relation. His door was open to an employe with a complaint. To Grumman workers—numbering as many as 25,000 in World War II—he preferred to be known as "Jake."

One of his beliefs was that a happy worker was an efficient one. He built baseball fields at his plants, and encouraged employe participation in bowling and basketball as well.

Mr. Swirbul was born in Brooklyn and spent his boyhood in Sag Harbor, Long Island. He studied engineering at Cornell

University, earning money at a small aircraft plant near Ithaca. In 1917 he left college to join the Marines. Subsequently he became an inspector of Army aircraft.

JOINED LOENING AFTER WAR

Shortly after the war he joined the Loening Aeronautical Engineering Corp. in this city, eventually becoming works manager. Mr. Grumman, a former Navy flier, was general manager. Mr. Schwendler was a designer. When the Loening company was merged with another corporation, the three left to form their own organization.

They set up shop in a garage in Baldwin, Long Island, repairing sportsmen's planes and building truck bodies. In 1930 they obtained their first contract from the Navy—for aluminum floats for amphibian planes.

In 1931, in new quarters in Valley Stream, Long Island, they began work on an experimental Navy fighter—the XFF-1. Twenty-seven were ordered. Shortly afterward the plant was moved to its present site at Bethpage. It is now engaged in production of Navy jet fighters and trainers, antisubmarine warfare craft and guided missiles, among others.

Mr. Swirbul leaves his wife, the former Estelle Stephens, and two sons by a previous marriage, Phillip of Bay Shore, Long Island, and William A. Swirbul of Landsdale, Pa.

For Us To Remember

EXTENSION OF REMARKS

OF

HON. KENNETH A. ROBERTS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 23, 1960

Mr. ROBERTS. Mr. Speaker, the Talladega Daily Home, an outstanding newspaper in the Fourth Alabama District, recently carried an editorial which I believe all of us from all parts of the country will read with interest.

It concerns the Civil War, as I understand officials North and South have formally agreed to call the war of 1861–65, and when an editorial on this subject can touch the heartstrings of any citizen of this great land, I think it bears reprinting.

Therefore, under unanimous consent, I insert the editorial in the RECORD at this point:

FOR US TO REMEMBER

The forthcoming observance of the Civil War Centennial will be a national thing and we won't have any major part in it because nothing of great historical importance happened here.

But we would all do well to use the years of the centennial as a time for remembering the virtues of our forefathers who fought and of trying to bring about their rebirth in our own lands.

We almost wrote "our forefathers who wore the gray," but actually we can't say that any more because as Talladega has grown it has become cosmopolitan and many of our fine citizens now hail originally from the North.

However, the qualities we're talking about were common to the good soldiers of both armies and our heritage grows more and more into a common thing as the years bury the old bitterness.

Actually, there was an amazing lack of personal animosity between these soldiers, South and North, who fought each other to a frazzle on so many storied fields.

Most of that came later with the shame of Reconstruction, but during the war it was mostly a case of "They fit us; we fit them," as one ragged Confederate put it.

But whatever the uniform, the shoddy blue of the Yank or the tatterdemalion outfit of the Johnny Reb, the hearts beneath were stout and devoted.

There was a willingness to suffer and to die for principle. There was conviction that a man had better be dead than to be shamed or pushed around.

There was a simple, unquestioning patriotism, expressed not in words, for they were often caustically critical, but in deeds.

And the deeds included such things as Pickett's gray charge at Gettysburg, Stonewall's onslaught at Chancellorsville or the blue charges at Fredericksburg when men kept advancing into almost certain death even though they walked more on the bodies of their fallen comrades than on the ground.

The time will come when we will need these things again. They have been largely forgotten. They should be restored to our lives and characters.

A West Virginia Girl, Carroll Barte Kincaid, Speaks of Arms Control in Significant Speech

EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Tuesday, August 23, 1960

Mr. RANDOLPH. Mr. President, it is heartening that our youth should be not only thinking seriously about such a penetrating subject as disarmament, but, indeed, are doing studious research, forthright writing, and forceful speaking about it of their own volition.

A case in point, and one which I am happy and privileged to call to the attention of my colleagues, is a speech by Carroll Barte Kincaid, 17, daughter of Mr. and Mrs. Hugh A. Kincaid of Huntington, W. Va. Miss Kincaid chose the subject, "Arms Control and Limitation," for discussion as her contribution to the freshman class in public speaking at Ohio University recently.

This young lady will enroll in September at Marshall College in her home city, where her father is a successful businessman and a member of the West Virginia State Legislature, and where her mother is active in community social and civic affairs. I am delighted to note, too, that the mother—a native of my home city of Elkins, W. Va.—was named Democratic Woman of the Year in our State.

When Carroll reached the conclusion and announced to her speech class that "we must control and limit arms," she was not simply borrowing a thought. A reading of the remarks she prepared and delivered will indicate that she truly believes what she wrote and said, and that she embraced this belief through reading, study, and thought.

Mr. President, I ask unanimous consent that this speech be printed in the Appendix of the RECORD as a merited reward for an academic mission well performed and as a reflection of the thought of a typical young American who is concerned about a most pressing world problem—disarmament.

There being no objection, the speech was ordered printed in the RECORD, as follows:

ARMS CONTROL AND LIMITATION

(By Carroll Barte Kincaid)

Hiroshima is a name which will resound fear in men's minds throughout history, for it was that city which proved to be the testing grounds for the atomic bomb. According to the book, "Government by the People," 60,000 people were killed in 1 minute and later 31,000 died. A total of 91,000 men, women, and children were killed by this single bomb; tens of thousands were injured and maimed. This was a small bomb.

Seven years later in the Central Pacific, a deserted island was destroyed by a fusion-type bomb—the hydrogen bomb. With its ability to destroy, the hydrogen bomb was as much an advancement over the atomic bomb as the atomic bomb was over the more conventional bombs. The age of absolute weapons is here.

As stated by Lt. Gen. James M. Gavin, "We live in a world in which literally hundreds of millions could be killed in a single night." Something must be done about this situation.

We, the United States of America, as a world leader, must make the first big step in control and limitation of absolute weapons.

The fact that men are able to destroy their fellow men brings various reactions from different people. Some hope that man will be wise enough not to try such a foolish act, while other people believe that our civilization is doomed.

If you are an extreme optimist, perhaps you will agree with the first opinion. However, there is one fact which cannot be ignored. The pushbutton weapon systems which are based on instant response, are capable of both mechanical and human error. It could take only one event, such as the recent U–2 incident, to set off a push-button war.

Imagine the world in the year 1965, and that every country has its own nuclear bombs. Since tension rises with the arms race, every country is alerted for surprise attack by its enemy. A man in Burma, looking at the radar screen, sees what could be an enemy's missile. Knowing that if he waits a second too long his country might be destroyed, he pushes a little button. This sets off a chain reaction as countries panic and push button after button. Then there is silence, for there is no one left to push the next button.

This may sound fantastic, but it is very possible, for today every country lives in constant fear that even though it puts forth its best efforts, its survival may be jeopardized by another advancement in the arms race on the part of its opponent. Thus, each time an advantage is achieved in this race, there is a powerful incentive to exploit it. So the arms race goes on and on, as both our arsenal and Russia's grow, and new countries of dubious stability join the "atomic club." During all of this, the grave chance of a nuclear holocaust increases.

Sir Winston Churchill has warned us that it may no longer be possible "for nations to fight each other and survive as nations, or even for armies to fight a battle and have at the end of it enough men on either side to fight another."

In the book, "World War III," a novel about a fictitious but possible war, it states that the first of three major reasons for the war was preparation for it. At the present

time, we continually produce weapons that we dare not use.

According to the June issue of the "Bulletin of the Atomic Scientists," it is estimated that the world's nuclear stockpile today contains 30 billion tons of TNT; this is about 10 tons of TNT for every human on the globe. Is this necessary for peace? I do not see how it could possibly be so. Surely this must come to an end before we destroy all mankind.

In the next few years, we may have our last opportunity to stabilize the arms race. Perhaps Soviet stubbornness will block our most earnest efforts, but it would be most unforgivable if we failed because we did not try. We must control and limit arms.

Address by Hon. Allen W. Dulles

EXTENSION OF REMARKS
OF

HON. FRANCIS E. WALTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 23, 1960

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Allen W. Dulles:

ADDRESS BY ALLEN W. DULLES, DIRECTOR OF CENTRAL INTELLIGENCE, TO THE VETERANS OF FOREIGN WARS, DETROIT, MICH., AUGUST 22, 1960

I am deeply grateful to you for your action in awarding to me the Veterans of Foreign Wars-Bernard Baruch Gold Medal, an award given because you have judged that the recipient has made a contribution to world peace and to American security.

As a young man at the Paris Peace Conference of 1919, over 40 years ago, I had my first opportunity to know and to appreciate Bernard Baruch, an American who himself over the years has made an outstanding contribution to these great aims. I feel honored to be among the privileged few to whom you have given this award which bears the name of your organization and that of Bernard Baruch whom we salute as he passes his 90th birthday.

The Veterans of Foreign Wars have worked for more than 50 years in promoting patriotic objectives and in extending the institutions of American freedom. It is natural that you should devote special attention to the twin objectives of world peace and American security.

In your announcement of this evening's meeting and of your speaker tonight, you describe me as a man who knows more about Communist techniques and intrigue than any man in the world.

This is a bold assertion. It would be immodest of me to claim that it is true.

But I do admit that I have devoted many years of my life to the study of Communist theory and practice, and during the last 10 years since I have been with the Central Intelligence Agency, a mountain of hard evidence on Communist intrigue has passed over my desk.

The Communists have a blueprint for conquest. It is not a rigid plan detailing exactly when and where every nail will be driven. It is, rather, a flexible plan permitting the Communists to adjust realistically to changing conditions in the world. In any event, they think they know what the edifice of the future will look like. It is a Communist house in which they say our grandchildren will all live.

Their ambitions are not those inherited from the old czarist regime. They seek much more than access to warm water ports and to extend their national boundaries. They are aiming at nothing less than domination of the world.

The United States is today their major target. And yet, though I believe this is patently demonstrable, there is a dangerously complacent attitude among many people in our country. Too many, motivated by wishful thinking, grasp at every Soviet whim—their every call for coexistence, their grandiose and impracticable schemes for universal disarmament and emotional pleas to ban the bomb.

Too many jump to the conclusion that the Communist leaders have changed their spots, and that they really want to settle down to live in peace with us.

All our past relations with the Communists belie any such interpretation. Their plans, their statements, and their actions show that they have no real faith in coexistence.

It is well to look at the record.

The origins of the Communist movement go back to Marx and the Manifesto of 1848. But, we have had only about 40 years' experience in a world where Communist principles controlled the actions of the leaders of a major power with great human and material resources.

Then for a decade or more after the Communist revolution of 1917, the power of the Soviet leaders was limited. They were occupied with consolidating the Communist position inside Russia itself and applying Communist theory to the practical task of ruling the peoples within the U.S.S.R. who have never been given the opportunity to choose for themselves.

I was a member of the American delegation to the Paris Conference in 1919 when the peace to end World War I was being negotiated. Then the Communist movement was regarded as a nuisance, but not as a serious threat outside of the borders of the U.S.S.R. Even then, however, Lenin was preaching the doctrine of worldwide communism. He predicted an eventual clash between the Communist world and the free world—or the capitalist world as he chose to call it—the eventual collapse of capitalism and the fratricidal struggles among capitalist countries.

The outbreak of World War II seemed to bear out the accuracy of this last prediction. However, the Soviet Union, despite its effort to stand aside—as, for example, through the disgraceful agreement with Hitler for the partition of Poland—was eventually attacked and drawn into the conflict.

Stalin sought and received the maximum of aid from us in the common fight against Hitler, but he never cooperated fully during World War II. As the war drew toward a close, Moscow's main preoccupation was preparing the ground for Communist takeover of the greatest possible areas in Central Europe and in the Far East rather than in bringing the war to a quick conclusion.

The most tragic example of this was when Soviet armies sat idly by on the outskirts of Warsaw and allowed the bitter struggle between the Poles and the Nazi to decimate the leaders of the Polish resistance.

Commuist actions in these closing days of the war revealed that they had not abandoned their long-term objectives. While this began to alert us to Communist objectives, we were still far too slow in realizing the full implications of their policy.

For the second time in recent history, we have had an antagonist tell us in advance both by words and by action what he proposes to do. Hitler in "Mein Kampf" gave the world a clear picture of his intentions. We paid little attention to it until too late and he had moved on to the attack. We cannot afford to ignore the present and even more precise warnings which the Communists have been giving us.

Over the past 15 years since the end of World War II, we have had many an opportunity to learn the lessons of Communist purposes, particularly during the days which immediately preceded and followed the loss of mainland China to communism.

During these years Stalin's policy of military pressure and adventurism continued. He probed our resistance and our determination in Greece and Turkey and Iran, at Berlin during the days of the blockade and the airlift, and, in league with the Chinese Communists, in Korea. We held the line against this type of Communist attack, and we learned a great deal about Communist techniques.

Then, in 1955, Khrushchev took over the effective leadership of the Soviet Union. He had the same objectives, the same philosophy of the worldwide mission of communism as his predecessors, but he proposed different techniques to accomplish these objectives.

As soon as he had firmly consolidated his position, Khrushchev proceeded to denounce Stalin and all his works. He repudiated Stalinist methods and in effect asked the rest of the world to forget the tyranny and the cruelty of Stalin in domestic affairs and his aggressive foreign policy in threatening the free world from Berlin to Korea.

Khrushchev let his people know that he was shocked that, during a time when the United States had overwhelming superiority in nuclear power, Stalin had engaged in dangerous foreign adventures. In a thoroughgoing repudiation of Stalin's policies, Khrushchev tried to delude us into believing that a new era was at hand.

What are the basic elements of Khrushchev's present policy?

First of all, he proposes to build up Soviet military might based on ballistic missiles. His main target has always been the United States. Intercontinental missiles would give him an effective weapon for direct attack on the United States. During the missile buildup, he will maintain an intercontinental threat with his bomber forces.

Second. Khrushchev proposes to build up Soviet industry, the base of Soviet military power, by completing the ambitious 7-year plan which covers the period through 1965. This will still leave him well behind the United States in overall industrial production. But Khrushchev believes that he can devote to military and world power aims a far greater percentage of his industrial production than we are likely to do. He expects to satisfy his people with a far more modest share of the consumer goods and luxuries that have seemingly become for us so essential a part of our own much higher living standard. Whether he will succeed in deluding his people, who today have far greater knowledge of the outside world than during Stalin's days, remains to be seen.

Third. He is supporting all elements of extreme, rabid, nationalism in Asia, Africa, and Latin America. At the XXI Party Congress held in February 1959, as well-documented reports in our hands established, the leaders of Communist parties from these areas were specifically instructed to play down the link with Moscow and with the Communist movement and to stress nationalism and hostility to the nations of the non-Communist bloc, the United States in particular. He is working for chaos in countries from Cuba to the Congo. And chaos breeds communism.

Fourth. He is targeting economic and technical aid to certain critical countries in Asia, Africa, and Latin America where the Communists believe they can make the most headway.

Fifth. Khrushchev has put into high gear his worldwide subversive apparatus consisting of local Communist parties, underground and overt, Communist fronts, and all the espionage and agitprop assets of Moscow and

its satellite allies. This apparatus is very active today from Cuba to central Africa and to southeast Asia, and indeed throughout the world.

Sixth. Khrushchev is directing the greatest propaganda machine the world has ever known. One voice of Moscow goes abroad to try to seduce the newly emerging countries by citing the Soviet example of rapid industrial and military growth and of the aid which awaits them if they turn to Moscow. Behind the Iron Curtain, quite another voice is aimed at the people of the Communist bloc to reassure them that all is going well.

And Seventh. The Kremlin is jealously guarding the physical security of great areas of the Soviet Union where it is building up in secrecy its formidable military weapons. The Soviets have repeatedly refused to accept a meaningful form of inspection, the best guarantee that disarmament can be honest.

To protect their security the spy phobia is being exploited by the Soviets with attacks on our planes and harassments of our tourists. Well-publicized trials and the imprisonment of our RB–47 airmen are all calculated in Khrushchev's view to bring pressures to bear to help preserve the secrecy of military preparations.

By these tactics Khrushchev hopes to prevent the free world from gaining the knowledge which may be essential to our own security. Behind this shield, rejecting the President's proposals for adequate inspection and open skies, the Kremlin believes that it is free to prepare for a surprise attack on the free world in relative security.

This, in brief, is Khrushchev's program. It is vigorously supported by Communist China despite growing ideological differences and political disputes between the two on the homefront. These are the tactics which Khrushchev is using to help along what he describes as the inevitable trend of history; the victory of communism.

This is how he explained his often quoted phrase, "We will bury you," when he was talking to the National Press Club in Washington last September:

"Social systems change as society develops.

"There was the feudal system. It was superseded by capitalism.

"Capitalism was more progressive than feudalism. Capitalism created better conditions than feudalism for the development of the productive forces.

"But capitalism engendered irreconcilable contradictions.

"Every system gives birth to its successors. Capitalism, as Marx, Engels, and Lenin have proved, will be succeeded by communism."

In saying this, Khrushchev would have us believe that this evolution to communism will be a peaceful, painless process if only we will let him carry out his many-sided program to "bury us."

I am convinced that we can do far more to meet the threat if the people of this country truly understand the nature and purposes of communism, its objectives, and the means the Communist leaders are using to accomplish their aims.

For too long, and by too many, subversive communism has been viewed as just another international danger like those which we have faced before from the ambitions of malevolent dictators or the thrusts for power by foreign potentates and rulers. We have assumed that if we remain strong at home, the danger will in time disappear.

We are still too prone to believe that the Communist movement is no more than an international danger like those which we ested solely in their own power. If this were true, I should feel more easy in my mind. A conspiracy can be defeated by effective police work. The citizen understands this, and will support it.

But the situation is not that simple. The threat is far greater, and the defense far more difficult.

The threat is greater, first, because many Communists are not mere conspirators but fanatically dedicated men. True, there are innumerable time-servers in the movement, and many who are corrupt, self-interested, or ineffective. True also, there are indications that revolutionary fervor is diminishing in some important circles in the U.S.S.R. and giving way to more practical considerations.

Nevertheless, throughout the world there are still thousands of dangerously rabid Communists. Many of them believe that they are working for the progress of mankind as they see it. Many of them—perhaps most of them—are willing to sacrifice themselves to the cause. They are ready to work and struggle with little material reward, and with comparatively little of the sense of power which their bosses may enjoy. Many of them are highly trained and extremely competent. We have to deal not with mere conspiracy, but with genuine revolutionary fervor.

These men disseminate ideas, and ideas must be met by sounder and more satisfying ideals, not merely by force.

The threat is greater than mere conspiracy, secondly, because the Communists seem to offer what much of the world—the underdeveloped world particularly—is striving for. The underdeveloped countries are seized with a passion for rapid economic growth and social advance.

We know from history, and from our own experience, that economic growth is not achieved easily. It involves discipline, self-sacrifice and a great deal of hard work. The Soviets promise to deliver it on a platter.

Moreover, Communists know the techniques for enforcing the most ruthless discipline upon their own and other peoples. They are masters of organization. Also, as they have demonstrated their ability to achieve rapid economic growth, and quickly to develop national power, they can advertise their accomplishments. Peoples in the underdeveloped countries tend to see only the achievements of communism; they overlook its cost in terms of human dignity and political freedom.

If we could offer a prospect of economic development without pain or sacrifice, we should doubtless triumph fairly easily over the Communist adversary in underdeveloped countries. But we cannot do so. We know better than to try to do so. We refrain from making false promises. The Communists have no such inhibitions.

We as a people have never given to the study of communism, as I have described it, the depth and breadth of effort sufficient to understand it adequately and to gird to meet it. It cannot be done merely by the setting up of new machinery of government or the creating of cold war executive, or such measures.

We need far and wide in this country more education on the whole history of the Communist movement.

In our schools and colleges we can find many courses in ancient history, in philosophy, courses on the great movements of the past, the conquests of ancient times from Alexander the Great to Napoleon. Courses on Communist theory and practices are few and far between.

Yet, today we are face to face with a revolution which since 1917 has absorbed almost a billion people; a movement which boasts blatantly and openly that it will destroy us and all the institutions which we hold essential to our freedom and to our growth, spiritually and materially.

There is a vast body of readily available and useful literature descriptive of Communist policies, ambitions, and successes. Our press, radio, and television are doing a fine job in current reporting and analysis. There are ample biographies of Communist leaders and plenty of case histories of their actions in Berlin, Korea, and Hungary. We know a great deal, and can tell a great deal, about the secret apparatus which has promoted its revolution.

By and large, however, in our educational institutions, except in the graduate field or in specialized schools and seminars, these subjects are not generally taught.

I have reviewed the curriculums of many of our universities and colleges and, despite a considerable advance in recent years our students are not yet afforded a broad opportunity to gain the essential background knowledge of Communist history and policy. And we should start this education in our secondary schools.

It is only the very few who have read about Marx, the titular father of the system. Here was one of the meanest, least admirable characters in his relations with other human beings who ever existed. He was an unoriginal theoretical thinker. His economic writings were outmoded even when they appeared. Even the Communists themselves are beginning to admit that he is not a completely reliable guide for political action.

Such an educational program should not be approached in any spirit of propaganda or trying to make a case or sell a thesis. The history of the communism movement should be taught objectively, recognizing, as appropriate, scientific, technical, and other accomplishments of the peoples who have been absorbed by it.

We should not be afraid to teach the subject. A history of communism and of all its works would bear its own indictment of the system.

Let the facts speak for themselves.

There is a real urgency to build up our knowledge on the entire background of the Communist thrust against our civilization.

During the years immediately ahead it seems more likely that the immediate danger we will be facing, and on a worldwide basis, will be Communist political, economic, and subversive action and penetration; not a hot or nuclear war.

In general, we and the other peoples in the free world have a relatively good understanding of the nature of the Soviet military threat. In this country a major effort in money, manpower and research has been and is being devoted to meet it. People may differ here and there whether it is adequate but certainly it is massive and there is broad agreement that no effort should be spared in the military sector. We must maintain our military strength. I believe we will do so.

The Soviet Union today has a healthy respect for our military and retaliatory power and we must see to it that they continue to have this respect. They realize that the devastation they would receive in the event of nuclear war would be unacceptable.

Hence, I conclude that the Soviet are not now planning primarily for military attack, although they will use the military threat, they will rattle their ballistic missiles and may exercise military pressure on the periphery of the Communist bloc.

Given adequate defense on our part, the military threat is not our most immediate pressing danger. Where then does the danger to us lie? One thing is sure: we must conclude, without peradventure of a doubt, that the Communists will move against us on every front where they consider action to be effective and for the time being they will move primarily on the "short of war" fronts.

Are we ready, if instead of attacking us militarily, Khrushchev should direct his major thrust to subverting other countries in the free world by secret, disguised and undercover means?

By blackmailing the leaders in the newly emerging, the shaky countries, to follow his lead.

By luring them with promises, and with the actual delivery, of large quantities of arms and economic aid and of considerable quantities of flashy but sometimes rather

second-rate goods and equipment; and of the services of many skilled technicians.

By taking control of revolutions which may have started out with sound motives, but which have been perverted and turned from their original course into the Communist pattern.

In this way he will try to turn into Communist or communizing tools the regimes in many countries which today are free, but which tomorrow, under the pressure of Communist techniques might become slave.

Maybe many people in this country will be taught a new lesson in communism because Khrushchev, right at our doorstep, is applying his methods and techniques. He is perverting a revolutionary movement which initially had the support of some estimable people but which now is in the throes of a Communist take-over. Cuba is not the only country, though it is the one nearest to us, where such a process is underway.

Are we alerted fully to this kind of danger, and are we prepared to do all that we can to see that this development does not occur in a dozen or more countries elsewhere in the world?

This, today, is the major element of the Soviet scheme for world domination. We must understand it. We must analyze it, and through a well-coordinated program of education and of action, protect ourselves against it.

The people of this country are and will continue to be basically opposed to communism in general. This opposition is based more on instincts than on knowledge. This is not enough. Our people should be sufficiently educated in all of the ramifications of communistic intrigues and its historical background, its purposes and programs adequately to contribute toward an effective answer.

The initiative for new knowledge comes more often from those of us who want to learn than from those who teach. But let us also call on our educators, and on those in authority who have influence over the development of our educational system to begin to expand the realistic teaching of the history and policies of communism.

We must do this with an eye to the future and to the coming generations who will be living in a world of continuing Communist challenge.

Today, it is relatively easy to get the manpower and the money for the vital needs of military defense. This is as it should be. But it is desperately difficult to get the tools and the funds that the Government needs to meet the present and threatening danger of nonmilitary Soviet penetration and subversion; the corruption by communism of vast areas of the free world.

I hope that your great organization with its high ideals and patriotic membership will help to build up an understanding and an educated public opinion to enable this country effectively to meet this grave danger we face today. This is a cause worthy of the best efforts of the Veterans of Foreign Wars.

Library Services Act

EXTENSION OF REMARKS
OF
HON. ROBERT N. GIAIMO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 23, 1960

Mr. GIAIMO. Mr. Speaker, yesterday I had the pleasure of supporting extension of the Library Services Act, and I am happy that this House approved the continuance of this most valuable program. The people in my district in Connecticut have long appreciation the importance of the Library Services Act. Their support for this legislation was reflected in an editorial published by the New Haven Register on August 13. I ask that this statement of the Register be included in the RECORD at this point:

LIBRARY SERVICES ACT

Among the items of legislation caught in the preconvention logjam in Congress was a library services bill which gets its last chance for passage in the next few weeks.

The bill would extend for another 5 years the Library Services Act of 1956, which has helped immeasurably to expand the availability of books to the rural populations of the United States. Since the law was passed, according to the American Library Association, about 30 million Americans have gained new or improved library service, State funds for the development of rural libraries have increased 54 percent, local appropriations have increased 45 percent, and there have been other substantial advances in the enlargement of public library services.

Here in Connecticut, libraries in communities of under 10,000 population have been given many kinds of professional and consultant services. Workshops have been held for volunteers. And a new vigor has been brought to suburban and rural library projects which were often withering in many ways.

All of these services, National and State, may be discontinued or curtailed if the Library Services Act is not renewed. At a time when the "pursuit of excellence" and the development of individual learning is so importantly regarded, it is obviously negligent to permit our community libraries to retrogress—as they certainly will without the continued attention of all concerned citizens.

The Library Services Act has helped to bolster the individual strength of many a smalltown Connecticut library. Connecticut Congressmen and Senators should be reminded of this as H.R. 12125 languishes in the anterooms of Congress.

Violation of Law by Post Office Officials—Part 2

EXTENSION OF REMARKS
OF
HON. GLENN CUNNINGHAM
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 23, 1960

Mr. CUNNINGHAM. Mr. Speaker, I called attention yesterday to illegal lobbying activities being carried on by Post Office Department officials.

This illegal lobbying also came to the attention of a newspaper editor in New Hampshire, the editor of the Journal-Transcript, published in Franklin, N.H.

The editorial reaction follows. It is entitled "The Post Office—And the Sap Works":

THE POST OFFICE—AND THE SAP WORKS

On our editorial desk we have been staring all week at a classic example of how Government bureaucracy can get so fat and blowsy that it tries to "take over the whole sap works" as they say back in the woods.

It came in the form of an official press release from the Post Office Department, dropped off at our office in the routine course of his duties by Postmaster Warren Metcalf of Tilton. (What we have to say about it here is not directed at Mr. Metcalf, for it involves policy far over the heads of operating postal officials—they only carry out orders.)

This particular release told how sometimes the department put 4-cent letter mail on airlines to the extent that airspace is available, instead of carrying these bags by rail. The Post Office release went on to say that the so-called Cunningham bill, H.R. 12595, which passed the House of Representatives last July, would prohibit this practice if it should pass the Senate "and escape or overcome the presidential veto."

Then came the payoff from the Post Office Department:

"We urge all those who are interested in providing quicker and better mail service to communicate with their Senators in opposition to the passage of the Cunningham bill, H.R. 12595."

Now we have no objection to any citizen urging his Senator to vote any way he wants to vote on any matter. But it strikes us as being little short of outrageous for any agency of the U.S. Government to use its position and its public funds to promote a public claque to pressure the Congress in the direction the Department wants to go.

As to the merits of the Cunningham bill, we don't happen to know, for there seems to be no Government agency using the taxpayer's money to shill the other side of the question. The Post Office release presents only the arguments on its own side of the question. But the fact that more than half the U.S. House of Representatives voted for it would indicate that there must be something to be said for the bill.

We do know that if the Post Office has so much money that it can use its men and facilities to tell the common voters how to run things, it might get to work doing a better job delivering the mails. If you're in any doubt that there's need for improvement, you might make note that the service in West Franklin has been reduced in the past 2 weeks—just one small example.

The real point, however, is that to put it simply, the essence of the American democratic system is that the people will tell the Government and Congress how to run things. When a Government agency, the Post Office or any other, presumes to use its position and the money it receives from the taxpayers to tell the people—and Congress—how to run things, it is a complete reversal of sound democratic procedures. That's the first step toward putting into effect "the Government knows best" idea, and we're against it.

Air Force Academy Good Investment

EXTENSION OF REMARKS
OF
HON. KENNETH A. ROBERTS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 23, 1960

Mr. ROBERTS. Mr. Speaker, the editor of the Selma Times-Journal, an outstanding daily newspaper in the Fourth Alabama District, recently made a trip to the Air Force Academy in Colorado.

Edward B. Field draws on his long experience in journalism and public service to tell the informative story of

that tour in an editorial which appeared recently in his newspaper.

Under leave to extend my remarks, I wish to include this editorial:

AIR FORCE ACADEMY

The U.S. Air Force currently is in the process of giving as many representative citizens as possible a firsthand view of its new Service Academy near Colorado Springs. This is being accomplished by sponsored tours of 2- or 3-day duration, which acquaint selected groups with purposes of the Academy, what has been accomplished and what is hoped to be accomplished in the future.

These tours cannot be regarded in any respect as junkets at the expense of the taxpayers, as the Air Force furnishes only transportation, usually in planes already available and manned by officers who are required to maintain flying time by one means or another. It is true that accommodations furnished are provided at minimum costs, but the facilities are there and use of them by tour groups serves largely to increase revenue.

Because the American people have heard a great many reports of Federal extravagance in establishment of the Air Force Academy, these tours represent sound policy, especially as few individuals who see this great installation leave dissatisfied with returns from the large sums of money invested.

As one impressed observer remarked "the Air Force Academy already has become a national monument."

Nestled at the foot of the Rampart Range of the Rocky Mountains, the Air Force Academy is as breath catching in its scope and planning as is the altitude at which it was located. It is this scope and planning which some day will make the issue of costs forgotten, because a century from now the Academy will be just as efficient and functional as it will be at completion within the next 2 years.

The site of the Academy was chosen by a congressional committee, after considering offers of 400 locations in 44 States, largely because the 17,000 acres of land required could not be found anywhere else where climate was regarded as favorable.

And the climate is favorable, because sleeping under blankets is usual in summer and air conditioning is not necessary except in buildings sealed against sound. Only one unit of the Air Academy is air-conditioned, and that is the Academic building, which has no windows, as a means of improving concentration. In fact, only a few establishments in Colorado Springs are air conditioned, and if there is any agency there peddling these facilities, they do not make themselves known.

Altitude, of course, is a major factor for casual visitors, but experience has demonstrated that those who remain long enough at the Air Academy not only become accustomed to this, they soon develop chest and lung capacities which give them an advantage over residents of the lowlands.

This has been proven in the past by athletic teams of the Air Academy and it will be proven time and again when foreign teams invade the great stadium now only in the planning stage.

While the Air Academy accepts the plebe system of West Point and Annapolis to apply rigid discipline to its new classes, such as constant double time and squaring corners in all cadet areas, it has departed from the usual plan of concentration of scientific study courses.

At the Air Force Academy, the humanities, such as English, geography, social sciences, psychology, and foreign languages, hold almost equal status with mathematics, sciences, aeronautics, astronautics, and mechanics.

This is because the Air Force Academy is dedicated to production of officers and leaders rather than airplane pilots. While Academy graduates are ready for training as key pilots, they also are ready for transition to the age of missilry. In fact, the Air Force Academy can be converted to missilry on very short notice, because that was the way it was planned, and that, in large extent, explains the tremendous expense involved.

Now about costs:

Congress initially appropriated $138,779,000 for establishment of the Academy. Off that sum, $137,400,000 has been spent on construction. In addition, an additional appropriation allowed expenditure of $22 million for equipment.

For the 17,000 acres of land purchased, which wiped out numerous private operations, the cost was $5 million, to which the State of Colorado contributed $1 million.

These figures, of course, are tremendous and rightly give cause to the people of this Nation to think concerning returns gained.

But the returns are there and sooner or later all our people will become convinced that a sound and long-paying investment has been made in the Air Force Academy.

Oil Price Rises Despite Glut

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, August 22, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a timely article by John Harriman written for the August 18, 1960, issue of the Boston Globe:

OIL PRICE RISES DESPITE GLUT—BOOST IN RESIDUAL HITS NEW ENGLAND HARD—WORLD SITUATION IGNORED BY U.S. POLICY

(By John Harriman)

The situation in residual fuel oil, well illustrates what may yet turn out to be the Achilles' heel of the American economy.

What we see is this: an increase in prices here—15 cents a barrel along the coast, which will cost New England industry alone $10 million—and a general world-wide softening in all oil prices.

Firms in India have slashed prices. Middle Eastern crude is down 14 cents a barrel. Oil is being marked down in Europe.

Yet here in the United States oil is headed upwards, due to Government interference with a free market, and largely because of political pressure exerted by the coal industry and the domestic oil producers of Texas and the Southwest.

Oil today is in world oversupply.

There are two hugely important new producing areas being brought in: The French Sahara and the even more important fields in Lybia, where reserves are said to be on the order of those in the Middle East.

In addition, new techniques are making the recovery of oil from older wells more feasible. And in the future is a not unlikely possibility that a process may be found practical which will allow the recovery of crude from the much-advertised and almost inexhaustible reserves in Canada's "oil sand."

Finally—a project of the U.S. Bureau of Mines itself—there is the possibility of tapping our own supplies of oil shale.

What we are seeing, actually, is an era beginning to open in which fuel costs will probably be a good deal cheaper. This means lower cost electric power—energy, which in a sense is wealth in the modern world.

It is simply inconceivable that in such a situation—and simply to alleviate competition for domestic oil and coal producers—that we should arbitrarily saddle ourselves with a high-price structure in fuels which will still further weaken our competitive position in this fiercely competitive age.

The cut in the imports of residual oil by 20,000 barrels below last year's level for this same quarter is serious, not only for New England, but for the whole country.

In doing this we offend and injure economically our oversea suppliers, particularly Venezuela. We serve notice on the Mideast that we are in fact establishing a two-price system in oil: One for the United States and a lower price for the rest of the world.

But, above all, this path that we seem to be treading in oil is but one more example of our seeming helplessness in fitting ourselves into a world economy that is growing and strengthening on all sides.

Such moves, and the attitude of which they are an expression, are bringing us toward a very great danger * * * that we may find ourselves more and more isolated in a world in which we need other nations as much as they need us * * * in an economic isolation of our own making.

Teenage Journalists To Visit U.N. This Fall

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Tuesday, August 23, 1960

Mr. WILEY. Mr. President, the youth of today—the leaders of tomorrow—need to be especially educated to the new world of the 1960's.

The advent of space, the technological, social and economic revolutions, the new relationships among nations, ever greater responsibility of our Nation as a world leader: All of these factors emphasize the need for providing our youth with the knowledge, understanding and perspective to deal with the increasingly complex problems which will be facing them in the years ahead.

Recently, the Milwaukee Committee for the Observance of United Nations Day, in cooperation with the Milwaukee Journal, set up a program for picking 10 Milwaukee high school journalists for an expense-paid, 3-day trip to the United Nations headquarters. The purpose of the tour is to provide these students—chosen among student journalists for the quality of their newspapers—with a better knowledge of the functions and responsibilities of the United Nations.

Over the years, the U.N.—now just 15 years old—has assumed larger and larger responsibility in international affairs. This civic-spirited effort to educate our young people on the operations of this international agency is, I believe, a most commendable endeavor.

Recently, the Milwaukee Journal carried an informative article, entitled, "Teenage Journalists To Visit U.N. This Fall." Reflecting the kind of civicly

sponsored programs that can do much to better enable our youth to meet the problems of tomorrow, I ask unanimous consent to have this article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TEENAGE JOURNALISTS TO VISIT U.N. THIS FALL—PUPILS TO BE PICKED AT 10 HIGH SCHOOLS WITH NEWSPAPERS OF TOP QUALITY

Ten Milwaukee high school journalists will be chosen for an expense paid, 3-day trip to United Nations headquarters in New York City this fall.

The project is being sponsored by the Milwaukee Committee for the Observance of United Nations Day, in cooperation with the Milwaukee Journal.

Leonard S. Zubrensky, chairman of the Milwaukee U.N. committee, said judges would pick five public and five private high schools from which the pupils would be named. The schools will be selected on the quality of their newspapers, he said.

FIVE JUDGES AT WORK

Copies of high school papers are now in the hands of judges Garold L. Bartness, of the University of Wisconsin—Milwaukee journalism department; Robert A. Kidera, public relations director of Marquette University and three executives of the Journal—Arville Schaleben, managing editor; Harvey W. Schwandner, assistant managing editor, and Harry L. Sonneborn, city editor.

Zubrenksy said winning high schools would be announced by September 1. Each principal then will be asked to choose a pupil by September 15 to join the tour. Zubrensky said editors or staff members of the winning high school papers were the most likely to be selected.

Accompanied by Zubrensky and a teacher as chaperones, the pupils will be in New York October 13–15. After they return, they will report their impressions October 24 as part of the third annual observance here of United Nations Day.

Last year, a speech by former New York Gov. W. Averell Harriman highlighted the U.N. Day ceremony. In 1958, the U.N. committee presented Sir Carl August Berendsen, former New Zealand Ambassador to the United States and a former delegate to the U.N.

Zubrensky said the pupils would leave Milwaukee at 8:30 a.m. October 13, and arrive in New York at noon. They will stay at the Beekman Tower Hotel. The first day will include a boat ride around Manhattan, a visit to the Statue of Liberty, the top of the Empire State Building, a television show, and an automat.

The major events of the trip will come on October 24. The pupils will receive a briefing by a member of the United States mission to the U.N. on the organization and functions of the international body and participate with other visitors at the World Affairs Center in an informal discussion and question period with government specialists.

WILL OBSERVE ASSEMBLY

At noon they will attend a reception and luncheon at the center given by members of the United States and other U.N. staffs for U.N. visitors, and Friday afternoon they will observe the U.N. General Assembly or its committees in action. The teenagers will return to Milwaukee Saturday.

After their return, they will participate in a discussion and evaluation session on their trip with editors of the Journal, and will appear on television, radio and high school convocation programs to describe their experiences.

Address by Senator Wiley Over Radio Liberty

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Tuesday, August 23, 1960

Mr. WILEY. Mr. President, the East-West struggle—despite best efforts of the West to resolve the differences, and establish a solid foundation for peace—promises to be a long, arduous, trying contest between two ideologies, freedom and communism.

By experience, we have learned that the Soviets use every possible tactic: ethical and unethical, legal or illegal, right or wrong, to forward their cause.

Recognizing the great stakes in the struggle, I believe we need to explore every known avenue—and search for new ones—not only to counter the Soviet offensive, but to establish conditions under which ultimately peace, order, and law can be a normal process of life in the world, and such things as the Iron and Bamboo Curtains can be rolled back, to give the people in bondage a voice in self-determination.

As one way of "getting through" to the people behind the Iron Curtain, I was recently privileged to broadcast to the Soviet Union over Radio Liberty.

Personally, I feel that getting the facts to the peoples themselves, to provide them with the truth, and to offset the propaganda of the Kremlin-controlled press and other information media, will serve us well in the long struggle ahead against this infamous ideology.

At this time, I ask unanimous consent to have excerpts of the broadcast reviewing factors of the U–2 flight and the RB–47 case printed in the Appendix of the RECORD.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

EXCERPTS OF ADDRESS PREPARED FOR DELIVERY BY HON. ALEXANDER WILEY, REPUBLICAN, OF WISCONSIN, SENIOR REPUBLICAN OF THE SENATE FOREIGN RELATIONS COMMITTEE, TO THE PEOPLE OF THE SOVIET UNION OVER RADIO LIBERTY

NEEDED: MORE EMPHASIS ON MUTUAL INTERESTS THAN DIFFERENCES

As citizens of great world powers, we have a great many mutual interests, together with mankind, around the globe. Fundamentally, I believe, we all want to attempt to create a better world in which to live.

Instead of quarreling about our differences, we would do better to expand areas of agreement and, as possible, to cooperate in support of programs that would achieve a better, safer life for all of us.

We would welcome the opportunity to channel the vast efforts, manpower, and resources going into armaments, in the United States and, yes, in the Soviet Union, as well as other nations, for things which would improve, not threaten to destroy, life on the globe. These resources could be used to produce more and better homes, schools, food, clothing, and other things that contribute to a good life.

NEEDED: GREATER EXCHANGES OF TRUTH

In a world weary of tensions, but full of promise for a better life, I believe there is a need for greater exchanges of truth between the people of our two great countries.

How can this be done? Through radio, television, newspapers and magazines opening the doors—that is, lifting the Iron Curtain for better neighbor-to-neighbor relations.

What would more exchange of ideas accomplish? Among other things, it would eliminate the fears, often born of untruths, that we as a nation want war; or that you, the people of the Soviet Union, want war; and also reaffirm our common dedication to peace; to a desire to channel our resources and the wonderful human ingenuity of our two great peoples to building a better life.

DIFFERENCES BETWEEN UNITED STATES AND SOVIET SYSTEM

Now, let's be realistic: There are differences in East-West ideology, between the political systems under which we live. From long experience, we have learned that these differences will not easily be eliminated.

However, the differing ideological beliefs should not obscure the reality that you and ourselves—in common with all other people of earth—want, wish for, and are willing to sacrifice to attain—peace.

Ultimately, we can hope for the great ground swell of free public opinion from the common people of the world to provide the strength and wisdom to direct the affairs of men and governments in all nations toward the goal of peace.

In the cycle of international events, regrettably, there continue to be problems—sometimes, we feel, deliberately created—to stir up tensions, distort the truth, create misunderstandings and alienate our people from each other. In such circumstances, we recognize, of course, that there are always two points of view.

Now, I'd like to review with you some of the current problems and our ideas on them so that you, the people of the Soviet Union, may better know how we feel about them.

To prevent the possibility of sneak attacks against any nation and thus eliminate one of the great fears in the hearts of the people of the world, for example, our Nation, in the past, has proposed open skies and mutual inspection of armament installations.

Despite President Eisenhower's effort to get open skies, Mr. Khrushchev, unfortunately, has not been willing to make such an arrangement.

As a people dedicated to peace, we have asked the question: Why? If the Kremlin, as it claims, is dedicated to peace, then why would it not open its doors as we would do to inspect armament installations, to prevent surprise attacks by any nation?

Had Mr. Khrushchev been willing to agree to an open skies proposal as recommended by President Eisenhower, or to work in a really constructive way to establish peace, the U–2 flight, for example, would not, I believe, have occurred at all.

In considering this flight, it's important to take into account the following factors:

1. The plane was not armed, instead it carried only cameras.

2. The U–2 flights occurring for 4 years have at no time committed any act of aggression against the people of the Soviet Union.

3. The information obtained from such flights has never been used for any aggressive acts against the Soviet Union, and

4. As yet, there have been no international agreements as to how high a nation's rights extend into aid space. Consequently, there is serious question as to whether or not there was any real violation of inter-

national law with the plane flying at 60,000 or 70,000 feet. As you recall, for example, the Soviet Union launched the first Satellite, Sputnik I. However, nobody attempted to shoot it down. If the U–2 violated air space, then perhaps the sputnik also violated the same interests of other nations.

RB–47 FLIGHT DID NOT VIOLATE SOVIET AIRSPACE

Now, let's look at another case. You will recall that recently, the Soviet armed forces shot down a U.S. plane over international waters. Then, charges were made against the United States in the U.N. that the RB–47 violated Soviet air space. Following the charges, the Security Council considered the case.

In effect, the U.N. threw the case out of court. Why? The charges were not based upon truth. To the contrary, it appears there has been a violation of international law by Mr. Khrushchev. How is this? Because the U.S. plane was flying over international waters at the time it was shot down. According to the evidence presented at the U.N., and substantiated on a scientific basis by other nations, the U.S. plane at no time flew closer than 30 miles to your country.

Consequently, the RB–47 incident has put the Soviet Government in a strangely unfavorable light. Why? First of all, it was a violation of international law; a needless killing of men; and an act that could result in grave consequences for world peace.

Secondly, the Soviet Government has been carrying on information-collecting activities near the United States. For example, a Soviet ship, equipped with radio-radar and other devices for information collecting, anchored 13 miles off our coast. If the United States employed Mr. Khrushchev's tactics, we would have sunk the ship, and killed or imprisoned the persons aboard.

Did we do this? No. Instead, we merely took pictures, photographing the vessel, to prove that it was on an information-gathering mission.

At the U.N., the United States also proposed an impartial investigation of the facts of the RB–47 flight. Unfortunately, the Soviet Government refused to submit to such an investigation.

Why? From experience, we have learned that anyone, if he is right, is not likely to turn down an impartial investigation; in all likelihood, this would only provide greater evidence for his case.

Basically, we believe that the shooting down of the RB–47 flight was a violation of law, and of good conduct by nations. The actions of the Soviet Government, also, have resulted in the needless death of several persons aboard the RB–47, as well as illegally retaining custody of two of the fliers, Lt. John R. McKone and Lt. Freeman B. Olmstead in violation of international law.

With a long history of fairness and greatness, however, I feel that you, the people of the Soviet Union, would like to know both sides of the story including what we feel is the truth.

Why Not Use Our Farm Surplus?

EXTENSION OF REMARKS

OF

HON. HOMER E. CAPEHART

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Tuesday, August 23, 1960

Mr. CAPEHART. Mr. President, our distinguished colleague, the senior Senator from South Dakota [Mr. MUNDT] has long been a champion and strong exponent of developing an effective research program so as to increase industrial utilization of our agricultural abundance.

The Senator from South Dakota, who serves so ably on the Committee on Agriculture and Forestry, has long held the conviction that the development of new markets for our farm products both at home and abroad can provide one of the solutions to the difficulties which now confront American agriculture:

That the Senator is recognized as one of the eminent authorities in this field is without question, for we all have followed with interest the dedicated efforts he has made and continues to make for the American farmer.

This week on the newstands of America, the distinguished Senator once again makes a strong case for this program to utilize farm products. An article written by Senator KARL MUNDT is appearing in the September issue of Mechanix Illustrated, entitled "A Senator Says—Let's Abolish Our $1,000-a-Minute Farm Surplus."

Not only does Karl Mundt's article make good reading, it makes good sense, and I deem it a privilege to bring this article to the attention of my colleagues, and ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A SENATOR SAYS LET'S ABOLISH OUR $1,000-A-MINUTE FARM SURPLUS

(By Senator KARL E. MUNDT)

In the past 26 years the American taxpayer has paid more than $40 billion for farm programs. This year alone the American taxpayer will pay more than $4 billion for farm supports; more than $1,500,000 a day—more than $1,000 a minute—to store farm commodities in surplus.

The American taxpayer pays $6,000 a day to store peanuts; $131 a day to store honey; $238 a day to store tobacco. Flaxseed and rye cost $7,000 a day in storage fees; oats, $15,000 a day. Rice costs $17,000; soybeans, $23,000 a day; milk and butter fats, $29,000; barley, $65,000 a day; and cotton, $76,000.

When the taxpayer reaches into his pocket to pay storage costs on more vital items in surplus, he pays $262,000 a day to store grain sorghums; $44,000 a day to store corn; $579,000 a day to pay wheat storage costs.

And these reported warehousing costs do not include miscellaneous charges such as acquisition costs, financing, supervision, and the salaries of needed administrative employees in the Department of Agriculture.

This entire support program, growing yearly in size, can collapse of its own weight at any time. As more than one of my colleagues in the Senate has asked—When are we going to get the American taxpayer out of the farm business?

American taxpayers have paid for farm programs that called for plowing under corn, killing pigs, subsidizing exports. During one 4-year period of the farm support program, the U.S. Government—meaning the American taxpayer—owned a total of 235 million pounds of surplus cheese and more than 1 billion pounds of surplus tobacco.

Yet the U.S. Government can solve the expanding farm surplus problem and relieve the American taxpayer. It can do for the agricultural industry the same type of job the so-called Manhattan project accomplished in the atomic field. With a stepped-up program of farm-product and farm-marketing research on a crash basis, we could channel our increasing farm output into an expanding market right here at home.

We are living in an industrial age. American people are using more products, more materials, more equipment of all kinds than ever before, and that use is increasing daily. Many of the products, equipment, and materials can be supplied from raw materials grown on American farms.

For instance, we can, as many European countries do, use alcohol extracted from grain as a blend with gasoline for our automobiles and farm tractors.

We are the greatest consumers of motor fuel in the world. If we blend only 5 percent of grain alcohol with gasoline, we will conserve precious supplies of petroleum that are now being exhausted. The Indianapolis Speedway drivers use alcohol in their fuel because it gives more propulsion, more speed, more efficiency. Expanding this one use alone would get the American taxpayer out of the farm business.

We could, as we did during World War II, make our synthetic rubber supplies of grain alcohol. The Department of Commerce predicts a doubling of synthetic rubber requirements by 1975. If we were to reopen the eight Government synthetic rubber plants closed after World War II, they would consume approximately 100 million bushels of grain annually.

This would mean we could use corn and wheat now in storage (that must be reaching a stage unfit for human consumption) in a productive fashion rather than adding to the tax burden.

We can divide a bushel of wheat, use the starch for alcohol and develop new markets for the protein that is the residue. We can make a K-ration, rich in vitamins and minerals, and pack it in a wheat carton to supplement our school lunch program and help the needy here at home who are on relief status.

The American petroleum industry now spends over $3 billion a year in research. The result is obvious in the flood of new products from petroleum. This compares with the figure of about one-twentieth of 1 percent of the gross sales of our agricultural output devoted to the search for new uses for agricultural products.

But we have found that everything made today from petrochemicals can also be made from grain; the molecules are interchangeable. Grain alcohol can be used to make not only motor fuel and synthetic rubber but new, more pliable plastics; solvents; surface coatings to repair the 700,000 miles of roads that need repairing. It can be used for explosives, insecticides, lubricants. It can serve our missiles, turbojets, and rockets.

We can relieve the newsprint shortage by making newsprint from wheat straw. We can make paper from surplus wheat and corn. If we simply add grain starch to wood pulp in paper production, this one use alone would consume 100 million added bushels of corn yearly.

We could absorb the vast farm surplus; we could add new products from what we now consider waste. A few years ago, driving through South Dakota, one would see the horizon dotted by colorful piles of burning straw. Now we know this straw we once burned can be used to make much needed newsprint and strawboard.

We can use wheat and corn starches as coating agents for textiles. We already produce a corn fiber called vicara for the manufacture of clothes. With intensification of our agricultural research, we would see buildings constructed of corncob concrete. We will wear clothes made of a luxurious corn fiber similar to cashmere. We may soon wear rainproof coats made from corn. Some are already made from lard.

We must recognize that one of the strongest contributing factors to the food surplus

problem exists in the very nature of farming. Our 6 million farmers have had little opportunity, due to the independent nature of farming, to apply the modern techniques of merchandising and research that have been the dynamic forces for growth in American industrial life.

If we but use the brains of some of our jet-age scientists in an agricultural Manhattan project that includes both creative and marketing research, we can bring to American homes a flood of new products that will stagger the imagination.

To spark this grain-chemical revolution, to organize this agricultural Manhattan project, we need to establish a separate agency of Government with funds and authority to apply modern techniques of research, marketing, and merchandising.

This new agency would have the authority to let contracts to industrial organizations with laboratories; it would have the authority to put scientists to work.

It would have the authority to seek out new ways to utilize the knowledge found in these laboratories; authority to develop markets, to help finance early production of new products from farm commodities. It would apply modern techniques to create a real consumer demand for these products. It would offer scholarships to young people to study farm-product science.

Some have suggested that the problem can be solved merely by shipping all our surplus food overseas to the needy peoples of other lands. We have shipped food overseas to many areas but to attempt to solve our gigantic surplus problem in this manner is to assume additional costs and burdens of transportation with little assurance the food will reach deserving peoples. We can ship the food to ports of underdeveloped nations but distribution facilities to the remote villages of the world are poor or lacking entirely. And we must also remember that to try to solve our surplus food problem by foreign giveaways is to antagonize friendly allies who have surpluses of their own.

We must recognize that to find a realistic solution to these surpluses, and ultimate relief for the taxpayer, we must create additional farm-product markets at home. These markets can only be created by the research program suggested here and by industrial application of our farm products.

Established on a crash basis, this new project would not only move the giant surpluses out of the warehouses onto the American markets, it would create new jobs. It would spur merchandising, advertising, transportation—all retail progress. It would spark a new, higher standard of living throughout the entire American economy. It would mean a fair price for a full crop for farmers.

And it would end, once and for all, the crushing burden on the American taxpayer: $1,000-a-minute for the storage of farm surplus that should and must be put to productive use for the benefit of all.

You're Doing Fine

EXTENSION OF REMARKS

OF

HON. CARL ALBERT

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 23, 1960

Mr. ALBERT. Mr. Speaker, last week was the most impressive one to date in the annals of our Nation's space achievements. Oklahoma had an important share in the realization of these long-sought objectives and we are proud of our contribution. Under unanimous consent, I wish to insert in the RECORD the following editorial which appeared in the Tulsa (Okla.) Tribune on August 15, 1960:

YOU'RE DOING FINE

Amid all the back slapping about the Nation's rocket successes last week, Oklahoma can be proud that:

Tulsa employees of Douglas Aircraft helped build two of the three stages of the mighty rocket which thrust the 10-story balloon—the Echo satellite—into orbit.

It was a Rush Springs, Okla., boy the previous day who helped haul out of the Pacific the first manmade object to be successfully returned to earth from another satellite.

To this we may add that:

It was an ex-Oklahoma Citian, Adm. William F. Raborn, Jr., who pushed through the submarine-launched Polaris missile project so brilliantly vindicated this month and last.

How on earth (or in space) would they manage without Oklahomans.

Champion of Plain Talk

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 23, 1960

Mr. McCORMACK. Mr. Speaker, while looking through an issue of Reader's Digest of August 1955, I noticed and read a splendid article about a close and valued friend of mine, Theodore Granik, founder and moderator of the popular radio-TV programs, "American Forum of the Air" and "Youth Wants To Know," entitled "Champion of Plain Talk" and written by Lois Mattox Miller.

The article written about Theodore Granik is one which he richly deserves. The entire life of Theodore Granik is dedicated to constructive service and in consistently fighting for progressive causes. Theodore Granik is a firm believer that under democratic institutions of government people should be as widely informed as is possible, and for the past 30 years he has certainly done everything within his power through the medium of his informative and constructive programs to obtain and give to the American people the fullest information possible on all problems confronting them, and particularly in the field of public service where information by the people is so necessary and needed in order to form for the American people, individually, a sound public opinion.

Theodore Granik is one of the outstanding leaders in this respect. He is also a dedicated American. As one who has been a strong admirer of his for years because of his nobility of character and constructive mind, it is a pleasure for me to insert in my remarks the article written by Lois Mattox Miller, and which appeared in the Reader's Digest of August 1955.

CHAMPION OF PLAIN TALK

(By Lois Mattox Miller)

Three years ago, Theodore Granik, founder and moderator of the popular radio-TV programs, "American Forum of the Air" and "Youth Wants To Know," was stricken by a heart attack. He was then 45 and still had a lot of things he wanted to do in life.

After a spell in the hospital, he went to Florida. His law partners and broadcast associates were sure he was in the first stages of retirement. But he fooled them. The next thing they knew, he had teamed up with local businessmen and started a television station in West Palm Beach. Then the memos and phone calls began to pour into Washington and New York, and Ted was on the way back.

Today he is going stronger than ever. In addition to his two weekly forums and his TV station in Florida he has started three new programs. He is a successful Washington attorney and the friend and confidant of Government leaders.

"When I was flat on my back," says Granik, "I found wisdom in the doctors' bromide that a coronary is the greatest lifesaver of middle-aged men. I've learned to conserve energy and make it produce more than ever before."

Theodore Granik is a sturdy man with thinning sandy hair, an engaging smile and a mission in life that won't let him sit still. He got into radio on the ground floor in 1925, and for the past 30 years he has been the champion of plain talk on the air.

While still in law school, he was hired as secretary to Lee Adam Gimbel, of the famous New York department store. To lure customers to bargain sales, Gimble's had just set up a new radio station, WGBS. Granik was given the chore of keeping the station on the air between commercials with poetry readings and newscasts. Broadcasting fascinated him. He sensed its enormous educational possibilities. "There were so many things people ought to know," he says, "and no one was telling them."

He set out to remedy that by arranging a program called "Law for the Layman." With himself as interrogator, he lured his professors from St. John's Law School to the microphone to inform the public about wills, leases, contracts, debts, alimony.

When WGBS was sold in 1928, Granik was invited to bring "Law for the Layman" to station WOR. Prohibition was then a controversial issue; and Congressman EMANUEL CELLER of New York was scheduled to speak against the 18th amendment. The Women's Christian Temperance Union demanded equal time for its representative to defend the amendment.

"Let's put them both on my show at the same time," Ted suggested. "Then we can present both sides of the issue."

That broadcast made radio history. Facing her angry opponent at the microphone, the temperance lady let loose the charge that, in Washington, underground passages connected Government buildings with nearby speakeasies. The press took it from there, and next morning the Nation was aware of a new type of broadcasting.

Granik convinced the broadcasters that there was a place for controversy on the air so long as the proceedings were kept under control by an impartial moderator. The program became "The American Forum of the Air"; its shelf of transcripts represents a lively history of the past 27 years.

Arranging and moderating the weekly forum could have been a full-time job. Granik managed it in his spare moments—with the help of his wife, Hannah. Then, with a sheaf of glowing letters from members of the bar, he applied for the post of assistant district attorney of New York County and got the job.

In 1937, when he was appointed counsel of the U.S. Housing Authority, he took the forum with him to Washington, where it became a network feature. With the New Deal controversies raging and a war brewing in Europe, Granik was able to bring to the

microphone an increasing number of Congressmen and Cabinet officers who were willing to speak out on everything from social security and farm policy to neutrality and armed intervention. The CONGRESSIONAL RECORD reprinted the proceedings, and the program became known as the "Unofficial Congress of the United States."

Sometimes the debates taxed Granik's adroitness as moderator. Once the late Gen. Hugh S. Johnson, an irascible ex-New Dealer, tried to beat Senator Claude Pepper over the head with a table microphone. During the bitter wrangles between the isolationists and interventionists in 1940–41, the American Forum was also the scene of some dramatic conversions. Clarence Streit, founder of Union Now, converted an isolationist Senator in the course of the broadcast. On another forum, Mrs. Irving Berlin, an ardent interventionist, persuaded her opponent to resign publicly from the America First Committee.

Granik retired from the U.S. Housing Authority in 1941 to enter private practice. But his impulse to give friends in Government a hand with their problems left little time for his clients. He helped Maj. Gen. Lewis B. Hershey launch the selective service program. When Mario Giannini, president of the Bank of America, told him of the problems small businessmen of California were having getting war contracts, Granik went to California and organized scores of little firms into subcontractors' pools that became models for the entire Nation. This job so impressed the Senate Committee on Banking and Currency that he was retained to help draft the Smaller War Plants Corporation Act. Meanwhile, the American Forum served a vital purpose in wartime information and morale.

After the war, Granik's friends tried to persuade him to forget public service and concentrate on his law practice. Nearly 20 years of broadcasting had been carried on at a personal financial loss; his out-of-pocket expenses represent a fabulous sum. Ted rejoined, "Can't a man have a hobby?"

For a few years he concentrated on the law and the American Forum. Then in 1951 he had another broadcasting idea. When lining up speakers for the Forum, he was frequently accompanied by his teenage son, Bill. Often he was amazed by the clarity and directness of Bill's questions and the respect with which they were answered.

The result was "Youth Wants To Know," which made its debut on the NBC radio and TV networks in 1951. On the first broadcast Senator Robert A. Taft faced an audience of Washington teenagers who asked searching questions about the coming presidential campaign, General MacArthur's recall from the Far East, and the liberal-conservative struggle within the Republican Party. After the broadcast, switchboards were swamped with calls from enthusiastic listeners. Senator Taft remained in the studio with the kids for 2 hours. Later the Senator told Granik: "I've never been questioned so intelligently in my entire public life."

The youth program gives Granik more satisfaction than anything else in his career. The youngsters' questions go directly—sometimes ruthlessly—to the crux of the matter. They are quick to spot evasions. One lad stopped a famous public relations expert: "Please, sir, quit filibustering."

This year "Youth Wants To Know" attracted a sponsor, the General Dynamics Corp., which is considering sending it on a nationwide tour, enabling youngsters in many cities to participate.

With State Department blessing, Granik is planning a TV program which will take the public to a party in a different Washington embassy each week. He has another program planned with the Overseas Press Club, in which leading journalists will talk things over with foreign statesmen.

Last year Granik logged 100,000 miles of air travel, and 15,000 more by sea. Yet he seems calm and never in a hurry. The doctors say that he never has been in better shape.

Little Lost Sheep

EXTENSION OF REMARKS
OF
HON. BARRY GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Tuesday, August 23, 1960

Mr. GOLDWATER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Little Lost Sheep," which appeared in the Wall Street Journal of today, August 23, 1960.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LITTLE LOST SHEEP

In the Life magazine series of articles, Senator KENNEDY has joined those who decry America's loss of national purpose.

One of the more interesting things about this series is the contributors' assumption that we have in fact lost our purpose. Almost none of the writers questions this; they just say it's so. After several hundred years of organized society on this continent we suddenly, overnight, mislaid our purpose, lost our way, got off the track. No need to argue the matter; everybody at home and abroad, it seems, can see our plight as plain as day.

By what nationwide poll, it might be asked, or by what process of psychic osmosis, have the learned gentlemen discovered this astounding loss? They have apparently managed to discover it by limiting their search to what is, beneath all the rhetoric, a very peculiar definition of purpose. They have decided that Americans are not working in unison, harmoniously and enthusiastically, for the promotion of specific Government programs or proposals. Ergo, no purpose.

In that sense they are of course right. But when, aside from wars, did America have a national purpose in that sense?

One period commonly mentioned is the great continental expansion in the last century. That, though, was by and large not a Government project at all. It was the sum total of millions of individuals availing themselves of opportunities, and risking dangers, for the purpose of building a better life for themselves, their families, and their descendants as individuals.

Another period that comes to mind is the relatively brief fling with imperialism starting around the turn of the century. This, if you wish, was Government purpose, though there was plenty of confusion about it within the Government. And many Americans may have been temporarily thrilled by it, though we may be sure their main concerns were individualistic. In any case, other Americans were so far from thrilled with imperialism that they ceaselessly denounced it and in due course this phase passed.

Let us go a bit further. What is Britain's national purpose? France's? Quickly now, what?

Or, even more to the point, what is the national purpose of the Soviet peoples? That one sounds easy; we all know it is to win the world for communism. But that is the Soviet government's purpose, which is another matter. No one who has taken a serious look at the Soviet Union can believe the Russian people as a whole are working might and main, with fanatical fervor, toward that aim. On the contrary, they are rather pathetically confused and hag-ridden by their government's oppressive purposes and practices.

There is, to come back home, only one abiding national purpose throughout America's history since independence, and that is the preservation and perfection of individual liberty within a framework of order. No American should despise that purpose; it was a tremendous intellectual as well as political feat for the founders to put together liberty and order. It is still a tremendous challenge to keep it and improve on it.

By definition, however, that kind of purpose doesn't fit with national purpose in the sense of Government direction. Individual liberty within a framework of order contradicts the concept of Government-imposed togetherness.

And just as no one should despise the framework, so no one should despair of its efficacy. Individual liberty within order continues to work, bringing as byproducts sensational economic benefits for all. It will, if we let it, work to meet all the challenges we are supposedly confronted with.

The men who decry our loss of national purpose are the despairers of our real purpose. Only if we ever let Government decree a "purpose" which we must follow like sheep—only then will we have lost our way.

Self-Employed Individuals Retirement Act

EXTENSION OF REMARKS
OF
HON. JOSEPH E. KARTH
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 23, 1960

Mr. KARTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following remarks concerning H.R. 10, the Keogh bill:

SELF-EMPLOYED INDIVIDUALS RETIREMENT ACT

Most of us in Congress agree that the problems of our present aged population deserve our most urgent consideration. No less pressing, however, is the problem of our aged of the future. The question of how the needs of this growing segment of our population will be met may soon assume critical proportions if we continue to neglect seeking the answers.

One answer to this many-faceted question is found, I believe, in H.R. 10, the Keogh bill, which would help millions of our self-employed people provide for their retirement years. These people—workers in agriculture, forestry, fishing, small businesses and the professions—would be allowed to deduct from their Federal income tax up to 10 percent of their annual net earnings, or $2,500 (whichever is less), in order to put this money into their own retirement program as specified in the bill. Under this legislation, the self-employed would finally have the tax advantage on their retirement savings similar to that which employees covered by employer-financed pension plans have had for some time.

The spirit of individuality which the self-employed exemplify is basic to our national heritage and to our economy. To fail to encourage it through removing legislative inequities is economic and social folly.

Our men and women must be given the opportunity to use their years of productivity to prepare for less prosperous days. For the self-employed, H.R. 10 is a just means to this important end.

Eloy Alfaro Award

EXTENSION OF REMARKS
OF
HON. ROBERT R. BARRY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 23, 1960

Mr. BARRY. Mr. Speaker, I have been asked to insert highlights of the proceedings of the Eloy Alfaro International Foundation, on the occasion of the decoration ceremony at the Hotel Astor, New York City, in honor of the Right Honorable Earl Anglin James, D.D., Kt., Abp., of Toronto, Canada.

Dr. Herbert Holt, distinguished psychiatrist, and American Deputy Provost, read a letter from the Honorable Olmedo Alfaro, secretary general of the foundation, authorizing the ceremony at the Hotel Astor, New York City, and then introduced Dr. Herman A. Bayern, American Provost, who outlined the background of the foundation. Dr. Bayern said, in part:

The Eloy Alfaro International Foundation was organized to perpetuate and further the political and moral values of the Americas by General Alfaro, for whom the organization was named, and who from 1895 to 1901 and from 1906 to 1911 was President of Ecuador. The philosophy of General Alfaro, known as the Abraham Lincoln of South America, was based principally on service to his fellow human beings all over the world and to the cause of international peace. The public and private activities of the Right Honorable Earl Anglin James, D.D., Kt., Abp., of Toronto, Canada, particularly his extraordinary achievements and accomplishments, comes within the framework of the services rendered by him to his fellow human beings and to the cause of international peace. In recognition of this fact, the board of dignitaries grants Bishop James it highest honor—the Eloy Alfaro Grand Cross and Diploma.

Following additional remarks, Dr. Bayern called on Dr. Herbert Holt, who in conferring the Eloy Alfaro grand cross and diploma, said:

I am very happy, indeed, to have the honor of conferring this award on you, my dear Bishop James, in recognition of your outstanding work in behalf of humanity all over the civilized world as a dynamic religious leader and a great humanitarian, and your outstanding effort to bring about international peace, through prayer to divine providence.

You know, my dear Bishop James, you now join an elite and goodly company of distinguished persons, who have been similarly honored in the past. They include, President Eisenhower, former Presidents Harry S. Truman and Herbert Hoover, FBI Director J. Edgar Hoover, Senator Lyndon Johnson, Governors Rockefeller and Averell Harriman, Generals MacArthur, Crittenberger, Devers, and the Rt. Rev. Benjamin C. Eckardt, of Canada, who typify the caliber of men who hold this high honor.

On behalf of the Eloy Alfaro International Foundation, it is my rare privilege and honor to confer this diploma, and the Eloy Alfaro grand cross, upon the outstanding religious leader of the world, the Right Honorable Earl Anglin James, D.D., Kt., Abp., of Toronto, Canada.

ADDRESS OF THE RIGHT HONORABLE EARL ANGLIN JAMES, ON PRESENTATION OF THE ELOY ALFARO AWARD

I am overwhelmed and deeply appreciative of receiving this high honor and join such an elite and distinguished company of outstanding personalities.

As a member of the clergy, I have always tried to live up to the very highest ideals and principles of ecumenual thought. My constant endeavor has been for peace and cooperation among all religious groups of the world. I know that the major concern to the Eloy Alfaro Foundation is the advancement of the moral aim of the Americas. Morally, the Americas—North and South—and, of course, Canada—have much to teach the world. Especially can the religious forces of the Americas serve as examples of the Judeo-Christian tradition, which is the fountainhead of the morality of the Western Hemisphere.

It is within the compass of the religious of the Western Hemisphere to supply the leadership for transforming the spiritual standards of the world. Basic to the task is the vision required to join their efforts.

Religious groups in the Americas will, however, find their efforts severely curtailed until such time as they achieve peace and cooperation among themselves. Religious tensions, no less than political riftings, jeopardize the strivings of men of good will to achieve the realization of a united world. I urge that substantial measure of cooperation among religious groups which had been achieved in the United States and Canada be increased in order to further the moral objectives of the Americas.

Happily, we of the New World have initiated a program of interreligious amity that has reversed the pattern of religious friction that has marred the history of the Old World. Our task should be the broadening of the scope of our cooperation and the progressive lessening of the root causes of misunderstanding and distrust.

This major contribution on the part of the spiritual leadership of the Americas will inevitably exert a tremendous influence in bettering human relations and ushering in a more harmonious society for the blessing of mankind.

To be the recipient is indeed a high honor, and I shall regard it as an inspiration to accelerate my efforts to carrying out the high ideals and principles of Gen. Eloy Alfaro, for which General Alfaro laid down his life. I shall be glad to continue my efforts to promote world peace throughout the civilized world through prayer to the Great Spirit. I note that the Eloy Alfaro decoration is awarded to "men in the field of education and religion who dedicate their lives to eternal vigilance over human rights—sacred patrimony of mankind."

I wish to again express my personal appreciation and gratitude for your kindness and generosity in conferring this high honor on me, and I hope and pray that we may have peace in our time. May I conclude with the blessing that comes to us from the Old Testament in asking God to send us peace. May the Lord bless us and keep us. May the Lord make His face to shine upon us and be generous unto us. May the Lord lift up His countenance upon us and give us, in this country and all over the world, peace, forevermore. Amen.

The Congressman From Hawaii: The Honorable Daniel K. Inouye

EXTENSION OF REMARKS
OF
HON. WAYNE N. ASPINALL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 23, 1960

Mr. ASPINALL. Mr. Speaker, a year ago, a distinguished war hero and a Territorial Senator named DAN K. INOUYE was overwhelmingly elected by the greatest number of votes recorded by any candidate in the history of Hawaiian politics to represent the new and sovereign State of Hawaii in the Congress of the United States. A brand-new State and a freshman Congressman—a combination that portended a hard challenge ahead.

The heavy mantle of responsibility for the young State of Hawaii was thrown upon the young shoulders of DAN K. INOUYE. The congressional records bear immutable evidence that the young State and the young Congressman met the challenge well. The same qualities which Hawaii saw in DAN won him the love and respect of seasoned legislative veterans and leaders of the Washington scene.

His parental ancestry, in combination with this thoroughly American-as-apple-pie personality, provided a cold war weapon which Congress and our Nation were quick to recognize and utilize. During the past year DAN has been sent to the Pacific Trust Territories, Okinawa, Korea, Japan, Formosa, the British Crown Colony of Hong Kong and the Philippines, functioning as a veritable one-man East-West center. A few months ago the young legislator was appointed as an American delegate to the conference of the Interparliamentary Union in Tokyo, Japan. DAN is the first freshman Member of Congress to represent the United States in the entire 80-year history of this the oldest international legislative organization. DAN was recently appointed cochairman of the Foreign Relations Committee of the President's people-to-people program in charge of East-Asian activities. The Nation has recognized DAN's outstanding legislative and diplomatic talents.

As an experienced legislator, whose courage and love for his country are beyond question Hawaii's first U.S. Congressman has written an eloquent paragraph for peace in today's stormy chapter of international affairs. DAN has brought great credit and prestige for the people of Hawaii.

The brilliance of DAN's international and national accomplishments is matched by his assiduous and devoted attention to the immediate, practical needs of the people who elected him. In a short period of 11 months DAN has astounded Washington observers by his legislative know-how in guiding and as-

sisting in the passage of the following measures:

Establishment of the East-West Center for Cultural and Technical Interchange in Hawaii—H.R. 7500.

Assistance for the economic development of the Ryukyu Islands—H.R. 1157.

Construction of an enlarged turning basin in Kahului Harbor, $944,500—H.R. 7634.

Lifting of ceilings on loans administered by the Federal National Mortgage Association for the State of Hawaii—H.R. 10213.

Authorization to use Federal highway funds for the construction of approach roads to ferry terminal facilities and also for the construction of ferry terminal facilities—H.R. 10495.

Granting of the sum of $6 million to the college of agriculture at the University of Hawaii—H.R. 11602.

Granting of certain tariff and tax exemptions for Hawaii west coast shipping lines—H.R. 11748.

Provision for the permanent airlift of Hawaii's first-class mail—H.R. 12595.

Inclusion of Hawaii in the Interstate Defense Highway System, $12.5 million—H.R. 11602.

Provision for the presentation of the first U.S. flag with 50 stars to be flown over the U.S. Capitol to the honored dead now resting in Punchbowl National Cemetery—House Joint Resolution 546.

Appropriations of $10 million for the first year and $20 million for the following 2 years for the East-West Cultural Center—H.R. 11666.

Appropriations for feasibility studies by the Army Corps of Engineers—$10,000 for Honolulu Harbor project; $50,000 for Barbers Point Harbor project; $6,000 for Waikiki Beach erosion project; and $5,000 for the Kawainui Swamp project—H.R. 7634.

Authorization for the Army Corps of Engineers to make preliminary surveys and studies of the following projects—H.R. 7634: Kahoma Stream flood control, Maui; Kahaluu Harbor project, Oahu; Maalaea Bay deep sea harbor, Maui; lava flow barrier, Hawaii.

Authorization of a new Federal building in Honolulu, $23.5 million; authorization for a public health clinic and quarantine station in Honolulu—$1,887,000.

Increases in Federal grants to the State of Hawaii—over $400,000.

Authorization to conduct a feasibility study on the construction of a Hilo Harbor seawall or protective barrier—H.R. 7634.

Pay raises for Federal Government employees—H.R. 9883.

Hawaii has left an indelible mark of distinction in its first year of statehood. It has shared in the rewards of first-class citizenship. It has contributed its material and human assets to our Nation. And one of its proudest contributions has been Hawaii's first U.S. Congressman, the Honorable DAN K. INOUYE.

General Lee's Leadership

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 23, 1960

Mr. DEROUNIAN. Mr. Speaker, Ralph McGill has written a discerning article, which appeared in yesterday's Evening Star, on the distinguishing features which spell out the real leadership of the immortal general, Robert E. Lee, and our great President, Dwight D. Eisenhower. I submit it for the Appendix of the CONGRESSIONAL RECORD, for the attention of the Members of the Congress:

[From the Evening Star, Aug. 22, 1960]

PRESIDENT'S TRIBUTE TO GENERAL LEE—IMPRESSED BY HIS INTEGRITY, LOYALTY, POST-WAR DEVOTION TO UNION, YOUTH

(By Ralph McGill)

A dental surgeon in New Rochelle, N.Y., giving ear to President Eisenhower's speech at the Chicago convention, brooded a few days over a part of it and then wrote a letter requesting an explanation.

Mr. Eisenhower had mentioned that he had on the walls of his office the pictures of four great Americans—George Washington, Ben Franklin, Abraham Lincoln and Robert E. Lee. The gentleman in New Rochelle was firmly indignant about this. He demanded to know why the picture of a man who had tried to destroy the Union was on the walls of the office of the President of the United States.

Mr. Eisenhower's answer was an eloquent, moving tribute to Robert Edward Lee. The President has long been impressed by the "selflessness" of General Lee and by the fact that he was ever "unfailing in his faith in God." It is the revealed character of Lee which has made so enduring an impression on Mr. Eisenhower. It was this constant, inner integrity which made General Lee "a poised and inspiring leader" and one "unfailing in the trust imposed in him by his fellow citizens."

Another aspect of General Lee's character which the President likes was his conduct after the Civil War ended. Those who have read the life of the noble Virginian are aware, with Mr. Eisenhower, that in the postwar years left to him he strove with all his might to "help heal the Nation's wounds."

"These qualities of Lee," the President wrote, "are worth emulating today, especially by young Americans." To do so, Mr. Eisenhower thinks, would strengthen us as citizens and further sustain our love of freedom.

In a historical sense it is a rare sort of letter. It comes fittingly as the Nation prepares to commemorate the 100th anniversary of the Civil War which forever perpetuated the Union.

We learn from it something about Mr. Eisenhower himself. We sense what qualities of character he views as most necessary. We feel, too, since he mentions young Americans, that here is a sound, old-fashioned bit of advice on values to teenagers. It is quite apparent he feels that this generation, especially the young leadership, is called upon to end the present divisive controversies and, in a time of grave danger, strengthen the Union and its ideals of common liberty and freedom.

It is true, as the President says, that General Lee devoted the years left to him to teaching and instructing the young men in the South.

Time after time, by word and example, he taught love of country and of the Union. He made his life a symbol of obedience to civil authority.

He had never wanted secession. He did not believe in slavery. One of his letters to his family said: "I am not pleased with the course of the 'Cotton States,' as they term themselves. In addition to their selfish, dictatorial bearing, the threats they throw out at the Border States argue little for the benefit of peace for Virginia should she determine to coalesce with them."

But after a night of prayer he determined, if Virginia withdrew, to join his State and fight in defense of it.

He wanted no dealings with hotheads or fools, the strident screamers and shouters. He would, we may be sure, have contempt and distrust of those who fill those roles in our time. The President seems to say as much if one reads between the lines of his letter.

We Want Medical Insurance, Not a "Giveaway"

EXTENSION OF REMARKS
OF
HON. FRANK KOWALSKI
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 23, 1960

Mr. KOWALSKI. Mr. Speaker, in view of the administration's long-shouted claims that the budget takes precedence over everything else, it is astonishing to find the President supporting a plan for direct subsidies that could cost the U.S. Treasury $1.7 billion a year. Were the program to have other sponsorship, I am sure that the very spokesmen who advocate it would be calling it a giveaway.

As for the means test requirements of the administration plan, should we move backward in our social thinking to the days of the poorhouse and the county farm?

Instead of the subsidy and charity proposals of the administration, I believe the American people would much prefer the pay-as-you-go, self-supporting medical care proposed in Forand-type legislation.

None of us and particularly the senior citizens of the United States want any Federal handouts; we don't want any Federal charity. We want a workable insurance program that will give us protection against the costs of illness when we reach retirement age.

We have an efficient social security system already operating, which could easily handle the administration of a medical care program. There is no need for the establishment of a costly new agency.

The administration's handling of this whole question has been incomprehensible. First it told us there was no need for any medical care program for the elderly. As the election approached, the

administration took another look at the mass of incontrovertible evidence and suddenly espoused the cause of medical care for the elderly. But, instead of an insurance program under which our citizens would pay during their working years for protection in their older years, the administration advanced it subsidy-charity program.

I urge that we bury forever the charity concept in social programs. Let us allow each American to preserve his dignity as a free citizen; let us reject the anachronistic thinking whereby the administration would have us deal with our own senior citizens in terms of treasury handouts and public charity.

Resolution Grasshopper

EXTENSION OF REMARKS
OF
HON. MILTON R. YOUNG
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, August 23, 1960

Mr. YOUNG of North Dakota. Mr. President, one of the great weaknesses of the soil bank program is that no provision was made in the contracts to control grasshoppers and other insect infestation on soil bank land. This has become a real menace to other farmers living near soil bank land.

It is being proposed by both political parties that the soil bank program be extended. I think that a resolution which has been adopted by a number of boards of county commissioners in North Dakota and which has recently been forwarded to me should be of great interest to all Members of Congress.

I am therefore asking unanimous consent to have "Resolution Grasshopper" printed in the Appendix of the RECORD.

This resolution was first forwarded to me by Mr. O. Woolfrey, county auditor of Divide County, N. Dak., and was cosigned by Mr. Claude Christianson, chairman of the Board of County Commissioners of Divide County; Mr. Cornwall Holm and Mr. Fred Heuer, members of the Divide County Commissioners, Crosby, N. Dak. I have also received identical resolutions from Mae Classon, county auditor of Cass County, N. Dak., and cosigned by Mr. Ray Kasowski, chairman of the Board of County Commissioners of Cass County; Mr. Lewis Sutton, Mr. Ingolf Sandbeck, and Mr. Laurence Yunker, members of the Cass County Commissioners, Fargo, N. Dak.; Gladys C. Pederson, county auditor of Ward County, N. Dak., and cosigned by Mr. B. O. Dahl, chairman of the Board of County Commissioners of Ward County; Mr. Paul Walker, Mr. Harold Haner, Mr. John W. Howe, and Mr. O. E. Sandberg, members of the Ward County Commissioners, Minot, N. Dak.; Dorthy Laird, county auditor of Mountrail County, N. Dak., and cosigned by Mr. Ray S. Ashley, Mr. L. G. Larson, and Mr. Harry Olaf, members of the Mountrail County Commissioners, Stanley, N. Dak.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION GRASSHOPPER

Whereas great areas of Divide County, N. Dak., have been placed in the soil bank; and

Whereas these large areas have become infested with noxious weeds and breed grounds for the great hordes of grasshoppers; and

Whereas the spread of noxious weeds and great infestation of grasshoppers from the areas are creating a difficult hardship on those farmers still on their farms and engaged in the occupation of farming; and

Whereas present regulations formulated by the U.S. Department of Agriculture are inadequate to correct this situation: Now, therefore, be it

Resolved by the Board of County Commissioners, Divide County, N. Dak., That the North Dakota congressional delegation, the U.S. Department of Agriculture, and all interested persons are hereby urged and requested to support legislation or a change of regulations whereby landowners who have placed their land in the soil bank be required to control noxious weeds and grasshopper infestation thereon, and that a system of inspection be instituted to insure compliance therewith; be it further

Resolved, That the county auditor of Divide County, N. Dak., is to forward copies of this resolution to the U.S. Department of Agriculture, to the North Dakota congressional delegation, and to all other interested persons.

Dated at Crosby, N. Dak., this 2d day of August 1960.

CLAUDE CHRISTIANSON,
Chairman of the Board.
CORNWALL HOLM,
Member of the Board.
FRED HEUER,
Member of the Board.

Robert Frost

EXTENSION OF REMARKS
OF
HON. JAMES A. BURKE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 23, 1960

Mr. BURKE of Massachusetts. Mr. Speaker, today the House Committee on Banking and Currency reported out a bill authorizing the President of the United States of America to present a gold medal to Robert Frost, a New England poet. Senator LEVERETT SALTONSTALL of Massachusetts filed the original bill and the Honorable EDWARD P. BOLAND and I filed companion bills asking for due recognition for Robert Frost:

ROBERT FROST

One of the happiest aspects of the present times in America is that Robert Frost has lived long enough to have achieved something like his due in critical and public recognition. It is good that this sensitive and skilled poet, who spent the first 40 years of his life in obscurity and neglect, should now, in his eighties, be given his due need of praise and admiration. Perhaps it matters more, though, that we, the people of America, are granted the rare privilege of seeing and recognizing greatness in a living man. Vast numbers of Americans have been able to see Robert Frost, to hear him read, to hear his speech which is as beautifully phrased, as packed with feeling, as earnest and as witty as his verse. Through his spoken or recorded word, through his expressive countenance, whether seen directly or in photographs, through the warmth of his personality as brought to us in these ways and in his printed poetry, we of America have learned to know and love the man, and feel the impact of his greatness.

In the early years of his life, however, Robert Frost was little noticed or regarded. He was born in San Francisco, Calif., on March 26, 1874, the son of a New England man of Confederate sympathies, William Prescott Frost, and named for the Confederate general, Robert E. Lee. When the boy, Robert, was 11, his father died of tuberculosis, leaving nothing to his widow, his son, and his daughter, Jeanie, but the request that he be buried in his native New England. Enough money remained in the family supply to carry out this last request, but then the widow, with her two children, found herself in New Hampshire without the money to return to California. She taught in the school in Salem, N.H., which Robert and Jeanie attended. Robert Frost responded differently to different schools. In this grammar school, he was apparently lethargic and uninterested, refusing to read any book by himself until he was 12. But in the next school he attended, Lawrence High School, he semed to take fire with enthusiasm, and was graduated, in 1892, as valedictorian and class poet. In Dartmouth, something went wrong, either in Robert Frost's personal life or in the college, and he left early in his freshman year. Except for a brief period as a special student in Harvard, from 1897 to 1899, he has not since been enrolled in any college as a student.

Frost wrote and published a few poems between 1894 and 1899, but he was mainly trying to find a way of life, and a way of making his living. He worked in mills in Lawrence, held a job as a newspaper reporter, and taught school. After his marriage to Elinor White, in 1895, he helped his mother manage a small private school in Lawrence for more than 2 years. In 1899 he entered upon a career of raising hens and selling eggs, and in 1900 moved to a farm in Derry, N.H., to carry on this business. He continued in this business, though with little success, until 1909. In 1906, however, he tried to make up for the deficiencies of the poultry business by undertaking to teach English at Pinkerton Academy, in Derry, which he continued to do until 1911. In 1911–12 he taught psychology at the State Normal School, Plymouth, N.H.

The year 1912 marked the turning point in Frost's life, for in that year he and his wife decided to stake their future on his poetry, rather than on farming or school teaching. Selling the farm in Derry, and encouraged by the receipt of a legacy from his grandfather, Robert Frost set sail with his wife and four children for England, where they rented a house in Beaconsfield, Buckinghamshire, in which Frost was free to devote his time to writing.

Here he put together his first book of poems, "A Boy's Will," and shyly offered it for publication to the firm of David Nutt, in London. It happened that the head of the firm, David Nutt, had just died, and the book was taken for consideration, and then accepted, by the publisher's widow. The enthusiastic support of Ezra Pound, who brought the book immediately to the attention of a wide literary circle in England, and wrote favorably and perceptively of it in "Poetry: a Magazine of Verse," helped it at once to reach a wide audience, particularly among poets and critics. This first success was followed by the publication of "North of Boston," a book of dramatic dialogs, in 1914. By 1915, when the Frosts returned to America, both books had been published here by Henry Holt, the first that has remained Robert Frost's American publisher ever since.

Though Robert Frost had abandoned farming as a means of livelihood, he apparently still preferred a New England farm as a place to live, for he soon purchased a small farm in Franconia, N.H., and established his family there. For the support of six people, the income from his writings alone proved insufficient, and he began, in 1916, the way of life that he has followed, in general, ever since: teaching in colleges for certain periods, traveling from one end of the country to the other to speak his poetry to varied audiences, and always returning to a New England farm, whether for rest or for a restoration of vigor and renewed contact with reality. In 1919 he moved his family from the farm in Franconia to one in South Shaftsbury, Vt.

In 1916 Frost published "Mountain Interval," read the Phi Beta Kappa poem at Harvard, and became professor of English at Amherst, holding that position until 1920. He was poet in residence at the University of Michigan from 1921 to 1923, taught at Amherst again until 1925, served as fellow in letters at the University of Michigan, 1925–26, and returned to the position in Amherst until 1938. In 1920, he helped to found the Bread Loaf School of English, Middlebury College, where he has since been an annual lecturer. In 1923 he published "New Hampshire," in 1928 "West-Running Brook," and in 1936 "A Further Range." In 1933 he was made associate fellow of Pierson College, Yale, and in 1936 he was Charles Eliot Norton professor of poetry at Harvard University. Since 1933, he has been George Ticknor fellow in humanities and visiting lecturer in humanities at Dartmouth College, and Simpson lecturer in literature at Amherst. At Harvard he was member of the board of overseers for 1938–39, Ralph Waldo Emerson fellow for 1939–41, fellow in American civilization for 1941–42, and honorary Ralph Waldo Emerson fellow for 1942–43. In 1936, on doctor's orders, Frost began spending the most severe winter months in Florida, a custom he has kept up ever since. In 1938 Mrs. Frost died. In 1940, Robert Frost built himself a New England bungalow on the outskirts of Coral Gables, Fla., in which he has since spent much of the winters. He spends his summers on an upland farm in Ripton, Vt.

Frost's later books are "A Witness Tree" (1942), "A Masque of Reason" (1945), "Steeple Bush" (1947), and "A Masque of Mercy" (1947). Since 1947, there have been few poems, published individually as Christmas cards, or appearing in magazines, but among these few poems are some of the most popular in Frost's programs of spoken poetry, and some of the most important, in the opinion of critical commentators on his work. It is to be hoped that the compilation issued in 1949, with the now misleading title, "Complete Poems," will soon be reissued with the addition of such poems as "One More Brevity," "Kitty Hawk," "Away," and "A-Wishing Well."

In 1958–59, Robert Frost was consultant in English poetry at the Library of Congress, and on the expiration of this term he was appointed honorary consultant in the humanities for a 3-year period. He has been a member of the National Institute of Arts and Letters since 1916, and of the American Academy of Arts and Letters since 1930. In 1940, he was given the permanent post of honorary president of the Poetry Society of America.

Though many books have been written about Robert Frost, all are studies of his work, or of some aspect of it, rather than full biographies. John F. Lynen's book, "The Pastoral Art of Robert Frost," one of the three books on Frost to be published in the past few months, contains a bibliography listing seven earlier studies of Frost and his poetry. Much biographical material is incorporated in "Robert Frost, The Trial by Existence," by Elizabeth Shepley Sergeant, and a "selective chronology" of Frost's life is appended to that recent book. The other very recent book, "Human Values in the Poetry of Robert Frost," by George W. Nitchie, is a critical and philosophical discussion, with no biographical information. Lawrence Thompson published, in 1959, a biographical pamphlet on Robert Frost, as No. 2 of the series of "University of Minnesota Pamphlets on American Writers." In a preliminary note in this pamphlet, it is stated that Thompson is preparing a biography of Robert Frost.

Among honors that have been bestowed upon Robert Frost up to now are a large number of honorary degrees, of which no definitive list has been compiled as yet. The number is probably in excess of 40, though the fullest list at present available comprises 34. Frost has been awarded the Pulitzer Prize for Poetry four times, in 1924, 1931, 1937, and 1943. The only major award for literary achievement that has not been bestowed upon him is the Nobel Prize for Literature—and it is difficult to understand the fact that he has not been selected for this honor. Tufts College, as early as 1915, made him its Phi Beta Kappa poet, and such organizations as the Academy of American Poets, the American Academy of Arts and Sciences, the Poetry Society of America, the Huntington Hartford Foundation, the National Institute of Arts and Letters, and the New England Poetry Club have given to him their fellowships and cash awards, their gold medals and other decorations. The Senate of the United States gave him its official greetings on the occasion of his birthday in 1950, and again in 1959. A bill (S. 3439) providing that a gold medal be presented to Robert Frost by the President, in the name of the Congress, has passed the Senate, and is awaiting action by the House of Representatives.

It is to be hoped that Robert Frost will live long and prosper, in the enjoyment of the acclaim which he has so amply earned, and continues to earn, by the high qualities of his poetry, by the charm and force of his personality, by the sharpness of his perception, and by the integrity of his character. In my few remarks, I have tried to indicate the esteem in which he is held, I know, by the people of the United States generally, and most deeply by the people of his native New England.

The Big Political "If"

EXTENSION OF REMARKS

OF

HON. KENNETH A. ROBERTS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 23, 1960

Mr. ROBERTS. Mr. Speaker, through the editorial columns of his fine weekly newspaper, the Piedmont (Ala.) Journal, Publisher Austin Johnson often strikes chords which are consonant with the sentiments of a large segment of the South.

This, I think, he has done in an editorial entitled, simply, "If," which I would like to include at this point in the RECORD:

[From the Piedmont Journal, Aug. 12, 1960]

"IF"

Some States rightists, along with the self-appointed political Moses Gessner T. McCorvey, are at it again—engaging in their typical wishful thinking, political bickering, fantastic haranguing, and "ifie" agitation, urging another 1948 political debacle—to the extent of finding a sufficient number of States' rightists to ditch the election of a President by the electoral college process and throw the election into the House of Representatives.

The whole scheme—as proposed by an agitative folder issued by McCorvey and broadcast to the press—is fantastic and "ifie" to Kthe *n*th degree. For example (according to folder):

"If neither the Democratic nor Republican nominee of the national convention has a majority of electoral votes * * * (then) * * * If we can throw the election into the House * * * etc."

(Then) "If the election is thrown into the House I (McCorvey) feel confident that many States, including some Northern and Western States, will cast their votes for a great statesman of the type I have mentioned—Byrd (Virginia), Senator James F. Byrnes, or Strom Thurmond (South Carolina); Senator Dick Russell (Georgia); Senator Eastland (Mississippi) for President—if neither John Kennedy nor Dick Nixon got a majority in the electoral college * * * etc., etc."

And again "if" such a scheme were to work by some wild stretch of the imagination, and the election were to be thrown into the House—woe be unto an Alabama or southern Senator or Congressman who had the effrontery to "* * * vote for an integrationist and antisegregationist political leader like JOHN KENNEDY * * *" rather than THURMOND, RUSSELL, EASTLAND, or the rest of rightists' hopefuls.

And "if" the Alabama or southern Senators and Representatives did vote for the villains—JACK or DICK—then the following paragraph as to what would befall them: "* * * I think I (McCorvey) can safely say that henceforth the guilty party could not be elected to any office in Alabama. Can you imagine the indignation of our people if any one of our Congressmen, having such an opportunity, should be traitor enough to his people, and enough of a "Quisling" to support a man who is avowedly trying to wreck our traditions and our civilization?"

Of all tommyrot, wishful thinking, crackpot scheming and shadowboxing, this must be it. As obnoxious as the civil rights phase of the Democrats' platform is, as detestable as is the integration attitude of non-Southern States in the party, where else can southern Democrats go?

True we can sulk. But sulk alone. We are not ready to "take our little ball and go home." We must stay in there like the real McCoy—and fight back and keep on fighting—if we ever expect to get anywhere—if we continue to have a friend at court. As bad as the civil rights dose is, the mess might be a lot worse if we stomped on the party and quit.

What about the splinter party? You answer that. It's been tried over and over. It's like talking a squirrel out of a tree. It won't work.

So, all the objectionable features of the Democratic platform notwithstanding, it is the feeling of this paper that good Democrats will be smart to rally to the ticket, pull the lever and vote it straight under the rooster, come the November general election.

And, it's our considered opinion, they will.

The Issue at Stake in Port Authority Controversy

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, August 22, 1960

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues

the following article by George E. Sokolsky as it appeared in the New York Journal-American of August 12, 1960:

THE ISSUE AT STAKE IN PORT AUTHORITY CONTROVERSY

(By George E. Sokolsky)

Consistency in thought and action is rare and to politicians not too important. For instance, Governor Meyner of New Jersey and Governor Rockefeller of New York do not believe in the kind of States rights that Governor Faubus of Arkansas believes in. Governor Faubus holds that with regard to all matters which are not literally and verbally delegated to the Federal Government by the Constitution, the Federal Government should mind its own business.

The Governors of New York and New Jersey would hold that the 14th and 15th amendments forbid the designation of any American citizen as lesser than any other American citizen, but when it comes to the constitutional provision that the States shall make no compacts without the consent of Congress, they raise the issue of States rights just as the Governor of Arkansas raises the same issue with regard to the management of the schools of his State.

This is no new issue in American history and over it the only civil war in our history was fought. The war did not settle the basic quarrel over federalism because men's minds were diverted to the question of slavery. What the war did settle was that no State could secede from the Union and that the Congress of the United States could pass social legislation. It also settled the matter of States making compacts among themselves. The Confederacy was such a compact and when the Confederacy was defeated, that settled the question of compacts and treaties between States without the consent of Congress.

On the other hand, the daily business of the United States is such that States have to engage in joint enterprises. The Port of New York Authority is such an enterprise. There are many such enterprises in the United States. In some instances, such as the TVA, the Federal Government organizes its own management body. The forms vary, but in every instance that requires a joint operation in more than one State, the consent of Congress must be obtained. And the operation is forever subject to congressional scrutiny, because what Congress grants, it can revoke.

This issue is so important that in the Port of New York Authority's controversy with the House Judiciary Committee, appeal has now been made by both sides to the Governors of all the States and to each Member of the House of Representatives. Undoubtedly, before it is over the question will go to the courts because at stake are two congressional rights: the right to amend or revoke a consent to a compact between States and the right of the Congress to investigate the operations of public bodies existing by congressional consent. The Congress will not give up either of these rights.

If States may enter into a compact for a good purpose, they may enter into a compact for any purpose. It is for this reason that the Constitution specifically forbade such compacts without the consent of Congress. At issue is this: If Congress has once granted consent to a compact, is the consent eternal and unalterable or may Congress from time to time investigate the compact to discover whether it is still in the interest of the United States and whether it is performing the task for which the compact was permitted by Congress, or is producing an excess of power.

It does not matter that the compact serves a good cause or that those who supervise the compact are reputable men. Today men are reputable; tomorrow others take their places who serve their own purposes. It is a fallacy to base a judgment on the virtue of men; it is essential that the law be correct and that the law be obeyed.

In the present Port of New York Authority controversy, the virtue of the individuals is not questioned; what is questioned is the right of a congressional committee to inquire into the activities of a public body which exists by a compact between two States and a consent by the Congress. The contention of one side is that the public body, in this instance, the Port of New York Authority, needs to report only to the Governors of the States in the compact; the contention of the congressional committee is that the right of investigation is inherent and that a consent once granted may be revoked.

It is a tricky subject and out of it could come decisions of far-reaching effect.

The Brass Roots for Nixon

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, August 22, 1960

Mr. ANFUSO. Mr. Speaker, under leave to extend my remarks, I wish to insert into the RECORD the text of an article published recently in the New Republic. The author of the article is Lloyd R. Winburn, administrative assistant to State Senator Hugo Fisher of San Diego County, Calif.

In his article "The Brass Roots for NIXON," Mr. Winburn discusses some very interesting aspects of the Nixon campaign in California before the recent national conventions of both parties, and the people who are spearheading that campaign. The article reads as follows:

THE BRASS ROOTS FOR NIXON

(By Lloyd R. Winburn)

Being press agent for any unopposed candidate for public office is a hard job, and it's no easier if the candidate happens to be the inevitable Republican nominee for the Presidency. To work off his frustrations, Herbert Klein, aide to Richard Nixon, recently called a press conference to report, though no one had asked him, that "The Vice President's bandwagon is rolling and rolling hard at the grassroots level."

Which makes it proper to inquire: How deep grow the roots?

In California, where the last of the Nation's presidential primaries will be held on June 7, the Vice President will be competing in a popularity contest with a Democratic slate headed by Gov. Pat Brown as a favorite son, but including delegates who favor other candidates. Brown has made a point of the fact that the Vice President has retained two public relations agencies in the State to cultivate those "Grass Rooters for Nixon." But actually there are not two, there are five, and the digging and sprinkling has been going on since September 1959.

Nixon clubs are organized regionally—in northern California, the Los Angeles area, Orange County and San Diego County—mainly because those are where the Nixon-employed ad firms are located. The Whitaker & Baxter agency in the Flood Building, San Francisco, is the address of the "Nixon in '60 Committee of Northern California." Baus & Ross, 2796 West Eighth Street, Los Angeles, is also the address of the "Richard M. Nixon for President Committee," and the "Orange County Committee of 10,000, Richard M. Nixon for President," is at 2133 W. Chapman Avenue in Orange, the same address as the agency known as Robert Geier Associates. The Orange Daily News has listed Robert Geier as the Nixon club campaign director.

Although there is a separate Nixon Committee headquarters in San Diego at 1072 Second Avenue, this was not opened until January after two agencies, Armstrong, Fenton & Vinson, and Champ, Wilson & Slocum, organized the first Nixon clubs in the country. Releases of the "Nixon in '60 Committee of Northern California" carry the Whitaker & Baxter masthead with the names of Clem Whitaker, Jr., James Dorais, and Newton Stearns. The Nixon committee San Francisco telephone number, Sutter 1-3751, is the Whitaker & Baxter telephone number. A Los Angeles release of the Nixon for President Club carries the notation, "Represented by Baus & Ross Co., 2796 West Eighth Street, Dunkirk 8-1107." Dunkirk 8-1107 is also the telephone number of the Nixon for President Committee which lists William B. Ross of Baus & Ross as campaign director.

California men on the Nixon staff who are behind "Grass Rooters for Dick" are Robert Finch, Nixon's administrative assistant and former chairman of the Los Angeles Republican Committee, and Mr. Klein, who is editor-on-leave from the San Diego Union. A scattering of California Republican Congressmen are helping, led by Representative BOB WILSON of San Diego, who is the only member of an advertising firm to sit in Congress. (He is a partner in the Champ Wilson & Slocum Agency which is working with Armstrong, Fenton & Vinson to organize Nixon clubs in San Diego County.)

The first Nixon clubs in the State were organized in September by Baus & Ross in Yorba Linda, Nixon's birthplace, and Whittier, where the Vice President grew up; and on October 11 the Los Angeles Times in three-column headlines and photo reported, "Nixon for President Club Aims To Get 10,000 Here." The story began, "Los Angeles citizens have joined the Nixon for President Club drive—a grassroots movement which has boomed since its inception in Vice President NIXON's home-town area of Whittier-Yorba Linda." Thomas P. Pike, head of the grassroots club, stressed the "absolutely nonpartisan" aspect of the drive and said, according to the Times, "Democrats, Republicans, and independents alike are joining the Nixon for President Club parade." Pike is a former assistant to President Eisenhower and a former Assistant Secretary of Defense, and thereafter his name appeared prominently in Nixon campaign material and press releases issued by Baus & Ross. Committee members of the grassroots movement listed by the Times included Alphonso E. Bell, Finch's successor as Los Angeles chairman; advertising man Don Belding, Walt Disney, Irene Dunne, Mrs. Bernard Giannini, Herbert Hoover, Jr., George Murphy, Harry Buffum, Zazu Pitts, Dick Powell, Edward S. Shattuck, Republican national committeeman; Jack Warner, Robert Warner, Jack Wrather, owner of numerous radio and TV stations and of the luxurious Knoa Kai Club in San Diego, and Dr. Arnold O. Beckman of Beckman Industries, who later accepted the chairmanship of the Orange County "Neighbors for Nixon" which has been set up by the Geier firm.

A set of instructions for organizing the grassroots, sent out by Baus & Ross in October states: "The Nixon problem is to be elected President of the United States—not to gain the Republican nomination. * * * Those who campaign for NIXON's nomination actually do him a disservice by lowering him from the exalted political position he now occupies—the obvious favorite of the present President of the United States.

"Our job now is to set up an organization for winning the November election—an or-

ganization attractive to voters of both major parties and the independents. When we succeed in organizing this broad support, it will be apparent to every delegate at the GOP convention that Vice President NIXON, the trained and handpicked successor to President Eisenhower, is the only Republican who can be elected in November of 1960."

Baus & Ross subsequently issued a more elaborate pamphlet entitled, "How To Organize a NIXON for President Committee in Your Community," which opened with the statement: "For the first time in history a man has been trained to be President of the United States." On the same page is the paragraph: "Despite the President's uncompromising attitude of neutrality in the election of his successor, Vice President NIXON obviously occupies the unassailable position of Eisenhower's trusted lieutenant and trained successor—head and shoulders above all other contenders. Other hopefuls will be heard from (they may add to the ticket and the forthcoming Nixon administration) but NIXON, as the handpicked successor to President Eisenhower, is the only Republican who can be elected President in November of 1960."

In San Francisco on November 18, Whitaker & Baxter released an announcement by John W. Dinkelspiel and Caspar W. Weinberger of the formation of a volunteer NIXON for President Committee of northern California citizens. Dinkelspiel is a former chairman of the San Mateo County Republican Central Committee, and Weinberger is a former Republican member of the legislature. The release listed, on five legal-sheets, double spaced, names of Nixon Committee members in 46 nbrthern counties. Almost all are well-known registered Republicans, including, in Santa Clara County, the GOP State chairman, George W. Milias, Jr., of Gilroy.

NIXON has made many visits to California since "Grass Rooters for DICK" got underway. Each visit is fringed with a sectional tour and a round of nonpolitical appearances, and the agency men are invariably present to help with arrangements. In December NIXON saw Ross and Pike in Los Angeles, then went to Newport Beach where he saw Armstrong and Representative Wilson, as well as San Diego and Orange County leaders. In February he was back in Los Angeles for conferences at the Statler Hotel with representatives of the five ad agencies and State Nixon club leaders.

California newspapers have reported the existence of about 250 clubs, but these are no more than paper organizations in such places as Broderick, Lemon Cove, Hollister, Llano, and Potrero. In the larger cities there are meetings, luncheons, and dinners—but the clubs, if they ever existed in the small towns and villages, are dormant. In February Pike was quoted, in a Baus & Ross release, as saying there were 55 clubs with more than 15,000 members in the Los Angeles area. This averages about 275 members per club. I have not seen a single newspaper account of a Nixon club meeting which reported more than 40 members in attendance, and according to many of the newspaper stories, attendance ranges from 10 to 20.

Newsletters and press releases from both the San Diego committee and the Armstrong agency stress the need of wide backing for NIXON. One newsletter dated February 11 and signed by Clair W. Burgener reports that "* * * DICK NIXON feels that nonpartisan membership should be the keynote in any NIXON for President group formed." In San Diego, an Armstrong agency release dated November 25, 1959, announced the formation of Young Men for NIXON with Chairman Laurie Flood saying he thought the movement would spread to other cities in California and across the Nation. As of now, Young Men for NIXON is still operating only in San Diego.

The press releases of the NIXON clubs in northern California, although ostensibly emanating from various communities, reveal a sameness in form, content, and mechanical duplication which suggests a common agency origin. Melville E. Willson of Fresno, is quoted as saying: "As a truly working Vice President he has proved himself an able and qualified leader." Whitaker & Baxter had earlier written that line for Dinkelspiel and Weinberger this way: "As the first truly working Vice President."

Although there is no central direction of the "Grass Rooters for DICK" movement in California, outside of NIXON's own office in Washington, the agencies apparently work closely with each other. George E. Taylor of 4494 30th Street, San Diego, wrote to a Mrs. Enid K. James that he wanted to form a NIXON group in San Diego. Mrs. James passed the letter to Baus & Ross in Los Angeles and Ross wrote to Taylor on October 30: "My understanding is that this work is currently being headed up by Mr. Tom Armstrong of the Armstrong, Fenton & Vinson Agency. I would suggest that you check in with him immediately in order that there be no duplication of activities. Meanwhile, I am sending you our 'How to Organize' folder."

"What DICK NIXON has in California," a San Francisco advertising man said some weeks ago, "is a Madison Avenue stretching 1,580 miles from Yreka in the north to San Ysidro on the Mexican border."

Winds of Change

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, August 22, 1960

Mr. POWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and newspaper articles:

G-M LOCAL 1097, UAW,
Rochester, N.Y., July 21, 1960.

HON. ADAM CLAYTON POWELL,
House of Representatives,
Washington, D.C.

DEAR HONORABLE POWELL: In this critical election year of 1960 our Local Union 1097 of the United Automobile Workers of America, is deeply concerned about the future of our Nation both at home and abroad. The civil rights platform recently adopted by the Democratic Party assembled in Los Angeles for its quadrennial convention has filled our hearts with new hope and inspired us to think and work diligently for this success at the polls in November for the candidates sworn to push for a strong civil rights platform.

My committee is primarily concerned with securing full equality for all of the citizens of the Rochester area regardless of race, color, or creed. As you are well aware, the minority groups have long suffered from uninterested parties and the inequities resulting therefrom, imposed upon our Negro citizens by the ultraconservative party now in power and which has controlled the Government in this area for many years.

Recently two distinguished journalists of the staff of one of our local papers, the Times-Union, made a survey of minority group problems in our community. They have published the results of this study in a series of excellent articles under the title of "Winds of Change." These articles constitute an essentially accurate portrayal of the intolerable discriminatory conditions which hamper their lives and progress. I am enclosing reprints of these articles for your careful study.

The UAW believes that our efforts in the field of human rights would be rendered immeasurably more effective if the disgraceful record of this community in the area of civil rights could be exposed to the whole of New York and the entire Nation. We believe also the exposure of these discriminatory practices will aid significantly the cause in November of the candidates sworn to push for a strong civil rights platform.

These considerations have led us to request that you use your good office to introduce these articles in whole or in part into the CONGRESSIONAL RECORD. We should appreciate, therefore, any effort that you find it possible to make in our behalf in our efforts to achieve full equality for all our citizens and a resounding victory in the fall for those candidates who have pledged themselves to enact a sound reliable civil rights program.

Very truly yours,

CLARENCE LOVE,
President, Local 1097 UAW.
JOHN C. MITCHELL,
Chairman, Fair Practices Committee and FEPC.

WINDS OF CHANGE—CITY IS CAUGHT IN U.S. DILEMMA OF RACE RELATIONS—THE "NEW NEGRO" IS DRIVING HARDER FOR ACCEPTANCE

(By Desmond Stone and Jack Germond)

From Africa, the South, and the urban North, winds of change have blown into Rochester and caught a proud city largely unawares. What was for so long an essentially local problem in race relations has become part of the wider problem of the colored man's struggle for equality around the world.

It was bound to happen sooner or later. No man is an island, and in a quickly-shrinking world, neither is any city.

It has happened today rather than yesterday because conditions in Rochester are riper for change than they were.

The Negro community has been stung into a greater awareness by the controversy over the proposed establishment of a Rochester office of the State Commission Against Discrimination.

A new middle-class Negro has begun to shed his inhibitions.

A close political balance in the city has made the parties newly sensitive to Negro demands.

The transformation is untidy, sometimes confused. The Rochester Negro's identification with the Negro in Ghana, in Biloxi and in Detroit is still incomplete even in middle-class circles. But though the winds of change do not blow steady, or all to the same effect, the sighs are unmistakable.

A Negro research chemist spreads a pile of recent newspapers from Nigeria across the floor of his dining room and says: "At first the American Negro looked on Africa as a dark and savage place. Now he sees the time when the Negro in Africa will be free. But will he be free here in the land of freedom?"

A teenager at Hanover Houses, talking to a white acquaintance, brings the name of Dr. Kwame Nkrumah, the prime minister of Ghana, down out of the blue.

A well-educated woman member of the Delta Ressic Club, a Negro group that originated in the Baden Street Settlement, relates an incident that occurred during the Montgomery (Ala.) bus strike.

"My father was a patient in one of our hospitals. He heard the nurse say to a young Negro helper, 'Go sweep that room.' He also

heard the boy say to the nurse, 'Haven't you read this morning's paper?' "

These portents are not peculiar to Rochester. Unless it be in the intellectual darkness of big city slums or in the remoteness of a cotton field, few Negro communities anywhere are unaffected any longer by events outside.

But more than some cities, Rochester has been taken by surprise. It has mistaken the Negro's new vocalism for the cry of the local malcontent. It has not caught the overtones of the Negro emergent in Africa and elsewhere.

There are reasons for this. Traditionally, Rochester has preferred to solve its problems at the local level.

Now, however, the Negro problem is suddenly in danger of slipping out of its grasp.

Events in the South have led to picketing of local Woolworth stores.

Pressure is on for an office of the State Commission Against Discrimination.

Housing bias here and elsewhere has become a primary target for statewide action by the National Association for the Advancement of Colored People. Roy Wilkins, executive secretary in New York City for NAACP, made this point when he addressed the recent 24th annual meeting in Rochester of the State conference of NAACP branches.

DEMANDS CANNOT BE ISOLATED

Having depended on the local approach for so long—and, more important, having failed to remedy conditions in time—Rochester today finds itself caught up in the American Dilemma. And not appreciating the full implications, the community at large is puzzled, confused, resentful.

"I ask you, What does it all mean?" cries an employment official as he waves a newspaper clipping telling of the Episcopalian resolution backing a local SCAD office. "What's the fuss? Why's everyone jumping on the bandwagon?"

"Why," asks the man in the street, "must they picket our Woolworth stores when the lunch counters here are freely available to all Negroes? Why should we suffer for something we haven't done?"

But whether considered just or unjust, the demands and actions of the local Negro community cannot now be either isolated or ignored.

"You can no longer sweep us under the rug," declares a new leader, "because what you sweep under the rug is potential dynamite."

Encouraged by the words of men like Rabbi Philip S. Bernstein, Negro pressure for acceptance is today at a new high in Rochester. And though this pressure is coincidental with the controversy over SCAD and the awakening of the Negro everywhere, it is obviously not accidental. The SCAD issue supplies spontaneity and adds fuel, but a new, more militant leadership supplies the planning.

More than any other leader of recent times, the Rev. Quintin E. Primo, Jr., president of the local NAACP and minister of St. Simon's Episcopal Church, has begun to speak out bluntly, sometimes angrily, on behalf of his people.

Publicly, he says: "The posthumous granting of human rights to those Negro citizens who are our neighbors today is unacceptable; therefore, immediate effective action is necessary."

Privately, he spells this out strongly in terms of Negro deprivations.

"We want representation," he says.

As the NAACP leadership has changed, so have both the nature of the organization and the composition of its board.

"Let's face it," explains a white board member, "NAACP was once a slumbering body, its policy strongly influenced by non-Negro members. Some were genuinely devoted to the Negro cause. Others sat there either to make perfunctory gestures or to keep NAACP in its place."

Today the policymaking board of NAACP is dominated by Negroes. Five years ago only some 35 percent of members were Negroes; today the percentage of a larger board is more like 60.

Two things helped bring this about.

Some of the whites dropped out because they feared and resented the new militancy, both here and in places like Little Rock.

Others have been discouraged by Negro members less willing to work alongside white colleagues. In fact, some Negro members make no bones about it—they would prefer an all-Negro NAACP.

This change at least is regretted by the Reverend Mr. Primo. "We should be able to work as an integrated group."

Desirable or undesirable, the change is symptomatic of NAACP's new determination to force the pace.

The Negro community is still a long way short of standing as one man behind the Reverend Mr. Primo.

The NAACP continues to scratch for members as it has always done.

The middle-class Negro finds himself torn at times between the desire to help his people and the need to establish himself downtown.

Among the low-income Negroes are many who know little or nothing of the issues at stake.

(These splits in the Negro community are not peculiar to Rochester. An advertisement in a recent issue of Crisis, the official organ of the NAACP, poses this question: "Who says our businesmen and professionals are slackers?")

THE NAACP'S NEW DRIVE

What is undoubtedly true, however, is that the Reverend Mr. Primo has been able to find more support than any other recent NAACP leader.

As a man of the church, and as an articulate, educated man, he commands respect from both upper and lower class Negroes. Thirteen years in Rochester have changed his original diffidence into forcefulness, his naivete into sophistication. He speaks, moreover, out of his own bitter experience. He does not forget that in spite of his church affiliation he looked at 75 houses before he was able to buy the home he lives in at 128 Empire Boulevard.

As NAACP head, the Reverend Mr. Primo's demand for a SCAD office has drawn a significant response. "Wherever I go, I find my people asking about SCAD and congratulating us on our stand—people you would not suspect of caring."

Behind the NAACP's new drive lie several significant factors.

The first is the increase in numbers. Although the Negro population remains small at some 5 percent of the city total, it jumped from 8,247 in the 1950 census to the some 16,000 reliably estimated by SCAD in 1957. Today it may stand at 18,000.

Better opportunities for education—including the college training offered veterans under the GI bill of rights—have made the Negro more conscious of the gains he still has to win and put him more closely in touch with the march toward independence in Africa.

Barriers to employment have become progressively lower. The Negro's economic status has improved vastly.

A key factor has been the closing of the political gap. Republicans held an 8 to 1 majority on the city council as recently as 3 years ago, but last fall control of the city administration turned on 52 votes. And there are perhaps 3,000 Negroes eligible to vote now in the city and potentially as many as 5,000—in short, a balance of power if organized into a bloc.

The Negro leadership is aware of this situation, as are the parties' county chairmen. This has been reflected already in several ways—perhaps most conspicuously in the GOP's belated endorsement of the SCAD office.

The Negro's political muscle will be felt more and more in the future. Already the NAACP is planning an educational campaign next fall that will look into the records and concerns of the candidates. The Reverend Mr. Primo concedes that this is quite likely to lead to tacit endorsements of Democratic candidates, despite the NAACP's nonpartison status.

"You don't think we're going to vote for Conway (John Conway, Republican candidate for district attorney) after his stand on SCAD, do you?" the Reverend Mr. Primo asks. (He himself is an enrolled Republican.)

Finally, there has emerged in Rochester a larger group of young, middle-class Negro professionals and technicians. Professionals do not represent a substantial proportion of the total Negro population, but they are a growing group, and the newcomers are making their presence felt by their attitudes and their actions.

"If you act colored, you get treated colored."

"Uncle Sam doesn't tell me that because I'm a Negro I can pay less tax. He doesn't exempt me from war service. So if I have all the obligations of a citizen, why should I not have the privileges too?"

This new Negro does not submit to indignities. If he feels himself insulted at a restaurant, he makes a point of speaking with the owner.

Taunted by the cry of "nigger" from a neighbor's child, he seeks out the father of the child.

Between the new and the old Negro lies a gap that explains much of what is happening in Rochester today.

X is a Negro who moved several years ago with his family to a predominantly white neighborhood on the city's outskirts. He has been in Rochester more than 20 years and has a steady, unprofessional job with one of the large industries.

Because he is an essentially kindly and quiet man, X would not be altogether different in his behavior if he were white instead of Negro. The love of gardening that prompts him to supply cut flowers to his white neighbors, to arrange these flowers in vases for an invalid lady, reflects a passion that cuts through creed and color.

He is a complex man, representative in a sense of the split in the Negro community. Simply by choosing to live in a predominantly white neighborhood, he allies himself with the new Negro.

In other ways, however, X typifies the more submissive Negro who has lived in Rochester a long time and has made his compromise with the city's racial customs.

Thus, when he and his wife arrived in their new home, they were careful to observe that most of their neighbors did not hang out the wash in the yard. "So we too decided to dry our clothes in the basement. We felt we shouldn't be the first to establish a new backyard pattern."

Because he is a gardener, X is a little troubled when the newsboy walks across his lawn instead of using the path. So he is putting in a strategically placed hedge of young shrubs (to serve also as shelter). "This seems to me a nicer way of keeping the newsboy off the lawn. If I spoke to him, he might resent it."

A white visitor arrives unexpectedly and is shown through the house. "You see how neat and clean my wife keeps the rooms. And she didn't know you were coming this morning."

A STUDY IN CONTRASTS

In the same general neighborhood lives Y, a younger Negro, a lawyer, who points up the contrast between the new and the

old. The comparison is not wholly valid, for one is a professional and the other is not. And one man's character is different from the other's. Yet over and above these things, they do reflect something of the changing times.

Y, who came to Rochester some half-dozen years ago from another eastern city, feels with X that house and property maintenance is a prime requirement. But beyond this he declines to go.

He takes and leaves his neighbors as he finds them.

If his wife wanted to put out her wash, he would tell her to go ahead.

If the newsboy walked across his lawn, and if this annoyed him, he would not hesitate to speak to him.

If the rooms happened to be neat and clean, he would draw no special attention to this, thus avoiding the implication that this should be found surprising in a Negro household. On the contrary, he would probably conclude that this was none of the visitor's business.

Y belongs in the general company of the educated middle-class Negroes who are providing the push for acceptance. They are all saying in effect: "Our frustrations are greater than you know. We want our rights, not as Negroes, but as citizens."

The expressed demands and dissatisfactions of the new Negro leadership run directly contrary in some cases to the feelings of the older Negroes who have lived most of their days in Rochester. The result is a complex of status patterns in the Negro community.

Dr. Charles T. Lunsford, a physician, offers the best example. Less than 2 years ago, he said publicly that Rochester was "tops in the Nation" in racial understanding. "Bad as it is, Rochester is the best in this country. * * * In other places they will bomb you, or whole neighborhoods will move out when a Negro moves in. We haven't had that situation here."

The Rochester community at large, respecting Dr. Lunsford as a longtime resident, contrasts his estimate of conditions with the ratings given Rochester by Negroes like the Reverend Mr. Primo and another leader, Loftus C. Carson, and is frankly puzzled.

Very often, preferring the pleasant to the unpleasant, and knowing Dr. Lunsford better, they have taken the older man's word.

Yet this contradiction is more apparent than real. It is all a matter of the perspective of time.

HE SAW A "REVOLUTION"

Dr. Lunsford came to Rochester some 40 years ago as the first Negro professional in the city. Fighting virtually alone, he had to contend with conditions few Negroes today would find endurable.

"This has been a revolution—not evolution, but a revolution," he says of the progress out of his own experience.

From his point of view, the local situation—partly through his own efforts—has improved out of sight. If he says Rochester is relatively fortunate, it is mainly because he has lived through the changes.

The sad thing is that because he is now repudiated by the new professionals, he is placed in the position of having to justify his views. Yet Dr. Lunsford has espoused the Negro cause all his life.

City Historian Blake McKelvey said of his activities in 1938: "He blasted the University of Rochester for refusing to admit Negroes into the school of medicine; he declared that the public schools employed but one Negro teacher * * *"

Many of the conditions Dr. Lunsford railed against in earlier days have since been remedied. But the new Negroes take little account of this. And this, too, is understandable. The younger professionals, looking from a different standpoint in time, see not the gains achieved but the gains still to be wrested.

In pressing for more progress, they show an aggressiveness alarming to those members of the white community who have grown up with Dr. Lunsford and others like him.

The Reverend Mr. Primo appears as a radical when he tells the city council: "The frustrations experienced by our Negro citizens in areas of unemployment and housing * * * are fast becoming unbearable. The manner in which these seething resentments to continuing indignities may manifest itself is frightening to envisage."

Loftus Carson (an NAACP executive committee member and a high school teacher) looks like an alarmist when he tells an NAACP-sponsored rally: "Rochester has a growing Negro population. All evidence indicates it will continue to grow. With it, its race relations problem will continue unabated until this community is faced with a serious crisis."

In reality, the Reverend Mr. Primo, Carson and leaders like Dr. Walter Cooper and Dr. William J. Knox are responsible men. Bitter, yes, and impatient. But in general their militancy is of a responsible kind. It is based on legal methods and traditional applications of pressure.

EXTREMISTS OR CHAMPIONS?

It is not, however, unequivocally approved by the Negro community. There are those who want to set a faster pace. Rochester would dub them extremists perhaps, but the Negroes would call them merely more ardent champions.

They exist here and there inside NAACP, and some would not be loath to see the organization become all-Negro.

But in the main they can be found in the open on the outside—students in colleges or fresh out of it; young married couples who have received enough education to be keenly aware of their deprivations and yet not enough to qualify them for the professional jobs that would improve their lot.

These people want sterner action and quicker results.

They look with favor on sympathetic economic boycotting of stores.

They would extend picketing to absentee slum landlords who may live in Brighton or Greece, and to real estate agencies reluctant to sell houses to Negroes outside defined Negro areas.

The real extremists, however, are the black hate groups that exist at a subterranean level, as much detested and feared by responsible Negroes as by whites. These are the Negroes who would buy black, think black and live black. They turn away from all that is worthwhile about life.

These organizations have operated on the fringe since the days of Marcus Garvey, the first prominent black nationalist leader, 40 years ago. In some cities, New York and Chicago, well-established units of the so-called black Muslim movement, the Temple of Islam, have flourished for years.

There is evidence that some followers of this wing exist also in Rochester, though not in substantial numbers, and make periodic trips to the temple at Buffalo.

One prominent Negro housewife tells of being approached by two representatives of such a group.

"But I couldn't join," she says, "I don't believe in hate."

THE PRESSURES ARE THERE

The present NAACP leadership is not seriously challenged by any of these groups. But the pressures are there and they can be expected to wax or wane with the success or failure of the Reverend Mr. Primo's drive for Negro acceptance.

Repeated failures could give rise to a less reasoned approach, for there is no question that emotional promises and shows of great militancy have a strong appeal for the least sophisticated members of the Negro community.

This was shown quite dramatically during the 1958 political campaign when the Reverend ADAM CLAYTON POWELL drew a crowd to a Negro church that matched anything attracted by the two gubernatorial candidates in their appearances here.

Despite the general quickening of pressures, there has as yet been no single fusing of the various Negro groups.

The consciousness of the low-income, low-class Negro has been pricked, but not fully penetrated. The stoop laborer from the South lacks the education to understand the issues at stake, and it is often enough for him to live 1 day at a time.

The Rochester-born Negro knows the issues but is not ready to be caught up in them. To him, both the young professional and the migrant laborer are disturbing influences.

The new leadership berates him for braking progress, calls him an Uncle Tom, a flunky, or a "handkerchief head" (an allusion to the old Negro servant).

The migrant drags down the status of the oldtime resident through low cultural habits ingrained by years in the South, and often crowds him out of his quarters.

But it would be unwise to ignore the susceptibilities to change of either the migrant or the oldtime resident. The children of the beanpicker are already in school. And the Rochester-born Negro, though long resigned to accepting the role society has given him, may not always stand on the sideline.

"I keep thinking of those old Negro servant women during the Montgomery bus strike," says a young professional Negro now 6 years in Rochester. "If they could be wakened out of bondage to the point where they were ready to walk rather than take the bus, I see no reason to despair of the old Negro community in Rochester."

A TIME OF RESTLESSNESS

Because Rochester is so much better than Montgomery, there has been no single gathering together of Negro forces. And this day may never come, nor need to come.

But the times, together with the local Negro's lot, have generated restlessness and galvanized NAACP into action that meets increasing Negro approval.

The day is not in sight when Rochester tensions will cease altogether. A little equality for the Negro is bound to become a lot of equality. A victory in one area will become the signal for new demands in another.

Some resistance is inevitable. It is the degree of it that may be crucial. What must be acknowledged is that the Negro is enduring conditions worse here than most persons know, and worse than they need be.

WINDS OF CHANGE—BETTER HOUSING IS THE NEGRO'S STRONGEST CRY—GHETTO CONDITIONS EXPOSE MANY TO EXPLOITATION

(By Desmond Stone and Jack Germond)

The crux and core of Negro dissatisfaction in Rochester is housing. Although the problem is different for different groups, the lack of any real freedom of choice is a universal cry.

"We're not asking for favors," the Negro says. "We're seeking only those things available to everyone else—the right to housing compatible with economic status, a choice of neighborhoods, the option of buying or renting within the regular limits of supply and demand."

These are the Negro's most impassioned demands. They are also the demands that put the greatest strain on racial tolerance. Having a Negro next door is an acid test comparatively few people in the city and its environs have been able to pass well.

The newly arrived, low-income Negro must, as a matter of course, go into the ghettos.

The Negro who wants to move out of the ghettos, but who has not enough money to buy, finds good rental accommodation almost unobtainable.

The young professional or technician new to town is up against the same problem. Outside of the defined Negro districts, almost no one will rent him an apartment.

The middle-class Negro who has the money to buy must search long and hard before edging into a white community. And when he is in, he must brace himself for a hostile reception.

There are exceptions all along the line. But the substantial facts are hardly in doubt. The pressures of discrimination, many of them subtle and complex, greatly reduce the Negro's freedom of choice in housing.

THE HIGH RENT DOLLAR

Enforced segregation is not, however, the only factor in keeping so many Negroes massed together around the peripheries of Baden-Ormond, and in the Troup-Clarissa area.

Poverty pens many of them. And others huddle together for shelter and protection. Because the Negroes in general are so much poorer and less educated than the urban whites, the ghettos would not disappear overnight even if there were no residential segregation.

But one undeniable result of this concentration—and a cause of it as well—is economic exploitation of the Negro. Limited though his resources often are, he pays a high rent dollar. Even where he does not pay more rent than a white tenant, he gets much less for his money.

It is a familiar pattern. As a rule, the Negro settles into a neighborhood only after it hae deteriorated, after white groups have begun to move out. Yet he is expected to pay as much, frequently more, for these dilapidated quarters.

A construction worker with eight children pays $16 a week (about $66 a month) for three small, shabby, unfurnished rooms on Scio Street.

A mother, her husband and child pay $17.50 a week (about $72 a month) for a small kitchen and one all-purpose room which does not measure more than 12 by 10. They share the bathroom with another family of five. Utilities are included and the apartment is furnished, but $20 would cover the cost of the furniture.

Whites leave a third ward apartment where they have been paying $50 month, and incoming Negroes pay $80.

The examples could be many times multiplied but they all tell essentially the same story. More families keep crowding into a street already down at the heels, big old homes are cut up into apartments and single rooms with communal kitchens and bathrooms.

THE WAY OF SLUMS EVERYWHERE

Sometimes the Negro himself is caught up in the squeeze. He takes a lease of a property under a land contract and pays the owner so many dollars a month. To cover his debt, and to make his own profit, he, too, chops up the house into smaller pieces.

This is the way of the slums and blighted areas everywhere. Homeowners give way to absentee landlords who can be controlled up to a point through building ordinances. But when it comes to rents, the sky is the limit.

The process of decay is hard to resist even without speculation and exploitation.

The ravages of time alone make repairs costly and rents high.

The cobblestone basement of an old third ward home crumbles without any assistance from neglect, and rats become a problem.

Helping to speed the deterioration is the migrant from the rural South to whom a bathtub may be a place for storing and peeling vegetables. He has not been taught the ways of the urban North. He does not understand that an old sofa tossed out in front of the house is a bad mark against him and his race.

At best, the effort to stop the deterioration of an aging neighborhood can only be a holding action. The spot checks of the rehabilitation commission, the enforcement of building ordinances, the attack on vermin, the work of the settlement houses and neighborhood councils and social workers in general in encouraging pride of property—all these things have helped.

But they do not go to the root of the trouble—the growing density of population in these areas caused by the rental and housing shortage. In Philander Street, for example, a street less than one quarter of a mile long, there are 124 children between the ages of 6 and 16.

WHAT CITY HAS DONE

There are a number of things Rochester has done well. The Baden-Ormond clearance project is generally, although not universally, recognized as a praiseworthy effect to cut out the worst of the canker.

The project eventually will involve the relocation of 800 families, more than 400 of whom already have left the area. Half these have been moved by the commission; the others have fled on their own, often in confusion, misunderstanding and panic. The vast majority are Negroes.

The immediate effect of the flight has been to heighten the housing pressures in other section of the ghetto and to expand its limits. In the 16th ward, neighborhoods long dominated by Italian-American families now have become predominantly Negro. The classic pattern of deterioration, rent gouging and white flight is being repeated.

Many of those from the Baden-Ormond site have gone across town to the third ward, frequently crowding three families where there had been two. And this pressure from the bottom has in turn driven some Negroes with the means into new areas on the fringe of the 19th ward.

The rehabilitation commission has made a genuine attempt, as it is required to do, to find adequate, sanitary housing for the displaced. But there is no question it has not been successful in many instances, for it can offer housing but it cannot force its acceptance.

It is a measure of the lack of interracial trust and good will in the community that some Negro leaders have become critical of the commission for its failures and have overlooked its successes.

For the long pull, perhaps the most significant development has been the use of section 221 of the Federal Housing Act to permit displaced Negroes to buy their first homes. The program offers FHA-insured full mortgages up to $9,000.

So far only 30 have been finally approved, but there is a potential for many more. And the important thing is that the 30 probably represent families who in most instances could never have bought a home.

For many an unsophisticated ghetto dweller, homeownership is something beyond imagining. He often has no idea how to go about it, and if he does, the thought of gathering together a downpayment is out of the question. And beyond this, where do you look for a house?

The crucial thing in the 221 program is its value as an example. The 30 or 40 or 50 Negroes who buy homes through it will be watched by their former neighbors and their experiences recounted over and over through the Negro community.

"What we hope," says the rehabilitation commission director, John A. Dale, "is that the yearning for homeownership will become contagious."

The key to the success of the program has been the cooperation of the banks, who have always been prime targets for the criticism of the Negro leadership—not just in Rochester but everywhere in the North. It is, in fact, axiomatic among Negro that they cannot get a mortgage that would be approved for the white man in the same circumstances.

But in this case, seven banks and two savings and loan associations have joined in the program, each agreeing informally to set aside a percentage of its mortgage portfolio for the 221 loans. They have agreed to accept 120 mortgages already, and some have indicated they will go further if the demand warrants it.

The program is a sound one for the banker, because the mortgage is guaranteed and because the rehabilitation commission does much of the leg work in arranging the transaction.

But most significant perhaps is the value it can have in breaking down the walls of suspicion that stand between the Negro and the banks today.

NEW PROBLEMS CREATED

But slum clearance—when it is added to the effect of highway construction and new commercial development—creates problems as well as solves them. Many fewer Negro families will go back into the Baden-Ormond area than are coming out of it. The Chatham Gardens middle-income housing, planned in the cleared area, will accommodate only 252 families.

More low-rent public housing is one obvious answer, but there is no conspicuous evidence that Rochester's longstanding antipathy toward such projects has been lessened. And the only example, Hanover Houses, probably has done as much to increase the prejudice against the program as it has to solve the Negro's housing problem.

Hanover Houses was born in controversy, a concession from a powerful, antipublic-housing Republican city administration to the demands of social workers and to the realities of the slum's squalor.

Virtually everyone close to the situation agrees now that it was built in the wrong place and in the wrong way and that it was badly neglected by those responsible for it during the formative years.

The result is that it has been a failure as a sales device. In fact, the original bias has been strengthened in many quarters.

In the absence of any effective program to school the rural migrant in urban living, shocking squalor developed in the project within a year. And although many white families were involved in this neglect, the Negro took the brunt of the public's resentment. The old stereotype of him as a man who takes the slums with him wherever he goes was freshened by new evidence.

Now, the project, which was originally half white, is 70 to 80 percent Negro-occupied. And under a new management, it is in better condition physically and as a community of individuals than at any time in its history.

But this improvement has not been well enough established in the community consciousness to remove the stigma. Nor is it likely that those who have noted the improvement credit the preponderance of Negro tenants for any part of it.

NEVER A SUBSTITUTE

Hanover Houses and the Baden-Ormond project also have done a disservice to the Negro in another way—by persuading the casual observer in the white community that the problem is being solved for the slum dweller.

"Why can't they find a place? There's the project, isn't there?" the uninformed ask.

"We're really taking care of those slums," a cab driver boasts to a fare.

Manuel D. Goldman, chairman of the Rochester Housing Authority, has pointed out:

"The Baden-Ormond redevelopment program is needed, but was never intended as a substitute for low income public housing. Chatham Gardens with its proposed 252 units is for middle-income families whose rents will begin at $85 per month, which puts it completely out of reach of low-income families."

The desirability or otherwise of public housing as a means of relieving the housing pressures is another question again. The point to be emphasized is that more low-cost accommodation would contribute to better Negro housing.

The alternative seems to be a hastening of the process of blight around the crumbling edges of Baden-Ormond, in the Hudson-Clifford and Troup-Clarissa areas. Conditions are not yet irretrievably bad. All is not misery in these areas. And compared with the slum sections of the big cities, Rochester's areas of blight are small.

But with more Negroes moving into the community, the danger is there.

"If you've ever seen the colored sections of Detroit," a new Negro has said, "you'll realize how many more people can be packed into the third ward, for instance."

NO EASY TASK

It is unrealistic to expect Rochester to rid itself of seedy, deteriorated areas altogether. This is more than any other community of the same age has been able to do.

Some of these areas are essentially transient rooming districts where Negro artisans stay a little while before moving on to Buffalo and elsewhere. The turnover is extremely high, as school records confirm.

It must be acknowledged, too, that many of the ghetto dwellers long ago lost a desire for better conditions, or at least enough desire to take the steps that are required. They are no longer willing to fight against odds, and they have no confidence in the tenders of hope from agencies like the rehabilitation commission.

If, however, more low-cost housing can be provided, the worst of the pressures may be relieved, population density kept in check and the proverty-ridden, low-status Negro protected from the harsher forms of exploitation.

Whatever is done will not come easily. Anything that smacks of a new ghetto will be rejected by the new Negro leadership. And there is no evidence that enough whites will accept the Negro to permit genuine integration—at least until they are convinced that real estate values do not automatically drop when a Negro moves in.

WINDS OF CHANGE—HOUSING BIAS HITS HARD AT EDUCATED NEGRO—NO REAL FREEDOM OF CHOICE IS MAIN COMPLAINT

(By Desmond Stone and Jack Germond)

The full weight of racial discrimination falls on the middle-class Negro in search of a home.

His financial situation, his professional attainments, his social skills—all count for little against his black skin.

In the slums, the Negro is a victim of discrimination to the extent that he is confined to a particular tract. But there are other forces—simple economics, for example—that contribute to his segregation.

The frustration of the middle-class Negro, by contrast, is solely a product of discrimination.

And whereas the bias partly responsible for the ghettos is imposed by the community generally, the middle-class Negro receives it at the hands of individuals. Discrimination is for him a much more naked, more personal affair, and his resentment is correspondingly greater.

The educated Negro who wants to leave the orange peel of the ghetto behind, and the young professional who comes into town to take a job, find apartments in good housing areas almost impossible to rent. Doors are constantly being shut on them.

A SCIENTIST SEEKS A HOME

Dr. X, a scientist, could find no living quarters near the University of Rochester when he came here half-a-dozen years ago as a student. After he married, he and his wife looked at 67 rental accommodations without gaining admittance.

"Many and wonderful were the excuses mustered on the doorstep. Some people suddenly had relations coming to stay, or said they had decided not to renew the lease."

Dr. Y more recently had much the same experience. Though he searched for several weeks from early morning to late at night, he could find no rental quarters. He was prepared to pay up to $200 a month, though $150 was his preferred maximum. Some landlords told him bluntly they were not renting to Negroes.

Others said the apartments had already been occupied. By phoning these landlords later, Dr. Y was able to prove this was a subterfuge. The same persons who had told him as a Negro on the doorstep that the apartment had just been taken said, in response to his anonymous phone inquiry, "yes, there's a vacancy."

• • • • •

So the young middle-class Negro, simply because he is a Negro, does not have the choice that is open to most young marrieds. Instead of being able to choose his own time for buying, he very often has to buy prematurely.

In some special cases, the necessity to buy can make a Negro a captive.

Red Wing pitched Dick Ricketts is a case in point. The college-educated athlete, a native of Pennsylvania, came to Rochester only to play ball. Like most in his trade, he sought an apartment and the mobility it would give him should he be called to the major leagues or sold to another club.

But Rickets, despite his background and his modest fame as a ballplayer, could find nothing, so he bought a house in the 19th ward. If he's sold to Denver tomorrow, he will remain a Rochesterian.

The necessity of buying might not be such a severe penaly if houses were freely available—if, for instance a young Negro technician could buy in a new tract of relatively cheap homes where the down payment is small.

But Dr. Y did not waste his time even looking at tracts. He knew from the exeprience of others that tracts were out of the question—that the fear of property depreciation was too powerful to buck.

THE TWO RESTRICTED CHOICES

One or two Negro families have been able to move into rural-type tracts in Monroe County. But it is safe to say that no Negro is able to buy into the average tract in the city and towns.

Once having confirmed this for himself, the newly arrived professional, or the Negro trying to flee the ghettos, has only two alternatives, both restricted.

One is to move along the perimeter of the predominantly Negro districts and buy on a street where three or four Negro families have broken the worst of the barriers.

The other is to plunge into a white community—not because it is white but because it is a desirable residential area.

The first course was taken by Dr. Y, who settled in an area of the 19th Ward below Genesee Street. It is not an ideal location and not where he would have gone had he been able to exercise a choice, but the home itself is a good one.

Dr. X, the professional who looked at 67 rental accommodations before he found a temporary place, chose the second course. By judicious saving, he and his wife had accumulated $7,000, enough to assure any white family an easy passage into a home. But money is not the price of admission for a Negro, as Dr. X found out over several bitter months.

"I wanted to locate near an A–1 school. We looked all around Monroe Avenue and Pinnacle Road. We tried 40 places near Winton Road north and south, east of the Twelve Corners, and in several Brighton tracts.

"But everywhere it was the same. No one wanted a Negro next door. Builders and real estate men avoided me where they could. Those I was able to corner would tell me that even if they accepted my purchase offer, the banks wouldn't give me a mortgage.

"They also told me I wouldn't be happy there, that I wouldn't like it. This I resented. No man has the right to determine where I'm to live or die. I said to them: 'Here I am, an individual of good repute, economically responsible, with no jail record, not even a parking fine, and yet you say you can't sell to me. If this is so, then it comes down to the color of my skin.' "

Dr. X was finally able to locate in a house some 10 miles out of the city, where the country is close at hand and the houses spaced out. "I didn't want to buy here. It's too far from my work. But I was desperate and my wife was with child at the time."

His experience has eaten deeply into Dr. X. "I regard myself as an American first and a Negro second. But people treat me the other way round. It's like being a graduate student, except it's more crucial. When the time comes to make a contribution to a fund drive, the student is classified with faculty. But in the matter of parking privileges, he quickly reverts to his student status."

To the extent that he had to move far from the city into a house unseen by his wife, Dr. X did not succeed in getting into a wholly desirable area. But his experience in trying to locate a house is fairly typical.

HOW THEY ARE KEPT OUT

The pressures to keep the Negro out run all the way from subtle blackmail against the person proposing the sale to a sudden jump in the price of the house.

In some cases, the established residents collect money among themselves and offer it as a premium to the seller if he reneges on his plan to sell to a Negro.

Negroes have no hesitation in accusing real estate interests of conspiracy. Specific charges are often hard to prove or disprove. But there is no doubt that real estate agents dealing with good housing areas shy away from the Negro as a purchaser.

"Let's face it," comments one. "I'm not fighting any battle for integration. I'm a hardheaded businessman. And it makes no sense for me to throw scares into people by showing a Negro buyer round all my best properties."

The real estate agent is the man in the firing line rather than the only villain in the piece. And since he stands to be more injured by the shots fired by white property owners, he will usually acquiesce rather than battle, and indeed sometimes he will run a mile.

A prominent realty man in Rochester sold a house on a desirable street in good faith to a white purchaser. But the purchaser turned out to be a "strawman" (one acting as a front for a Negro buyer) and promptly resold the house to a Negro family.

The shock of the discovery sent the street into a turmoil. One of the neighbors, a big powerful man, marched into the office of the realty man breathing fury.

"He threatened to punch me on the nose," recalls the agent, himself a rather small man, "and I thought he was going to for a moment."

This incident obviously shook the agent and so anxious was he to establish that he himself had not been a party to the deal that he made 100 photostatic copies of the original purchase agreement and had them distributed in the neighborhood.

The real estate interests point out that as middlemen they do not more than reflect the wishes of their customers. Negroes, however, maintain that they anticipate the feelings of the community and assume discrimination where it may not always exist.

This may be true in some cases. Judging, however, by the storms that have broken out when Negroes have moved into all-white areas, the realty men are not very far astray in their estimation of people's feelings.

Negroes say it is particularly galling to find that some of the same agents who block them are the first to seek a profit from them once the move has been accomplished.

They tell with great bitterness of a "block-busting" real estate broker going among their new white neighbors to find those anxious to sell and then going into the Negro community to find purchasers. In one case, a real estate man actually solicited the Negro newcomer for the names of others of his race who might want to follow him.

GROUPS SEEKING TO HELP

It would be wrong to suggest that nothing has been done to help the educated Negro to get better housing or to create a more favorable climate of opinion.

The Women's Human Relations Council, the Presbyterian and Baptist Churches, and other organizations have been active for some time with open-housing covenants.

Many hundreds of persons (a thousand among the Presbyterians alone) have signed statements agreeing to welcome all families into their neighborhoods regardless of race, creed, or nationality.

The Negro is rather skeptical of these covenants. "We think these things must come from the heart and not from signed pledges."

This may be true enough. Yet at least the act of affixing their signatures has persuaded many persons to think about a problem too often ignored.

Dr. Robert France, chairman of the NAACP housing committee and a U. of R. professor, gives some credit for action on housing to the citizens' committee that grew out of the covenant movement. The committee, though it has no direct church affiliation, is composed largely of active church-workers and has collaborated with real estate interests and with NAACP's committee on housing. Where white property owners have been found willing to sell to Negroes, the NAACP committee has been advised.

"Admittedly it hasn't worked out ideally," says Dr. France. "Not all Negroes are aware of this channel. Some are reluctant to work through it lest too many persons should become involved in a house deal. And the committee of citizens has never had a wide variety of homes available, probably not more than six at a time. But it has, I feel, been doing a sincere job."

Perhaps the very existence of such a committee points up the housing problem as few other things could do. The fact remains that, in spite of the good work being done here and there, no Negro moves into a white area without difficulty.

WHAT HAPPENS WHEN HE MOVES

The initial outburst of hostility is sharp, though very rarely does it take the form of violence. Seldom are rocks thrown through windows. The methods employed usually are more subtle, stopping short of lawbreaking that can be easily detected.

A tottering four-household mailbox stand is taken down and left to lie on the Negro property owner's frontage; and the new stand put up by the neighbors has only three boxes, though, significantly, space is left for a fourth.

Silence to the newcomers is almost universal, and in some cases whites with a disposition towards friendliness are warned that they will be ostracized themselves if they welcome the Negro.

Petitions also are universally employed, although it is difficult to understand to what authority the circulators hope to appeal. In some cases, the petition is simply addressed to the Negro, urging him to get out of the neighborhood, perhaps offering him a profit if he will sell.

Usually, however, the petition never actually reaches the Negro—which may reflect the guilt that runs below the surface in even the most hostile situations.

THE CASE OF THE HARRISONS

Once over the first hump, once it is realized that the Negro family has arrived to stay, the street settles down into some kind of acceptance, grudging though it may be.

The case of the Harrisons (the name is fictitious) is not untypical, though worse than some.

The Harrisons, a Negro couple, met in Rochester some 6 years ago as college graduates who came originally from the South.

They married and were able to buy a home in a white community within the city. Although first antagonism was sharp—stones were thrown through a picture window before they moved in—the street came to know and like them and the Harrisons improved their property until it was one of the best in the neighborhood.

After 5 years or so, the Harrisons decided to sell. Their home was on a main thoroughfare and they wanted a quieter area and a larger house, preferably in the suburbs.

Although they had much to commend them as intelligent, responsible citizens, they went through the usual discouraging experience of being refused wherever they turned. But they had a white friend who was willing to act as a blind, and last fall they located a house falling vacant on a substantial, tree-lined street in one of the towns.

The decision to use a front man is often a hard one for the Negro to make. It starts him on the worst possible footing with his neighbors, and he will sometimes decline to use this subterfuge on principle.

"Do you know what it does to a man's dignity to have to do this?" a Harvard-educated chemist asks.

"On the other hand," the Negro will more often say, "if we do not buy this way, we often cannot buy at all. There's no such thing as educating people gradually to your arrival. The only way out is a fait accompli."

AT 12:30 SUNDAY MORNING

When Harrison made his first visit to the home after getting possession, he took along some cleaning gear in his car. Some of the neighbors assumed from this that he had come to clean the house for the new owners. Perhaps it was wishful thinking. But it also fitted the stereotype of the Negro as a worker at menial jobs.

The following day the Harrisons drove up ahead of the carting company. The news that a Negro family had come to stay flashed through the street like a lightning bolt. Little knots of people started to gather in front of their homes.

At 12:30 a.m. on the first Sunday after they moved in, the Harrisons' phone rang and a voice warned them, "Nigger, go home." That was the start of an incredibly sustained barrage. From 12:30 a.m. Sunday until 2 p.m. Tuesday, the phone rang at almost regular quarter-hourly intervals—through the day and through the night.

The voices were different but the message was always the same—"Nigger, go back where you belong." Harrison, sorely tried, took one of his callers up on this.

"Go back to Baden-Ormond where all niggers belong," he was told.

"And this," he recalls sadly today, "happened on World Communion Sunday."

Harrison had expected hostility but not a campaign so vicious. Alarmed, he went to the town police. He was advised to get an unlisted phone. He was also told that he could expect the trouble to die down within a week or two, but that, if it were needed, he could rely on the protection that was available to all the town residents.

Almost every trick in the book was tried during these first weeks of eruption.

When the Harrisons got a new unlisted phone number, threatening anonymous calls continued to pester Mrs. Harrison at her place of work for 2 or 3 weeks until all incoming calls had to be screened by a secretary.

Efforts were made to get up a petition and to find some ground for nullifying the sale.

One neighbor went to Harrison's lawyer and alleged that the house was to be used for vice.

Another sought out the old Harrison home to see what it was like and to find out why they had moved.

Yet another checked Harrison's character through a friend at his place of employment.

SUPPORT FOR THE HARRISONS

Not all the street was up in arms during those first hard weeks. Violent opposition, based mainly on property depreciation fears, was probably confined to four or five families. Most of the remainder, though generally unsympathetic, took little denunciatory action.

There were, however, a few forces working actively for the Harrisons as well as against them.

One woman in particular conducted a stout verbal battle on their behalf. She declared herself early by sending one of her children down to the Harrisons at the height of the storm to inquire if they had children her girl could play with.

The town police passed the word down the street that the troublemakers would be wise to desist.

One minister with a number of parish families on the street appealed for tolerance from the pulpit and made a personal call on all his parishioners. He also contacted other churches, and altogether in the first few weeks five ministers were making calls in an effort to improve the climate of opinion.

Today the street is quiet again.

The Harrisons have met some of their neighbors and have been invited to their homes. They were tricked and treated by one or two at Halloween. Even though it contributed to Mrs. Harrison's ill health at the time, the experience has not made them bitter, though it has left them sadder.

Diehard opposition is confined now to a very few, though it is likely to remain. And even among those younger families whole tolerance tends to stretch further, there is still some evidence of the unconscious prejudice found in so many minds.

"I still can't understand," says one pleasant young housewife, "why the Harrisons should have chosen to move here when they were already integrated in a white neighborhood."

UNDER STRONG SCRUTINY

The white property owner's motives are questioned by no one when he decides to shift, but the Negro has many hoops to jump through.

The Harrisons' property has already been improved in the short time they have been there and the chances are it will soon have one of the best appearances on the street.

This is a point about the educated, middle-class Negro many white persons have not yet come to understand. With a few exceptions, he can be depended upon to improve both home and grounds, and will often keep a better property than his white neighbors.

Unfortunately, this fact is not easily demonstrable, for Negroes in the suburbs are few and far between.

The Negro property owner is, of course, under a strong scrutiny and a silent compulsion. "We Negroes do not get a second chance," explains one newly established professional in the suburbs. "One lapse and we're put back on the Baden-Ormond level."

This is true for the Harrisons and nearly all other Negro middle-class families. A noisy house party, careless tooting of horns, are luxuries they normally cannot afford. They must be constantly on their guard.

The neighbors who exact these standards are often far from unblemished themselves, and they are usually of inferior education.

Even when he moves into a white community, the middle-class Negro will seldom find himself among equals, intellectually or otherwise. A Ph. D. will live on a street where most of the residents have not advanced beyond high school.

This is a bitter pill for the educated Negro to swallow. He strongly resents being placed on trial by persons he considers his intellectual inferiors.

No case is better known among the Negro community than that of a Negro professional who was hostilely received when he bought a suburban home formerly occupied by a white man convicted of a morals charge.

Perhaps the strongest resistance to the Negro comes from those families newly arrived at economic security in the suburbs. They have invested every cent in their new home and have a great deal at stake. They have fulfilled a dream and they do not want it broken.

Not all middle-income Negroes fare as unhappily as the Harrisons. Even if they only prove the rule, the exceptions ought to be noted.

ENCOURAGING SIGNS

There are encouraging signs in almost every situation. In almost every neighborhood someone will go out of his way to welcome the Negro, to aline himself with him. In one case, for example, a man circulating a petition against a new Negro resident was told by two neighbors, "We'd a lot rather have him here than you."

Perhaps because he moved onto a street of mainly professional people, perhaps because a wide treed strip runs down the middle of the street, one downtown Negro established himself on the city outskirts with a minimum of trouble.

And when one of the near neighbors sold his house, his wife made a point of visiting the Negro family and explaining that they were leaving because her husband had been transferred to Buffalo, and for no other reason.

Even this Negro hotly resents one of the circumstances in which he bought his home. He points out that though his bid was in before a second, equivalent bid, he had to submit to having his name put in a hat and having a draw made from paper slips.

For the rest, however, this Negro acknowledges an easier passage than most.

So there are bright spots here and there. But the barriers in housing remain strong and the pressures against them seem likely to keep on growing.

WINDS OF CHANGE—SCAD BECOMES A SYMBOL TO NEGRO COMMUNITY—UNREST CRYSTALLIZED BY DEMAND FOR LOCAL OFFICE

(By Desmond Stone and Jack Germond)

The unrest in Rochester's Negro community has been crystallized by the controversy over the proposal for an office of the State commission against discrimination.

Whatever its merits, the SCAD office has become a symbol to the Negro in all walks of life.

On Vienna street, amid the rubble of the city's slum clearance program, a Negro laborer says: "We ought to have the SCAD. They've got one in Buffalo; we ought to have one here."

And a sophisticated Negro intellectual who lives in a predominantly white neighborhood argues: "It's absolutely essential."

This is not to suggest that there is universal interest in SCAD among the city's 18,000 Negroes. The controversy has passed many of them by. Some are so uninformed politically as to be unaware of their relationship to the agency, or even of its existence.

But the consensus of feeling among the Negro leaders is that no issue in years, if ever, has so effectively drawn the parts of the Negro community together.

Much of this common concern is the result of the efforts of these same leaders to rally their people behind them. Public pronouncements of the Reverend Mr. Quintin E. Primo, local president of the National Association for the Advancement of Colored People here, seem to get much closer reading in Negro circles than accounts of even the most startling developments in world affairs.

The SCAD symbol has attained such stature with the Negro that he new equates opposition to it with a desire to delay his progress, to keep him tied to the ghetto and to the apron of the domestic.

"Some of these white people, they don't want anyone messing around here, that's the trouble," a maintenance man says.

"What is the power structure here afraid of?" a Negro professional asks.

The interesting point about the whole controversy is that it has forced both sides to more extreme positions than they might normally adopt.

Some of industry, in justifying its opposition, has left the impression that discrimination in employment is almost nonexistent.

The NAACP, in pressing for SCAD, has created the idea that conditions are uniformly bad.

The true situation lies somewhere in between. But the distinctions that ought to be made have been melted by the heat of battle.

Thus, to the Negro, the absence of a SCAD office has come to mean Rochester's refusal to admit the existence of discrimination at all. This has irritated him even more than discrimination itself.

Because of the way the issue has been blown up, industry now tends to have a fear of SCAD that its history does not justify. And the Negro, for his part, has come to expect more from an office than is likely to be achieved.

SCAD AN ACCEPTABLE ARBITER

Perhaps the principal value of a branch here is related to its status as a symbol. It would be accepted more than any conceivable substitute—official or quasi-official—as a trusted arbiter in discrimination matters.

Negro leaders to a man are convinced that decisions of no discrimination by SCAD would be accepted by most of the Negroes who bring the complaints.

If this proved to be the case, they say, the agency would offer a valuable protection to those industries that follow bona fide fair employment practices.

The Negro's regard for the still conjectural SCAD office probably cannot be transferred to the new Human Relations Committee now being set up. The Negro leadership finds no fault with this concept but suspects that the committee is being put forward as an eventual substitute for SCAD.

The appointment of Robert E. Bray, Jr., to receive discrimination complaints in the courthouse has prompted frank outrage among the Negro leaders. Publicly, they have stressed that Bray, a veteran employee of the county treasurer's office, is not qualified for the job.

What stirred most criticism was the conviction, among some, that County Manager Gordon A. Howe was throwing them a bone by appointing the first Negro in eye range to the job. Above all, they resent the implication that Negro support can be bought by such a simple expedient.

Finally, they view the appointment in the same light as the Human Relations Committee—as a potential excuse for denying the city a SCAD office.

This conviction persists despite the repeated assurances by Howe, in his capacity as Republican county chairman, that the office is a certainty next year.

"What happened this year?" a Negro professional demands. "You can't tell me he couldn't have gotten this thing approved down in Albany, if he'd really tried."

Howe insists, of course, that he really did try but that his involvement came too late to be effective. He became county chairman in mid-January, after the legislature had convened.

To those who watched the situation at Albany, the failure to anticipate the strength of feeling on the issue appeared to be the crucial factor. In any event, Monroe County's legislators had taken such strong positions that there was not time for a graceful reversal.

Moreover, the legislators had become used to a minimum of party discipline intruding on their decisions at the capitol. This situation has changed. Howe has said that the office will be supported vigorously by the entire Republican ticket this fall. And he has told the candidates that they must support it or lose their place.

Outside the legislative delegation, opposition to the SCAD office has centered in the city's major industries, and has been publicly voiced by industry's spokesman, Russell McCarthy of the industrial management council and a member of the SCAD council.

He makes much of the argument that SCAD would represent simply an extension of bureaucracy.

"If you start an office," he says, "it is bound to grow. Staff will go out and drum up business to justify their positions and prove their worth."

He contends, too, that a SCAD office would make for new conflict over employment.

"For many years now the council has been working quietly, effectively and voluntarily to educate employers and personnel people. We've met many times to review and interpret the antidiscrimination laws and to put them into practice. But now that frictions have been created, this educational work becomes harder to do."

INDUSTRY'S FEAR OF OUTSIDE AGENCY

Similar arguments are advanced by the chief personnel officer of one of the city's prime employers. And he adds: Rochester is a city of highly skilled industry, but most Negroes coming into the community, principally from the rural South, lack skills. Therefore, it is unrealistic for the Negro to expect a share of the jobs with particular companies bearing a close relationship to their share of the total population.

Underlying the opposition to SCAD is a fear of an "outside propaganda agency" that, in the words of one civic leader, "might do more harm than good."

Opponents say they feel a SCAD office can "stir up trouble."

Yet some of those who know SCAD say they are at a loss to explain this impression, for SCAD is most often considered a cautious body devoted to soft-sell persuasion and conciliation rather than to saber rattling. In fact, the present chairman, Elmer A. Carter of New York, is unpopular with many Negroes who believe he relies too much on conciliation.

Industry's suspicion here differs from that of some statewide employer groups.

The Commerce and Industry Association (a membership group of 3,500 employers in all categories of business and industry, with headquarters in New York City) has had a cordial relationship was SCAD for years, according to association officials.

In 1956, the Commerce and Industry Association appointed a SCAD advisory committee which joined forces with the agency to produce a booklet on "Management and Merit Employment." This pamphlet outlines seven questions an employer might use in evaluating his own personnel policies on racial discrimination.

SCAD was created in 1945, during the administration of Gov. Thomas E. Dewey, with the initial assignment of administering the State fair employment law. Since then its jurisdiction has been extended to such divergent concerns as age discrimination and resort advertising, but the principal area of interest has remained employment.

SCAD has a 1960–61 budget of $860,000 and a staff of 115 employes, most of them centered in the New York City headquarters. An office here would add $17,000 to $20,000 a year to the budget and two employes to the staff.

EXISTING SCAD COVERAGE

The agency's coverage of Rochester is sketchy, at best. There is a 29-member citizens advisory council, just as there is in most cities, but it has had little impact. In fact, the chairman, Joseph Silverstein, says: "We haven't done a thing"—a record he attributes largely to the lack of so much as a stenographer to implement the council's wishes.

Russell McCarthy, an original member of the SCAD council, feels differently. "Over the years the council has, without question, accomplished a great deal in an educational way by working with employers and agency groups."

The professional SCAD coverage here comes from the Buffalo office, one of three upstate branches. Its staff consists of two field representatives and two secretarial workers. Its area of responsibility includes the 11 westernmost counties in the State and a population estimated at 2½ to 3 million.

The branch necessarily has concentrated its efforts in and around Buffalo. At one time, Victor Einach, the senior field representative who serves as regional director, kept regular office hours here every week or two. But he found that the hours and the demand for the agency did not coincide. Now he comes to Rochester irregularly as the situation warrants.

Between them, Einach, Commissioner Mary Louise Nice and Field Representative Leeland N. Jones, Jr., last year made from 40 to 50 visits to Rochester. Einach says the establishment of an office in Rochester would reduce these visits by 75 percent and confine them to supervisory matters.

Meanwhile, the link between Rochester and SCAD is a telephone at 155 West Main Street, where a State labor department secretary takes messages and passes them on to Buffalo.

SCAD's caseload has shown a substantial increase in the last few years, from 397 complaints throughout the State in 1955 to almost 1,000 last year. For the Buffalo region, an average of 50 a year rose to 77 in 1957, to 90 in 1958, and to 149 last year.

Einach considers the rise in his region principally a reflection of the economic situation on the Niagara Frontier, where hard times have bred more refusals of jobs to Negroes and whites alike. But some of the increase, both in Buffalo and across the State, also may be traced to the increased Negro militancy and the increased Negro population.

The Rochester complaint volume has remained relatively stable—15 in 1957, 17 two years ago and 20 last year. These figures are cited by opponents of a SCAD office here as evidence that it is not justified by the potential workload. On the other side is the argument that the paucity of complaints results from the lack of a place for them to be heard.

FEW CASES HEARD PUBLICLY

Most of the complaints are handled without any of the public rhubarbs that industry might have reason to fear. The procedure is this:

A complaint, once filed in acceptable form, is investigated for probable cause or validity. When probable cause is found, a private conference is arranged with one of the commissioners, who tries to reach a settlement through persuasion and conciliation. If this fails, the case can be ordered for a public hearing before the entire commission, which has the power to issue cease and desist orders enforceable by the courts.

As a practical matter, probable cause is found in only 25 to 30 percent of the complaints upstate, and a settlement is reached through conciliation in almost all of these cases.

Einach reports that in the 15-year history of the Buffalo office, which he has headed since SCAD was created, only one case reached the public hearing stage—a group of complaints from Negro women against a chain of reducing salons.

SCAD takes the position that regulatory activity is only one phase of its work. Equally important in the agency's eyes is its performance as an educational force—with employers, members of minority groups and the public at large.

SCAD's educational program has had no dramatic impact anywhere upstate. But in Rochester it has been virtually nil.

What it might become can be illustrated by an example of recent activity in the Albany office.

Early last year, after a flurry of complaints against downtown stores, Regional Director F. Peter Libassi called on personnel officers of 14 major stores, then arranged a group meeting to discuss merit employment—a favorite SCAD term—with them. The result has been that 5 of the 14 hired Negro sales help for the first time. In addition, four other downtown stores not represented at the meeting have hired their first Negro clerks in the past year.

EMPHASIS PLACED ON EDUCATION

The Albany approach, and indeed that of the entire agency, has been soft sell. Mailings to guidance counselors, placement and personnel directors, employers, real estate brokers, chambers of commerce—all emphasize the information spreading functions of the agency and play down the muscle represented by the statute it administers.

"It is our hope," says a standard paragraph in SCAD mailings, "that we may be able to provide you with relevant reports as they are published by the commission and keep you advised of any changes in the law against discrimination which may affect your right and obligations."

Much of the educational program is aimed directly at the Negro, through settlement houses, churches and, the NAACP. It emphasizes the legal protection offered minorities and it spells out the regular channels for protest.

One pamphlet, for example, tells graduating high school seniors:

"You're assured of an equal chance. The State commission against discrimination was established to protect you and to insure your right to equal job opportunities. If, in seeking work, or training opportunity, you experience discrimination because of your race, color, religion or nationality, write or go to the nearest office of the commission."

Assessing the precise degree and nature of employment discrimination in Rochester is virtually impossible. But the available evidence would seem to confirm the findings of earlier surveys.

Eunice and George Grier, social researchers for SCAD, reported in 1956 that discrimination in hiring was slight in many of the major industries, but that some discrimination still existed in upgrading from routine production line jobs to craftsmen and foreman positions, or to jobs involving contact with the public.

The 1957 SCAD report, "Greater Rochester Takes a Look," made substantially the same points.

"Hiring on a nondiscriminatory basis is official policy in most of the major manufacturing plants and public utilities, although discrimination may still be practiced by individual personnel interviewers, executives, or foremen."

There is no question that discrimination exists. But the experience of SCAD in dealing with complaints suggests how difficult it is to prove. No employer is going to admit it.

In the Negro community, almost everyone has a story to tell. For example, the Reverend John L. Salmon, minister of Trinity Presbyterian Church, recalls trying for several months to find a job for a young music student and finally succeeded in a telephone call. But when he gave the boy's address in one of the ghettos, the employer said:

"I'm sorry, in that case we have nothing."

On occasion, the Negro's sensitiveness leads him to assume discrimination where there is none. One minister had a parishioner come to him with a story that she had been refused a job because of her color. He took the time to investigate and found she had been turned down as a typist, not because she was a Negro but because her typing was too slow and error-ridden.

JOB OPPORTUNITIES IMPROVE

The most conspicuous thing in the employment picture is the fact that Negroes are being found every year in industries and specialties that were closed to them only the year before.

More Government jobs, local and Federal, have also opened up over the years. Thus there are Negro policemen and mail carriers. Truman E. Coles is an assistant district attorney; Lloyd L. Hurst is an assistant county legal adviser.

One of those who has played a part in improving opportunities in industry is McCarthy of the industrial management council, who concedes that often doors are opened only after an employer is convinced there is no way out.

In one such case, a big employer called McCarthy and said he understood his firm was under observation for not hiring Negroes. He was reluctant to employ them, he went on, because he felt the girls on the clerical staff would object to using the same wash basins and toilets.

McCarthy replied: "You've got to do this. Have your personnel man contact some of the ministers and get them to select a good type of Negro employee and integrate them quietly. Tell them they're in the front line and should behave accordingly. And educate your own employees, too."

The company followed the advice and today employs a number of Negroes without any staff conflict.

Very often, the Negro thinks of the employment situation in terms of symbols. His bitterness centers around jobs dealing with the public in which virtually no Negroes have been accepted.

Above all, the bank teller is a symbol. At all levels of the community, Negroes complain because there is none of their race behind the bank counters. The job has special significance to the Negro because it involves both contact with the public and the trust implied in handling money.

DISCRIMINATION CAN BE SUBTLE

The practice of discrimination can be a subtle business indeed. Personnel officers can establish dozens of criteria, any one of which can be essential or completely artificial.

And some employers say that turning a Negro down for a job for which he is not qualified can be embarrassing when the refusal is equated with discrimination. There is a similar risk, they say, when a Negro employee has to be dismissed for legitimate reasons.

Much of the discrimination that does exist seems to be based on the anticipation of reactions of other employees and customers—presuppositions that frequently have little basis in fact.

Thus, a placement director for a business school says:

"You can understand that in many of these small offices, they just can't take a chance with colored. You can see the problems it would cause."

Negroes also are particularly sensitive about what they consider token hiring. One professional who works for a large employer with many Government contracts (which forbids discrimination) put it this way:

"When the Federal man comes around, they point to us. 'See,' they say, 'We have Negroes in every department.' But most of the time it's only one."

The roads that may lead to better job opportunity for the Negro are several. But perhaps the most important is simple industrial necessity. For example, the postwar shortage of engineers has done more than anything else to eliminate the bars in that field.

"They need engineers so bad, they don't care if they're blue," one Negro commented about his employer recently.

But even this is not a universal pattern. There is a critical shortage of skilled secretarial help in Rochester now, but few Negroes seem to end up in offices.

THE QUESTION OF SKILLS

The question of training may be crucial here. In many cases, the Negro complains that there is no place for his people without establishing that there are any qualified for the jobs involved.

According to the 1950 census, 56.9 percent of Negro male workers and 63.4 percent of Negro female workers in Rochester were in the lowest categories on the occupational scale—domestic workers, service workers, and unskilled labor. In contrast, less than 11 percent of white males and 17 percent of white females fell into the same groups.

Fundamentally, this is probably still the situation. Newcomers from the rural South keep the proportion of unskilled workers high.

In qualifying himself for jobs, the Negro begins in school at a big disadvantage. His family often is unlettered and his own knowledge sketchy for his age. He often cannot expect any real help at home, and he is forever moving from one school to another.

Says one grade school principal:

"Many of these children have no stability. Their parents keep moving round and round in the housing trap. There is little insistence that the children try for an A or a B rather than a C or D."

And a high school principal adds: "The biggest problem is to give these youngsters drive and ambition and purpose."

Inadequate home life is reflected at school in poor preparation and in attendance lapses that follow the children through their lives. A Negro boy with 6 weeks of absence from high school will not get a job ahead of a white teenager whose family has been able to keep him regularly at school.

A Negro girl will not get a job as a sales clerk if she cannot answer such a question as: "If cookies sell at 31 cents a pound, how much would you charge for a pound and a quarter?"

The schools try hard to cope with the problem, and some guidance counselors feel that Negro pupils are showing better ability and staying power.

But ambition is still easily defeated, hope still quickly lost. The Negro teenager sees the Negro elevator boy but not the scientist in industry. He sees the Negro street cleaner every day, but the Negro librarian less often.

These are some of the reasons Negroes do not always apply for the best job openings. Initially high factory wages and poor family circumstances often combine to see a prospective secretary or accountant lost forever.

It is the recognition of this that has been responsible for the emphasis in the Negro leadership on education, particularly for those in the lower income brackets with no family tradition of advanced schooling.

There is no clear evidence of great gains, but there are signs. Four years ago, for example, the teenage program at the Baden Street Settlement included only two or three youngsters aiming at college. Today, the same settlement has an organized tutoring program in which eight youngsters are being groomed specifically for college.

In terms of numbers, however, those who go no further than high school are the most important. And giving them ambition is not easy.

In the long run, job opportunities for the Negro cannot be separated from the climate of public opinion, housing conditions and the state of the economy.

WINDS OF CHANGE—NEGRO REMAINS MAN APART IN COMMUNITY—FEW ABLE TO VIEW HIM AS AN INDIVIDUAL

(By Desmond Stone and Jack Germond)

No matter how well the Negro solves his housing and economic problems, he remains a man apart in the Rochester community. If he is ever recognized as an individual, it is only after he has been regarded as a Negro.

This is true even when there is no obvious discrimination.

The accepted Rochester ethic is one of tolerance, and those who practice discrimination carry a heavy burden of guilt. They try to put it off on their neighbors, on anything that will avoid their being identified on the wrong side of what they recognize is a moral issue.

But these same Rochesterians often are unwilling or unable to look at a Negro as an individual, and it is this above all that galls him.

A few weeks ago a Negro cleric, an educated man of many parts, called a radio station to inquire about a program he had been told was being used as a forum for racist diatribes.

He spoke first to the program director, but he was referred finally to a young Negro receptionist—"one of his own people"—for an accounting of what had transpired on the program. Would Rabbi Bernstein or Bishop Kearney have been referred to a receptionist?

A Negro professional who has lived in a predominantly white neighborhood for more than a decade was asked to take part in a capital fund drive for youth organization. He accepted, but when he was given a list of persons he was to contact, he found all were Negroes in the ghetto.

From the fundraiser's point of view, this assignment had obvious practical advantages. But to a sensitive man, this use of his race, which bars him from so much, was intolerable.

A Negro with a college degree, new to the community, called at a leading furniture store to buy furniture for his home. He was given the address of another store and advised to try it instead. He went in all innocence and found it to be a seedy second-hand furniture store.

The father of a college-educated Negro woman was taken to a hospital, and a private room was requested. One of the staff was overheard to say, "No use putting him in there. He won't be able to pay for it."

A Negro's role in the community has been severely limited by this informal apartheid. The middle-class Negro finds generally that he is asked to participate only in matters that deal with his race or with social problems that are vaguely associated with the Baden-Ormond area.

Thus, Negroes serve on the SCAD citizens council, on the board of such agencies as the Baden Street Settlement and on panels discussing urban renewal aims.

And, thus, Dr. William J. Knox was appointed recently to the housing authority, which has as its principal responsibility the administration of the predominantly Negro Hanover Houses.

But where, Negroes ask, are the Negroes on the city planning commission or the zoning board or any of the myriad of citizens committees established by official Rochester to give advice to elective officers?

The area that may offer the brightest hope for Negro recognition is politics, for here he has a weapon—the vote.

In the past, the Negro has been no more than a minor voice in the councils of either party. The only Negroes nominated for office have been candidates for supervisor in the third ward. And no Negroes hold ward leaderships, even in such a heavily Negro one as the seventh.

Part of this has been the fault of the Negro himself. Unlike other ethnic groups here, he has been slow to exert a concentrated pressure.

But with a population of 18,000 and a vigorous new leadership, this situation is changing.

Neither political party has taken any major steps to recognize the Negro yet, but leaders of both realize they will have to bid for his support in the near future. And they realize that this can be done only by giving him a direct voice in party affairs.

FEW NEGROES ON LOCAL BOARDS

This separation of the races does not apply only to government.

A similar picture can be obtained from an analysis of the groups who carry on Rochester's many good works. These organizations have no policy of segregation—and would be horrified at the notion—but the fact remains that Negroes seldom show up on their boards.

For example, participation in the Community Chest is a substantial status symbol here, but there were only five Negroes among the 836 who attended the annual "kickoff" dinner this year.

There are none on the 60-member board of dierctors, and only one among the 170 members of the corporation.

This is not to suggest deliberate exclusion by the Community Chest.

On the contrary, its member agencies are characterized by programs that cut across all social, racial, or economic lines. But the failure of the city's substantial Negro minority to achieve a greater role illustrates the Negro's position as a man apart.

The Negro is realistic about the part he might play in the foreseeable future. He does not clamor for admission to the clubs that bar even the unidentifiable Jew. But he wants recognition as an individual. If his professional attainment justifies his being sought out for advice, he wants to be sought out.

The separation of the races has served to bind the Negro community together, despite the tremendous range of intellectual levels,

economic backgrounds and social interests represented in these 18,000 Rochesterians.

There is a Negro "grapevine" that carries not only news of other Negroes but common expressions of humor and bitterness.

A story told in a roach-ridden kitchen on Clarissa street is repeated in an Irondequoit living room.

In the Baden-Ormond area and the 19th ward alike, Negroes speak sardonically of Rochester winning a brotherhood award.

Stories of the tribulations of individual Negroes spread like a virus, as do those of their triumphs.

Thus, a Baden-Ormond Negro is quite likely to know the details of another Negro's new home in Brighton, although he may never have met the man.

The factors that contribute to the separation in the minds of men are several.

One is the artificial division of labor along racial lines. A Pullman porter is Negro; the conductor, white. The hotel bellhop is white; the doorman and elevator operator are Negro. The waiter is white; the busboy is a Negro.

The Negro himself contributes to the separation in a sense, usually because he has no choice but often because he regards himself as a man apart, a man with a particular crusade to carry on. He attends Negro churches, belongs to Negro fraternities, reads the Negro press.

Visit the home of almost any middle class Negro and you will find that he reads Ebony or Sepia or Jet magazines. His interest in them is a reflection of his identification with his group as a separate culture within a culture.

Look at the articles in the current issue of Sepia to find what interests the Negro—articles about migrant labor, school integration, Miriam Makeba, Louis Armstrong, a movie on race prejudice, a white man's experiences posing as a Negro, Negroes in business, a Negro writer, the AME church, race conflict in Chicago, and Jesse Owens. And all in a single issue.

The racial separation also is abetted by the southern Negro who comes north and finds it hard to emerge from the subjection in which he has lived.

There is one southern Negro here who tells his children to speak to people wherever they go, whether fishing or to the store. Life in the South has convinced him that an alibi is a valuable thing.

But the principal factor inevitably is housing segregation. Many, perhaps a majority of Rochesterians grow up without ever getting to know a Negro on an equal footing.

The suburban dweller may attain his majority without ever going to school or church with a black man. And he may climax this by working in an all-white office and bowling on an all-white bowling team Wednesday nights.

"STEREOTYPE * * * IS NOT BUNCHE"

Ignorance breeds acceptance and perpetuation of the stereotypes. And the stereotype of the Negro is not Ralph Bunche or Jackie Robinson.

It is a man who lives in the slums, has a common-law wife, drinks gin and orange pop on Saturday night and—despite all—is cheerful about his lot so long as he can have yellow suede shoes and the hope of a used Cadillac to ride around in.

("They just love red convertibles," a suburban housewife confided to a reporter.)

Those who come to know the Negro find that some fit the stereotype (as do some of their white neighbors) but that the majority do not. And they find the range is broad.

Just as housing segregation has maintained this apartness—for it is both cause and effect—so will the gradual dispersal of the Negro through the community allow him to take shape as an individual.

Negro after Negro tells of finally winning acceptance from hostile white neighbors who come to realize the newcomer invading their suburban paradise is just another mortgage-ridden, grass-cutting, snow-shoveling bookkeeper or factory worker or schoolteacher.

This experience is a common one. Vance Packard, in "The Status Seekers," cites a study of two groups of white housewives, one in an integrated New York City apartment project, the other in an all-white project in New Jersey. The study found what students of race relations have preached for years—that those who know the Negro best think the most highly of him and are least given to viewing him as Stepin Fetchit.

One Negro professional who finally won civility, at least, from a white neighbor after several years put it this way:

"If I never do another thing for my race, I've educated that woman next door."

The acceptance of the stereotypes causes confusion to the white when he meets Negroes who do not fit.

The attractive college-educated wife of a Negro ballplayer recalls answering an advertisement for an apartment near Red Wing Stadium. When she telephoned, she was received with cordiality and invited to inspect the apartment. But when she appeared, the landlady was stunned.

"Why," she stammered, "I'm sorry, but this is a residential neighborhood."

Recalling the incident now, the wife asks wryly: "What did she think we were going to do, open up a bar?"

HOW THE MIDDLE CLASS BEHAVE

The sensitive, middle-class Negro goes to great lengths to avoid the stereotype. Except when he is in danger of being insulted, he is likely to be soft spoken because he does not want to convey boorishness. He is likely to dress conservatively. He goes to almost ridiculous lengths to prove that he is dedicated to maintaining his property. (In fact one Negro who bought in a white neighborhood was seen outside trimming the hedges and preparing to paint within a day after moving in.)

Because he takes such pains to offset it, the Negro is embittered by the persistence of the stereotype.

"You think we're all like those handkerchief heads you see on Joseph Avenue," a well-to-do housewife tells a reporter angrily.

"The white man always expects us to be carrying a banjo," a factory worker observes, "and some of our people do just that."

Rubbing shoulders is essential to seeing the Negro as an individual, and this means taking an interest in him. A shopkeeper near one of the high schools tells a Negro youth who has wandered in during school hours to go back to class. She sees her student-customers as individuals, Negro or white.

But few members of the community have this chance, and so they push him into the stereotype. Thus, a sensitive and intelligent young Ph. D., is called "Sunshine" by a service station attendant.

The concern with the way he is regarded frequently makes the Negro hypersensitive, and the more candid admit it. Moreover, he is so conditioned to expect discrimination that he sometimes avoids going to restaurants and other places where he might in fact encounter little trouble.

Although most Negroes agree there is little discrimination in stores or restaurants here, some are quick to see the ordinary rudeness and bad temper of a waiter or salesgirl as a comment on their pigmentation.

NEW NEGRO A CRUSADER

Sometimes, of course, the Negro is right. The unsophisticated migrant is apt to flee in confusion from such situations, never to return to that store again. But the new Negro is a crusader who is quick to set the record straight.

A young third ward housewife tells of admiring a $69 dress in one of the city's better women's stores. Just as she concluded that she couldn't afford the dress, a sales clerk gratuitously announced that she could not try it on unless she bought it.

"So I got mad and bought it," the housewife recalls. "It was foolish perhaps but that woman made me so mad."

The picture of the Negro as a man apart appears to be a harsh comment on Rochester. But the situation here is not really a unique one. The Negro faces similar humiliations in most places.

Whether Rochester is better or worse is impossible to measure, although the Negro who is experiencing life here now is quick to assure you that things were never this bad in Columbus or Binghamton or Louisville, or even—some say—in Mississippi.

SHAPED BY TRADITIONS

What can be said with some assurance, however, is that there are significant local influences. The life of the Negro here is shaped by Rochester's special character as a community as well as by the influences that operate throughout the North.

In Rochester, the Negro has been angered by what he regards as the city's tendency to set itself apart, to believe that it has no real problems compared to the rest of the Nation.

He feels so strongly on this subject that he is inclined to overlook the truth that Rochester does have a number of distinctive characteristics—for example, an unusually high percentage of homeowners.

It is significant that this is a city of industries employing exceptionally highly skilled workers. This has meant that there has been no great movement of migrant Negroes into the main streams of the city's productive life.

The migratory worker who drifts in is more likely to wind up doing service work of some kind than he might in Buffalo, where heavy industry offers a higher paid alternative.

Because industry's dependence on the skilled worker is rising all the time and because such devices as the mechanical bean-picker are reducing dependence on migrant labor, it seems unlikely that the Negro population here ever will be a large proportion of the total. This means that the fearful white need not expect a wholesale invasion.

A STRONG ECONOMY

Some of Rochester's peculiarities work to the advantage of the Negro. The city is strong economically. Recessions arrive late and disappear early, and unemployment is seldom as severe as in other upstate cities. This gives the Negro workers a measure of security that he might not realize in Buffalo, for example.

In other respects, Rochester's economic well-being, reflected as it is in an affluent upper class and a generally comfortable middle class, adds to the Negro's problem. The distance between the high men on the totem pole and those on the bottom is greater than it is elsewhere.

This can mean that the man with plenty can give more, as with the community chest. But it also means that he has less contact with the Negro newcomer and is less likely to see him as an individual.

One of Rochester's peculiarities is probably at the root of the controversy over the SCAD office. This is the city's tradition of preferring local enterprise to outside assistance.

Rochester has a reputation for being slow to accept the subsidies of State and Federal Governments, and its political and business leaders are frankly suspicious of what they consider the meddling and waste that inevitably accompany this subsidy.

It is no accident that Rochester has less public housing per capita than any other major city in the State, or that Rochester is the only city that established its housing authority only after it had built a project.

OLD APPROACH IS NOT ENOUGH

Rochester has preferred to meet its social obligations through local action often founded on frank paternalism and benevolence.

And in most things, the city has been conspicuously successful. The city's per capita spending on social welfare is high, and the community chest drive is always a success.

All these things reflect a city that is essentially proud, secure, conservative, independent, civilized, cultured, detached and self-contained.

But the problem of the new Negro does not yield to the traditional approach.

In the past, in the absence of strong labor unions, the need for social action has usually been anticipated by private and public leadership. In the case of the Negro, however, the community has not kept its finger on the pulse.

Comparatively few in Rochester have admitted that the problem is a serious one.

Above all, the city has failed to recognize that the new Negro does not want "better treatment" or "help" or anything that smacks of condescension.

He wants equality. He wants recognition commensurate with his attainments as an individual. And he wants it now.

A letter to the editor put it this way:

"How much longer must the Negro be expected to show gratitude and humbleness for the few freedoms we as a race enjoy.

"I would like to taste the fruit of first-class citizenship in my lifetime. If not, I pray that my children may one day be able to take for granted all the rights, which should be ours as they are the white man's, not for the begging or boycotting, but for the taking."

Soldier of Honor or Soldier of Fortune?

EXTENSION OF REMARKS

OF

HON. STEVEN B. DEROUNIAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 23, 1960

Mr. DEROUNIAN. Mr. Speaker, the following article which appeared in the Washington Evening Star on August 22 and which was written by William S. White, deserves the most thoughtful attention of all Americans:

THE PASSING SCENE—"PEARL HARBOR" IN A MOSCOW COURT

(By William S. White)

Is it a missile lag or a space lag that should most trouble us as we confront the massive and brooding hostility of the Soviet Union across the world?

Or is it, instead, really a lag in our national character, a decline in our old standards of personal guts and personal responsibility? What value all our progress in the weapons we produce if we are to produce fewer and fewer strong, grownup men? What price the old words like "duty" and "honor"? Has a sophomoric pseudo-sophistication snickered these words out of our national language?

These melancholy questions arise in this correspondent's mind in the afterlight of the Moscow trial of Francis Powers, the pilot of the American "spy plane." It is not a comfortable thing for a man who works in safety to pass judgment on another man caught up far from home in an alien, so-called court for a criminal mission on which his superiors had sent him.

The easy, the sentimental, way would be to sympathize with Powers—to say that after all he had his life to save and so why should he not have cooperated with his Russian accusers?

But this would be a view as stickily dishonest as it would be superficially compassionate.

AIDED ACCUSERS OF UNITED STATES

For Powers was cooperating not so much with Powers' own accusers as with the accusers of his Government and his country. He was not, in the language of the American criminal courts, simply "copping a plea" for himself. He was copping a plea for the United States of America. First, he had saved his own life by permitting his aircraft and its secrets to fall into enemy hands, at the expense of his own country's vital interests and in violation of his duty.

Next, in the trial itself, he again saved his life by joining his country's assailants in slandering that country, in violation of his responsibility as an American citizen.

But he was more than a private citizen who had got into difficulty abroad. He was a soldier, if not in uniform, of the United States—specifically of its most urgent arm in the cold war, the Central Intelligence Agency.

KNEW THE RISKS

When he accepted his job—and at $30,000 a year it was an infinitely better job than his background could ever otherwise have found for him—he took his chances. Here was no little boy who had lost his way in the Soviet labyrinths. Here was a man on a high mission who knew in advance of its risks—and of its privileges.

Was he entitled then upon capture—a capture which it was bluntly his duty to avoid at every cost, including the final cost of death itself—to save himself in the way he did? Is a ship's officer on a raft flung from a sinking liner entitled to kick off the passengers if the raft, too, begins to sink? His duty is far more than theirs, for he is a part of the ship's responsible command.

Now I know it is seemingly a cruel thing to say that another man should die, if dying is the only way to protect his country. But millions of men, far less favored than Powers, have died when they had to die to maintain their duty. Many of us have seen hundreds of our friends so die, not gladly but stoically, in the infantry outfits of the U.S. Army. An intelligence officer has no more immunity from death, when death is required of him, than any exhausted platoon leader in Normandy, on Iwo Jima or wherever.

With no wish to persecute one man, it is still sadly necessary to say it: In that Moscow courtroom we have suffered a small, an intimate, a personal Pearl Harbor—but not, unhappily, an insignificant one.

Explanation of Vote

EXTENSION OF REMARKS

OF

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 22, 1960

Mr. FULTON. Mr. Speaker, on rollcall 120, Friday, June 3, 1960, a record vote on a motion to adjourn, I am recorded as not voting. Had I been present and voting, I would have voted "nay."

Unfreezing Our Defense

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 23, 1960

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include an article, informative and exposing, entitled "Unfreezing Our Defense," written by Joseph Alsop, an objective and fearless minded columnist, appearing in the Boston Globe of August 10, 1960.

For several years, Mr. Alsop has made marked contributions by fearlessly discussing our national defense posture, as well as our foreign policy, and where necessary, exposing our weaknesses in both fields.

The article follows:

UNFREEZING OUR DEFENSE—FUNDS FINALLY RELEASED BY IKE WILL BUY MORE AIRBORNE ALERT FOR UNITED STATES—BUT NOT BEFORE SPRING

(By Joseph Alsop)

WASHINGTON.—President Eisenhower has now passed over the recommendations of his Secretary of State and ignored the Republican platform's promise to "intensify, accelerate and increase" the national defense efforts.

Quite naturally, without saying so in plain words, the President's message to Congress indicates he has merely decided to unfreeze the last congressional session's added appropriations for special defense projects.

These funds were voted against the President's wish.

They were instantly frozen by the President's and the Budget Bureau's order. And now the act of taking these funds out of the refrigerator again is presented as important and significant.

The best way to gage the real nature of this decision of the President's is to take a look at the problem of the airborne alert.

A maximum airborne alert was urgently requested last winter, by the brilliant man who has personal responsibility for the American deterrent, the strategic air commander, Gen. Thomas S. Power.

In the period of the missile gap, which we have now extended, the SAC airbases in the United States and overseas are nakedly exposed to the Kremlin's long-range and medium-range rockets.

Existing systems provide zero warning against a missile strike.

Hence the only way to have a truly invulnerable deterrent during the period of the missile gap is to keep the maximum feasible number of SAC's B-52 bombers constantly in the air, with bombs aboard and ready to fly at their targets.

According to General Power, a maximum airborne alert is needed now.

The mood will be vastly more acute in 1961 and 1962, when the missile gap will be very much wider.

This need in 1961 and 1962 will not be canceled out, either, by a presidential order for construction of more Polaris submarines, which cannot be at sea before 1964 or 1965.

A maximum airborne alert is now impossible, however, for the simple reason that aircraft in flight wear out their engines and other parts.

SAC does not have a spare parts backlog big enough to maintain a serious airborne alert with continuous attrition of its B–52 force.

With extreme caution, the last session of Congress therefore appropriated an additional $85 million to buy a larger reserve of B–52 spare parts for SAC. This is one of the appropriations that has now been unfrozen.

Unless Budget Bureau pettifogging negates the unfreezing—which is quite possible—SAC will therefore be permitted to acquire the capability of mounting a continuous airborne alert.

But the job will only be completed next spring.

Nine months have already been lost because of the President's obstinate resistance to General Power's recommendation. And an alert of 80 bombers in the air will be the most that SAC can hope to mount, even by next spring.

There is a simple measure for the inadequacy of this belated gesture.

The former SAC commander, Gen. Curtis LeMay, has never been one to overestimate the effectiveness of air defense.

Yet General LeMay used to maintain that SAC needed to be able to send off a first strike of 1,000 aircraft.

General LeMay did not argue that it was necessary for SAC to deliver 1,000 cargoes of nuclear bombs, which would be ridiculous. He argued that a first strike of 1,000 bombers was tactically necessary, to make sure of overwhelming the defenses and reaching all assigned targets.

Furthermore, General LeMay set up his requirement of a 1,000-plane first strike in the period when the Soviet air defense was relatively very weak.

Since then, and particularly in the last 18 months, the Soviet air defense system has been greatly strengthened. But the American Government, with the missile gap staring us in the face, has now decided that it will be quite enough to have a sure first strike capability of only 80 aircraft.

More money—very little more money—would buy more airborne alert.

An additional $100 million of appropriations now would permit an alert of 160 B–52's by next spring.

An additional $150 million would give the means to prepare a maximum alert of over 200 B–52's.

With the Hound Dog missile added to the B–52's, this kind of maximum alert would be a reasonably reliable deterrent, unless the masters of the Kremlin go mad.

But if the spare parts are not ordered now, the alert will not be possible later.

A whole series of other cases might be cited, to show how the future is being mortgaged to suit the present convenience of the Budget Bureau and the wishes of the President.

If this goes on, President Eisenhower's successor, whether he be Vice President NIXON or Senator KENNEDY, may well not inherit the means to defend this Nation and the free world.

Tragic Tariff Decision on Textile Imports

EXTENSION OF REMARKS
OF
HON. KENNETH A. ROBERTS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 23, 1960

Mr. ROBERTS. Mr. Speaker, earlier this year I appeared before the U.S. Tariff Commission and gave reasons for my contention that certain equalizing steps should be taken because of unfair importation of foreign textile products.

This situation is one that is critical to domestic industry.

I was extremely disappointed, therefore, when the Commission ruled against restrictions which would safeguard our home industries.

Of course, I will continue to work through Congress for these safeguards.

An editorial appeared in the Talladega (Ala.) Daily Home on this subject, and under unanimous consent I insert it at this point in the RECORD:

A TRAGIC BLUNDER

Our own J. Craig Smith, who is president of the National Cotton Council, said his group was "aghast and bitterly disappointed" at the 4 to 2 decision whereby the U.S. Tariff Commission ruled against imposition of additional import restrictions on cotton textiles.

Living and moving and having our being here in a cotton economy we understand and share Mr. Smith's shock and disappointment that this Government refuses protection in the face of a situation threatening an entire region.

The commission majority, as Mr. Smith said, clearly refused to recognize the danger inherent in the tide of imports from countries where labor is cheap.

Yet on the streets of Talladega and Sylacauga and other towns right now are women wearing textile garments made abroad and sold at a fraction of the price American textiles must command if they are to survive.

"They have completely ignored the fact that imports of cotton textiles are nearly five times as great as they were 5 years ago and that cotton yarn imports are 15 times what they were just last year," Mr. Smith said.

The cotton industry now must turn to Congress for any possible relief.

In its fight it deserves the backing of every southerner who realizes that our great basic industry is under attack that could prove fatal unless corrective steps are taken—and in time.

Social Security

EXTENSION OF REMARKS
OF
HON. ROBERT C. BYRD
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Tuesday, August 23, 1960

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement by me on the Social Security Amendments of 1960.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR BYRD OF WEST VIRGINIA

SOCIAL SECURITY

Although I supported the Anderson amendment, I do intend to vote for the passage of this bill. I am particularly interested in the provision to permit men to voluntarily retire at age 62. This language was adopted by the Senate Committee on Finance, it having been proposed by an amendment offered by me and cosponsored by 21 other Senators.

Moreover, I believe that removal of the age 50 requirement is a necessity. If we act favorably on this bill, it will mean immediate benefits for a quarter of a million people, disabled workers and their dependents. The lifting of the age-50 requirement will mean a first-year saving in public assistance funds of approximately $28 million. There is no basis for denying benefits to the group that is likely to be most in need of them—persons under age 50 who generally have family responsibilities. We all know that for a person to qualify for disability benefits he must be, according to the law, unable to engage in any substantial gainful activity. Sometimes he can be rehabilitated, and, despite his handicap, can earn a living for his family. More often he must look forward to a life without earnings of any kind. Many of our disabled are thereby forced to go on public assistance rolls.

I am also pleased with the provision paying benefits to survivors of workers who died before 1940. About 25,000 persons would benefit by this, most of them being aged widows of 75 and over.

Howard Cummings—A Gallant Soldier

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 23, 1960

Mr. PHILBIN. Mr. Speaker, under unanimous consent to revise and extend my remarks, I include therein a very fine article by the talented columnist of the Clinton (Mass.) Daily Item, my good friend, Mr. John E. O'Malley, entitled "Howard Cummings Was a Company K Man."

Company K was an outstanding unit of the famous Yankee Division of World War I fame and Howard Cummings was one of its greatest heroes. The company was largely recruited from Clinton and Howard Cummings was one of its officers having worked his way up from the rank of private.

K Company participated in many of the most crucial and bloody battles of World War I and the magnificent saga of its exploits has been impressively set forth in several publications and articles, one of the most distinguished of which was the dramatic story written by the late Major James T. Duane, also an officer of the original K Company.

Since both of these gallant heroes were virtually next door neighbors of mine from the Acre district in Clinton, they were dear friends and I knew them very well. The community that could produce such brave fighting men and such outstanding leaders may well be proud, and the Nation fortunate enough to have such patriotic and dedicated men fighting and sacrificing in the defense of its freedoms is indeed fortunate.

Both these men, in addition to their memorable military records, enjoyed notable success in civilian life: Major Duane as State commander of the American Legion and prominent business and civic leader, and Lieutenant Cummings as a high-ranking official and leader in the U.S. Internal Revenue Service.

Mr. O'Malley deserves great credit for his fine article on Lieutenant Cummings.

It not only reminds us of a beloved friend and valiant soldier, Lieutenant Cummings, but it brings to mind once again with impressive vividness the exploits of one of the most colorful and gallant military units that has ever engaged in any American war, the famous Company K of Clinton.

Lieutenant Cummings recently followed his beloved friend and service comrade, Major Duane, to the ranks of that silent majority of heroes who, having given unreservedly of themselves for the cause of God and country, have passed to their heavenly reward.

Such men as Howard Cummings and James Duane can never be replaced, but their magnificent contributions, their sterling Americanism and their loyal support of the Nation in war and peace will long be remembered by those who cherish American liberty and who value noble, unselfish citizenship

On the rolls of heroes their names are indelibly inscribed. Their many friends will long honor and cherish their blessed memories and the Nation will long continue to be inspired by their devoted service.

The article follows:

[From the Clinton (Mass.) Daily Item, July 5, 1960]

HOWARD CUMMINGS WAS A GREAT COMPANY K MAN

(By John E. O'Malley)

July 24, 1918, was a sad day at the old post office at 203 Church Street. It was about noon that James R. Connery came in to say that a telegram had just been received that Howard J. Cummings had been critically wounded in France. He had served for 8 years as a mail carrier before he was called to active service with Company K.

It happened in the second battle of the Marne, starting July 18 and lasting for 6 days. Company K was at the apex of the attack. On the fifth day of the battle Lieutenant Cummings stepped out to help remove a wounded comrade. A shell landed close by, killing the wounded soldier and the litter bearers, and a shell fragment hit Lieutenant Cummings causing a severe skull fracture. The act that caused his injury was typical of the man.

The day Company K arrived in Clinton after the war, Cpl., James F. "Dolly" O'Toole was seated in Latin's Lunch Cart. He was wearing his Croix de Guerre decoration. A man sitting next to him told him he should be very proud of it. His answer was a wonderful tribute to a fellow officer.

He said, "I would be proud of it if Howie Cummings had one too."

Dolly had not forgotten the night he volunteered to scout the enemy lines. He had worked his way through the barbed wire entanglement and had crawled close to the enemy lines. He had the same feeling that every soldier had in the same position—the hand of death was resting on his shoulder. Suddenly there was a hand on his shoulder and a soft kindly voice was whispering in his ear. It was the voice of Lieutenant Cummings who had, of his own volition, crawled out in no man's land to sustain a friend.

NOTIFIED OF PROMOTION

February 1, 1918, at Frebercourt, Sgt. Howard J. Cummings was notified that he had been commissioned as a second lieutenant. February 21 he left for Grendecourt for special training and was furnished with a guide for the trip. The guide lost his way. In his report later, the guide stated that it was through the brilliance and high courage of Lieutenant Cummings that they made it without being killed or captured.

On May 3, Lieutenant Cummings was elevated to the post of regimental gas officer. On July 3 he was honored with a 3-day pass to Paris to take part in the Fourth of July celebration.

On his return to Clinton the employees of the post office gave a banquet in his honor. The affair was at the Raymond Hotel, Fitchburg. Raymond Dwyer, the proprietor, set out to make it a gala occasion. In its finest day the Waldorf Astoria never could have surpassed it.

Howie's words to a Veterans' Bureau bureaucrat were typical of the man. He had applied for special training and after three sessions of petifogging questions he spoke about as follows: "I want this very much. It belongs to me. I don't intend to get down on my knees and beg for it." That was the kind of a fellow he was.

A short time ago they sounded taps for Howie Cummings; another hero of Clinton's famous Company K had joined "the innumerable caravan."

He had a brilliant mind, he smiled easily, he worked hard, he was a true gentleman at all times—that was Howard J. Cummings.

Helping Russia To Help Cuba

EXTENSION OF REMARKS

OF

HON. EDWARD A. GARMATZ

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 23, 1960

Mr. GARMATZ. Mr. Speaker, the lack of coordinated policy between us and our Allies in trading with Communist-controlled countries, and the administration's policy on oil imports, is working to the advantage of Russia, in her efforts to gain a foothold in the Western Hemisphere by befriending Cuba. This is brought out very clearly in an article in the Baltimore Sun of August 9 by the maritime editor of that paper, Mrs. Helen Delich Bentley, which is reprinted herewith, under permission to extend my remarks:

HOW THE RUSSIANS DO IT—OIL TANKERS FOR CUBA

(By Helen Delich Bentley)

Russia's ability to ship crude oil directly to Cuba is a mainstay of the Castro (or post-Castro?) fight against American and British oil concerns. Yet Russia commands the necessary tanker tonnage for the long ocean run largely because of two practices among the Western countries which have the effect of advantaging the Soviet.

These same two factors help Russia supply India and other countries with crude oil at 5 to 15 percent below world prices, thus building up its own oil industry at the expense of free-enterprise companies all over the globe. True, India yesterday announced cancellation of oil agreements with Russia—but only after three suppliers with refineries in India had cut their price by 11 percent. In fact, worldwide price postings for crude oil are edging closer to a major break as a result of activity such as Russia is forcing in Cuba, India, and like areas.

Russia's first advantage is the failure of the Western nations to retain a unified front concerning trade with the Iron Curtain countries over the past decade. Even during the Korean war, ships flying the flags of Great Britain, Norway, Denmark, Italy, and others called regularly at Red Chinese ports.

The other major factor, and perhaps the more important at this time, is the restrictions imposed on import oil by the U.S. Government. Limiting import oil to only slightly more than 1 million barrels daily, with the bulk of that from nearby Venezuela, Washington policy has forced hundreds of thousands of tons of giant supertankers "on the open market" to shop and ship anywhere that they can pick up trade.

Hungry owners have been searching for business at any price, just to keep their vessels going and hoping to be able to pay off at least the mortgage interest as it falls due. Principal payments have been lagging further behind because of the continuation of the depressed market, now entering its 4th year.

Some owners who have been drawing on their capital reserves during the past 3 years, now face bankruptcy or forced sale of their ships at prices far below the amount still due. Many already have failed. This makes the survivors still more anuxious for any kind of business, including Russian business.

Knowing that approximately 6 million tons of tankers are idle throughout the world and available for charter at rock-bottom prices, the Russians have been able to avoid expending great sums to build their own tankers and still are able to ship their oil all over the world at prices under those of the oil companies, which get bargains on freight rates only when they themselves are able to spot-charter a ship.

Normally the oil companies have their own vessels (which must be amortized and maintained) on their hands as well as those they chartered under long-term agreements before the depressed market set in.

The import oil restrictions which are imposed by the Interior Department to protect a small, but vocal group of domestic independent oil producers are blamed for the tanker situation by the owners.

They estimate that an increase of imports by 800,000 barrels daily, or less than one-tenth of the 9 million barrels consumed in this country every day, would employ the entire 6 million tons of idle supertankers if all of the increase could come from the Persian Gulf. Even a shift in the present quota from Venezuela to the Persian Gulf area would help some because of the longer water haul. With the tankers busy filling the oil needs of the United States, there wouldn't be any left to transport Russian petroleum.

The Maritime Administration has opposed the import oil restriction program of Interior on the basis that the latter governmental branch was undermining Maritime and its efforts to build up a merchant marine under American-flag registry.

Because of the oil restrictions some of the supertankers which the U.S. Government has helped build in this country have carried nothing except grain of one sort or another—not a drop of petrol. The tanker owners would prefer their vessels being used for bulk liquids and so would the dry cargo owners whose market has been depressed further by the entrance of tankers into grain cargo hauling.

The fact that Russia was able to divert tankers to the Cuban run almost overnight is considered quite a feat in shipping circles. That accomplishment plus some other maneuvering she is doing on her cargoes to destinations other than Cuba demonstrates that her officials for all their Marxist preoccupations have become most adept in manipulating the charter market of world-wide private enterprise.

Various reports have been issued within the past 2 weeks about the effectiveness of the threat by the big oil companies, particularly the three whose refineries were seized in Cuba, to blacklist owners who

charter to Russia for movement of its oil anywhere in the world. It is understood that the oil companies definitely want the impression to circulate among shipowners that their threat is very effective so that all will cold-shoulder the Russians.

However, a check on the weekly ship position list published by Lloyds of London shows that a number of tankers—particularly British, Italian, and Norwegian—are in the Black Sea area. Their charters have been kept secret, as charters often after, and the work has proceeded without fanfare.

The Greek shipowners, who for the most part are trying to adhere to the plea by the U.S. Government not to make their tankers available in this trade, have pointed out again that if the British, Norwegian, and Italian tankers are free to move as they please then the Greeks are forced by naked economic necessity to follow suit.

As suggested above, one way in which the oil companies and the U.S. Government could divert these Greek tankers from Russian employment is to put the tankers to work for them.

As might be expected with an increased demand, the prices being offered for charters by the Russians are rising but still are only high enough for an owner to break even on operating costs if he's lucky and if his tanker is already paid for. The Russians have invited charters for 1 and 2 years (unusually long on today's depresed market) at around $2.50 per ton for T-2 tankers. Small owners are chafing at the bit and are hard to restrain from signing the contracts.

Another point not emphasized or realized in lay circles is that it is difficult to reroute any ships to a completely new run on short notice. Normally it takes several weeks and sometimes months to arrange charters, particularly if the ships are to be put on a regular run such as between the Black Sea and Cuba.

To help ease this interim period, the Russians are placing as many of their own tankers as they can on the Cuban run and routing those of other countries to other areas. Further, to increase the tankers available now the Russians are actually selling their oil f.o.b. Black Sea and offering to pay the transportation costs, even though higher, if the purchasers will send in their own ships.

The Department of Interior reported last week that Russian's 1959 oil exports averaged 507,440 barrels daily. Every country in Europe—except Ireland, Spain, and Portugal—had made extensive purchases from the Iron Curtain's oil supplies. Italy led with 3 million tons.

Despite all the statements to the contrary, shipowners still believe that the depressed shipping market will provide enough tankers to the Russians for movement of their oil at a low cost anywhere in the world. Rescheduling and rearranging because of the Cuban situation will take some time, but no one believes the flow of oil from the Black Sea ever will be reduced by a lack of sufficient ships in this market. As stated above, the Lloyds weekly ship movement record supports their belief already.

It was the same Lloyds report which revealed during the Korean war, despite denials, that at the height of that conflict 103 freighters owned in England, Norway, Denmark, Italy, and France were under charter to Russia and her satellites and were engaged principally in transporting cargo to Red China.

During the same war the Danes were building ships for Russia.

The point made is that if western ships were servicing the Communist bloc during the time when the United States and other United Nations troops were fighting the Reds, why wouldn't the same countries make their ships available today when only a cold war is underway and they aren't really affected?

As a matter of fact, today every country in the Western bloc is trading with Russia and her European satellites. Every nation except the United States and the Philippine Islands is trading with Red China, North Korea, and North Vietnam.

Most of this trade is subject to certain restrictions on the movement of strategic materials into the Soviet blocs, but the restricted list grows shorter every year.

The United States permits its ships to bring any cargoes available out of Russia, but only certain items can move in from this country. Again, every year the list of goods exchanged increases.

Many U.S. maritime leaders contend that this country's failure to permit trade with Red China was injurious both to the American-flag ships and to the country's own general trade balance.

John Tyler Morgan

EXTENSION OF REMARKS
OF
HON. KENNETH A. ROBERTS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 23, 1960

Mr. ROBERTS. Mr. Speaker, an outstanding southern journalist has written an exceptionally interesting short biography of an outstanding southern statesman.

Col. Harry M. Ayers, editor and publisher of the Anniston (Ala.) Star who is widely known and respected in national newspaper circles, has written the story of the life of John Tyler Morgan, who was born in Tennessee and among whose accomplishments was the representation of Alabama in the U.S. Senate.

The name of John Tyler Morgan has been submitted to the Hall of Fame as a representative of the State of Alabama. This is a most fitting nomination, and one which I am proud to second.

I believe everyone who reads the CONGRESSIONAL RECORD will enjoy Colonel Ayer's story, "John Tyler Morgan," and I am pleased to include it at this point:

JOHN TYLER MORGAN

(By Harry M. Ayers)

While John Tyler Morgan was a southerner by birth and by persuasion, his father was a native of Saratoga, N.Y., and was born on the night George Washington was a visitor to the family. Hence, he was given the name of the distinguished visitor, George.

John T.'s grandparents were Gideon and Patience (Cogswell) Morgan of Connecticut and Revolutionary War fame. His mother was the daughter of an Episcopal clergyman of Virginia, and a woman of rare intellectual gifts. Yet the son became a devout Methodist in his mature years.

His earlier ancestors came from Wales and settled in Connecticut. All of them lived to a ripe old age, two of whom were nonagenerians.

Senator Morgan was born in Athens, Tenn., on June 20, 1824 and died as U.S. Senator in Washington on June 11, 1907.

After training at home he entered the pioneer school of Charles P. Samuel, a Kentuckian, located 2 miles from the family home, when he was 6 years of age and there he received the foundation of a classical education grounded in Latin.

He says that when he left school at 9 years of age, he knew more Latin than anything else, having read Historiae Sacre, the first six books of Caesar, the Georgics and Bucolics, plus Aeneid of Virgil. He also had some acquaintance with Sallust and was pretty well acquainted with Horace.

In his other studies, he mastered all there was in his little geography, of which he was always fond, and had gone as far as fractions in arithmetic. However, these 3 years from 6 to 9 comprised his entire academic training.

MOVES TO ALABAMA

When the family moved to Calhoun County, Ala., it was a virtual wilderness. They settled on squatted land and young John helped to make the first crop in a territory still surrounded by Indians.

In the absence of schools, he pursued his studies under the guidance of his mother and, in addition to his Latin, he began a deep study of the Bible and memorized several of the English classics, including Pope's "Essay on Man," Young's "Night Thoughts," Pollock's "Cause of Time," and John Wesley's sermons, some of which were stored in the mind of his talented mother.

Through his legacy from her he developed a memory that was the astonishment of his friends and associates in afteryears. While serving as Senator on a trip to Paris as a member of the Bering Sea Commission, he was asked by Lord Hannen what university he had attended.

The reply was: "I never stepped foot upon a college campus in my life until one day during the War of Secession, I had occasion to take my regiment behind the brick walls of William and Mary College to find protection from minie balls and rifle bullets that were flying in our direction."

LAW AND POLITICS

After having studied law at the office of William P. Chilton of Tuskegee and Talladega, Ala., Morgan made his first adventure into politics as a presidential elector on the Breckenridge ticket in 1860, then later became a delegate to the convention which ratified the ordinance of secession in Dallas County, Ala., which was to become his permanent home in later years.

But although he was an ardent southerner, he opposed the African slave trade, which the convention demanded to be retained in the Confederate Constitution.

It is stated in "The South in the Building of the Nation" that he ranked second only to William Yancey in influence and power of debate in the Secession Convention.

But he said that when he enlisted in the Confederate Army, he still knew more Latin than English. Yet evidently he was recognized even at that time as a very capable gentleman, as he served on the staff of Major General Clemens, commanding State troops at Fort Morgan, in the southern part of the State.

ENLISTED AS A PRIVATE

Later he enlisted as a private in the Cahaba Rifles, which became Company G of the 5th Alabama Infantry, and on the organization of that regiment, in which he became a leader, he was promoted to the rank of major and later was advanced to lieutenant colonel.

Subsequently, however, he resigned that commission, too, and came back to Oxford in his old home county there to organize the 51st Alabama Cavalry in 1862.

He then was advanced to lieutenant colonel and was assigned to protect the railroads in Alabama and middle Tennessee, reporting at all times to General Forrest. He was then appointed to brigadier by Gen. Robert E. Lee and was notified of his assignment to Gen. Robert E. Rodes' Brigade, which later achieved a great victory during the fighting in Tennessee.

Still later, he served under Gen. Joseph E. Johnston and participated in the Atlanta campaign. His principal duty then was to keep watch and harass General Sherman's troops.

RENOWNED AS A SENATOR

But while his military career was outstanding, it was as a Senator of the United States that Morgan became nationally and internationally renowned. He received his first appointment by the Legislature of Alabama to succeed Senator George Goldthwaite, defeating in that contest George S. Houston, who later was to become one of Alabama's greatest citizens, being known as the State's reconstruction Governor.

When the political primary was established he won his first open contest by a majority of 81,795 votes and was unanimously elected by the legislature.

Early in his service in the Senate, he became interested in an interoceanic canal to connect the Atlantic and Pacific and never abated his efforts in that direction until the completion by the United States of the Panama Canal.

FAVORED NICARAGUAN CANAL

As is well known, however, Morgan favored the Nicaraguan route and he was able to carry his point in the Senate for four successive sessions, being defeated after President Theodore Roosevelt had joined with the firm of Cromwell & Co., New York attorneys, and the Continental Railway influences that fought him step by step in the House until the Senate finally voted to select the Panama route.

As chairman of the interoceanic committee during Cleveland's last administration, Morgan's influence was greatly enhanced. But while he favored Nicaragua, he followed the measure of his character after his defeat by accepting an appointment to the Panama Canal Commission out of recognition of his vast knowledge of the entire canal problem.

Thereafter he became known, however, by both Panamanians and Nicaraguans as "the father of the isthmian canal idea."

Morgan was appointed as a member of the Bering Sea Fisheries Commission by President Harrison in 1892, the duty of which was to arbitrate the differences that had arisen between Great Britain and the United States regarding the seal fisheries rights between the two governments.

He served in that respect with Mr. Justice Harlan of the U.S. Supreme Court and his immediate grasp of the situation challenged the admiration of both the English and American delegates.

FOUGHT "FORCE BILL"

It would take a volume, however, to list all of the accomplishments of John T. Morgan as a Senator, but in view of what is taking place in the House and Senate today, it might be of interest to note that in 1900 the Senator vigorously opposed a so-called "force bill" that was introduced by Senator Pritchard, of North Carolina, and he held the floor longer than any other man who had spoken continuously in the Senate up to that time. His contention was that the resolution in question would be an intrusion on the rights of the States. It was defeated.

As to the character and ability of the man, he can best be evaluated by the Senators with whom he served for so many years. In that connection, Henry Cabot Lodge said: "I doubt very much if we ever had a Senator who knew our relations with other countries both past and present and the political conditions of foreign nations so thoroughly as Senator Morgan."

FOREIGN AFFAIRS SPECIALIST

That same opinion was expressed by Senator Burton of Ohio, who said: "As regards the problem of our foreign policy, he had a grasp of the conditions in different countries and of our own proper relations with them, which has rarely, if ever, been surpassed in the history of the Government."

Chauncey Depew said that "Senator Morgan was in the front ranks of the statesmen of the Republic. His great ability, vast acquirements, profound erudition, indomitable industry, self-sacrificing devotion to the public welfare and rare eloquence have placed him in a niche of the temple of American fame."

So impelling was Morgan's advocacy of the Nicaraguan route, as opposed to Panama, that there is considerable sentiment today for another sea level canal by way of Lake Nicaragua.

The late Walter E. Edge, Senator from New Jersey, and U.S. Ambassador to France, made the statement that "we might as well have only one battleship on the high seas as a single canal. For sink that one ship and we would be lost, as we would be also if a single canal were destroyed."

OTHER NOTED ALABAMIANS

However, had the Nicaraguan route been selected originally, it might have been that Alabama and the United States would never have had a Gorgas and a Gen. Robert E. Noble, who was the right-hand man of Gorgas up until the time of his death. It well has been said that the cleanup of the miasmic conditions that prevailed around the old Panama site where they wrought were as challenging as was the engineering genius of Goethals and Sibert, the latter also of Alabama, and having been designated by Pershing as the engineering genuis of Panama.

It has been further said of their achievements that neither would they have had to level mountains, obliterate mosquito manifestations, sliding mud and other handicaps which one authority has likened to "a victory as great as Valley Forge, Gettysburg, Belleau Woods or Guadalcanal."

ROOSEVELT VERSUS COLOMBIA

Neither would it have been necessary for President Roosevelt to summon the entire American fleet to Panamanian waters in order to impose a reasonable concession from the Colombian Government.

We even today can appreciate the great concept of Morgan by reason of the fact that we are greatly dependent upon the people of Latin America for many of the material necessities that we have exhausted in supporting our allies and ourselves at once in two World Wars.

Be all this as it may, however, it was the character of Morgan that counted for most. Often many of a younger generation came to appreciate that fact when the old gentleman came back to Anniston, Ala., nearly every summer to enjoy a cooler climate at the old Anniston Inn, which had been designed by Stanford White.

There he renewed his acquaintanceship with many old friends of Calhoun County and many who made regular pilgrimages to his quarters each year through the ages. And while it may be trite, it still is true that "the lives of great men all remind us that we may make our lives sublime and departing leave behind us footprints on the sands of time."

Or, to quote Senator Nelson, of Minnesota, "When he passed away he was one of the great patriarchs of this body who had helped to bring us back into the promised land of a reunited country, one in heart, in spirit, and in aspirations, a country that we all love, that we live for, and are ready to die for."

Bridgeport Union Supports Bill To Save Jobs of Workers When Plants Move

EXTENSION OF REMARKS

OF

HON. FRANK KOWALSKI

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 23, 1960

Mr. KOWALSKI. Mr. Speaker, I have submitted a bill, H.R. 12895, to protect the rights of workers when a business moves to a new location.

Under my bill, an employer who moves his operations to a new location must offer employment at the new location to old employees who are willing, able and qualified and for whom work is available.

My bill has won the endorsement of UE Local 237, in Bridgeport, Conn. Also, according to an article in the nationally circulated UE News, the union is working to win other support for this legislation.

Under unanimous consent, I present the text to the article from the UE News:

REPRESENTATIVE KOWALSKI INTRODUCES BILL: WOULD GIVE RIGHT TO MOVE WITH THE JOB

(By Charles R. Allen, Jr.)

BRIDGEPORT, CONN.—What may well prove an historic development emerged here recently as a result of the fight that the members of UE Local 237 of the Columbia Record Co. have been waging against this multimillion-dollar corporation's abandonment of the Bridgeport community.

In the struggle to save as many jobs as possible in the face of the Columbia Record Co.'s plans to move its plant operations to Pitman, N.J., the UE sought out support from numerous prolabor sources.

U.S. Congressman at Large FRANK KOWALSKI of Connecticut personally conducted his own thorough examination of the Columbia Record Co.'s action. His sympathy shortly was matched by action when he introduced a bill into the U.S. House of Representatives which would make it an unfair labor charge if an employer denied a worker the right to move with his job to the new plant location.

No utopian panacea to the grave problems caused by run-away plants, Congressman KOWALSKI's bill is based solidly so that the U.S. Congress will be forced to consider it seriously.

A MAJOR PROBLEM

In placing his right to move with the job bill into the congressional hopper, Congressman KOWALSKI said that "the problem of plant transfers has been a major cause for industrial dislocation throughout the Nation. The least that can be done is to give the individual worker an opportunity to move with his or her job if they so choose."

ONE HUNDRED ASK FOR RIGHT TO MOVE

In a survey of some 750 UE members at Columbia Record Co., the union learned that more than 100 workers asked to exercise this right.

In interviews with Bridgeport newspapers and radios, several UE members pointed out that runaway plants were no respecters of jobs or unions.

Said one UE worker:

"A plant can run away at any time in any plant no matter what the plant makes and no matter what union is involved.

"I CREATED THE JOB

"The job that I work on is a job which I have created with my own labor, muscles and brains. You can't separate the worker from the job. Without the worker, there wouldn't be the job in the first place. Without labor, there would be no production.

"Since I have put my labor power and brains into the job, then I should have every right to continue to make my living from that job. And that means if I wish to do so I should have the first chance to move with the job if the company moves the plant.

"As a result of our experience with the Columbia Record Co.," he said, "I hope that the trade union movement will see to it that the right to move with your job is written into all contracts as protection against these run-away companies."

The Kowalski bill in Congress will play an important part in UE's continuing fight to salvage as many jobs as possible from the Columbia Record Co.

ASK BACKING FOR KOWALSKI

UE Local 237 at a recent membership meeting resolved "to contact all labor unions in the State of Connecticut in order to urge them to support Congressman KOWALSKI's reelection to Congress so that the Kowalski bill providing the right to move with the job may be assured passage."

Congressman FRANK KOWALSKI's bill was given statewide publicity throughout Connecticut when he introduced the measure. All UE locals in Connecticut then promptly followed up this widespread reception in the press, radio and TV by announcing their support of this unique step which would advance the workers' fight everywhere against run-away plants.

Topping the list of political action for UE in Connecticut will be a heavy fall campaign on behalf of Congressman FRANK KOWALSKI and his proposal which would make it a law of the land that a worker has the right to move with his job.

Abuse of Irish Names

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 22, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial of interest to the Americans of Irish origin, which appeared in the National Hibernian Digest for July–August 1960:

ABUSE OF IRISH NAMES

(By James J. Comerford)

Summertime with its heat waves, vacation days, and reduced time for organization meetings makes one forget the slurs, the jibes, the caricatures, the ridicule which Americans of Irish ancestry had to endure last winter in the greeting-card field, as well as in the field of screen, radio, and TV. We are speaking of the winter of 1959–60. And for good measure, we can also add the 1957–58 winter.

One does not have to look back into the old days, in order to find instances where defamation and slander have been used against Americans of Irish ancestry. Any observer will easily recall that within the last 2 years, since the last national convention, over 1,000 instances have appeared on TV screens in which Irish names were slandered and in which the Irish as a race were held up to contempt and ridicule. Of course, they got an assist now and then from a slob with an Irish name. The movies and the radio also depicted through their own medium on innumerable times, characters and situations which hurled vicious insults at the American of Irish heritage. No one, we are sure, has forgotten the incident around last St. Patrick's Day of the despicable greeting cards.

Does this happen to Americans of other racial origins? You can bet your boots it does not. For if and when it does, the many and varied "antidefamation committees," and "vigilance committees," go to work and bombard the sponsors, the promoters, the "financial angels" who pay for the cost of the shows, the producers, the editors, with dynamic and hard-hitting protests. With and through these committees, they refuse to buy their advertised merchandise, thereby hitting them in the financial pocketbook where it is felt the hardest.

Members ought to recall the words: "I will not countenance by my presence or support any performance that may reasonably be interpreted as caricaturing or debasing the Irish people, whether in public or in private, in song, recitation, or story on the stage or on the screen."

Constant vigilance by AOH members is required. The Irish are traditionally known for their inherent sense of humor and for their ability to tell and make jokes at their own expense. However, this characteristic, no matter how well it is recognized as a special Irish trait, does not grant a license for sellers of merchandise using TV advertising as a matter of business policy to publicly lampoon and brazenly insult the Irish race.

An individual, bearing a historic Irish name, may feel awfully upset on hearing these insults and jibes. Not being a member of an organization, his little protest registers zero. All his fume and fury create an impression no larger than a pin hole in the side of a mountain. Thousands of others, like him, who are unorganized may in the capacity of individuals also protest in rage. But their voices, being only that of individuals, are no more heeded than raindrops falling on ocean waves.

In preserving the pride of race and in protecting the reputation of race, the organized Irish Americans must talk not only for themselves but also for their unorganized fellow clansmen. The experience of people for thousands of years show that this is the rule of life.

Let us, the organized, talk up as we did about some of last St. Patrick's Day greeting cards. We shall be heard. Collective thinking and collective acting are the instruments that modern man yet has at his command in the lands that are still governed by democracy.

When our race is insulted, particularly by those who develop such insults into salespitches for selling their merchandise, let the AOH hit hard with protests. Remember, that bank accounts and pocketbooks of the vendors are always vulnerable targets.

Americans of national origins which are not Irish have stopped the peddling of insults directed against their people. Eventually the Irish will. But why not soon?

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at $1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

Appendix

Senator Thomas J. Dodd Receives Distinguished Award Medal From Knights of Lithuania

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 23, 1960

Mr. DONOHUE. Mr. Speaker, last Sunday evening, August 21, 1960, it was my privilege and pleasure to attend the dinner, in my home city of Worcester, Mass., marking the closing session of the 47th Annual Convention of the Knights of Lithuania.

The outstanding feature of this dinner was the official conferring of this great organization's Distinguished Award Medal upon our former House colleague and present junior Senator from Connecticut, THOMAS J. DODD. The medal is annually given to the non-Lithuanian who has done most to advance the freedom of Lithuania.

The Most Reverend Bernard J. Flanagan, D.D., present bishop of Worcester, and former head of the diocese of Norwich, Conn., Senator DODD's birthplace, characterized the Senator as "a friend of freedom, a man who has spoken eloquently for captive peoples—and a man who has not let us forget our obligations toward them."

The Reverend John C. Jutt of St. Casimirs Church, convention honorary chairman, in his remarks, also praised Senator DODD for "his tireless efforts and dedication, which have given Lithuanians courage never to give up in the fight for freedom."

It was indeed another memorable event in the long, patriotic history of the Knights of Lithuania and, under leave to extend my remarks, I am pleased to include, at this point, the inspiring acceptance award address delivered by Senator DODD. His speech follows:

REMARKS OF SENATOR THOMAS J. DODD BEFORE KNIGHTS OF LITHUANIA CONVENTION IN WORCESTER, AUGUST 21, 1960

Bishop Flanagan, Mayor O'Brien, Father Jutt, distinguished guests, friends, I am moved and deeply honored by the award you have bestowed upon me. But when I ask myself, What have I done to deserve this award? I am, very frankly, troubled.

Somehow it seems to me that it would be more appropriate if I, as an American were here to present an award to a representative of the Lithuanian people. For no people in the world has fought more heroically for freedom, or suffered more cruelly under tyranny, or clung more tenaciously to their national identity, their cultural and spiritual heritage, their faith in the ultimate triumph of freedom.

This great nation, this nation of heroes and martyrs, has, in its suffering, become a symbol for freemen everywhere.

On the one hand, the agony of your people serves as a constant reminder to us of the ignorance and cynicism and lack of foresight and courage that resulted in the abandonment of the captive peoples of Europe at the close of World War II.

On the other hand, by their obstinate refusal to reconcile themselves to tyranny, either under the Czars or under the Bolsheviks, the Lithuanian people have inspired all of us to fight harder and work harder for the eternal cause of freedom.

If I have sometimes spoken up on behalf of the Lithuanian people and the other captive peoples of Europe, if I have sometimes urged the we seek after more effective ways of promoting their liberation, I take no special credit for this. To me it has been a simple matter of conscience. I would have been delinquent had I done less. And so it seems to me that, instead of receiving an award from you, it is I who should be presenting an award—an award for exemplary courage and spiritual fortitude—either to some living Lithuanian patriot or to the unknown soldier of the Lithuanian resistance movement.

America has every reason to be proud of its citizens of Lithuanian extraction—and you have every reason to be proud of your ancestry.

The history of the Lithuanian people, as I have read it, is an epic story of heroism and suffering and man's unquenchable will to assert his God-given human rights. It is a story to be told again and again, for freemen everywhere have much to learn from it.

I believe the story of Lithuania should be told for another reason. Better than any story I know, it illustrates the nature of the enemy we now confront. It teaches us how much trust can be placed in treaties with the Kremlin, in its pledges of coexistence, in its off-and-on pretenses of friendship. It teaches us how inhuman international bolshevism is, how utterly without morality or restraint.

When the Lithuanian people, at the close of World War I established their own Government and proclaimed their independence, the Bolsheviks invaded the newly established state. There were many bitter battles but finally the Lithuanian people emerged triumphant. On July 19, 1920, the Soviet Government signed a treaty of peace. It declared in this treaty—mark these words well—that it "voluntarily and forever renounces all sovereign rights possessed by Russia over the Lithuanian people and their territory."

For 20 years Lithuania knew peace and independence. During this period, there was a great renaissance of their nation literature and culture.

But then came the Hitler-Stalin pact and the partition of Poland between Germany and the Soviet Union. Almost immediately the Kremlin demanded permission to place 20,000 troops in Lithuania for the duration of the war. These troops, it was emphasized, would be removed at the end of the war. Prime Minister Stalin himself stated—and again mark these words well—"We respect the independence of the Lithuanian State. We are disposed to defend its territorial integrity."

History records no blacker or more perfidious lie by the head of a great state.

On October 10, 1939, only 2 weeks after the original demand was served on Lithuania, the Soviet Union concentrated its armed forces on the Lithuanian frontier. The Government of this brave little nation had no alternative but to sign the pact of mutual assistance which the Kremlin placed before it. But at the point of signing, they discovered that the clause stipulating that Soviet bases would be maintained in Lithuania only for the duration of the war had been stricken from the agreement, on the personal instruction of Stalin.

This was only the beginning of the perfidy. Eight months later, on June 14, 1940, the Soviet Government demanded that the Lithuanian Minister of the Interior and Director of Security be brought to trial, that a government friendly to the Soviet Union be installed and that the Red army be granted free entry in force into the territory of Lithuania. There was not even time to reply to this ultimatum. The very next day, on June 15, the Red army occupied Lithuania and the Government was compelled to flee abroad.

The Communists had made their plans carefully, as they always do, and they moved rapidly. They had a quisling regime ready to install. They had their lists of names of Lithuanian patriots who were slated for arrest and execution. They had their plan of action.

On July 7, 3 weeks after the occupation, the quisling regime ordered the liquidation of all non-Communist parties and the arrest of their leaders. On July 14 and 15, the people were compelled to vote in national elections with only the Communist Party represented. The Lithuanian people resisted heroically, desperately. But they were fighting against hopeless odds. On July 17, the regime announced that 95.1 percent of the people had voted and that 99.19 percent of these had cast their ballot for the Communist Party.

Two days later, on July 21, the so-called People's Diet convened for its first session. In less than 1 hour, without any debate, it voted unanimously to ask the supreme Soviet of the U.S.S.R. to admit Lithuania into the Soviet state as one of its federated Soviet Socialist Republics.

What an object lesson this should be to all those who insist that we must be trustful, who wish to believe that the world's difficulties can be resolved by signing another treaty of nonaggression and coexistence with the Kremlin, who think that we can somehow improve relations by signing treaties on Antarctica or on outer space or on Berlin.

I know there are those who will say, "But the events you relate took place in Stalin's day. Today we have a new regime, a regime that is less brutal, less immoral." How they can argue this in the face of everything that has happened in the captive nations, in the face of the brutal suppression of the Hungarian revolution, in the face of Khrushchev's ultimatums and threats of nuclear war—how they can still pretend that there has been some basic change for the good in Soviet policy, I cannot understand.

Let me point to one simple fact. The man directly responsible for the occupation of Lithuania under Stalin was Gen. Ivan Serov. It was he who installed the quisling government, who directed the mass arrests of Lithuanian patriots, who was responsible for the brutal deportations of scores and hundreds of thousands of Lithuanians to the oblivion of the Soviet slave labor camps.

It was the same Gen. Ivan Serov who was responsible for the inhuman suppression of the Hungarian revolution, the perfidious

arrest of General Maleter while he was negotiating under flag of truce, the mass deportations of Hungarians which took place after the Soviet occupation.

In short, the only thing that has changed in the Soviet slave empire is that Khrushchev has succeeded Stalin. There is the same total inhumanity, the same total perfidy, even the same General Serov. Let me correct myself. There has been another small change. General Serov has been promoted. He is now the head of the Soviet secret police.

The despots of the Kremlin may be efficient, but, like all tyrants, they have a blind spot. They believe that, with enough oppression, they can ultimately destroy the human will to freedom. How wrong they are. The Hungarian revolution and the continuing resistance of the Lithuanian people and of the other peoples of the captive nations prove once again that neither 1 generation nor 2 generations nor 10 generations of brainwashing can produce a breed of men that is willing to accept the denial of the God-given human rights as natural and proper.

The word "liberation" has been somewhat compromised because in the 1952 campaign it was used as a crude election slogan. It is however a good word, a word for which there is no substitute. Instead of abandoning the word, as some have proposed, we must redeem it and give it meaning.

To use it again as an electioneering slogan or simply to pay lip service to it would—I agree completely—be the height of irresponsibility. If we use the word again—and I wholeheartedly urge that we do—we must do so as a serious act of self-dedication, and we must spell out precisely what we mean. "Liberation" does not mean that we confront the Soviets with an ultimatum and launch a war if they object to it. Basically, liberation will have to come from within. But what we say and what we do can encourage or discourage the spirit of liberation—while our behavior at critical moments like the Hungarian revolution can be of decisive importance.

How should we go about encouraging the liberation movement? The first step, in my opinion, would be to demonstrate the earnestness of our concern by raising the issue of the captive nations at every diplomatic conference and at every U.N. session.

In enslaving the captive nations, the Soviets were guilty of violating a whole series of international agreements that guaranteed free election. In imposing their regimes and maintaining them in power, they have used the Soviet Army in the most flagrant manner as an instrument of political intimidations; and when intimidations failed in Germany and in Hungary in recent years, they resorted to open military intervention and repression. They have violated the U.N. Charter repeatedly and at almost every point.

Let us spread the facts about Soviet imperialism on the record at every available opportunity. Let us continue to demand that the Soviets respect all their obligations.

Above all let us make liberation a cardinal goal of our diplomacy. I do not underestimate the difficulty of persuading the Kremlin to liberate its satellite empire. But, after Hungary, I find it easy to conceive of a situation where a combination of division within the Kremlin, unrest in the satellites and hard bargaining on the part of the West will induce the Soviets—in their own interest—to grant freedom to the unyielding, troublesome captive peoples of Europe.

Liberation is not a pipedream. It is the only conceivable way in which we can recapture the political offensive. And, as every schoolboy knows, a side which defends itself when attacked but never takes the offensive, is bound to lose. The same is true in politics.

A point in history has been reached where men who are free must come to the aid of those who seek to be free, because if they do not, the chances are that they will lose their own freedom.

Mr. Chairman, in accepting this award, I salute the brave people of Lithuania. I promise you that I shall continue to speak about the captive nations and the issue of liberation at every appropriate opportunity.

And I venture to prophesy that, before I am too old to travel, I will some day have the great pleasure of visiting a free Lithuania—of visiting your ancient capital of Vilnius, which I have so often wanted to see, and of drinking a toast to freedom and to enduring friendship between the Lithuanian and American nations there, with some of my friends in this audience.

Pennsylvania Sheriffs Association Annual Convention Banquet Held at Altoona, Pa., July 21, 1960

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 22, 1960

Mr. VAN ZANDT. Mr. Speaker, my hometown of Altoona, Pa., was the scene of the 1960 convention of the Pennsylvania Sheriffs Association which was highlighted by the annual banquet held on Thursday, July 21 at 6:30 p.m., at the Penn-Alto Hotel. It was my pleasure to deliver the principal address of the evening at which time I spoke on "The Nature of the Communist Threat to America."

Blair County Sheriff V. Paul Reed proved to be a fine host to his fellow sheriffs of the Keystone State who in turn expressed their regard and esteem by electing him second vice president of the Pennsylvania Sheriffs Association. Sheriff Reed was the only newly elected officer and in line with the traditional policy, he is slated to become president of the association in 1962.

The 1960 convention was voted as one of the finest in the history of the Pennsylvania Sheriffs Association with the convention banquet providing a fitting climax to the annual convention proceedings.

My address on the occasion follows:

ADDRESS BY REPRESENTATIVE JAMES E. VAN ZANDT, MEMBER OF CONGRESS, 20TH DISTRICT OF PENNSYLVANIA, AT THE ANNUAL STATE CONVENTION OF THE PENNYLVANIA SHERIFFS ASSOCIATION, HOTEL PENN-ALTO, ALTOONA, PA., JULY 21, 1960

It is a real pleasure to address this sheriffs' convention.

As we all know enormous problems beset our country and the world. One of these problems is communism, and I want to talk to you about it.

Certainly, you law enforcement officers, of all people, need not be reminded of the great dangers to our Nation and the free world that are inherent in the Communist threat.

The first page of every daily newspaper throughout the Nation carries a headline or byline—

(a) reporting a Soviet thrust in this quarter or that quarter of the globe.

(b) repeating another boast by Khrushchev about surpassing the United States militarily and economically.

(c) or disclosing the details of another Communist Chinese attack on Tibet, the Indian border, or Formosa.

Most of us are consciously aware of this ominous threat.

What we are not fully aware of, however, is the overall Soviet outlook on the world as it relates to us and the problems it presents to us.

We are not all fully conscious of the political problem and the moral problem that exists in the Soviet concept of a divided world.

There can be no mistake about the fact that theoretically the Soviets view the world as a divided world. In the Soviet mind, ours is the capitalist world; and theirs is the Communist world. Both are "camps," to use the Soviet terminology. Indeed it would be more accurate to say that both are "military camps" in the sense that the Soviets view this historic build-up of power in the same light as a military campaign.

Both "camps" or worlds are to the Soviets distinctly opposite in philosophic orientation, political behavior, and ultimate goals.

The Soviets claim further that as a matter of doctrinal truth both worlds are engaged in disputes at every level of human existence and as a result they are unavoidably engaged in a gigantic struggle for survival.

The Soviets claim that the struggle is a continuing one which will go on until either capitalism or communism triumphs.

Lenin, the founder of the Soviet state and world communism, put it in these terms, "who whom," or in other words, "who will conquer whom."

On another occasion Lenin described the contest for survival in this highly dramatic and imaginative way: "As long as capitalism and socialism (that is, communism) remained, we cannot live in peace.

"In the end one or the other will triumph—a funeral requiem will be sung either over the Soviet Republic or over world capitalism."

However, neither Lenin, Stalin, nor their successor, Khrushchev, doubted that communism would emerge triumphant and in Khrushchev's words, would "bury" us.

Thus, the Soviets are committed to a line of action that seeks not only to destroy the American way of life.

But it goes further because the Soviets are determined to transform the entire world in the Soviet image.

Regarding force and power as political weapons to be used ruthlessly in achieving this end, the Soviets press ever forward.

They seek advantages here and there, probing for soft spots in the defenses of the free world.

Furthermore, they aggressively assert their power through outright territorial conquests or through their fifth column operations within the world Communist movement.

So much for the Soviet world outlook.

On the other hand, what about the United States and the outlook of its people and leaders? We, Americans, have a completely different outlook on the world.

First of all, we, along with our allies, are trying to preserve the prevailing world political structure which we regard generally as the most acceptable structure for insuring freedom and democracy. For us, it is a simple fact of survival.

This does not mean that we are blindly attached to a type of status quo that preaches the ill-fated doctrine of keeping things as they are. We are, and always should be, sensitive to the winds of political change throughout the world.

We admit the necessity of political change not only in our own domestic politics but in world politics in general.

What we seek to preserve is the procedure of free government through which orderly transfer of political power can take place in a genuine spirit of liberty and justice.

Unlike the Soviets, we are not committed to the planned destruction of world societies. In a spirit of tolerance, we seek rather to assist the peoples of the world, wherever possible, to achieve a higher state of human liberty through the institution which is most likely to succeed in acoomplishing this goal, a government of free people.

In addition, we are committed by heritage and national tradition to the belief that differences among nations—as those among individuals—can be resolved through the exercise of reason and good will.

Differences between us and the Soviets, as with any other nation, we would say, are not beyond solution, but rather are adjustable. So it is then that we Americans and the Soviets do have radically different conceptions of the world around us.

We have different national purposes and different national goals. We are both guided by wholly different philosophies of life. But the political problems inherent in this divided and contrasting view of the world has still another particular manifestation.

We could call it the problem of a divided morality. The Soviets operate within a very restricted framework of morality which is radically at variance with our own conceptions. The Soviet moral conscience is colored totally by the dogmatic belief that whatever is good for the advancement of communism is morally right. In addition the Soviets believe whatever deters or opposes communism is morally evil.

Lenin spelled out this belief in answer to the question, "Is there such a thing as Communist morality?" He said: "Of course there is."

He continued, by saying: "It is frequently asserted that we have no ethics, and that * * * Communists deny all morality. * * * We say that our morality is wholly subordinated to the interests of the class struggle. We deduce our morality from the facts and needs of the class struggle. * * * At the basis of Communist morality lies the struggle for strengthening and completing communism."

Finally Lenin said: "For us morality is subordinated to the interests of the class struggle."

Ladies and gentlemen, these standards of morality and ethics conceived in these narrowly restricted terms permit the Soviets and their Communist allies great versatility in political action. Communists can and do operate completely unimpeded by codes of ethical conduct that are normally accepted in world society as morally correct. They can disregard morality, as we conceive it, and assert that to act otherwise would be to them "immoral."

This is a peculiar type of logic I know; but nonetheless this is the foundation of Communist morality. This is the way they, Soviets, think of good and evil.

What this means in concrete terms is that the Soviets are able to profess the principles of peaceful coexistence which explicitly stipulates noninterference in the internal affairs of other states.

Yet, at the same time they carry on subversive activities—on a mass scale—to destroy those states and expand Soviet power.

By the same perverted moral justification, a treaty is to be complied with only so long as it serves Soviet purposes. When its usefulness has been served, then it can be broken.

To you law-enforcement officers this problem of a divided morality has a special meaning.

For the Soviets, law that is formulated by a free capitalistic republic such as ours is not necessarily morally binding on Communists.

Only Communist law, as such, has the real force of moral compulsion in Soviet terms and thus must be obeyed. Non-Communist laws, as all other institutions, are looked upon by the Communists as instruments of what they call capitalist exploitation. As such, they are to be tolerated where no other course is possible until they can be destroyed.

At this point let me quote again Lenin's words on how the Communists are to use legislatures and parliaments, the very heart of free government, as devices to further Communist ends.

Lenin said: "No parliament can in any circumstances be for Communists an arena of struggle for reforms for betterment of the situation of the working class. The only question can be that of utilizing state institutions for their destruction."

Ladies and gentlemen, we don't have to look back very far in recent history to find excellent examples that illustrate the moral level upon which Communists function to accomplish their goals.

You may be interested to know that one of the first areas for penetration and seizure prior to a takeover in Communist tactical procedure is the organization for maintaining law and order.

Throughout Eastern Europe at the end of the war the Communists uniformly took over the functions of the interior ministry which in those countries controlled the national police.

In Czechoslovakia, the democratic opposition was paralyzed when the Communists asserted their power in February 1948 mainly because the police power had been successfully communized.

In Hungary, the Communist police were able to reduce the democratic opposition through terror, intrigue, and torture and thus establish uncontestable Communist control over every facet of national life.

It is significant that the notorious Hungarian secret police who were communized were the first victims of the Freedom Fighters in the revolution of 1956.

Similar patterns of communist control are seen in other countries that were conquered by Soviet Russia. And, there can be little doubt that the Communist supporters of Fidel Castro, following the Communist example elsewhere, have already conspired to assume total control over Cuba's police authority. With this weapon of manipulation and control in the hands of a dictator, the Cuban people will be hard pressed to stage a resistance movement against Castro's excesses.

The Communist aim in a period of takeover, as the East European experience indicates, is to win control over police authority within the nation and thereafter to impose their own system of law and order. But it is significant that one of the primary tactics of the Communists in doing this is to encourage and create civil disobedience. With the ultimate objective of destroying all civil law and order, the Communists seize upon any occasion that can be used to undermine the authority of established police power and destroy the laws it seeks to uphold and enforce.

Only very recently we had a dramatic, and I might add, lamentable, experience of seeing this tactic in operation. I am speaking, of course, of Japan and the recent riots there against the Japanese-American Security Treaty. We know now that a widespread feeling of neutralism existed in many quarters of Japanese political life which are not Communist. But, the Japanese Communists, aided financially by the Soviet Union, were able to exploit these deep-seated emotions of the Japanese populace and direct the vast energies generated as a consequence into a massive and prolonged demonstration of civil disobedience.

Surely, therefore, if there ever was a first line of defense in any nation against Communist internal subversion it is the law enforcement officers. They are in a sense the weapon and the shield of the law. They supply the inner structural discipline within the state that permits law and order to prevail.

The last 15 years' experience of Soviet Communist activity throughout the world bears out the truth of this generalization.

Ladies and gentlemen, great problems face us today and in the future that arise from the threat of world communism.

In many respects the 1960's are the beginning of a new era in American history. It is the beginning of a new revolutionary era in which we must face up to enormous problems. These problems have in part domestic and international implications.

The domestic implications are the following:

(a) The need to speed up our economic growth.

(b) Expansion of American educational facilities.

(c) Fulfilling the social needs of the Nation.

(d) And particularly the urgency of harnessing the enormous material resources of our Nation in the continuing struggle for survival against world communism.

The problems facing us have also international implications which are focused entirely on our conquest with Soviet powers.

Briefly, they are:

First the necessity of reformulating a policy for Western Europe that recognizes the emergence of our allies to a new status of economic and political independence.

Secondly there is the urgency in adjusting our policy requirements to meet the demands of the emerging new states of Asia and Africa.

And finally the need to recast our strategic thinking, taking into account the rising tide of neutralism in Asia and Africa and the development of intercontinental mass destruction weapons.

Ladies and gentlemen as I conclude my remarks let none of us underrate the great dimensions of the challenge of the 1960's.

As our forebears before us, let us extend ourselves and meet this challenge. Frankly our survival depends on it.

Chelsea, Mass., Commends Government on 25th Anniversary of Social Security

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 22, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a resolution adopted by the city of Chelsea, Mass., on August 15, 1960:

Whereas United States has had a quarter century under social security setup; and

Whereas during this period it has paid out more than $10 billion in benefits a year; and

Whereas in Suffolk County alone, more than 777,000 men, women, and children are paid approximately $61 million a year and nationally more than 14 million persons are receiving monthly old-age, survivors, and disability insurance checks; and

Whereas these benefits for elderly citizens allow them to enjoy their elderly age with financial aid and benefits which they ordinarily would not receive: Therefore, be it

Resolved, That the city government congratulate Congress for this act which was passed during the administration of our late beloved President Franklin Delano Roosevelt with the hope that more benefits will be allowed and improvements made to allow workers 60 years of age and over to continue to enjoy their elderly age; and be it further

Resolved, That a copy of this resolution be sent to the President of the United States, our Senators and Congressmen, the Speaker of the House, and the President of the Senate.

JOSEPH B. GREENFIELD,
Alderman.

Capital Punishment

EXTENSION OF REMARKS
OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, August 22, 1960

Mr. MULTER. Mr. Speaker, with further reference to my bill, H.R. 870, to abolish the death penalty, I commend to the attention of our colleagues the following article by Prof. Richard C. Donnelly, professor of law, Yale Law School, and retired member of the Connecticut Board of Parole:

CAPITAL PUNISHMENT

(By Richard C. Donnelly, professor of law, Yale Law School; retired member of the Connecticut Board of Parole)

The massive literature of capital punishment—commencing with Beccaria's influential essay "On Crimes and Punishment" published in 1764—presents special difficulties and frustrations. It is a curious fact that the main arguments against the death penalty have remained remarkably unchanged since the beginning of the debate. First of all, the arguments have been and are usually of a utilitarian character: capital punishment does not deter crime and its consequences are detrimental to social welfare. Secondly, and usually of much greater importance in accounting for the zeal of the advocacy, are allegations based on conceptions of moral value and humanitarian sentiment. These allegations, despite their priority, are rarely stated fully or precisely. To do so, while presumably not impossible, is difficult. They do not necessarily depend, for example, on an absolutist value of human life nor on a Tolstoian doctrine of nonviolence. There is also another attitude sometimes complicating analysis which, while not unrelated to the moral repugnance induced in many by the death penalty, is nevertheless distinct. This attitude is based on assumptions as to the nature of human behavior that create dissatisfaction and uneasiness with the whole concept of criminal responsibility and, indeed of moral responsibility. All of these factors, in large measure unanalyzed and unarticulated, bedevil communication and clear understanding.

It is probably safe to say that the crucial proposition in the abolitionist's case is that the death penalty is no more effective as a deterrent than other non-lethal sanctions. There is, of course, nothing in logic that requires this assertion to constitute the kingpin of an abolitionist position. Indeed, it would seem more logical to place the burden upon the advocates of the death penalty to establish that it does deter and is absolutely necessary for the protection of society. However, those who favor capital punishment have not accepted responsibility for demonstrating that the state kills only because of necessity and that there is no other means of societal protection. Their position appears to be that the existence of the law requires no justification and that its effectiveness may be assumed. It is for those who would change it to prove the desirability of doing so. Nevertheless, all realistic persons recognize that if the abolition movement is to be an effective political force, the nondeterrence point must be persuasively made.

It is a point of very real difficulty. This is true because we know virtually nothing about the deterrent effects of legal sanctions in general. We are ignorant, not only because investigation of the problem presents formidable difficulties, but because, apart from studies made as contributions to the death penalty debate, serious empirical investigation has rarely been undertaken. This is in itself a remarkable fact since, rightly or wrongfully, most criminal statutes become law on the assumption that their enactment and enforcement will eliminate or minimize the conduct for which sanctions are provided.

However, the practical necessities of recruiting popular support for the abolition movement have motivated the production of numerous studies designed to test the deterrent consequences of the death penalty. Although the studies employ several different modes of approach, they arrive at the common finding that, at most, no significant relation can be detected between the presence of the death penalty and the incidence of capital crime.

Putting aside studies of such relevant matters as the significance of mental disorder in the commission of capital offenses, these statistical inquiries tend to fall into one of several common types, the most characteristic of which are probably these: (1) studies of capital-crime rates in a particular country or American State before and after abolition of the death penalty; (2) comparative statistics on the incidence of murder in jurisdictions where capital punishment has been retained and those in which it has been abolished; and, less frequently encountered; (3) broader studies of general crime rates in abolition and death penalty jurisdictions. The abolition position, it seems to me, would be strengthened if it were frankly recognized that such inquiries rarely approach any minimum standards of decent scientific rigor. It is true that many public policy decisions are based on far less knowledge than these studies supply as to the probable deterrent effects of the death penalty. But the fallibility of such statistical inquiries is obvious, and it is important to be aware of what we do not know. In the first place, most of these studies require accurate statistics on the numbers of capital offenses actually committed. This presupposes a system of crime reporting that is both accurate and in such form as to make the information available. The fact is that, particularly in the United States, these conditions simply do not obtain. But even if this basic data were readily accessible, other difficulties would emerge. Suppose, for example, it is shown that in State X, murder rates declined in the 10-year period after abolition. Having learned this, what do we know? Simply that abolition did not prevent a decline. Whether there is a causal connection between the two occurrences, whether the crime rates would have been the same, higher or lower had the death penalty been retained, are questions that quite apparently remain unanswered. Comparisons of jurisdictions in which general economic and cultural factors are similar and where some have and some have not abolished capital punishment are afflicted by similar infirmities. These comparative studies, however, even if they do not succeed in measuring the actual consequences of the death penalty, at least strongly suggest that capital punishment as a factor in the incidence of crime is a matter of comparative insignificance. Now, all of this is not to assert that we can derive no useful inferences from the studies. We may say, first, that if additional deterrence results from the death penalty, it is not of enough importance to reveal itself through the rather crude measures afforded by these studies. Again, if the abolitionists fail to show that the death penalty does not deter, no one else has shown that it does.

There is another aspect of the deterrence argument that deserves attention. No reason occurs why one advancing the abolitionist position must assume, almost as an article of faith, that execution of the death penalty can, under no conceivable circumstances, be expected to enhance the deterrent effects of the criminal law. Rather, the crucial question would seem to be whether one can sensibly anticipate such a consequence, given the circumstances that actually surround the administration of criminal justice. Surely, realization of the deterrent potential of capital punishment, if it actually exists, requires that certain minimum conditions be satisfied. These include, at a minimum, reasonable certainty in the detection and apprehension of offenders, reasonable speed and certainty of conviction, and reasonable speed and certainty in the execution of the death sentence once it is imposed. The incontrovertible fact is that in the United States not one of these conditions is fulfilled today nor is likely to be in the years ahead. No one knows how many capital offenses are actually committed each year in this country. There are probably few believers in capital punishment who would consider it either just or desirable to put all murderers to death. It is because in practice we do not find the penalty of death appropriate that we execute for murder in the United States fewer than 50 persons a year—surely a trivial fraction of the cases in which it might legally be imposed. Our hesitancy and bad conscience in carrying out a sentence of death must largely nullify any exemplary benefits that could conceivably be gained. Perhaps it is sufficient to say that in the United States capital punishment should be opposed on the same grounds that induce one to reject any other futile and foolish course of action.

There are other considerations bearing on the death penalty debate that should be mentioned. It would require more faith than most could muster to assume that, when so few who commit capital offenses are actually executed, selection of offenders for the death penalty proceeds on anything approaching a rational basis. An examination of the cases of those who are executed would show, I am sure, that they are not more deserving of execution or more dangerous than those we do not kill; in fact, the most dangerous are likely to be the legally insane whom we do not execute and the few hired killers—those, perhaps, most deserving of punishment—who are rarely convicted and who are most likely to be killed by their competitors. Pure caprice must play a large part. Even more disturbing is the suspicion that selection is made on the basis of unacceptable criteria, such as, the race or poverty of the defendant, the status of the victim, and the like. In other words, capital punishment is the most difficult of sanctions to administer with even rough equality. Yet, most dramatically when life is at stake, equality is, as it is generally felt to be, a most important element of justice.

Apart from these considerations the possible imposition of the death penalty in a criminal trial has a discernible and baneful effect on the administration of criminal justice. A trial where life is at issue becomes inevitably a morbid and sensational affair. Mr. Justice Frankfurter, in his appearance as a witness before the British Royal Com-

mission on Capital Punishment, put it this way:

"When life is at hazard in a trial, it sensationalizes the whole thing almost unwittingly; the effect on juries, the bar, the public, the judiciary, I regard as very bad. I think scientifically the claim of deterrence is not worth much. Whatever proof there may be in my judgment does not outweigh the social loss due to the inherent sensationalism of a trial for life."

The special sentiment associated with judgment of death is reflected in another way in the courts. It lends added weight to claims of error in the trial and multiplies and protracts the appellate processes, including postconviction remedies developed during recent years. In this regard, one needs only to recall the case of Chessman, who from June 1948 until May 2, 1960, successfully resisted the execution of his sentence. Nor is this situation peculiar to California. These delays, this sense of shame in administering the death penalty, must be symptomatic of a widespread distrust of what we are doing.

There is still another point, namely, the effects of the death penalty on the staff of penal institutions where executions occur. The accepted objective of any modern correctional system is the rehabilitation and reformation of offenders. Any hopes for a more rational penology must rest ultimately upon the development of a professional group committed to correctional work as a career. Progress toward this objective has not been impressive. I suspect the presence of the death penalty is a significant source of difficulty. And I imagine that an enlightened warden finds an execution almost as contrary to his professional standards and duties as would a physician executioner. It has, in fact, been suggested that capital punishment by injection would be simpler, swifter, less mutilating, and less painful than any other method. This proposal, however, gets little serious consideration because it is unlikely that any reputable physician would be willing to give such an injection. The death penalty must create a problem of personal recruitment for correctional institutions. It should not be surprising to discover that able men object to participating in the operations of an abattoir.

My next to last point is that the death penalty if carried out is the only irrevocable sanction authorized by law. Like all human endeavors, the administration of criminal justice is not error proof. Innocent men and women have been convicted of crime and some executed. A mature system of justice makes provision for the acknowledgment and effective rectification of mistakes. The death penalty prevents this.

My final point raises a question beyond my competence to answer but does fall, it seems to me, within the special competence of this audience and the other members of the panel. Many have argued that it is appropriate for a society to express its condemnation of murder by associating the offense with the highest sanction that the law can use, however much considerations of humanity should temper the exaction of the penalty when there are extenuations. For example, Lord Justice Denning, in giving testimony before the British Royal Commission on Capital Punishment, said:

"The punishment inflicted for grave crimes should adequately reflect the revulsion felt by the great majority of citizens for them. It is a mistake to consider the objects of punishment as being deterrent or reformative or preventive and nothing else. • • • The ultimate justification of any punishment is not that it is a deterrent, but that it is the emphatic denunciation by the community of a crime; and from this point of view, there are some murders which, in the present state of public opinion, demand the most emphatic denunciation of all, namely the death penalty."

It would seem to me that if there is a social need for grevious condemnation of certain murders that it can be met, as it is met in abolition states and some 35 other countries, without resorting to capital punishment.

In conclusion, I think a persuasive case for the abolition of capital punishment can be made. At best, our handling of the death penalty is futile and not a little ridiculous. At worst, it may be positively pernicious.

Adrian van Koevering

EXTENSION OF REMARKS
OF
HON. GERALD R. FORD, JR.
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 23, 1960

Mr. FORD. Mr. Speaker, the Fifth Congressional District of Michigan lost a highly respected citizen in the death of Adrian van Koevering, founder of the Zeeland Record, an outstanding weekly newspaper published in Ottawa County.

Under leave to extend my remarks, I include two editorials concerning the work and service of Mr. van Koevering. The first is from the Holland Evening Sentinel of July 16 and the second from the Grand Haven Daily Tribune for July 18, 1960:

[From the Holland Evening Sentinel, July 16, 1960]

ADRIAN VAN KOEVERING

Another pioneer in the publishing business has passed on after a long and useful life of 86 years. He had lived in this community all his life and had spent more than 50 years in the printing and publishing business in our neighboring city of Zeeland. During the more than 50 years he was active in local politics as well as charter member of Rotary, past president of the Michigan Press Association, member of the board of public works, the school board and spent many years as a member of the Zeeland City Council.

Adrian, as he was known by many people in the community, gave many hours of his life to public affairs. In his later years he was a contributing member of the Michigan Historical Society and just this year was elected to the Michigan Hall of Fame, a group that has few living members.

The community has lost another fine citizen, he will be missed by many people.

[From the Daily Tribune, July 18, 1960]

ADRIAN VAN KOEVERING

Adrian Van Koevering, who founded the Zeeland Record, an Ottawa County weekly newspaper, is dead. He was 86.

Although he had been retired for some time, many knew him as an energetic publisher, outspoken in his views and loyal to his chosen work. He had many friends and admirers in West Michigan.

Adrian founded the Record, which has remained in the Van Koevering family. The newspaper has frequently won recognition among Michigan weeklies. It is one of a very few publications in its circulation class to print on a rotary press—equipment normally associated with much larger publications.

We always admired Adrian Van Koevering. He was conservative in outlook but had the highest of ideals and a deep sense of values. He played a key role in helping to make Zeeland a major poultry and agricultural center and was active for decades in county as well as community affairs.

A facet of his character was revealed in a series of Christmas cards he sent to friends after the passing of Mrs. Van Koevering a a few years back. He composed his own verse and poetry to express the deep religious feeling he possessed.

Although his convictions and principles were often expressed in the unvarnished language of the oldtime editor, he was a kindly man concerned with the best interests of his readers. He was a strong-minded citizen in an era of great change. But his newspaper lives on.

Caribbean Crisis Widens

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 23, 1960

Mr. FLOOD. Mr. Speaker, in a series of addresses to the House, I have stressed the widening crisis in the Caribbean and offered a program for the remedy. Thus, it was with the greatest interest that I read in the August 12, 1960 issue of U.S.A., a highly respected fortnightly weekly, an illuminating article by Anthony Harrigan dealing with this crucial subject.

I note particularly that the author includes among his suggestions the creation of what would be a reactivated Special Service Squadron as a "visible reminder to Caribbean peoples of the strength and good will of the United States, and of how military might can be a deterrent to Red aggression and shield against it."

The article, which is commended for reading by all concerned with the Caribbean questions, follows:

CARIBBEAN CRISIS WIDENS

(By Anthony Harrigan)

When finally the Castro dictatorship is overthrown by free Cubans supported by the United States and its Latin American partners, the danger of Communist victory in the Caribbean will not have disappeared. Indeed the island-studded vastness of that sea is the scene of unparalleled opportunities for subversion by Red regimes. Haiti, the Dominican Republic, Puerto Rico and the Caribbean Federation already are targets designated by the conflict-managers of the Kremlin. If efforts to turn the Pearl of the Antilles into a Soviet satellite are a failure, then the United States public can expect that Communist efforts will be shifted to other islands along the southern sea frontier of our country.

Already there are reports of new Communist activity in Haiti. Reds from Europe, including the Iron Curtain countries are being allowed to enter the country. Last May, a "student" demonstration took place in Port-au-Prince where 400 participants denounced "Yankee imperialism." Puerto Rico has harbored for a long time nationalists extremists who hate Uncle Sam. Gov. Luis Muñoz-Marín, while professing strong friendship for the United States, has declined

to allow that territory to be used as a base by free Cubans to smash Castro-type communism in neighboring Cuba. The conditions for future serious disagreements with the United States seem to be present in Puerto Rico.

A most ominous development is reported from the island of Jamaica. A group of Back-to-Africa cultists calling themselves Rastafarians and adopting Mau Mau names and methods is active there. Two British soldiers were killed by Rastafarians last month. Jamaican police say that unidentified submarines, manned by white seamen, have been seen off the northern coast of the island. It is widely believed that arms, presumably from Communist sources, have been turned over to the cultists. In addition, Castro's agents have been sowing seeds of discord among the populace in Jamaica.

These conditions are not the only reason for concern among North Americans. The Trujillo regime seems headed for a major crisis. Even if none takes place in the next year or so, the aging of the ruler of the Dominican Republic poses a serious problem concerning the future of the island of Santo Domingo. This island, shared by Haiti and the Dominican Republic, has a long history of bloodshed and disorder. No one can predict what will happen there when Trujillo dies or steps down. If Communists were to seize power in the Dominican Republic, it would be relatively easy for them to keep it, because the people there are accustomed to authoritarian rule.

The financial mess in Haiti, accompanied by general chaos and lack of popular discipline and stability, makes that country an easy target for communism. The Caribbean Federation, with 3 million people in a long string of islands extending from Jamaica's Cayman Island in the northwest to Trinidad in the southeast off the coast of South America, is more a nation in name than in fact. Heavily populated, lacking industry and responsible leaders, it is in danger of complete fragmentation and then domination by a Communist minority. Red leaders in British Guiana are working on the leaders of the Caribbean Federation, seeking to draw them closer to communism.

MORE CASTROS?

Given these conditions, it is not unthinkable that a score of Castros may pop up in the Caribbean during the next decade. Every day that the tyrant in Havana is permitted to rule, the danger of bad example grows greater among demagogs in the region. And while the United States may legitimately use whatever methods are needed to free the Cuban people from Castro and his clique, our country must look beyond such action to creation of a comprehensive and constructive policy toward the entire Caribbean area.

Undoubtedly, the reaction of the left-liberals in both our parties will be to seek the solution of Caribbean problems through extension of massive government-to-government foreign aid. But this solution completely begs away the question of what must be done about the political climate of the Caribbean region.

The essential fact to bear in mind is this: The Caribbean is but another theater in which world war III is being fought. Moreover, it is a battleground for the struggle between capitalism and collectivism.

SEA OF THE AMERICAS

American free enterprise has an enormous stake in all the countries and islands of the Caribbean. It is a sea where U.S. merchantmen and tankers ply the trade routes. Across this sea, American companies bring cargoes of oil, iron and bauxite; in the skies above the sea, U.S. airlines fly their dominant routes. The Caribbean is the sea of the Americas—South, Central, and Northern. It is a region rich in agricultural products consumed by the U.S. public. It is an area in which hundreds of enterprising North Americans started their businesses within the last decade. In the years ahead, if communism can be thwarted there, the Caribbean will be intimately connected with the daily lives of millions of southward-looking citizens. The Caribbean is a region where healthy and inspired North American leadership and influence can spread over a great arc, nourishing economies and cultures and fostering the politics of freedom.

But this North American projection into the Caribbean, carrying along great rewards for the peoples of the area, will be halted if any of the islands are turned into Communist protectorates. If that should happen, the United States would lose its most strategic area.

HOW TO WIN

What can be done to halt the spread of communism in the Caribbean? The first step, as the people of the United States are beginning to understand, is to stop Castro in Cuba. Beyond this, however, is the imperative need for coordinated anti-Communist action from Haiti to Trinidad.

Nothing is more important for successful action than a U.S. State Department staffed with personnel who are aggressively anti-Communist. There is an absolute necessity that the State Department Director of Caribbean Affairs be a man of demonstrated anti-Red zeal.

Our military men too can do much to check communism in the region. The Army's Caribbean Command, now based in the Panama Canal Zone, might be moved to a more centralized location in Puerto Rico. The Navy's Roosevelt Roads Base at Puerto Rico might be built up into a major installation as the operating base for a patrol force similar to the 6th Fleet in the Mediterranean. The need is not for heavy fleet units but for a strong and impressive "show the flag" force that would be a visible reminder to Caribbean peoples of the strength and good will of the United States, and of how military might can be a deterrent to Red aggression and shield against it. Permanent assignment to that fleet of a Marine Corps helicopter carrier with a battle team aboard would be especially useful.

Not enough is known in our country about the mercy missions conducted by the 6th Fleet in the Mediterranean and about its aid-to-orphans program and other humane and charitable activities.

Backing up the visible signs of might must be a broadcasting and printing operation that would smother Communist efforts to subvert any Caribbean nation. The task in the Caribbean is a battle for the minds and loyalties of men, as elsewhere in a world threatened by Red aggression.

PRIMARY EFFORT

Much as these actions by our Government are desirable, the likelihood of their being taken promptly is not great. Heavy demands upon troop and fleet units elsewhere are cited as justification for looking on the Caribbean as an area that can be defended on a brush fire basis. It might require several years of intensive education to persuade the American public to accord such recognition to the importance of the Caribbean as would enable the military to receive the the kind of political and economic support required for the assignment of armed strength there. As for creation of superior broadcasting facilities and printing presses necessary for an effective educational operation, the abysmal failure of our Government Information Agency to develop an adequate truth program for the Cuban people indicates that little can be expected in a hurry for the Caribbean region as a whole.

The continuing inadequacy of our Government agencies in fighting communism in the Caribbean area suggests that the primary effort must be made by private persons. Indeed, such an effort might prove to be more effective than any drive in which the permanent bureaucracy in the State Department and Information Agency has a part. A private anti-Communist effort in the Caribbean with stringent security supervision could not be easily subverted by anti-anti-Communists in key positions. Moreover, the personnel of such a private effort could be composed of stanch believers in free enterprise, not mere lip servants.

What appears to this writer as a necessary and reasonable start for such a private effort is the formation of a Caribbean committee by the U.S. enterprises doing business now in the region. Such a committee would provide a central clearinghouse for political information so that the various enterprises would know the entire scheme of Communist effort against American capitalism in the Caribbean. From such a committee could emerge a common free enterprise strategy, joint action of one sort or another, and coordinated information programs designed to keep America strong in the Caribbean. While individual companies are engaged in competition and have opposing business goals in some respects, it is nevertheless true that all the principal American firms doing business in the Caribbean have a stake in defeating communism and strengthening capitalism there.

Unless private businesses in the United States make such a joint effort, our country may suffer serious reverses in the Caribbean during the next few years—with confiscation of U.S. property and establishment of Red protectorates becoming the rule rather than the exception. Time and again, the State Department and other Government agencies have shown they do too little and too late in the fight to halt communism—even when they understand the menace.

If the American system is to be saved, U.S. private enterprise must organize and work for its own salvation.

Submerged Lands Legislation

EXTENSION OF REMARKS
OF
HON. KENNETH A. ROBERTS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 23, 1960

Mr. ROBERTS. Mr. Speaker, this week I introduced a bill—H.R. 12964—designed to correct a serious inequity which has devcloped regarding the claims of the several States on the Gulf of Mexico to tidelands oil, minerals, and other offshore resources.

This bill would amend section 4 of the Submerged Lands Act—43 U.S.C. 1312—to approve and confirm the seaward boundaries of the States of Alabama, Mississippi, and Louisiana as extending three marine leagues into the Gulf of Mexico.

Legislation such as this is required because of a recent Supreme Court ruling which I believe to be unfair and wholly unconscionable.

In its decisions in the cases of the United States versus the States of Louisiana, Texas, Mississippi, Alabama, and Florida, delivered May 31, 1960, the Court in divided opinions decided that the respective boundaries of Florida and Texas extend 3 marine leagues—or 10½ miles—seaward; while the boundaries of

Alabama, Mississippi, and Louisiana extend only 3 miles to sea.

The result of this peculiar ruling, of course, is that two Gulf States are given special privileges in laying claim to offshore mineral wealth while three other States on the same gulf are relegated to lesser positions; and are, in fact, precluded from reaping the natural benefits of their geography.

Certainly it was not the intent of Congress in enacting the Submerged Lands Act of 1953 to rob, shortchange, or otherwise mistreat any of the Gulf States in relation to treatment given any other Gulf States.

In his opinion of the May 31 decision, partly concurring and partly dissenting, Mr. Justice Black said of the Submerged Lands Act—

> Nothing in the act itself indicates that Texas was to be given any more consideration in this case than Louisiana, Mississippi, and Alabama. Had Congress wanted to give the land to Texas and refuse to give it to the other States it easily could have done so. As Congress indicated, it is time that the problem be solved, the title be quieted, and the controversy be stilled. In my judgment to interpret this act in a way which grants the land to Texas and Florida and withholds it from the other Gulf States simply prolongs this costly and disquieting controversy. It will not be finally settled until it is settled the way Congress believes is right, and I do not think Congress will believe it right to award these marginal lands to Texas and Florida and deny them to the other Gulf States.

Those Members of Congress who were embroiled in the ramifications of this legislation in 1953 will recall that it was the expressed desire of Congress that the Submerged Lands Act would settle, one time for all time, the injustices, uncertainties, and delays which have for years plagued every sincere attempt to develop the sorely needed offshore resources.

The Senate Committee on Interior and Insular Affairs stated in both reports to the 80th and 83d Congresses:

> We are certain that until the Congress enacts a law consonant with what the States and the Supreme Court believed for more than a century was the law, confusion and uncertainty will continue to exist, titles will remain clouded, and years of vexations and complicated litigation will result.

Sponsors of the Submerged Lands Act in 1953 thought Congress had accomplished an equitable solution in that act, but apparently this act did not go far enough. The Supreme Court now interprets the actions of Congress that year as having desired favored treatment for one State over another.

I maintain Congress did not intend favored treatment for any one State. If the Supreme Court can read this intention into the Submerged Lands Act, let us pass additional legislation, spelling out in no uncertain terms that fair and equal treatment is to be meted to all the Gulf States in the access to offshore submerged lands.

This is what my bill, H.R. 12964, seeks to provide.

It gives to Alabama, Mississippi, and Louisiana the same seaward boundaries as the Supreme Court has awarded to Florida and Texas.

As Mr. Justice Douglas says in his dissenting opinion of the May 31 decision:

> If the policy of measuring the zone of the United States as "three leagues" into the gulf off the shore of Texas is to give Texas property rights to the submerged lands in that zone, the beneficiaries of that concern should be all our Gulf States. * * * All the States on the gulf should be given the same benefit of the doubts that have been resolved in favor of Texas.

I certainly realize, Mr. Speaker, that there are many matters which could and perhaps ought to be resolved at this abbreviated session of Congress, and there is precious little time in which to act.

But there is no matter of greater concern nor of more importance, it seems to me, than that of clearing the air for putting to work the mineral wealth which lies off the coasts of our Gulf States.

This matter of submerged lands has drifted aimlessly for so long and now is further complicated by such an unjustifiable Court decision that it behooves us to act upon it responsibly at the earliest possible time.

Bipartisan Connecticut Commission on Elderly Endorses Social Security Approach to Medical Care for Aged

EXTENSION OF REMARKS
OF
HON. FRANK KOWALSKI
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 23, 1960

Mr. KOWALSKI. Mr. Speaker, when a bipartisan body which has been making a careful study of the problems of our elderly citizens recommends a Federal program of medical care under the social security system, I believe we should attach great significance to its findings.

Such a recommendation has been voted unanimously by the Connecticut Commission on Services to Elderly Persons, made up of distinguished citizens of my home State. The chairman is Dr. Donald P. Kent, who is also director of the Institute of Gerontology at the University of Connecticut.

The recommendation of this commission, which is interested solely in the welfare of the 225,000 persons over 65 in Connecticut, should carry great weight.

The action of the commission is reported in the following news article from the Hartford Courant, which, under unanimous consent, I include:

STATE COMMISSION BACKS FEDERAL AID TO AGED BILL

(By Jack Zaiman)

The Connecticut Commission on Services to Elderly Persons called on Congress Friday to pass a medical aid to the aged bill that would cover every one of the 225,000 persons over 65 in this State.

The bipartisan commission voted unanimously at the State capitol to urge Congress to approve the bill at the current session.

FAVORED BY KENNEDY

Dr. Donald P. Kent, commission chairman and also director of the Institute of Gerontology at the University of Connecticut, said the bill favored by the group is the one supported by Senator JOHN F. KENNEDY, of Massachusetts, Democratic nominee for President.

Dr. Kent said the commission did not go into details of the bill in making its decision. It dealt with the broad general problem of medical aid to the aged, he said.

"We have endorsed the bill on medical aid by the Federal Government to all elderly persons operated through the social security system," Dr. Kent said.

"We did not spell out the provisions," he said. "But we recognized that there is a Federal obligation in this matter, and we feel the 225,000 persons in Connecticut over 65, whether or not they are covered by social security, should be offered this Federal assistance."

Dr. Kent said messages are being sent immediately to Senator KENNEDY and to Vice President RICHARD M. NIXON, Republican presidential nominee, informing them of the commission's action.

In addition, messages are being sent to the six Connecticut Members of the U.S. House of Representatives and to the two U.S. Senators from this State.

Safer Highways

EXTENSION OF REMARKS
OF
HON. EMILIO Q. DADDARIO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1960

Mr. DADDARIO. Mr. Speaker, the Christian Science Monitor recently carried two outstanding articles on the success of the drive led by Gov. Abraham A. Ribicoff in Connecticut to cut down on traffic fatalities.

This campaign is based on law enforcement with fair and impartial effect and has earned the enthusiastic approval of people all across the country as they recognize that something must be done about the rising toll of traffic accidents. It has had the unwavering support of the press and public in Connecticut, including such public-spirited ventures as a campaign of the Hartford Times a year ago to bring voluntary suggestions from the public on how it could be intensified.

I believe these two articles deserve the consideration of every Member of this House, and, under unanimous consent, I include them, as follows:

[From the Christian Science Monitor, Aug. 16, 1960]

CONNECTICUT PROVES SAFER HIGHWAYS ARE POSSIBLE

(By Donald Mainwaring)

It can be done.

In spite of the huge numbers of vehicles using the Nation's highways, traffic fatalities can be reduced.

It has been done in Connecticut.

During 1935, with only 400,000 registered vehicles, Connecticut averaged 10 fatal accidents a week.

Since then, despite enormous population growth and with more than 1 million vehicles on the road, traffic fatalities have dropped to fewer than 5 a week.

Nor is Connecticut willing to let it rest at that.

"I don't believe there is such a thing as an irreducible minimum," says James K. Williams, executive director of the Connecticut Safety Commission.

ALCOHOL ATTACKED

"We have accomplished a lot. Connecticut has the lowest highway death toll in the Nation, bue we will never let up in our efforts to bring safety to the men and women who use the highways of this State."

With a total of 2.5 fatalities per 100 million miles traveled in 1959, Connecticut has been awarded another in a long list of National Safety Council awards.

Other New England State figures for this period were: Massachusetts, 3.3; Rhode Island, 3.

A problem within a problem is worrying Connecticut safety officials, however.

Drink-caused traffic accidents have risen in number at the same time that the total of accidents has been reduced.

Nearly half of all fatal accidents in Connecticut involve drivers or pedestrians under the influence of alcohol.

Of 55 fatal run-off-the-road one-car accidents Connecticut State police found that more than half involved persons who had been drinking.

"The drinking driver," says the commission, "is a menace. He has left a trail of death and destruction on nearly every street and highway in the Nation."

SPOT CHECKS HELD

"We have only just begun to tackle this problem," admits Mr. Williams for the safety commission, "but we shall carry out a program of public education based on special studies of the situation."

Just now Connecticut State police make spot checks of passing vehicles and drivers are arrested if found to be under the influence of alcohol.

Involvement in a fatal accident while under the influence calls for an immediate 1-year suspension of the driving license plus any other penalties which may apply.

Under such circumstances a driver could be sentenced to 10 years in State prison.

But the commission knows that enforcement is not the ultimate answer, though its application will continue.

APATHY CRITICIZED

"Our public education efforts up till now have not been realistic," admits Mr. Williams.

"We need to eradicate the crazy notions people have about drinking."

"People should know how one or two drinks can be just as dangerous as many—that a small amount of alcohol can impair one's judgment, turning a driver into a safety hazard.

"Hosts and hostesses should place soft drinks on every tray at their parties so people are not 'pressured' into drinking when they do not want to."

"The greatest obstacle to finding a solution to this problem is public apathy. This is what we must attack."

Present traffic regulations are vigorously applied in Connecticut. Speeding, for example, carries a 30-day license suspension for the first offense, a measure instituted by Connecticut Gov. Abraham A. Ribicoff in 1956.

More rigid regulations are expected to result from organization of the new State circuit court which on January 1, 1961, will replace the present local court system.

[From the Christian Science Monitor, Boston, Aug. 20, 1960]

HOW ONE STATE BRIDLES ROAD MENACE

(By Donald Mainwaring)

Getting the message across to people.
Strict law enforcement.
Coordination.

These are the means by which the State of Connecticut has, for a steady quarter of a century, been reducing its annual traffic fatality toll.

Some Connecticut drivers have criticized Gov. Abraham A. Ribicoff's 4-year-old program for suspending the right to drive of convicted speeders (30 days at the first offense, 60 at the second, indefinitely afterward).

People generally, however, find it hard to disagree with the Governor's oft-quoted remark that "people won't drive slowly to save their lives, but they will to save their licenses."

ANSWER TO INCREASE

His program came into being as a direct result of an increase in traffic accidents which took place during 1955. Even then Connecticut ranked as the Nation's fourth safest State, with a fatality rate of 3.6 per 100 million vehicle-miles.

The national rate was then 6.4. Connecticut's present rate is the Nation's lowest at 2.5.

The license suspension program and the drop in the accident rate, says the Governor, are directly related.

Safety education in Connecticut begins during early school days. Children are taught to look left and right before crossing the street, not to rush into roadways, and other similar safety habits are encouraged.

Driver education courses are available to high school students.

Because of this last, James K. Williams, executive director of the Connecticut Safety Commission, is against raising the licensing age requirement above its present limit of 16.

"To raise the limit above high school leaving age," he says, "would be to lose the chance to educate our youth into safe-driving ways.

"Right there in the early stages is where safety training can have its greatest effect."

Law enforcement policies in Connecticut have excited much out-of-State comment.

UNMARKED PATROLS

Hard behind the sign welcoming visitors to the State comes the warning, "Don't speed. Conviction means loss of license."

Radar checks are frequent.

Police patrol in unmarked and different colored cars.

Officers in plain clothes also patrol. These do not stop cars or make arrests, but radio ahead to uniformed colleagues whenever they notice violations.

"Unconscious" speeding gets a reminder from signs placed periodically along the roadside. Some simply ask in bright lettering "Are you speeding?" Others carry messages ranging from the swift and telling to the ponderously cute.

They have their effect, however.

Police officers possess an area of tolerance which can sometimes save a "my speed crept up without my noticing it" type of driver from immediate arrest.

But he gets a warning.

POLITE, BUT TOUGH

A Connecticut "warning" is a printed form, a copy of which goes to the commissioner of motor vehicles and becomes part of the driver's permanent record.

A warning also includes a vehicle safety check, and proof that necessary repairs have been made is required within 10 days.

Depending upon the nature of the offense, each warning also counts for a number of adverse "points" which militate against the individual's right to drive.

At three points a driver receives a warning letter. At seven he is invited to a conference. At 10 points, unless he can show good reason why it should not be, his license is suspended.

The program is polite, but tough.

"Certainly it's tough," underscores Governor Ribicoff. "It's meant to be.

"We are tough on the reckless driver and the drunken driver."

Meanwhile, the safety commission continues its program of public education. Members of the commission and its staff will speak wherever the doctrine of safety can be spread.

Information is handed out, mailed, published in the press, broadcast on radio and television.

"And the program's purpose is to educate, not frighten," says Safety Commission Director Williams.

Coordination of all safety efforts, public and private, is the Connecticut Safety Commission's main task.

Highway engineering, law enforcement, the teaching of safety—these and like activities are made to mesh by the commission and its executive.

Mr. Williams notices "a national trend toward making it harder to get a driving license—easier to lose one.

"The day is not far distant, in my opinion, when a special license will be required before drivers are allowed to use turnpikes or other expressways.

"Turnpike driving requires special skills, faster reactions, the ability to think fast and for several cars ahead.

"Meantime, we in Connecticut intend to continue our attack upon this tragic waste of life and property with every resource at our command."

Israel Is Essential for Redemption of Mankind

EXTENSION OF REMARKS

OF

HON. HERMAN TOLL

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 22, 1960

Mr. TOLL. Mr. Speaker, just recently I had the privilege of reading the transcript of a radio address by one of the leading and most distinguished rabbis of Philadelphia, Aaron Decter, who now holds the post of national director of community relations of the Israel Histadrut Campaign and director of the American Histadrut Society.

Rabbi Decter's message is so inspiring and gives such encouragement for Western civilization and the eventual success of freedom-loving countries, that I include in the RECORD under unanimous consent, so that my colleagues and others may have the opportunity to read and study it:

ISRAEL IS ESSENTIAL FOR REDEMPTION OF MANKIND

(Radio Address by WWBZ, Voice of Israel, Vineland, N.J., July 31, 1960, Rabbi Aaron Decter, of Philadelphia, Vineland, N.J., July 31, 1960)

I am delighted to share with you in this program, celebrating the 13th anniversary, the Bar Mitzvah anniversary of the Voice of Israel, sponsored by the Labor Zionist Movement of Vineland. It has been an annual privilege for me to come to your anniversary programs and bring greetings on behalf of the National Committee for Labor Israel and the Histadrut Campaign on whose board of directors it is my pleasure to serve. I bring to you, therefore, the greetings of this great institution with which the Voice of Israel and its sponsors, the Labor Zionist movement, is identified, as well as their deep appreciation for the remarkable dedication of all the men and women who have been

identified with this unique and interesting program in public relations, the parallel to which and the like of which it not to be seen anywhere in this great land. For this small community of Vineland is making a contribution in human relations and in communications between the people of America and the people of Israel that is unique and is building a bridge of better understanding. My greetings, therefore, and the greetings and deep appreciation of Dr. Sol Stein, the national director of the Committee for Labor Israel, the Histadrut Campaign, as well as Mr. Mendel Fisher, the national director of the Jewish National Fund, to Mr. Louis Cohen, the chairman of the committee, Max Klein, Abe Cohen, Sam Spain, Rose and Harry Sobelman, and, of course, to Mr. Bob Coucill who has been serving, not only as the news commentator, but also as the coordinator for this program on behalf of the station WWBZ.

Dear friends, while it is true that I bring you the greetings and appreciation of these great organizations which are establishing a bridge between us and the people of Israel, I must also share with you both the anxieties and the fears of our generation as well as the dreams, the hopes, aspirations, and yearnings of our people. We are living in an age of anxiety, of fear, of uneasiness, of malaise—an age of low morale, a period of great challenge to the free institutions that have been the heritage of Israel and the heritage of that Hebraic spirit which helped to mold the great free American institutions of our country. These are dark moments indeed for all of mankind, and our people is girding itself to face the challenges to the free world of many totalitarian countries. While these are dark moments for contemporary mankind, they, at the same time are dark moments commemorating tragic periods in the history of our people. This week has seen the anniversary of the death of Dr. Theodore Herzl, the founder of the Zionist movement; Chaim Nachman Bialik, the poet laureate of our people; it has seen also the anniversary of the Tisha B'Av, the 9 days of Av, the period which witnessed the destruction of the Temple in Jerusalem almost 2,000 years ago. And yet hope springs triumphant in the hearts of our people. The darkest moments in the history of our people were at the same time moments that gave forth great hope and inspiration. There is an ancient talmudic legend that tells us that on the day that Rabbi Akiba, the great scholar, was killed during the period of Hadrianic persecutions, Hadrian, Rabbi Yehuda Ha Nasi who was to be the compiler of the Mishna and the Talmud was born. On the day, say the rabbis of old, that the Temple was destroyed, the Messiah was born. "Yom Sha Charab Bet Ha Mikdash Nolad Mosheach." Hope and faith have ever been the hallmark of our people. Therefore, these days which commemorate tragic moments in the history of our people are days which also remind us constantly that there is faith; that through faith there is hope to rebuild and hope to be an example of courage to all mankind.

I am reminded, therefore, of the apocryphal story that is related about a contemporary of ours, Mr. Khrushchev, who some few years ago in his attempt to downgrade Stalin wanted to remove the body of that dictator from the Kremlin and bury it elsewhere. He, therefore, and this is an apocryphal story, sent a telegram to Mr. Eisenhower requesting permission to have the body of Stalin removed from the Kremlin and buried in America. The President of this country immediately answered that we want no Communists in the United States, alive or dead. Therefore, Mr. Khrushchev, upon receiving this telegram, sent a cable to Anthony Eden, then still the Prime Minister of Great Britain, but Mr. Eden, smarting under the diplomatic defeat following the Anglo-French-Israeli puntive expedition to the Sinai Peninsula in 1956, sent back a cable to Mr. Khrushchev: "Sorry, old chap, regret cannot take the body of Stalin." Whereupon Mr. Khrushchev dispatched the following cablegram to Mr. Ben Gurion, the Prime Minister of Israel, requesting permission from him to have the body of Stalin removed from the Kremlin and buried somewhere in the Holy Land. Sometime after this telegram was received, Mr. Ben-Gurion, (B. G. as he is known in Israel), sent back the following cable to Mr. Khrushchev: "Delighted to have the body of Stalin buried in the Holy Land, but don't forget, ours is the land of the resurrection."

Indeed, the land of Israel is the land of the resurrection. It is the resurrection of the land of our people, of the soil of Israel; a soil that is replete with great spiritual experiences; a desert soil that has been resurrected and made once again like a blooming garden of God. Israel is the land of the resurrection of our people, a people that has been dispersed in many lands and for hundreds of years, and that once again is reliving its own way of life even as in ancient days. Israel is the land of the resurrection of the culture of our people, a culture that began with the Torah, with the great prophetic teachings; with the great teachings of Moses and the Biblical injunctions and the inspirations of social justice of the ancient teachers of our people, resurrected once again in the land of Israel through the cooperative institutions that are being created by the pioneers on the land and by the workers and pioneers in the cities. Today in Israel there are many problems as there are many problems everywhere. Constantly we are subjected to the voice of violence from Africa, from Asia. Even at our own doorstep, in Cuba, there is violence as the answer to the problems of liberty, of law, and of order.

In the Middle East, in that little country of Israel, there is being developed a way of life that I believe will be a challenge to all of those peoples who are emerging from the shackles of colonialism and imperialism and are rediscovering what it means to be free without at the same time rediscovering the essence of freedom. The people of Israel have discovered that the essence of freedom means to be free from ignorance, from the fear of death, from the fear of disease, from the fear of insecurity. Therefore, they are creating a way of life that is giving their people security in every sense—educationally, economically, spiritually.

Today in Israel there have been a number of interesting breakthroughs along the scientific field that give a great deal of hope, and courage and encouragement to those people who believe that Israel will become the arsenal of democracy in the Middle East. There has been a breakthrough because of the development of the nuclear reactor at the Weitzman Institute in Rehoboth—a second breakthrough because of the actual use of solar energy which promises much from the standpoint of the utilization of solar energy for fuel for the future, and thirdly the desalination of the waters of the Dead Sea, a process that can mean much for Israel where water is at a premium. But all of these scientific breakthrough are not as important neither for the State of Israel nor its people nor for mankind as much as the moral and the spiritual. For the state and the people of Israel are to be judged not by riches nor by military power nor by technical skills but by moral worth and human values. And I submit to you, dear friends, that the people of Israel is true to its mission and to its vision, the vision of Moses, of Isaiah, of Jeremiah, of Amos and Hosea.

That vision, predicated upon love and friendship and upon cooperation, can be best understood through the establishment only a few months ago of the Afro-Asian Institute in the city of Tel Aviv, an institute to which scholarships are being offered to dozens upon dozens of people from every part of Asia and of Africa, formerly members of the Afro-Asian bloc, now happily joined in treaties of friendship with Israel. From countries like Ghana and the Cameroons to Burma and Ceylon, men and women are coming. From almost 30 different Afro-Asian countries they come to Israel not only to learn various skills, but to learn, above all, how to live together. For Israel is the greatest example today, and the greatest example of many ages wherein a government and a people, wherein the pioneers of labor and the men of spirit join hands to make that country ideal.

I believe, dear friends, that those of us who are imbued with the American ideal of freedom can see therein the union of the great genius of Israel with the great genius of America. This union can be understood best in that philosophy which considers that human beings are important, significant, and have value. And while it is true that Israel is a rich little country; rich in soil—a soil replete and redolent with great historic and spiritual experiences; rich in resources in the Dead Sea, and in the Machtesh ha gadol, the Great Canyon; rich in the great potential. It is richest, above all, in the human resources, in those human beings who have been gathered together from every part of the world and who are giving hope to the world because coming from the valley of the shadow of death they are able to live and to be productive. This gives me, therefore, in conclusion, the opportunity to bring to you once again that remarkable vision of the Prophet Ezekiel wherein he saw in his dream the vision of the valley of the dead bones. And the Lord God appeared to him and said to him, "Ben Adam, Oh son of man, will these dead bones live again?" and the prophet said to him, "Lord God, thou knowest." God said to him. "Ha Atzmot ha elu bet yisrael hem." These dead bones, they are the household of Israel. Behold they say, "our hope is lost, our bones are dried up, we are completely cut off." Therefore I say unto you, go thou and prophesy unto these dead bones that they may live again." And do thou breath unto them, that I may clothe them with skin and breathe my spirit into them for why wilt you die oh house of Israel?"

Even as the land of Israel and the people of Israel are living once again, recreating institutions predicated upon cooperation and giving concrete example of the teachings of love of the ancient sages of our people, so will mankind live again by the message of the Jewish genius that emanates from the land of the Bible. It will live again because of the message of universal love; because of the passion for freedom, because of the principle of freedom under law and order; and because of the vision of international peace and comity. It is to these ideals that the land of the people of Israel and all of those institutions created by Histadrut are dedicated, and it is this great vision and with these great ideals that the men and women of the Labor Zionist movement who are sponsoring the Voice of Israel are identified. We hope that the communication with our Christian as well as our Jewish neighbors in South Jersey will help to bring all of us closer to the ideals of the prophets which are being made real and concrete by the pioneers and the laborers of Israel.

Through our association with the spiritual genius of Israel, we will not only enrich our American heritage, but help in the redemption of the world.

Boston Shipyard Takes Missile Era in Stride

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an article about 160 years of service by the Boston Naval Shipyard, which appeared in the Boston Globe on July 27, 1960:

160 YEARS OF SERVICE—BOSTON SHIPYARD TAKES MISSILE ERA IN STRIDE

(By Capt. F. L. Ruhlman, U.S. Navy)

In the shadow of historic Bunker Hill, Boston Naval Shipyard upholds a long and proud tradition of service to the Navy and to the Nation. The shipyard, a modern and potent industrial facility vital to the entire New England economy, is now completing its 160th year of service as an integral part of the Naval Shore Establishment.

From an origin of a few hardy shipbuilders and a few acres of land, the shipyard has progressed to a complex and magnificently equipped installation, valued at over $100 million, employing over 9,000 personnel and capable of meeting the diverse and constantly changing requirements of the fleet it supports.

Two years after the establishment of the Navy Department in April 1798, Navy Secretary Benjamin Stoddert recommended to President John Adams the purchase of land on the Charlestown waterfront for a naval shipyard. The land was obtained and the shipyard officially came into existence on Aug. 26, 1800.

The first job performed was attributed to John Tapley, a Charlestown blacksmith, who shod a team of oxen. The first known employment notice, soliciting the services of 8 or 10 able-bodied men to be employed in the shipyard by the month, appeared in the Boston Independent Chronicle in 1801.

First structures were simple sheds. The commandants' house, erected in 1805, is still in use as the home of the commandant, 1st Naval District.

Many notable events occurred in the shipyard in the first half of the 19th century. The first naval officers' school was established at the shipyard in 1815. It was the first ever organized by the Navy and may be said to be the forerunner of the present Naval Academy.

Drydock No. 1, one of the two oldest drydocks in the Nation, was completed in 1833 and has been in continuous use since that time. Old Ironsides was the first ship drydocked. In 1836 a ropewalk was built which provided most of the rope requirements of our fleet for the next century.

About 5,000 civilians were employed at the shipyard during the Civil War period. The majority of them were ship carpenters and joiners and the tools employed were primarily hammers, crosscut saws and axes. Teams of oxen did most of the heavy hauling in the shipyard until 1898.

During World War I, the shipyard served as an embarkation point and supply center in addition to its primary assignment as a repair center. Employment rose to 10,000 civilian workers. Additional piers and buildings were added to handle the average of 50 ships which docked or departed daily. Strategically located close to the North Atlantic, the shipyard accomplished a major load of World War I ship repair work.

The shipyard played a vital role in World War II. More than 165 ships of lengths greater than 100 feet, ranging from escorts and landing craft to large auxiliaries were built here for the Navy and America's allies.

Hundreds of smaller craft were constructed and thousands of ships repaired during the 4-year period. Employment of personnel increased to more than 38,000.

Through the years the facilities of the shipyard have grown steadily; slowly during peace, rapidly during wars. Large, modern shops have been built. Other shops have been enlarged, modernized and rearranged.

The shipyard's civilian employees and its military personnel and those of the ships present in the shipyard spend over $75 million annually in the New England area. Its material requirements necessitate procurement of additional millions of dollars worth of supplies and equipment, much of which is obtained from local sources.

Recent work includes conversion of U.S.S. *Albany*, which is scheduled for completion in 1961 as the Navy's first all-missile ship. The only original guns remaining on the U.S.S. *Albany* will be a 40 mm. saluting battery. When converted, the U.S.S. *Albany* will have one Asroc (antisubmarine rocket missile) launcher, a twin Talos (long-range, surface-to-air guided missile) launcher forward and aft, and a twin Tartar (short-range, surface-to-air guided missile) launcher on each side of the ship.

A powerful sonar will detect targets for Asroc and MK32 homing torpedoes which can be launched from either of two deck mounts.

Thus, as in the earliest days when the fleet consisted of ships dependent on cannon and sail until the present guided missile and nuclear power era, the personnel of the Boston Naval Shipyard stand ready and confident to meet many new and complex problems in developing and maintaining the Navy's strength and readiness in the defense of our Nation.

Panama Canal: State and Defense Departments at Loggerheads

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 23, 1960

Mr. FLOOD. Mr. Speaker, among the most gravely important questions that now face the United States are policies affecting the maintenance, operation, sanitation, and protection of the Panama Canal.

An important recent contribution to the cumulating literature on the canal question is a series of articles in the August 12 and 13, 1960, issues of the New York Times by Hanson W. Baldwin, its distinguished military editor.

These articles reveal to the people of the United States that the Departments of State and Defense have been at loggerheads over what our canal policy should be. Moreover, they show that influences in the State Department have evidently been contemplating the transfer by the United States of the Panama Canal to the Republic of Panama.

In order that the Congress, especially committees charged with legislative and investigatory matters affecting the Panama Canal, may be more fully informed, the two articles are quoted:

[From the New York Times, Aug. 12, 1960]

THE PANAMA CANAL—I

(By Hanson W. Baldwin)

The construction of a sea-level canal across the Isthmus of Darien in Panama, about 100 miles east of the present lock canal, has been proposed as part of a long-term solution to Panama Canal problems.

The proposal was part of a program outlined in a recent study prepared by the State Department. The program, if approved, would alter fundamentally the present U.S. position in the Panama Canal Zone, and our military, political and economic relationships with the Republic of Panama.

That part of the program that envisioned shifting the management of the present canal and of the Canal Zone from military to civilian control, inclusion of Panamanians in the Board of Directors and perhaps ultimate transfer of the canal to Panama aroused opposition within the Pentagon. This was particularly true of the Department of the Army, which is now charged with the canal's administration. As a result, most of these suggested changes have been temporarily eliminated.

Discussion of this program and these differences by the Cabinet resulted in a directive to the Defense and State Departments to try to find a common position upon which a long-term Isthmian Canal policy could be built. So far, however, no agreed-upon program has been completed, and Washington experts believe the problem of the Panama Canal and its future must await action by a new administration.

CANAL GROWING OLD

The policy discussions about the Panama Canal that have been in progress for some time in Washington stem from economic, political, military and organizational problems that have become obvious within the last 2 years.

From the economic point of view, the present canal is growing old, and requires modernization or replacement. The Panama Canal is essentially the same engineering plant, with minor modifications and improvements, that was opened to the world's maritime traffic in 1914. The 110-foot width of the six double (two-way) locks through which ships pass in their 50-mile passage from ocean to ocean, and the narrow defile of Gaillard Cut, sharply limit canal capacity.

None of the world's modern aircraft carriers can pass through the locks, and large, heavily laden ore ships and supertankers have to be piloted through the cut with extreme care.

The suggestion for a sea-level canal across the Darien area of Panama is one of many proposals for increasing Isthmian Canal capacity that date back to before World War II. Prior to the war, a third set of superlocks—much larger than the present locks—were started near the present canal, within the 10-mile-wide strip of the Canal Zone over which the United States has exercised since 1903 full authority and control as if it were sovereign.

The construction of these locks was abandoned when the United States entered the war. Since then, various engineering studies and surveys have been added to the many authorized in the past by Congress or other agencies.

The Darien canal route (suggested by the State Department), which would utilize much the same routes that Balboa used in his early 16th century explorations, is one of many suggested. Other choices are: Completion of the third set of locks for which excavation work was started prior to World War II; transformation of the present lock canal into a sea-level canal; a canal through Nicaragua; a canal across the Tehuantepec Isthumus in Mexico; a sea-level canal, per-

haps blasted by nuclear explosives, through northern Colombia.

Cost estimates for these projects are as high as $5 to $10 billion over a 5- to 10-year period. Any of these projects would require Presidential and congressional approval—and in the case of a new canal—complicated international negotiations.

[From the New York Times, Aug. 13, 1960]

THE PANAMA CANAL—II

(By Hanson W. Baldwin)

The problem of the modernization or replacement of the Panama Canal has been complicated by our deteriorating political relations with the Republic of Panama. Violent nationalism, encouraged by Fidel Castro and by the Communists and complicated by many other factors including the concentration of wealth and political power in Panama in the hands of a few, resulted in anti-American riots last year and attacks upon the Canal Zone. Despite two revisions to the basic treaty of 1903, major economic and other aid to Panama and numerous concessions on the part of the United States, Panamanian political leaders are still pressing for more concessions. They have demanded the right to fly the Panamanian flag in the Canal Zone, as a symbol of residual or titular Panamanian sovereignty.

The State Department's program for meeting these difficulties envisioned a 10-year plan of readjustment, involving continued aid to the Republic of Panama, increased annual payments to Panama, inclusion of Panamanians in top jobs in the canal administration and eventual inclusion of Panamanians on the board of directors of the canal. The canal board is now composed entirely of U.S. citizens, all appointed by the Secretary of the Army. Eventually this plan apparently contemplated, in its original version, the transfer of the present canal to Panama. Many of these suggestions are violently opposed by the Pentagon.

MILITARY PROBLEMS CITED

Many in the Pentagon also feel that if a new canal outside the present Canal Zone is to be built, its location should be outside of the Republic of Panama. The construction of another canal in another Central American country would greatly strengthen the U.S. political and bargaining position in Panama and in the entire area.

The military problems of the Canal Zone have been at least partly remedied since the riots last fall. The U.S. forces there—one infantry battle group without field artillery support; obsolete 90-millimeter and 120-millimeter antiaircraft guns; no modern planes permanently assigned, and only two naval minesweepers—have been strengthed recently.

A second infantry battle group has been assigned to the Canal Zone, and two Hawk missile batteries and 40-millimeter automatic weapons are to replace the old antiaircraft guns.

The zone, with a troop strength of 6,500 to 7,000, is now far better prepared than it was a year ago to provide internal security and antisabotage and antiriot protection, and defense against low-flying aircraft.

For the immediate future, the organizational problem also appears to be settled. A new president of the Panama Canal Company and Governor of the Canal Zone, Maj. Gen. William A. Garter, took office a few weeks ago. Like all other Governors in the past he is from the Army Corps of Engineers.

A State Department program had urged that the Governor be a civilian responsible to the State Department.

In the past there have often been major differences between the U.S. Ambassador to Panama and the Governor of the Canal Zone and between Pentagon and State about canal methods and policies.

The suggestion that the administration of the canal and of the Canal Zone be shifted to a civilian aroused intense opposition from the Army.

Maj. Gen. William E. Potter, who had been Governor of the Canal Zone for the last 4 years until he was succeeded by General Garter recently, was firm during his regime in upholding U.S. rights to the exercise of sovereignty over the Zone. He and the former U.S. Ambassador to Panama, Julian F. Harrington, had often disagreed.

Until relatively recently it had been expected that General Potter would be appointed the next chief of engineers of the Army, a promotion to three-star rank. Instead, the term of the incumbent chief of Engineers, Lt. Gen. E. C. Itschner, was extended. Recently, General Potter decided to retire to take a position as executive vice president of the New York World's Fair. His sudden and unexpected retirement has been interpreted by some in the Army as, in part, a result of his differences with the State Department, and in part due to the Army's opposition to the State Department program.

RUBOTTOM CRITICIZED

Many of General Potter's supporters in the Pentagon and in the Canal Zone, who had felt he was one of the ablest governors in canal history, have been discouraged by his retirement.

On the other hand, the Pentagon, which has been extremely critical of Roy R. Rubottom, Assistant Secretary of State for Latin American Affairs, feels that Mr. Rubottom's impending transfer to Argentina may clear the way for the formulation of short-term and long-term canal policies.

At the same time a new Ambassador to Panama, Joseph S. Farland, who is regarded rather highly by the military, has just presented his credentials. A new commander in chief, Caribbean, Lt. Gen. Robert F. Sink, with headquarters in the Canal Zone, has also just assumed office. And Roberto F. Chiari, newly elected President of Panama, takes office this fall.

Thus new men with new ideas will be restudying the problems of the Panama Canal in the near future and some short-term program may be formulated quickly. But the evolution of a long-term program and policy—including the possible modernization of the present canal or construction of a new one—will be the responsibility of a new administration.

A New Program for the New Situation in Asia

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 22, 1960

Mr. LANE. Mr. Speaker, now that the tide is turning in Asia and the Communists are becoming unpopular, it is time for us to reappraise our position in order to effect a more intimate association between ourselves and the Asian nations. Economic aid is not enough. "Something beyond economics determines the success or failure of economics," says Dr. Paul K. T. Sih, Ph. D., director of the Institute of Asian Studies at St. John's University, New York City, and author of "Decision for China: Communism or Christianity."

I believe the readers of the CONGRESSIONAL RECORD will be interested in the following article by Dr. Sih which appeared in the Catholic World, issue of August 1960:

A NEW PROGRAM FOR THE NEW SITUATION IN ASIA

(By Paul K. T. Sih)

In our past policy we were not lacking in generosity but in spiritual understanding.

The tide in Asia is turning in our favor. An evident upsurge of opposition has set in toward the Red China regime. A Bandung conference is unimaginable at this time. If such a conference were possible today, its major consideration would not be the expulsion of the Western powers but the elimination of the Communist threat.

This view of the Asian situation may seem excessively optimistic in view of the fact that almost half the Asians are under Communist control. It is a fact, however, that communism is not as influential now as it was 10 years ago. The recent riots in Tokyo indicate that Communists have tremendous power in certain circles of students and workers, but these violent demonstrations were symptoms of domestic quarrels rather than proof of a popular enthusiasm for communism. The overwhelming majority of Japanese are still conservative and, although they have an understandable bent for neutralism due to their memories of the last war, they are not pro-Communist.

In Okinawa a small but vociferous group expressed their grievances when President Eisenhower arrived in June. However, these grievances do not reflect pro-Communist sentiment and the Communists there are weak and ineffective. The grievances are based on a rational conviction on the part of most of the islanders that they would fare better economically by having the islands revert to Japan.

Elsewhere in Asia, there has been some deterioration of American prestige due to the cancellation of President Eisenhower's visit to Tokyo but in general the neutralist nations of Asia are becoming less neutral and less sympathetic to communism. In Indonesia, the large, well-disciplined Communist Party has lost ground because of Red China's opposition to the Indonesian Government's treatment of the Chinese in Indonesia. Malaya, under the leadership of Prime Minister Tengku (Prince) Abdul Rahman, has decided to stamp out Communist activities during 1960. The free nations of Asia are achieving new levels of stability and adopting a more realistic policy toward communism.

There are, of course, certain significant reasons for this development. The inhuman program of the people's communes in Red China has terrified the family-loving peoples throughout the entire oriental world. Assault on Tibet has extended to regions controlled by India, from Shipski Pass on the Tibetan border to the North-East Frontier Agency. Pakistan is fuming over a set of Chinese maps showing some 6,000 square miles of Pakistani territory above Kashmir as part of China. Indonesia has seen the much-prized spirit of Asian cooperation callously destroyed. Nepal has taken increased defense measures against Communist infiltration from Tibet into the villages of Hilje, Limi, and Jami. Burma is taking defense measures in its northern region against Communist aggression. In Laos, it has been reported that the rebellion has been resumed with the support of the Chinese Communists. In the Arab world, Kassim in Baghdad and Nasser in Cairo find that their Communist friends are a treacherous support.

This recent decrease of Communist influence does not, however, mean that the dem-

ocratic West has in itself grown more attractive to the Asian peoples. Bitterness based on recent colonial occupation and the West's economic superiority prevent that. The U–2 episode and the cancellation of President Eisenhower's visit to Tokyo were serious blows to Western prestige in Asia. Yet at the same time they did not increase respect for communism. It is most urgent, therefore, at this moment in the cold war, that we make a thorough reappraisal of our position. We must bring about a more intimate association between ourselves and the new Asian nations.

One thing is clear. Our policy in Asia in the past has not been adequate. On the whole we were not lacking in generosity, but in spiritual understanding. A soundly human friendship must be created if America and Asia are ever to achieve that firm basis upon which our future cooperation must rest. Something beyond economics determines the success or failure of economics. Once we establish this deeper understanding, an extensive renewal will take place in every phase of our relationships with Asia.

Here we outline in detail the new attitudes and activities that should follow in the political, economic, cultural, and spiritual orders if this new program of cooperation is to be put into effect.

In the political order:

1. We must appoint ambassadors and ministers to Asian nations who are truly capable of understanding Asians and of obtaining their confidence. Some of the American ambassadors in important posts possess the attributes of good diplomatic representatives, but qualified diplomats are needed in all the free countries of Asia. Present-day diplomacy demands more qualifications than traditional diplomacy. These include an adequate knowledge of the countries to be served. Jusserand, a noted French diplomat, said testily: "Experience has already shown and will more and more show that no invention, no airplane, no wireless will ever replace the knowledge of a country and the understanding of a people's disposition." The present trend reveals that "although the language proficiency of this country's Foreign Service officers is improving rapidly, more progress needs to be made. If the number of our diplomats who can speak French, Spanish, and German is now adequate, this can hardly be said of the numbers who cannot speak other needed languages, especially non-Western tongues. There is, for example, no American diplomat who can speak Singhhalese, only one who speaks Bengali, and only four who speak Burmese. We have had extensive relations with Korea since 1945, yet only nine of our diplomats can speak Korean" (New York Times, November 22, 1959).

Such examples could be multiplied, but the point is clear: we cannot hope to build good will for the United States unless those who are in official posts overseas have the ability to know the people of the host country—their needs, aspirations and point of view. Our representatives must be able to communicate easily and directly with many different peoples.

2. We must act consistently. This is most important for if there are things that are immeasurably irritating to Asian peoples they are inconsistency, hesitation, establishment of programs that are never carried out, and making promises that we do not fulfill. On the other hand, consistency gains confidence for times of crisis. American prestige was never higher throughout eastern and particularly southeast Asia than when our Government took a firm stand with respect to Quemoy and extended needed assistance to the Nationalist Chinese Government on Formosa in its valiant and successful resistance to Communist aggression.

3. We must make new efforts to mitigate inter-Asian political quarrels. The nations of Asia have conflicts and little cold wars among themselves. Even without Communist aggravation, Asia has its quota of international tensions that can often be relieved by outside assistance. India and Pakistan have to settle their disputes over Kashmir and over the waters of the Indus River system. Japan and South Korea must solve problems that have arisen over the repatriation by Japan of Koreans to Communist North Korea and over fishing rights in the Pacific. Controversies must also be settled between Free China on the one hand and the Philippines and Vietnam on the other with respect to Chinese minority groups. For these differences, an arbiter is frequently needed. This role of peacemaker is not an enviable one. Yet nations as well as individuals do need assistance from others. The United States can furnish intelligent, sympathetic and impartial advice to both sides and thus assist in healing many of the ancient and recent antipathies that exist in Asia.

Of course, before she is able to bring about this political solidarity in Asia, the United States has to overcome some of her own difficulties in Asia. Above all, she has to seek a proper adjustment with Japan, especially in regard to those Japanese who fear that the United States-Japanese Security Treaty will subject Japan to the danger of war. Then too the United States must reassure the Philippines concerning the lease of military bases and must arrive at a satisfactory agreement with free China concerning the status of American Armed Forces. We firmly believe that, with mutual good will, these normal political differences can be bridged.

In the sphere of economics, American programs must find more effective means of aiding the national economies of the new Asian countries. With Communist Russia and Communist China becoming evermore menacing in the Far East, there is no question as to the fact that those nations directly and indirectly threatened by communism should receive special attention. However, there are serious weaknesses in the execution of our foreign aid program. In implementing a new program of economic assistance:

1. We must delegate more power to our field officers. At present, too many details in our economic projects have to be decided in Washington. Efficiency is at stake. Drastic changes for the sake of more effective operation must be inaugurated. American aid in Asia is less welcome today than it was a few years ago. Why? Since 1953 the Soviet bloc has given economic help to the area. Compared with Communist aid, American aid seems less efficient. Sukarno, President of Indonesia, is reported as saying: "It usually takes 1 year to negotiate with the United States and another year to assure delivery. Not so with Communist China. It takes 1 week to negotiate and 3 weeks for delivery." A similar situation is found in Vietnam. Saigon welcomes Australian aid more readily than American aid in economic projects because Australia is more prompt in executing its part of the program.

2. We must institute a more extensive program for training Asian personnel in technical work. Scientists and men of higher learning are necessary and should be trained in the more developed countries on a larger scale. In this regard, the program of the United States Economic Cooperation Administration has achieved certain praiseworthy results in Asia. However, better trained local staffs are even more necessary for a balanced development of the area. It is generally advisable that this training be carried out in the place where the trainees are found rather than in more developed countries where social conditions are very different. Training programs set up in the West for use in the more developed nations are generally not suited to the needs of Asia. To cite one instance: Medical doctors who are at work in Asia are better trained in Asia than in the United States. Asia has particular diseases and types of diseases, such as malaria, smallpox, yellow fever, typhus, dysentery, cholera, etc., that are rarely found in this country. Many doctors who received their specialized training in the United States found, after their return to Asia, that their usefulness in their native lands had been somewhat impaired. We know that India has only 23,000 hospital beds, which can hardly accommodate 2,500,000 active cases of tuberculosis. However, a pilot experiment in Madras has shown that at-home treatment of tuberculosis patients produces results quite as good as those resulting from treatment in hospitals. Less disruption of family life facilitates considerably the recovery of the patients. It is this kind of doctoring and nursing that most of the nations in Asia, which cannot afford modern medical care, are anxious to secure. It is gratifying to note that a serious attempt to cope with the situation has been made in Indonesia. In August 1959 the University of Indonesia graduated 97 medical doctors under a cooperative training program with the University of California. Similar programs should be set up in other Asian countries.

3. We must absolutely separate ourselves from the traditions of colonial times. This is especially important at a time when the Communist bloc nations, sincere or not, are offering "disinterested help" to the nations in Asia. American economic aid programs, of course, do not envisage any imperial interest. Yet they originated in the Marshall plan which was successful in Europe, but which cannot be transplanted, in content and concept, to the newly developing lands of Asia. Asia is essentially a rural society. Being rural, it differs in character and genius from Europe. Therefore, in extending our assistance, we must give more consideration to the views and projects suggested by national leaders. Above all, we must develop our economic aid to Asia in such a way that a regional economy, like the European Common Market, may be formed with Free China, Japan, and possibly India as the leading nations. Experience indicates that many fine systems based largely on foreign patterns are not suited to the special needs of Asia. We must seek to develop "homegrown" programs that would be fundamentally based on the conditions and needs of Asia. This is the reason why Vietnam and Thailand have often sought technical assistance from Free China in establishing textile factories and sugar refining plants. Japan was asked to build a $2,800,000 nickel smelting and refining plant at Bindura in Southern Rhodesia. To those projects for inter-Asian economic cooperation, the United States should give all-out encouragement and help.

Asia is passing from a traditional agrarian economy into a modern industrial economy. While foreign aid is made available great care must be taken to assist the Asian countries to adapt present conditions to a modern economic system. Native resources and foreign assistance can both fail to benefit the people unless they are integrated into a sound functioning economy.

In our cultural exchanges with Asia we must adjust our programs to the psychology, traditions, and cultures of the peoples there. The United States Information Agency has been successful in its limited attempt to carry out oversea propaganda. However, there is room for considerable improvement.

The general impression has been created that intellectual quality is being sacrificed to commercial quantity. Department store catalogs often find more prominent places in our information centers than the works of Lincoln or Jefferson. With a sense of regret we read a news report published in the New York Herald Tribune of July 20, 1959, that the Malayan Government ordered the removal from community centers of all books and pamphlets donated by USIA. Minister of Labor and Law K. M. Byrne, who issued the order, said that the American publications would be replaced by books of Malayan content. The basic defects of our cultural relations with foreign countries derive from the excessively materialistic philosophy of our programs, not from political or administrative failures. This is particularly true in Asia.

Now more than ever, Asia wants more schooling for its children and a share in the fruits of modern cultural enterprises. However, no international program of education and culture could succeed without taking advantage of the rich traditions of Asia's intellectual life. Addressing themselves to the annual assembly of the World Confederation of Organizations of the Teaching Professions held in August 1959, at Washington, D.C., Asian delegates made a joint appeal for the setting up of a special commission to study "the educational problems of Asian countries and to make recommendations on them, taking due note of the spiritual heritage of these countries and the necessity of providing an education suited to the modern age." (New York Times, Aug. 4, 1959.) This outcry indicates their dissatisfaction for what they have thus far received from the West.

So far as the United States is concerned, we fail badly even in the entertainment field. American motion pictures are generally more popular with Asians than other Western productions. However, they have often been presented in such bad taste that local authorities were forced to ban them. We know that the Legion of Decency in Taiwan, for example, has established for the classification of films a moral standard that is even higher than its American counterpart. In fact, a puritan crusade prevails in Asia. Laos has carried out a program against indecent songs and recitals. Thailand has closed down night clubs. Singapore has banned pinball games and jukebox parlors. In Burma, both rock n' roll and beauty contests are condemned. In Indonesia, hula hoops are prohibited as sexually provocative. In Bandung, Western movies are forbidden because they tend to provoke "adventurous sentiments."

On the bright side, however, it can be said that good American motion pictures are welcomed by the young generation of Asia with enthusiasm. "The Ten Commandments," for example, was so successful in Japan that the theater in which it was shown established a new Japanese record for box-office receipts. Many nations in Asia, including free China, are unable to show this film because they lack the needed cinemascope equipment. Here is an instance in which a little thought, foresight, and adaptability could make American aid much more welcome.

Last but not least, we must do more to foster a truly spiritual relationship with Asia. In a special way, Asia is now in a state of expectancy, hoping for a fuller life, a spiritual fulfillment of its deepest desires. This can be provided only by Christian faith and love.

For many centuries, Asia has tended to look westward for intellectual and spiritual inspirations. Islam, the dominant religion of Malaya and Indonesia, is of relatively Western origin. Roman Catholicism, the faith of the Philippines, much of Vietnam and part of Malaya, came from the Occident. Democracy's tenets, now struggling in Asia to survive, were derived from England, France, and the United States. Even communism, being pushed in this area by both Russia and China, is a Western product. With this background, Asia tends to develop, not in isolation from the West, but through association with the West. The choice that is to be made is between the democratic West and the Communist West.

The outstanding characteristic of the East is struggle: struggle against poverty, disease, hunger and ignorance, struggle to adopt the West's modern technology and to develop an independent way of life which would combine the East's old heritage with a new hope—hope for a re-creation of the spiritual dimension of society, without which modernization, however successful, will not satisfy the deeper aspirations of man. In this respect, America's chances of success in Asia are far greater than those of Soviet Russia or Communist China. America is viewed as Asia's finest contact with the Western World. For America, it is not so much a question of overcoming difficulties in Asia but rather of taking advantage of the new opportunities that are offered in this area.

To Asia, America's meaning is profoundly human and spiritual. Jacques Maritain in his "Reflections on America" (Scribner's, 1958), stresses the importance of America in the extension of the Christian idea to the whole world. In fact, America cannot inspire Asia to be Christian unless she herself becomes more Christian. This is the real challenge Asia offers to the United States.

In conclusion, we note that Asian neutrality has broken down. But Asia will become a carbon copy neither of the democratic West nor of the Communist West. In maturing politically, the nations of Asia will undoubtedly develop a new sense of community which is less apparent in the individualistic traditions of Europe and America.

We must be very sympathetic to these new developments in Asia even when they do not conform absolutely to our own ideals. The ability of these countries to oppose communism depends on this inner development of their national life as well as on our own external support. We have outlined a minimum program. We know not how long the present opportunity will last. It may be later than we think.

Knights of Lithuania 47th Annual Convention at Worcester, Mass., August 21, 1960

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 23, 1960

Mr. DONOHUE. Mr. Speaker, last Sunday evening the Knights of Lithuania concluded their 47th annual convention with a great banquet at the Hotel Bancroft in my home city of Worcester, Mass.

The Most Reverend Bernard J. Flanagan, D.D., bishop of Worcester diocese, addressed the gathering and the Reverend John C. Jutt of St. Casimir's Church, Worcester, was the convention honorary chairman.

The feature of the evening was the ceremony during which the officials of this great patriotic organization conferred their Distinguished Award Medal upon our former colleague in the House and present Junior Senator from Connecticut, THOMAS J. DODD. The medal is annually given to the non-Lithuanian who has done most to advance the freedom of Lithuania. Senator DODD's inspiring acceptance award address appears elsewhere in today's RECORD.

It was my privilege to speak briefly to the assemblage and I have been requested to include my remarks in the RECORD, which follows:

Madam Chairlady, Your Excellency Bishop Flanagan, Reverend Fathers, Your Honor Mayor O'Brien, invited guests, officers and members of the Knights of Lithuania, it is a particular privilege and pleasure to meet again with some of my old friends here and join in welcoming you out-of-town members to our great city, the heart of the Commonwealth.

It is a significant tribute to the character and understanding of the Lithuanian people that the fundamental objectives of your great organization are prominent among the virtues most desperately needed by this Nation today to successfully defeat the Communist enemy and lead the world to a lasting peace under God.

Your first purpose is to instill in your members a deeper love of the Catholic faith. This you have consistently done and by your public expression of belief and trust in divine providence you provide an inspiring example to your fellow citizens as well as, I might say, a timely warning.

You realize that without a wider acceptance and practice of basic moral laws and principles by our people, this Nation is in grave danger of collapsing from internal weakness. You are devoting yourselves, in patriotic concern, to preventing such a disgraceful catastrophe and the country is particularly indebted to you for your effective work on this score alone.

Your further objectives are to encourage the appreciation of American citizenship and Lithuanian traditions and provide social activities. As one who was born, and has lived and worked among you all my life, no one has to tell me about the high manner in which you have carried out these objectives.

Your patriotic zeal in instructing and promoting the acceptance of the responsibilities of good citizenship among your members is well recognized and universally admired.

The Lithuanian traditions, the heritage of your forefathers, are those of love of God, loyalty to country, family faithfulness, preservation of individual freedom, and persevering courage in the face of adversity.

The wholesome qualities of your social activities, consisting of good fun, friendly association, personality development, and gracious hospitality, are a legend in this area as they are in world history.

All these fundamental Christian virtues constitute the reason why you have not, and never will, forsake the promotion of freedom for your home people who are bravely enduring cruel and inhuman persecution by atheistic Communist tyrants.

They are also, of course, the reason why the people of Lithuania themselves will never be completely subjugated and will fight relentlessly on to the blessed day, by God's grace, that they, and all the other Communist enslaved people, will be restored to freedom and independence.

You may be certain that so long as I live, as a private citizen or a public official, the heroic efforts of yourself and the people of your homeland to regain their rightful independence, will always be given my complete support.

Because you have set such an inspiring example of devotion and dedication to the freedom of Lithuania, you have enlisted the aid of practically all of the good people of

the United States and, particularly, a great many of those in high public office.

One such great leader is here with you today, in the person of U.S. Senator THOMAS J. DODD. I have had the honor and privilege of serving with him, side by side, in the U.S. House of Representatives. I have heard him, time and time again, both in the House and Senate Chamber, advocate your cause with intense sincerity, with the intimate knowledge of his own experience at the Nuremberg trials at Germany, and the persuasive eloquence with which he is gifted.

There is no greater champion or more devoted advocate of freedom and independence for Lithuania, and all subjugated people, in this country, than Senator DODD.

I am pleased, indeed, to join with you in welcoming him to Worcester. The high honor you are bestowing upon him today is richly deserved and I know your selection will be universally applauded.

Financing Government Activities in the District of Columbia

EXTENSION OF REMARKS
OF
HON. WILLIAM B. WIDNALL
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Monday, August 22, 1960

Mr. WIDNALL. Mr. Speaker, the disparity between the Federal Government's share of financing governmental activities in the District of Columbia and that of the taxpayers of the District is such as to work an unfair disadvantage on the taxpayers of our Nation's Capital.

In this connection, a letter dated August 8, 1960, written by Carl L. Shipley, chairman of the Republican State Committee for the District of Columbia, to the Honorable Maurice H. Stans, Director of the Bureau of the Budget, is most timely.

In his letter, Mr. Shipley cites a lack of formula for a Federal payment to the District of Columbia. He also calls upon Mr. Stans for suggestions that would be helpful to the Republican State Committee for the District of Columbia in drafting new legislation that would provide a formula that would in turn divide financial responsibility equitably.

Under leave to extend my remarks, I insert in the RECORD Mr. Shipley's letter, and urge my colleagues in Congress to give thoughtful consideration to its merits. The letter follows:

AUGUST 8, 1960.

Hon. MAURICE H. STANS,
Director, Bureau of the Budget,
Washington, D.C.

DEAR MR. STANS: I am writing in connection with our conversation in Chicago last week about the lack of formula for a Federal payment to the District of Columbia. As you know, all revenue and expenditures of the District of Columbia are the result of legislative acts of Congress, pursuant to its role under article I, section 8, of the U.S. Constitution, requiring it "to exercise exclusive legislation in all cases whatsoever" over the District.

We are confronted with rapid deterioration in our fiscal affairs. The trend is so clear that action should be taken now, rather than awaiting a financial disaster of the sort which has occurred three times in the past. The population of the District has declined from 808,000 in 1950 to 747,000 in 1960. Since 1954 our budget has increased from $145 million to approximately $250 million. Lower income groups are gravitating to Washington, while higher income groups are moving to the suburbs. This has increased expenses for welfare, education, health, hospitals, and law enforcement nearly 60 percent, while other general Government activities have increased about 45 percent. During the same period, personal income has increased only 9 percent. Unless a solution is found, a financial crisis impends in the Nation's Capital.

During the Republican National Convention in Chicago, our delegation attempted to have included in the platform a recognition of the Nation's financial responsibility toward its Capital. That failing, we sought a resolution recognizing this national responsibility. It also failed. Many officials fail to understand that "the government of the District of Columbia is simply an agency of the United States for conducting the affairs of its government in the Federal District." (*Penn Bridge Co.* v. *U.S.*, 29 App. D.C. 452).

The extent of the Nation's responsibility for properly financing governmental activities in the District has been a subject of controversy from the beginning. From the time the Capital was laid out in 1790 up to 1835, the Federal Government contributed about $1,500,000 toward the expenses of the Nation's Capital, which local residents paid $4,100,000. Local taxpayers could not stand the burden, and a state of bankruptcy followed. This led to a congressional investigation. As a result, the Senate District Committee issued a report recommending a Federal contribution of about one-half of the District's expenses. (S. Doc. No. 97, 1835.)

From 1835 to 1870 some $30,100,000 was expended in the District of Columbia, of which $12,400,000 came by way of Federal contribution and $17,700,000 from the District. There were no capital improvements during this period, except for the Washington Aqueduct, built at a cost of $3,385,000 with Federal funds.

As a result, the Nation's Capital had the appearance of a frontier town, and was an international joke. During all of this time, there was in addition to the financial problem a continuing search by the residents for satisfactory local self-government. This compounded the financial problem. For example, in 1802 Congress incorporated the city of Washington and established its first government, consisting of a mayor appointed by the President and a 12-member city council. The council was divided into two chambers, the first containing seven members elected by the people, and the second consisting of 5 members elected jointly by the councilors. This apparently failed.

In 1812 the charter was amended to provide for an elected board of aldermen of eight members and an elected common council of 12 members, with a mayor elected by joint vote of the aldermen and the council. This also failed.

In 1820 the government of the city of Washington was reorganized continuing the elected board of aldermen and the common council, but providing that the people elect the mayor for a term of 2 years.

In 1871 Congress created for the first time a municipal corporation of the entire District of Columbia. The charter of the cities of Washington and Georgetown and the laws relating to the government of the county of Washington, were repealed. The act of 1871 provided a territorial form of government for the District, consisting of a governor and board of public works appointed by the President, and a legislative assembly, consisting of an 11-member council and a 22-member house of delegates. The council was appointed by the President and the delegates were elected by the people. The voters also elected a nonvoting delegate to Congress.

In 1871 marks the real beginning of the modern District of Columbia. But when it was established, it inherited a debt of about $4,350,000. Because of the serious lack of public works, President Grant made a tremendous effort to lift Washington out of the mud. In so doing, the debt was increased to $23,360,700. The local taxpayers could not meet the debt, and Congress apparently would not make an adequate Federal contribution.

So, in 1874 Congress provided that the District should be governed by three commissioners appointed by the President, and authorized him to detail an Army engineer officer to have charge of all roads and bridges. Also a joint committee of two Senators and two Representatives was appointed to draft a suitable frame of government for the District of Columbia. This resulted in the present form, established by Congress in 1878.

Despite three financial disasters and six different types of government, residents of the District of Columbia are still demanding local self-government. In the District Republican primary on May 3, 1960, held pursuant to Public Law 376, 84th Congress, the ballot included some party questions on this point. In response to these questions, the results were:

1. Vote for President and Vice President? Yes, 10,606; no, 281.

2. Delegates in Congress? Yes, 9,093; no, 1,081.

3. Local legislative assembly? Yes, 8,014; no, 2,646.

In response to this demand, the 86th Congress has passed a proposed constitutional amandment (S.J. Res. 39), to provide a vote for President and Vice President. It has been submitted to the various State legislatures for ratification.

In addition, there is pending in Congress at the present time H.R. 4400, a bill providing for an appointed governor, a 15-man legislature and a nonvoting delegate in Congress for the District. That bill proposes far-reaching changes in the method of handling the District of Columbia budget. Although this is an administration bill, our committee has recommended certain amendments. It now appears that bill will not be passed by the 86th Congress.

However, because the voters have indicated a substantial interest in local self-government, the Republican committee, as the only elected representative of our voters in the District must come forward with a bill which does have a real chance of becoming law. Such a bill, to be acceptable to Congress and the President, should be patterned after the law President Grant signed in 1871. Our committee has taken no action on this matter as yet, but I shall recommend to it a proposed redraft of H.R. 4400, incorporating a two-house legislative assembly similar to that in the act of 1871.

The press for local self-government is inexorable, and the ultimate passage of some sort of bill is inevitable. Therefore, it is imperative that some workable formula for financing the District of Columbia be established as a part of such legislation.

The present organic act of the District of Columbia (act of June 11, 1878), originally provided that all budget estimates for the District should be approved by the Secretary of the Treasury and submitted to Congress. It established a 50–50 ratio in defraying the expenses of the District of Columbia government. This was the first definite legislative provision recognizing the obligation of the Federal Government to share in the cost of the District. From 1878 until about 1910 the 50–50 arrangement was complied with and estimates of appropriations and revenues were submitted to the Treasurer and transmitted to Congress.

Between 1902 and 1910 the District had insufficient funds to meet its obligations, and the Secretary of the Treasury was authorized to advance funds. Shortly after 1910 the District began to accumulate surplus revenue and efforts in Congress were made to reduce the ratio. By 1915 the controversy of the Federal contribution to the District had become so vexatious that Congress appointed a joint select committee to investigate the matter. It was composed of Senators William C. Chilton, of West Virginia, William Saulsbury, of Delaware, John D. Works, of California, and Representatives Henry T. Rainey, of Illinois, Warren Guard, of Ohio, and Henry A. Cooper, of Wisconsin. The committee held lengthy hearings and finally rendered a unanimous report. One of its members, Senator Works, prepared a 20-page report of his additional views. In describing the District of Columbia, he said:

"It is a nominal municipal corporation only, without officers, without authority, and without any function whatever to perform as such. The so-called District officers are appointed by and are in fact the officers of the National Government. It can make no laws but is governed wholly by laws enacted by Congress. Its treasury has no existence in fact. It has no money and no power to collect any. Its nominal officers, who are in fact officers of the National Government, are only instruments of the Government for the levying and collection of taxes from property owners within the District. It cannot make appropriations or pay any of its expenses. The money collected as taxes, from property owners is not paid into the treasury of the District because it has none, but into the National Treasury. It is not paid out by the District, but by the Treasurer of the United States upon the order of Congress. * * * In short, the nominal municipal corporation of the District of Columbia is a mere shell, without any authority, power, or responsibility, and without any of the attributes or functions of a municipal government. It is worse than that. It is a delusion and a snare."

More significantly the full committee reported:

"The correct rule should be that the responsibility in taxation of the residents of the District of Columbia be as fixed and certain as the responsibility of the residents of other American cities comparable with the city of Washington, that with the payment of such taxes as may be equitably and properly assessed against privately owned taxable property, the financial responsibility of the residents of the District should be concluded: * * * that the United States pay from its moneys all the balance of whatever sum is deemed necessary * * * We urge upon Congress that its appropriations for the expenses of the District of Columbia should always be in such sum as will not only continue the city of Washington and the District of Columbia in every respect as the splendid and beautiful central residence of this great Nation, but also cause it to become and be forever maintained as a model for all the cities in the world."

The above formula suggested by the 1915 joint committee is not the only one that has come under consideration. Senator Overton on one occasion undertook a special study in the hope of producing a realistic and sound formula for a Federal payment to the District. He suggested that since land is the principal source of wealth, the Federal payment should be measured year by year by the amount of land taken over by the Government for Federal purposes. (Joint hearings on S. 917 and H.R. 3490, March 6, 1941.) On another occasion, Senator O'MAHONEY obtained help from the General Accounting Office and the Federal Bureau of Investigation, and proposed a formula basing the ratio of Federal payment upon the total revenue of the District. (S. Doc. 203, 79th Cong., 2d sess., June 11, 1946.) A similar suggestion was made by a Senate subcommittee in 1835, but nothing came of it either.

In any event, the 50–50 Federal payment continued until 1921, when the ratio was changed to 60 percent for the District and 40 percent for the Federal Government. From 1925 to 1938 Congress appropriated the Federal share in an annual lump sum. These annual appropriations varied from $9,500,000 down to $5 million. Since 1921, when Congress discontinued its practice of paying 50 percent of the costs of operating the District, the percentage of costs borne by the United States has fluctuated from a high point of 39.5 percent of general fund appropriations in 1924 to a low of 8.5 percent in 1954.

Since 1956 the Federal payment has been about 12 percent. A newly increased authorization (Public Law 85–451) provides for an annual payment of $32 million, which is approximately 13 percent of the general fund budget estimate for fiscal 1961.

Recently Republican State committee members took the position that they will oppose any further increase in District taxation, except the sales tax, and will oppose any increases in the budget, unless revenues became available from sources other than increases in taxation.

There are at the present time pending in Congress a number of proposed tax increases. The tax on alcoholic beverages is to be increased from $1.25 to $1.50 per gallon, and on beer from $1.50 to $3 per barrel. The tax on cigarettes is to be increased from 2 cents to 3 cents per package. Also, it is proposed to reduce the taxable personal income brackets from $5,000 to $2,000, provide rates of 2½ percent on the first $2,000; 3 percent on the second $2,000; 3½ percent on the third $2,000; 4 percent on the fourth $2,000; 4½ percent on the fifth $2,000; and 5 percent on amounts in excess of $10,000.

Recent surveys indicate that the overall tax burden for a family of four, owning a home and a car in the District of Columbia, is now above the median of tax burdens for similar families in the Washington metropolitan area. Current taxes for persons with incomes of $5,000 to $15,000 are already above the average in 17 other largest cities in the United States. Any further increase in the tax burden will aggravate the loss of middle and upper income taxpayers from the District. Any diminution in the present budget will restrict welfare activities and produce an increase in crime, delinquency, and degradation.

The central fact in this situation is that welfare and government costs are increasing while the District population is decreasing. Laid over this problem is strong local pressure for self-government, which can only lead to increased taxes and expanded budget in response to popular pressure on elected legislators. This will increase the outflow of taxpayers, with ultimate bankruptcy or utter deterioration of the Nation's Capital.

Now is the time for the Bureau of the Budget to assume leadership in this area. Congress has been considering the problem of a formula for a Federal payment for a century and the controversy continues. Now for the first time we are confronted with a substantial population loss, and the President, through the Bureau of the Budget, should properly assume leadership in proposing appropriate legislation. Most of the home rule or local self-government bills offered in Congress, including the administration's bill, H.R. 4400, simply do not take appropriate account of the financial history of the District of Columbia.

It is no solution to suggest that our budget and tax problems can be effectively resolved by a popularly elected legislature of the sort proposed in H.R. 4400. However, I believe it is possible to draft a workable self-government bill, which will provide a proper formula for an adequate Federal payment similar to that suggested in the 1915 joint congressional committee report.

I will appreciate any suggestions you may have in this connection, so that I may lay them before the Republican State Committee for the District of Columbia for consideration before we draft a new bill.

Very truly yours,

CARL L. SHIPLEY,
Chairman.

The Newest Battle of the Sexes

EXTENSION OF REMARKS
OF
HON. EMILIO Q. DADDARIO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Monday, August 22, 1960

Mr. DADDARIO. Mr. Speaker, the most recent issue of Air Force magazine contained an interesting article by that always provocative and stimulating sociologist, Dr. Margaret Mead. Dr. Mead has examined some of the problems of how women can participate in the future exploration of space and some of the prejudices and inhibitions that must be overcome if we are to make full use of our talents.

Her call to develop a new sense of values, in line with the space age, is an inspiring summons to meet the new challenges that have arisen to our generation.

Under unanimous consent, I include the article, as follows:

THE NEWEST BATTLE OF THE SEXES

(By Margaret Mead)

If we are going to have an educated public that can support scientific research, the amount of funds that we need for the space age, and the kind of educational system that we need, a great deal is going to have to be done very rapidly to increase the average lay sophistication. It isn't going to be enough to have small children perfectly at home with relativity, because small children aren't in Congress.

The whole controversy over education gives us an opportunity to aim for this because our peculiar system of education involves so many people on both sides of so many issues that it's possible to turn the education system into a forum where we can discuss almost everything. We can discuss arithmetic; we can consider the fact that 8 years of arithmetic almost certainly ruins any mathematician for good, unless he can invent some very ingenious way of escaping. We can discuss our present attitude that mathematics is unfeminine, that if the best student in the mathematics class is a girl, she is told to study typing, while we walk around with the silly notion that we are going to have enough men scientifically trained to teach science in this country, although we obviously aren't.

No matter what amount of Federal subsidy of education comes through, no matter how well we step up our school systems and honor our teachers, we are not going to get enough men science teachers. And if we continue to insist on having male science teachers, science is going to be taught by male physical-education instructors. Science in this country now is too frequently taught by male physical-education instructors and female home-economic teachers, neither of whom are interested in it or fitted

for it. And we are going to have more physical-education instructors, because girls like boys to go into the field because it gives them a rapid career, allowing them to get married earlier than if they went into the sciences. Teenage girls today are exceedingly important in the career choices of boys.

Our very peculiar present setup, where boys make their career choices when they are in high school, and are already going steady with girls who are determined to marry at once, means that the girls, of 16 or so, have a crucial voice in the career choices of boys. Thousands of boys are being diverted from scientific careers and longtime careers of any sort, because when the boy says, "Oh, how I would like to be a geologist, or a physicist, or an architect," the girl says, "How long will it take?" That is the only thing that interests her.

The present split in knowledge and attitudes toward the future and toward space, between men and women, is very serious. Actually, we have a greater split in the knowledge of men and women today and in the attitudes of men and women than we have had since women started going to school. The general belief that women aren't interested in the hard sciences, that women shouldn't go into mathematics, has coalesced with the fact that women want men to stay at home. Women want men to stay at home now probably more than they have at any period in history. They need them more. They need them to look after the children and help build the house and do all sorts of things that they didn't used to need husbands for. They used to have other female relatives and neighbors to help or not so many children. But now, they need husbands at home, and there is a tremendous objection to men going anywhere. Part of the feeling about space, which spreads right through the country, is women's objection to men's going there.

We have done all these fancy things, such as having seven married astronauts, with one whose wife volunteered for him. We think that's very pretty. But I don't think it is. I think it's like giving women diplomas when they push their husbands through college. We have insisted that the astronauts be normal married men with children. We have not permitted them one single deviation in any known direction. The way they are represented in the magazines, you can hardly tell them apart. They were picked out by computers to specification, and the assembly of seven such perfect people in physical and physiological and reaction time and flexibility terms is, of course, a tremendous achievement that you could only do with a computer and a population of almost 200 million. At the same time, our emphasis has been on producing people who are just alike, and the astronauts are all presented in this form, and they are not models for other women's husbands—not one little bit.

Part of this is, of course, due to the general state of research in the fields of space. Nobody is doing decent research in the social sciences in space at all. No one is really considering what the composition will utimately have to be of groups who will work together in space. They are picking individuals who are nicely anchored to a wife and children here on the assumption that that will make them want to come back. I think it shows a terrible ignorance of space engineering to believe that at this stage it's going to be up to them to a very great extent as to whether they get back or not.

We are not considering the human aspects either, in our attitude toward space or what space colonization and space travel will ultimately mean. Science-fiction writers are, but science-fiction writers take a very gloomy view of the human race, so that while they spread a wonderful picture of the possibilities of space, most of them spread tenth-rate genetics and twentieth-rate sociology and very dim ethics as they picture race wars in space and evolution going backwards in space and terrible rows of incestuous colonies on spaceships in space. The general picture of humanity being presented through science fiction is very poor. The research on the human element is very poor, and the division in our minds between hardware and technology on the one hand and human lives as they are lived here, is much too great. But, on the other hand, what space can do and what a recognition of the importance of space can do to change our present attitudes toward the future and our present capacity to build the kind of character we want in young people, could be enormous.

If you look the world over today, most of the advanced countries in the free world are suffering from apathy, boredom, togetherness, and other sorts of behavior with low survival value. A great many people in the free world are worried about the character of our young people. They are worried, for example, because there is so little respect today for any sort of precision. No one thinks under any circumstances it is necessary to get anything right.

Not only that, the average American thinks that if you blame him for getting anything wrong, you are mean and unkind, and not a good person at all. So, the taxi driver goes in the opposite direction for half a mile and when you point it out to him, he says, "Well, everybody makes mistakes." On the railways, you buy a ticket 3 weeks in advance, and you get on the train and then there is no berth, and they say, "Yes; well, things aren't what they used to be, are they?" Secretaries are incapable of transposing three figures from one sheet to another.

Just as we approach the period where we are going to have to use technology a great deal more, we find we are not able to build a decent respect for accuracy in our young people. And accuracy is terribly necessary in the air and in space.

The second defect—apathy, lack of ambition, conformity—all the different names that we call it today, which results in everybody wanting nothing but togetherness and a job that will guarantee togetherness, comes partly from a lack of belief in any future at all and partly from a lack of belief in a future that is exciting and worth living for. People are behaving today the way they behaved in the middle of the war. They are afraid that they are going to lose the chance to live. So they snatch and grab everything right now. They want to get out of school, they want to get degrees, they want to get a job, they want to get married, they want to have life—all of it right away. This is serious, because it means that we are going to be short of scientists, short of statesmen, short of planners of every sort. In order to have real creativity, you have to have a belief in the future, and a belief that the future is worth planning for, worth working for, and worth living for.

Now, fortunately for us, as Americans, the one thing that Americans like better than almost anything else, is a little empty space. We have been fascinated since the beginning of our Nation by the size of our country, the emptiness of it, the way we could go out and cut down trees and put something else up. We have, in fact, destroyed a lot of the country in our enthusiasm for creating empty space and filling it up with something else.

I grew up with the notion that the frontier had shaped our characters and that there was no frontier any more. In 1920 we all knew that there was no frontier any more. What we had to have were frontiers in literature, scientific research, human welfare. This was a beautiful figure of speech. I used it for years, but the first time somebody really talked to me about space colonization and what it might be like to really put a colony out there that could do as it liked, I discovered that a little real new space in which you could put a new society was much more exciting than pushing back those figurative frontiers.

If we can catch the imagination of our young people with the possibilities that space offers, we then may have a sufficiently longtime perspective for them to be willing to do the kind of studying that is going to be necessary for the kind of scientists and engineers that we need in space. Study is going to be necessary for the kind of poets who are going to write about space too, and the painters who are going to paint about it. Those people who have been advocating a science education at the expense of everything else want to remember that to date it's the poets and the painters and the dreamers who have created the climate of opinion that made it possible for the scientists to invent and build.

This is the first time in history in which we are having to tell boys that "your job in the world is never to kill anybody, if it can possibly be prevented"—in which we are genuinely phrasing all our military establishment as a deterrent. We are telling people that they are going to have to fly around for years and years with bombs they mustn't drop. We are having to tell young people in new countries that are terribly impressed with themselves, just full of oats and beans, who would like to go out and win a lot of glory and die for something immediately, that this is the most destructive thing that they can do.

Bravery is going to consist in living—year after year, with patience, with endless alertness and endless attention, and no chance to drop the bomb, or let off the missile, or anything else. This is our phrasing of the present conflict. This asks a tremendous amount of men—it has never been asked of little boys before to look forward to such a future.

We are asking masses of our young people to go into the armed services where they will be trained in skills that the one thing they must not do is use. This the human race has never asked of males before. Can we only combine this request for endless patience, endless nonprovocativeness, and endless summit conferences, with a sense of outer space, that the next 100 years is going to present the most exciting adventure that human beings have ever had? "You are going to have a chance to get into this, kids," we can say. "You are going to be asked to do things that will require more heroism than any human being has ever been asked to show before."

They are going to be asked to explore, and on explorations, we always send men alone—that is a fixed rule of exploration, because we want them to come back. No women. It isn't a question of coming back to their wives, it's a question of having no women on the exploration at all, so the men will come back. Later, for colonizing, women will be needed. But first astronautics is going to involve men exploring. Girls have got to be back of the idea, and girls won't like a lot of men vanishing into outer space and not coming back. Unless we can involve the girls in the issues that are important, we are going to have every girl in this country pushing against our scientific programs and against an understanding of space, because they don't want the country turned into a widow's walk as Portugal was in the days of Henry the Navigator, when thousands of men sailed away and didn't come back.

What we want today is, instead, the kind of notion for the girls which involves them in the program, too. Now, the way to involve the women in it is going to be to emphasize some other things. Bravery in men women appreciate. But they have never

been awfully enthusiastic about long-term expeditions. The things that women are concerned with today are the safety of their children, the extent to which we are going to be able to turn the possibilities of space into new forms of safety in this world, the question of whether we will develop forms of political organizations that can cope with the dangers of the space age.

There are going to be no continents any more, and no nations in the old sense. We are going to have to transform the role of each nation into keeping all the other nations from blowing up the earth—this is going to be something that is meaningful to women as well as to men. Finally, the more we think about the strange beings we may encounter in space the more we recognize the unity of the human race and realize that we are one species.

Everybody in this country is voting for medical research. You remember there was a Gallup poll just a short time ago asking people where they thought the priorities lay, and space got a little miserable few percent and medical research got way up around 90 percent. Medical research means two things to Americans—it means prolonging their own lives, because they haven't enough faith in the future to think that other people's lives are going to be interesting later, and it means particularly to girls and women humanity and compassion and relationship to other human beings. We are going to have to build these two sets of ideas together into a program, so that space means greater well-being for our children and adventure, an outlet for all the things we thought there wasn't any outlet for, and a belief that the frontier isn't closed, that there are endless possibilities and we don't need to be discouraged by the population explosion, and we don't need to feel that life is going to get duller and duller so it isn't worth living.

We can begin to solve some of our age-old problems of human organization, when we realize that this is just earth, with just one human species on it, and with such communications that you can get anywhere in a few hours.

Once we develop these new values it will be possible to reset our expectations and hopes, release the imagination and creativity of our young people, and preserve the human species on earth and in space.

The Religious Issue

EXTENSION OF REMARKS

OF

HON. WINT SMITH

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 22, 1960

Mr. SMITH of Kansas. Mr. Speaker, much has been printed and said in recent months concerning the so-called religious issue as it pertains to the political campaign this Nation faces which will result in the election of a new President of this Republic.

As a result of much that has been printed and said, a great amount of misinformation and misconception of the issue has resulted.

In my opinion, one of the most forthright, factual articles, stripped of any semblance of religious bigotry I have had the privilege to read, is one by Dr. John A. Mackay, a prominent Presbyterian clergyman, which appeared in the July 4, 1960, issue of U.S. News and World Report. I ask that the article, "The Other Side of the Catholic Issue" be inserted in the appendix of the RECORD.

THE OTHER SIDE OF THE "CATHOLIC ISSUE"—A PROTESTANT SPOKESMAN ANSWERS MONSIGNOR LALLY

(By Dr. John A. Mackay, president, Princeton Theological Seminary, 1936–59)

The interview with the distinguished Roman Catholic clergyman and editor, Msgr. Francis J. Lally, which was published in a recent issue of U.S. News & World Report (May 30, 1960) is a fascinating and highly significant document. It is a contribution to a continuing dialogue on a great public question which has been going on in recent years between Roman Catholics and Protestants.

To my mind, however, Monsignor Lally has not satisfactorily disposed of a number of crucial issues which are of widespread concern to Americans, especially in a presidential election year.

I

I am unable to accept Monsignor Lally's suggestion as to the basic source of the anxiety at present prevailing in the United States with regard to Catholicism in politics. Let me say forthrightly that it has nothing whatever to do with social or religious prejudices caused by the advent in recent decades of so many Roman Catholics from abroad.

Much more is involved in the current anxieties and suspicions than a predisposition, which is described as a result of historic forces and is alleged to be located chiefly among Protestants who belong to evangelical and fundamentalist groups.

I speak as a representative Protestant churchman. In terms of denominational connection, I am a Presbyterian. As a Presbyterian I belong to a Christian tradition—the Reformed—which places the Holy Catholic Church, the church universal, above every existing manifestation of the church, including the Roman. While being profoundly evangelical in the classical sense of the term, I am committed to the contemporary movement toward Christian unity. I can say, moreover, gratefully and unashamedly, that I owe much to some thinkers and saints of the Roman Catholic Church who lived in France and in sixteenth-century Spain.

But I speak for myself, and also for a gerat host of informed, influential and unprejudiced American Protestants who are profoundly concerned on precisely this score—Catholicism in politics. It was this anxiety which, a decade ago, led a group of Protestant churchmen and others, myself included, to found the organization known as Protestants and Other Americans United for the Separation of Church and State. The founders of this organization have played a prominent part in the communions to which they belong, and some of them also in the ecumenical movement. At no time have they been associated with bigotry.

It appears to me, moreover, eminently unfair to suggest, as Monsignor Lally does, that, when similar anxieties occur among people who have no religion at all, it represents simply their general antipathy toward all religiously inclined folk. Episcopalians and Baptists and Jehovah's Witnesses. Some such individuals, the editor of The Pilot (Monsignor Lally) suggests, single out Roman Catholics for special attack only because their church offers a larger target.

This analysis fails to do justice to the spirit of the so-called irreligious. These may be philosophical humanists, agnostics or freethinkers, or just plain people with no religious faith. They cherish, nevertheless, genuine anxiety on the subject, Catholicism in politics. They are not bigots, they are just concerned Americans.

The basis of the suspicions and anxieties referred to in the interview have nothing whatever to do with religious bigotry, on the one hand, or with nonreligion on the other. The ground of concern is something entirely different.

It is the growing conviction among Protestants and non-Protestants alike, let me say it with calmness and candor, that a new phenomenon has appeared in the secular life of the United States. This phenomenon played a dominant part, often a sinister part, in the life of the Latin nations of Europe and the Americas for some four centuries. It began to make its presence felt for the first time in this Nation's history in the thirties of the present century.

The phenomenon in question has been traditionally known as clericalism. It may be defined thus: Clericalism is the pursuit of power, especially political power, by a religious hierarchy, carried on by secular methods and for purposes of social domination.

Clericalism has its seat not in the religious rank and file, whether clergy or laity, though it makes use of these, but in the church's hierarchy and its mighty religious orders. By constitutional right, these alone control its affairs. That great Spaniard, Salvador de Madariaga, former professor of Spanish literature in the University of Oxford and the last President of the League of Nations, once wrote: "Clericalism is an evil unknown to Protestant countries. It is a disease of Catholic societies." And he added these significant words: "It is extremely difficult to attack clerical abuses without seeming to attack Catholic institutions, that is, without being labeled a bigot."

The goal of clericalism is to exert a decisive influence upon the representative spheres of public life in the interests of the church's secular power. Clericalism seeks to shape the policies of state, the composition of governmental departments, the expression of opinion, the appropriation of funds, the forms of entertainment. The process of achieving this goal involves the use of pressures which are linked to subtle forms of intimidation where resistance is offered.

II

A delicate but inescapable question arises: Given the phenomenon of clericalism, could it affect the policies and attitudes of a President of the United States who happened to be a Roman Catholic? Would he become subject in a special manner to the traditional pressures which have marked the history of clericalism through the centuries?

Let me make unmistakably clear that, so far as I personally am concerned—and I speak, I believe, for the vast majority of Protestants in this country—there is no question of principle involved in a Roman Catholic fellow citizen's being elected to the Presidency of the United States.

In June 1958, I was a member of the "Meet the Press" panel which debated this particular issue on a national television program. At that time I gave it as my judgment that everything depends upon the personal qualifications, character and outlook of a candidate for the Presidency, quite regardless of his religious affiliation. The debate to which I refer took place before the names of any presidential candidates had been announced. It would be positively appalling if an aspirant to the White House were ruled out in advance because he happened to be a member of the Roman Catholic Church.

It would be equally unfortunate if a candidate for the Presidency were to receive a bloc vote simply because he was a Roman Catholic. If that were to happen, it would do no ultimate good to the person concerned if he were elected. It should also do irreparable harm through popular reaction to the church that gave him mass endorse-

ment. There is no place in a true democracy for bloc or mass voting by citizens who belong to a given religious faith, whatever that faith may be.

III

The issue involved has nothing whatever to do with a man's religious faith or its practice as such. The question of religion could be legitimately raised only in one instance, if, in the exercise of his political responsibilities, a man's conscientious loyalty to his faith involved him in subjection to some power other than God, his conscience or his country.

At this point I am compelled, in the interests of clear thinking, to take issue with Monsignor Lally. He maintains that in the temporal order the relationship between a Roman Catholic and the Vatican is slight. He defines the latter in terms of a diminutive territory which was constituted in 1929 within the precincts of the ancient city of Rome. This territory is known as the state of Vatican City, a state which has its own foreign relations, currency and subjects.

The fact is that the Vatican is the seat of global papal authority. This authority is exercised not only over the few hundred people who inhabit less than a square mile of land. It extends also over scores of millions of men and women throughout the earth. In all matters relating to the witness and welfare of that world organization which bears the name "Holy Roman Catholic Church," these people owe their supreme allegiance to a hierarch, hailed as infallible, who dwells in that historic mansion. The Vatican is thus the local symbol of a universal claim, which involves both church and society.

It is impressive, in this connection, that in recent decades the Roman Catholic Church in the United States has tended more and more, whether for religious or for political reasons, to drop the term "Roman" from its title. This trend has been particularly in evidence ever since Rome as a place name became associated in the American mind with Mussolini and his Fascist dictatorship; and, very especially, since Roman began to suggest foreignness to people increasingly imbued with burgeoning American nationalism.

Not once in the course of the interview now before us does Monsignor Lally attach the term "Roman" to his particular communion and to those who belong to it. The omission of one word and the monopolization of another becomes embarrassing, and even irritating, for Protestant as well as Eastern Orthodox Christians in the United States. They have gloried in belonging to the Holy Catholic Church, to the church universal. They are faced, however, with the fact that a historic Christian communion in whose ecclesiastical title the designation "Roman" is both official and traditional, now drops this term and calls itself simply "the Catholic Church." In the interests of Christian understanding, and of American solidarity at a crucial moment in national and world history, it is essential that this matter become the subject of dispassionate clarification. Is the virtual suppression of the designation "Roman" an effort to disguise a foreign relationship, or is it an attempt to establish an untenable claim?

But, whatever be the answer to the question just raised, of one thing there can be no doubt: The church hierarchy in Rome claims absolute authority to issue instructions to lay members of the Roman Catholic Church. It instructs as to how they should think and act with respect to truths regarded by the church as essential to the faith, and regarding things which it considers indispensable for its institutional welfare. Canon law is universally applicable among Roman Catholics.

In this regard U.S. News & World Report rendered an important public service in reproducing in its issue of May 30 the editorial that appeared in the Vatican City newspaper L'Osservatore Romano on May 17, 1960: "* * * The church, established by Jesus Christ as a perfect society with its hierarchy, has full powers of true jurisdiction over all the faithful, and therefore has the duty and right to guide, direct and correct them on the level of ideas and on the level of action. * * * The Catholic can never overlook the teaching and the instruction of the church; in every field of his life he must base his private and public behavior on the guidance and instructions of the hierarchy."

IV

This leads us directly to the crux of the issue: To what extent can the Roman Catholic Church, in full loyalty to its nature, refrain from projecting itself into the affairs of state?

To what extent would a Roman Catholic President be free to follow in all things his own best judgment while remaining in good and regular standing in his communion? In a word, what authority does the church claim to have in relation to the state, and, in particular, to those officials whom it counts among its members?

Nearly 20 years ago it was my privilege to belong to a small group of Protestants and Roman Catholics who met from time to time in the faculty house of Columbia University. The object of our meeting was to try to understand what we respectively meant by "religious liberty." I shall never forget the luminous remark of the late Father Gerald Walsh of Fordham University, when he said: "Religious liberty is a matter which the Roman Catholic Church deals with, not in terms of principle, but in terms of policy." The eminent teacher did not deny that in this field a historic principle is part of his church's heritage. What he meant to say was that the particular way in which the principle of religious liberty is applied depends upon existing circumstances. To all intents and purposes this important issue is determined in terms of policy, not principle.

The same observation is applicable to church-state relations. No informed Roman Catholic will dispute that there is an official and traditional doctrine as to the relationship which church and state should bear to one another. Each has its own particular character and sphere of responsibility. They are distinguishable but they are ultimately inseparable. As a distinguished Italian hierarch said a few years ago: "The complete separation of church and state cannot be regarded as an ideal situation."

What is the ideal situation in the eyes of the Roman Catholic Church? Monsignor Lally suggests that it may differ from one country to another, according to the will of the people involved. He refers to Spain as an illustration. Let me do so also.

The particular church-state relationship existent in Spain today represents an ecclesiastical tradition and a theological principle which, from the viewpoint of the Spanish hierarchy and of the Vatican authorities who drafted and approved the concordat with the present Government, can be regarded as expressive of the historic aspiration of Roman Catholicism. It is not true that the church-state relationship in Spain, which Monsignor Lally personally regards as most unideal, is due to the will of the Spanish people, "who," he says, "must decide about their own country." In 1931 the Spanish people created a republic, which was not pro-Communist. A democratically elected government was subsequently betrayed by the world's great democracies, who, through fear and ecclesiastical pressure, failed to give it the support to which it was entitled under international law. They abandoned the republic to the mercy of Hitler and Mussolini, who rehearsed on Spanish soil the Second World War.

The way was opened for the coming into power of General Franco. He, in his turn, and without authority from the Spanish people, consummated a concordat with the Vatican. So far as human rights, especially for Protestants, are concerned, this concordat is responsible for the darkest period in Spanish history since the days of the 16th-century Inquisition.

Let me allude now, however, to an opening vista of hope. The traditional doctrine of church-state relationship, it is true, has never been revoked by the Roman Catholic Church. This doctrine is still stoutly defended by distinguished hierarchs. But today this doctrine is being subjected to intense scrutiny by eminent Roman Catholic theologians and ecclesiastical statesmen in many lands.

There is clear evidence that a new doctrine is in process of coming to birth which could be presented in due course to the papal hierarchy. There are distinguished Roman churchmen in Europe and the United States who favor the relationship between church and state which is enshrined in the Constitution of this country. For the present, these men are implicitly regarded as heretics. They represent, it is alleged, a sectarian and not the traditional and authoritative Roman viewpoint. Is an evolution of the historic principle that governs church-state relations underway? Will policy become a mere synonym for expediency? May principle continue to be preserved in order to keep alive a historic dream?

Whatever be the answer to these questions, something of particular interest to Americans is taking place. What Father Walsh called policy and what Monsignor Lally calls political climate tends to become determinative of Roman Catholic action in the application of the traditional pretension of the church to exercise authority over the state and its activities.

Let me cite some recent evidence: When dictatorships which have been favorable to the church, and have had the church's benediction, are clearly headed for dissolution or serious trouble, the church finds a way to criticize their regime by making some public pronouncement. By doing so it is able to anticipate and forestall a possible violent reaction against the ecclesiastical authorities on the part of an emergent revolutionary government on the ground of the church's alleged connivance with the dictator.

Here are concrete examples: When the fall of Perón became imminent in Argentina, the church spoke out critically. It is speaking out critically today in the Dominican Republic. Some sectors of the church begin to speak out in Spain. A dispatch from Benjamin Welles, the New York Times correspondent in Madrid, was published in that newspaper on June 14, 1960. It tells how elements in the church, especially among the Basques, are becoming critical of the Franco regime. This significant paragraph occurs in his report: "The fear among the Franco opponents in the church is that, if the regime falls, the public may attack the church for allegedly having condoned dictatorial abuses."

What is the bearing of all this upon our American situation and upon important political decisions which must be made during the current year? Let it be frankly recognized that sensitivity to "political climate" is becoming a determinative force in Roman Catholic circles.

V

I come to the final decisive question: In this total context of fact, how free could a Roman Catholic layman be in carrying out his duties as a President of the United States while remaining in good and regular standing in his communion?

As regards the fundamental nature of individual freedom, Roman Catholics and Protestants are largely agreed. Over against a viewpoint which has become dominant in American life and culture and which tends to identify freedom with pure license, that is, with complete independence of any absolute loyalty, they stand together. For both Roman Catholics and Protestants, freedom derives from dedication to an absolute of some kind, to which one becomes loyal and obedient. For both the true Absolute is God. In the words of Monsignor Lally, it is "the transcendent spiritual allegiance to God" which makes men free. It is a paradox but it is true: Man becomes free when he becomes captive to the Eternal Goodness.

But what is the place of the church in relation to God and His will? This is the problem. For one Christian tradition, the church is the sphere where God works in a special manner and whose supreme head is Jesus Christ alone. For the other the church itself, in the person of a human hierarch, becomes the absolute and infallible representative of Deity.

In Roman Catholicism, the institutional church takes on an importance and is given a status which it does not have in Protesantism. Loyal obedience to the church's status and authority can lead to clericalism, as it has been doing quietly, conscientiously but insistently in the social and political life of our country. It can lead also to a more absolute demand on the thought and life of the Roman Catholic layman than could ever happen in any Protestant communion.

Let me illustrate what I mean. A leading judge in this country, a man who has achieved national eminence, told me this story 6 years ago: "Some of us who were close friends," he said, "Protestants, Roman Catholics, and Jews, decided to form a club for the discussion of the spiritual life and important religious issues. All were enthusiastic about the project. One day, however, the leading Roman Catholic member of the group came to see me, all crestfallen. 'I have consulted the bishop,' he said, 'and he told me that no Roman Catholic layman can discuss religion with other people unless a priest is present.' "

But in the end everything will depend upon the individual himself whether he be a simple citizen or President of the United States. In the Latin and especially in the Hispanic tradition, devout Catholic laymen have often stood out against what they regarded as the undue pressure of their Church. In some instances they actually brought about its disestablishment. They maintained their religious faith; they were faithful in their devotional practice. But, in the interests of their country and in loyalty to their conscience, they were resolutely opposed to clericalism and all its works. Sometimes they were excommunicated, sometimes they were not. Whether they were or not depended upon the "political climate," national and international, in which the drama was set.

It would be most unworthy if a Roman Catholic layman who aspired to be President of the United States were to be regarded with prejudice or discriminated against. It is both natural and right, however, that certain assurances should be asked of him on matters of vital importance where the official attitude of his church might arouse popular concern.

Many questions are being asked about the attitude of a Roman Catholic as President: Would he be free to attend services in other churches in his official capacity? What would he do about birth-control legislation if passed by Congress? What would be his attitude on Federal aid to church schools and other institutions?

Let us suppose that the candidate in question gives satisfactory evidence of possessing the capacity and the character, the experience and the vision necessary for the fulfillment of his high office. The decisive question to be answered by a candidate of Roman Catholic faith is really this: What would your decision be if called upon to choose between a mandate of your church on a specific issue and what you as a public servant believed to be right?

Juvenile Nondelinquency

EXTENSION OF REMARKS
OF
HON. JOEL T. BROYHILL
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1960

Mr. BROYHILL. Mr. Speaker, inasmuch as our newspapers and other news media constantly publicize the activities of so-called juvenile delinquents, it would seem most appropriate to give equal recognition to the thousands of boys and girls who try to be good citizens. With this thought in mind, I should like to point to an article which appeared recently in a St. Petersburg, Fla., newspaper, and which was brought to my attention recently by a very fine lady in my Congressional District, Mrs. Gladys Ragsdale of Springfield, Va.

The article reads as follows:

JUVENILE NONDELINQUENCY

Fortunately the gang wars and other misdoings of juvenile delinquents still remain news, i.e., unusual. And more fortunately they are offset by such items as the one following, which don't often make the news columns.

Recently a woman was driving along the Mount Vernon Boulevard just south of Alexandria, Va., when one of the tires became flat. She got the car off the pavement and began signaling to passing motorists for help.

An acquaintance stopped and she asked him to telephone to a service station to send out succor. But, before he could act, another car drew up, and the driver—a teenage young fellow—asked if he could change the tire. His services were accepted gladly.

When the lady got out her purse to pay him, he politely declined, and handed her a printed card, which read as follows:

" 'Originators' Auto Club, Alexandria, Va.

"Chuck Nolton, a member of the 'Originators' has just assisted you with your roadside repairs. The 'Originators' are an organized Hot-Rod Club dedicated to the safety rules and regulations of the Commonwealth of Virginia."

On the reverse side was an insignia and under it was printed the following legend:

"Remember: Only a cat has nine lives."

Contrary to what some people think, good ideas are as contagious as bad ones. We're glad to see this one being picked up in Pinellas and along the Suncoast. It may have far-reaching effects.

There is a sequel to this story which indicates that the seed took root. A young Florida boy read it, wrote to the Alexandria police for the address of the Originators Club, and personally attended one of the club meetings. His purpose was to learn how the club operated with a view to organizing a similar one in his own hometown.

Our young men and women who are making a conscientious effort to overcome the stigma attached to the term "teenager" deserve every possible boost to their morale and initiative. They are working against odds far above their maturity and experience. I am proud of these fine young men in my own congressional district for striving to set a good record for themselves and their contemporaries and an example for other junior citizens. I know my colleagues join me in praising them for their accomplishments.

Regulating Brake Fluid Manufacture

EXTENSION OF REMARKS
OF
HON. KENNETH A. ROBERTS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 23, 1960

Mr. ROBERTS. Mr. Speaker, I have introduced a bill to establish Federal safety standards for motor vehicle brake fluids to eliminate a very serious highway safety hazard.

Substandard brake fluids now on the market are a menace to all who use our streets and highways. Twenty-seven States and the District of Columbia have attempted to meet this threat by legislation but apparently the only way that these hazardous fluids can be kept off the market is by Federal legislation.

In a recent test, Chrysler Corp. engineers found that 28 percent of the brake fluids marketed in the Detroit area were substandard.

Every vehicle with brakes depending on substandard hydraulic fluid is a menace to life and limb.

An article in Automotive News August 15, 1960, describes these substandard brake fluids as "phantom killers."

As part of my remarks, I am including the following article from Automotive News giving details on the danger which my bill is designed to eliminate:

BRAKE FLUID DANGER

Potential death still stalks the Nation's highways in the form of substandard brake fluids, even though 27 States and the District of Columbia have passed legislation aimed at preventing the sale of such products.

In a recent test, Chrysler Corp. engineers found that 28 percent of the brands of brake fluid being marketed in the Detroit area were substandard and that these substandard fluids are "even worse than they were 5 years ago."

Of the 75 brands of commercial brake fluid tested, 15 were found to be so substandard that they would not qualify under any Society of Automotive Engineers rating formula, and six brands were of the "moderate" type or of SAE 70R2 which in most of today's high engine-output cars are considered to have a boiling point below a safe factor.

Despite the fact that 15 brands were definitely substandard and did not meet any SAE specifications (compared with 23 such brands 5 years ago), the quality of the substandard brands tested was considerably below that of the same brands of the earlier period. Five years ago, these substandard brands boiled at an average temperature of 181° F., while today's purely substandard brands boil at 179°.

Five years ago, the 23 moderate-duty brands boiled at an average of 245.5°, while the 6 moderate-duty brands tested this year boiled at an average of 258°, showing an improvement in their quality.

Today, it is considered that a safe brake fluid should withstand temperatures up to at least 300°, and with the larger, more powerful cars, fluids should be able to remain constant at 350°.

The insidious thing about these substandard fluids is that they are not only "phantom killers" in themselves, but when they are added to the 54 brands that do meet SAE heavy-duty or super-heavy-duty specifications, they tend to lower the top boiling point of the safe fluid that is in the car and make it unsafe.

PHANTOM KILLERS

The phrase "phantom" or "vanishing" killers is used in connection with these substandard brands because, while they vaporize under hard stopping conditions, by the time the car is investigated as to the cause of an accident, the brakes have cooled and the vapor returns to its fluid state and the brakes will work again.

Engineers like Charles M. Heinen, assistant chief engineer of materials laboratories for Chrysler Corp., and F. J. Markey, sales engineer of the Delco Moraine Division of General Motors, who are working to develop safer brakes, realize the extreme danger in allowing these substandard brands of fluids to be marketed, although they admit that they have no proven figures on the number of fatal accidents caused by brake failure due to substandard fluids and contributing factors.

Another insidious potential "killer" is found in the cars equipped with the modern foot-applied parking brake that acts on the rear wheels but has no warning light or other means except the release lever that is almost completely hidden under the dash to warn the driver that his parking brake may be partly applied.

Approximately 58 percent of the cars sold this year are equipped with this type of brake and were sold with no warning light to let the driver know when he was driving with his brake partially on.

A recent near accident drives home the dangerous situation that can develop under this condition. In this case, a car that had no warning light was driven at normal expressway speeds with one brake shoe held partially on by the parking brake.

This developed so much heat that it not only caused a failure in the brake, entire loss of brake fluid and entire loss of braking ability but it also blued the metal part of the shoes on that brake.

Under this high heat condition, the brake cylinder cup has a natural tendency to reform and lose the flare that holds it against the brake cylinder. This allows the fluid to gush out of the system. When the cup cools it also shrinks in diameter, it is claimed.

There seems to be no question that vaporization of the fluid also takes place regardless of the quality of the fluid in the system. The only reaction to subnormal fluids under this condition would be that the brake would fail sooner and under much less heat.

In addition to the rubber cylinder cup in the brake cylinder, some makers use metal expanders which will keep the cups from losing their flare and shrinking under high heat longer than the assemblies where only the rubber cup is used. Thus, in a sense, these metal expanders can prevent many accidents of this type.

Since they cost a few cents per wheel, some vehicle companies and many service stations do not put them in the brake cylinder either as original equipment or in brake repair procedures.

MOUNTAIN PROBLEM

The terrible thing about brake-fluid failure is that unless a leak develops in the system, cars normally operate at brake-cylinder temperatures of 158° to 250° under hard driving. But the high heat that makes them killers develops under conditions when the brakes are needed the most.

Coming down a long hill with the brakes on can generate as much as 600° of heat surrounding the brake cylinders, engineers say, and a dragging parking brake can develop 700° or more. Even the master cylinder is located in the engine compartment where temperatures of 300° are not uncommon on hot days and in stop-and-go driving.

Safeguards for mountain driving are giving brake engineers great concern in today's cars with their hothouse wheel compartments. And the problem is becoming more acute as the size of the wheels is reduced.

The day may come soon when present brake linings and hydraulic brake parts may not be able to stand the tremendous heat that is developed.

Currently, however, the problem is centered around areas of mountain driving where, for instance, every 1,000 feet of elevation contracts the volume of the fluid and lowers its boiling point from that of sea level.

Another problem is rush-hour expressway driving where the continual stop and go driving acts as a heat soaking agent and allows cylinder temperatures to climb.

According to Chrysler engineers, the quality of heavy-duty SAE 70R1 type brake fluids is alarming. Several of the commercial SAE 70R1 designated brake fluids tested will not conform to SAE specifications and a number of others are borderline.

Since only a limited amount of specification testing has been done to date, it would seem that a high percentage of trade name brake fluids designated as SAE 70R1 type are illegaly labeled.

Chrysler engineers have not completed their tests on type 70R3 heavy-duty fluid but it is indicated that there is some cheating going on by some makers of even this highest type fluid.

While 27 States and the District of Columbia now have brake fluid legislation permitting the sale of only SAE 70R type brake fluids, only 10 States require registration and certification that individual brake fluids conform to the minimum SAE standards. Many States which do not require registration do not designate any enforcement department or agency.

Since certain less-reputable manufacturers of hydraulic brake fluids can operate in these States with minimum risks, it is apparent that the illegal use of the SAE 70R1 type designation could be harmful or damaging to the SAE, to the driving public and to the dealers who sold the illegally marked fluid in the belief that they were selling a safe, high-test heavy-duty fluid.

MANY SUBSTANDARD BRANDS

Chrysler engineers found that while a few SAE 70R3 type fluids have borderline boiling points, eight trade-name fluids have boiling points above 400°.

While there has been an apparent reduction in the number of individual brands of substandard and moderate-duty brake fluids sold in the Detroit market, the availability of these undesirable fluids is more extensive than the actual percentage of these fluids purchased.

This is illustrated by the following table of the types of brake fluids sold by all retail outlets contacted during this survey:

Retail outlet	Substandard	SAE 70R2	SAE 70R1	SAE 70R3
Major gasoline stations	14	2	50	24
Independent gas stations	7	1	8	2
Auto accessory stores	68	41	104	43
Franchised car dealers	0	0	3	5

Although 27 States and the District of Columbia have enacted legislation to protect motorists from substandard brake fluid, only 10 States have put sufficient teeth in their legislation to prevent the marketing of spurious products.

In the interest of safety, this Nation should have legislation that will adequately protect the owners of cars and trucks against being sold any of these substandard brake fluids.

And every State that now has such legislation should put sufficient teeth in their laws to prevent the unscrupulous from marketing their spurious products.

Dealers should take every precaution to make certain that their source of brake fluid is reliable and that each package is plainly labeled as to its SAE rating.

STATES WHICH GOVERN BRAKE FLUID

1. Alaska.

Greater Hartford Labor Council Resolution Protests Speedup System in Post Offices

EXTENSION OF REMARKS
OF
HON. FRANK KOWALSKI
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 23, 1960

Mr. KOWALSKI. Mr. Speaker, many of us in the House have protested to the Postmaster General against the establishment of speedup systems in post offices.

The Greater Hartford Labor Council, AFL–CIO, representing many thousands of workers in Connecticut, recently adopted a resolution strongly condemning the speedup instituted by Postmaster General Summerfield.

To those of us who believe that the Federal Government should be a model employer, setting standards for private industry to emulate, it is most distressing to find that the Post Office Department pays so little attention to human values in its operations.

Following is the text of the resolution passed by the Greater Hartford Labor Council:

THE GREATER HARTFORD
LABOR COUNCIL, AFL–CIO.
Hartford, Conn., August 9, 1960.

Hon. FRANK KOWALSKI,
House of Representatives,
Washington, D.C.

DEAR MR. KOWALSKI: At the regular monthly meeting of the Greater Hartford Labor Council August 3, 1960, the following resolution was unanimously adopted:

"Whereas Postmaster General Arthur Summerfield, not content with the best postal service in the world, has installed in most first-class post offices in the country a system called measurement system which is supposed to guarantee mail deposited in any post office before 5 p.m. will be delivered in any part of the country the following morning; and

"Whereas this system is a hardship on disabled veterans and the older employees in the postal service; many who have given their entire life to the service. No consideration is given to these employees, which is causing many of them who are very efficient employees to leave the postal service; they are unable to meet the efficiency rates prescribed by the Post Office Department; the morale is affected; it being the lowest it has been in years; although denied by postal officials, we consider it an antilabor, antiunion procedure, and nothing less than a "speed up" system: Therefore be it

"*Resolved,* That the Greater Hartford Labor Council go on record as favoring a bill which will eliminate this practice or any system which calls for the use of stop watches or allows any measurement of work which will rate the efficiency of any postal clerk; and be it further

"*Resolved,* That a copy of this resolution be sent to Connecticut congressional representatives, asking to actively support and vote for a bill which will eliminate the use of such systems and that all possible publicity be given this resolution in the press and that it be presented to the coming State labor convention August 29–31, 1960.

"Sincerely,
"CHARLES M. YOUNG,
"*Recording Secretary.*"

Columbus Day, a National Holiday

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1960

Mr. ANFUSO. Mr. Speaker, on February 2, 1959, I introduced a bill, H.R. 3835, to declare October 12 of each year, known as Columbus Day, as a national legal holiday. Some 26 States—more than half of the States in the Union—observe this day as a holiday. I believe the time has come for national, though belated, recognition of the great discoverer of the Western Hemisphere. Properly celebrated, a day dedicated to Columbus could serve as a great inspiration in our times.

I have received many letters of support for my bill from people in various sections of the country. One of these, Mr. Alfred P. Adamo, of Detroit, Mich., has sent me the text of a short article he submitted to the Denver Evening Post, which was published in its issue of October 12, 1958, under the title "Two Pioneers, Noce and Columbus."

Recently, Mr. Adamo had a letter printed at his own expense in support of my bill and copies of this letter were mailed earlier this month to the President, the Vice President, all Members of the Senate and the House of Representatives, also to all Governors, and other prominent persons.

Under leave to extend my remarks, I wish to insert into the RECORD the text of Mr. Adamo's article in the Denver Post and the letter I received urging support of my bill, H.R. 3835:

AUGUST 6, 1960.

Hon. VICTOR L. ANFUSO,
U.S. Congressman,
House Office Building,
Washington, D.C.

DEAR CONGRESSMAN: Fifty-three years ago a citizen of the State of Colorado, Angelo Noce, was successful in having the State of Colorado declare October 12 a legal holiday known as Columbus Day.

Since that time 26 other States have followed the example of the State of Colorado. However, I feel that Columbus Day should be national holiday and I am very much in favor of Congressman VICTOR L. ANFUSO'S bill in the House of Representatives requesting that action be taken toward that end.

Christopher Columbus discovered a land which is the cradle of liberty for all liberty-loving peoples throughout the world. Yet, nothing has been done in the United States to give October 12 the recognition which it rightly deserves.

As an American of Italian descent I respectfully appeal to you to do your utmost to support House bill 3835 offered in the 1st session of the 86th Congress.

Your support will be appreciated by all freedom-loving people of the United States.

Respectfully yours,
ALFRED P. ADAMO.

TWO PIONEERS, NOCE AND COLUMBUS
(By Alfred P. Adamo)

DENVER, COLO.—We always feel especially touched on Columbus Day, not only because it gives us occasion to honor a guy who found for us such a wonderful country to grow up in, but because it reflects also the persistence and foresight of one of our own Colorado citizens.

The citizen was Angelo Noce, a Denver printer. What he tried to do, and finally succeeded in doing, was obtain formal recognition from the State for a celebration that had been customary in the North Denver Italian community since about 1880.

Noce, who had been born in Genoa, the vicinity of Columbus' birth, wanted the State legislature to make October 12 a legal holiday, but it was a long time before he got any support.

October 12, so far as we know, was not Columbus' birthday. Not only do we not know the date of his birth, we're not sure of the year (we think it might be 1451) and we're pretty foggy about his family background.

The date picked by Italian-Americans for the celebration was, instead, the date on which Columbus' Spanish expedition first reached land in the New World (some 600 miles southeast of Miami).

The discoverer wrote in his diary that a small island was sighted at 2 in the morning on Friday, October 12, 1492. At daybreak the admiral spotted people on the island, which he approached in a small boat. The natives called their home Guanahani. We now call it by the name he gave it, San Salvador.

At any rate, Noce kept plugging away to make that day a legal holiday. In 1905 he succeeded in having legislation introduced and finally, in 1907, the Nation's first Columbus Day bill was passed.

The idea gained momentum. By 1922, when Noce died, all but nine States had followed.

So on this day, we take off our hats to two men: Christopher Columbus, the persistent explorer who was, in a sense, father of America, and Angelo Noce, the persistent pioneer who fought to be recognized as father of Columbus Day.

Wheat

EXTENSION OF REMARKS
OF
HON. EDWARD H. REES
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1960

Mr. REES of Kansas. Mr. Speaker, under unanimous approval by the House, I include a tribute to wheat by the Honorable Victor Murdock, a former distinguished Member of the House of Representatives from the district I presently represent in Congress. Representative Murdock was one of the great men of our State and our Nation. Members will be interested in reading this well-written article:

The sun is setting in the wheat country. The wind halts as the day dies, and the birds, after careening conclave in midair, wheel with much dispute and wing-ruffling confusion of choice, to their final tree in the grove where, as the rustling leaves grow still, their greenery deepens into shadows and turns purple against the shafts of gold, lanced by the sun across the landscape. Along the damp edges of the hedge the crickets intone for the nightlong chorus and a hunchbacked yellow sunfish noses a single widening circle upon the blue-green mirror of the pond. Across the meadow, grass, flower and weed from their drab, day array brighted to translucent pinks and shining fibrous silvers, quiver, ripple, flush in the pageantry of leveled light.

Silence grows. The house, the barn merge into the tranquility and thrust with strength from a window, back to the weak sun, a blazing bolt of his own light. The horses in their stalls, taking their respite erect, twitch the hay from the mow and grind and grind, in contemplative content and the cow, moved by some vagrant emotional unrest, offers an unavailing protest from her place, which, having begun weakly, she as incontinently concludes. The pullets fidget and fluff fussily and feebly along their perch. The swine contest for the single undesirable corner of the sty in repeated pyramids which at last collapse to a permanent repose. The dog, with an air of despair in exploration, makes final forage at the back door.

Silence grows. Down by the stream, with its trees which bend over it to look upon it

and never tire, a moccasin evidences his presence on a log, by sliding from it, and a muskrat plunges from one hiding place to another with a single splash and leaves no trace. A raincrow, alone at last with silence, mourns and prophesies. Between purpling east, house, barn, grove, stream and the empty west, the wheatraiser stands before the wheatfield and its wigwam shocks, marshaled in a farflung line as at attention. They and the bristling stubble are gold, dull, dead gold.

He and they have traveled long and far together. This is one of the thousands of resting places, of breathing places they have come to. The sweat, the vexations, the defeats, the depredations and deprivations of toil a little while ago were heavy enough upon him. But now as he turns and looks across the dull, dead gold field to the empty west the burden of the day's work lifts, and the yellow twilight strokes his soul in benediction.

Unfinished Work in Courts and Congress

EXTENSION OF REMARKS
OF
HON. JOHN V. LINDSAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1960

Mr. LINDSAY. Mr. Speaker, the Federal omnibus judgeship bill is must legislation in this windup session and, under unanimous consent, I include in the RECORD an editorial from the Christian Science Monitor which succinctly points to the need for this legislation:

UNFINISHED WORK IN COURTS AND CONGRESS

The fact that a record number of criminal trials has been held in any jurisdiction is not of itself good news. But an item of this sort from New York City indicates that the Federal courts there are trying to keep up with a situation which Congress should relieve.

The U.S. Courthouse in Foley Square, Manhattan, during the year ended May 31 saw the trial of 179 criminal cases, the largest number in a 12-month period in its records. This is not only a tribute to the energy of prosecutors and judges but a reminder that Federal district courts in many centers of the United States are badly overloaded and congested, with resultant delays of justice.

The most immediately helpful remedy for this situation is in legislation awaiting debate and a vote when the Senate and House of Representatives come back into session in Washington. The purpose of these is to create new Federal judgeships.

The House Judiciary Committee on June 15 reported a bill to add 35 new judges to the Federal judicial system. This would be better than the 25 positions recommended by the Senate Judiciary Committee a year ago. But, according to the Federal Judicial Conference, representing the courts, the number really needed is nearer 50.

Creation of new judgeships is not the whole answer. Improvement in court rules can help somewhat. And Congress should think carefully before making Federal crimes of acts that can be handled by State courts. But at least twoscore of new Federal judges are seriously needed, and Congress should act next month to pave the way for their appointment.

Why Can't the States Get Together on Voting Rules?

EXTENSION OF REMARKS
OF
HON. WILLIAM H. BATES
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 23, 1960

Mr. BATES. Mr. Speaker, the article printed below was contained in the edition of the Saturday Evening Post of April 30, 1960.

During the recent recess of the Congress, many new residents of my district contacted me relative to this very serious problem which has disenfranchised millions of Americans. This is certainly negligence of a high order that demands immediate rectification.

It seems to me that the 50 States should amend their laws so that these citizens could continue to vote. This is a subject worth of the consideration of every State legislature and an appropriate matter for the agenda at the conference of Governors.

The article follows:

For a nation that prides itself on universal suffrage, the United States certainly puts up with a whimsical variety of rules and regulations for getting adults of sound mind onto the voting lists. For instance, if you move from South Carolina to Idaho, you can reregister as a voter in 6 months' time. However, if you move from Idaho to South Carolina, it will take you 2 years to get your voting privileges back. That is, unless you are a minister of the Gospel, in which case you will be allowed to vote in 6 months.

Such examples of nonconformity can be multiplied many times. Some States require 6 months' residence, some a year's residence and some 2 years' residence before a person can be registered as a voter. If a person moves from county to county in the same State, he stays off the voting rolls for periods that vary from 30 days in Nevada to 1 year in Louisiana. Even the business of moving from one precinct to another in the same community is attended by wildly varying consequences. If you move from one precinct to another in Jackson, Miss., you lose your right to vote for a year—even if you merely moved across the street. But if you move from precinct to precinct in Madison, Wis., you can get yourself reregistered in 10 days' time. The figures for the other States fluctuate between these extremes.

Residence requirements are only one part of the tangled situation. Five of the States require annual poll taxes, varying from $1 to $2. Eighteen of the States require literacy tests. Seven of the States require voters to take loyalty oaths. Forty-six of them require voters to be 21 years old, but Georgia and Kentucky let their residents vote at 18, Alaska at 19, and Hawaii at 20.

Disqualification of persons from the privilege of voting is treated in individualistic fashion by the various States. Michigan disqualifies no citizen. However, most of the other States draw the line at idiots, insane persons, and criminals. Wisconsin, Virginia, and Nevada also bar persons engaging in duels; Florida, anyone "interested in an election wager"; Idaho, "persons of Mongolian descent not born in the United States"; Mississippi, untaxed Indians, and Oklahoma, residents of poorhouses. Rhode Island withholds the ballot from persons living on land ceded to the Federal Government, while Pennsylvania turns thumbs down on anyone guilty of election bribery.

This odd lack of consistency in voting requirements stems from the fact that the States are responsible for establishing voting requirements—even for elections to Federal office. Some of these differences are unimportant. But others, such as the age and residence requirements, differ too much from State to State, at any rate in national elections. It has been estimated that between 5 million and 6 million Americans are barred from voting at every presidential election simply because they have moved too recently. With our people becoming more mobile, this problem will not be solved until some of the horse-and-buggy rules are brought up to date. For instance, if all the States adopted Iowa's residence requirements of 6 months in the State, 60 days in the county, and 10 days in the precinct, the number of unwillingly disenfranchised American citizens might be halved.

The answer is not for the Federal Government to step into the act, but for the States to face the obvious proposition that uniformity in voting requirements is just commonsense.

The Reviewing Stand

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1960

Mr. MULTER. Mr. Speaker, in connection with my bill, H.R. 870, to abolish capital punishment, I commend to the attention of our colleagues the following article by William Froug as it appeared in the Beverly Hills Times of June 16, 1960:

THE REVIEWING STAND
(By William Froug)

In 1921 somebody committed a robbery. Somebody else was murdered. Two men were arrested, convicted, and executed for the crime.

The same kind of crime with the same results had occurred a thousandfold times before and, unfortunately, is still going on in these United States with alarming regularity.

What made and still makes this case different from all the others is that the two executed men were both extraordinarily sensitive with the minds of visionaries and martyrs.

It would not be outlandish to suggest that these were just the sort of dedicated idealists who, had their lives turned to religion instead of anarchy, might have become saints.

Instead they chose to be misfits, nonconformists, revolutionaries, antichauvinists. They committed the unpardonable sin of refusing to fight in a war. In short, they are not the sort of men many of us would wish to see flourish in our society because they oppose at the most basic level that which we support.

This is the reason why the case of Nicola Sacco and Bartoloméo Vanzetti refuses to die. And this is also the reason why the Nation's press has reacted to Reginald Rose's

2-hour TV dramatization of their story with the kind of furor they usually reserve for the discovery of a Communist in the State Department.

If Mr. Rose had decided to write a detailed drama in defense of Bruno Richard Hauptmann or Leopold and Loeb, the Nation's newspaper reviewers would have given us a critique on whether or not the play was any good.

INDIGNATION

Instead, from Boston to San Francisco, from New York's highbrow TV columns to Hollywood's trade papers, the men whose job it is to watch the 21-inch tube nightly have cried out in righteous indignation not over the quality of the presentation but over the point of view of the author.

It is safe to bet that not one of the scores of reviewers involved know more than the most cursory facts of the Sacco-Vanzetti case. But almost all of us have heard something about it.

Let me state right off that I haven't the foggiest idea whether the two executed men were innocent or guilty. I doubt seriously if it matters very much now, either to the Nation's welfare or to Mr. Sacco and Mr. Vanzetti.

But I do know Reginald Rose spent weeks and even months researching his subject. I do know he presented a drama based on eyewitness accounts, court records, and, perish forbid, newspaper reports. A great portion of the two 1-hour dramas was made up of direct quotations.

BIAS?

If there is a newspaper columnist who knows more about the case than Mr. Rose this fact has yet to appear in a review. Most of the criticisms have been packed with words like "slanted," "unfair," "biased," etc. Since Mr. Rose defended Sacco and Vanzetti it apparently follows he is also a nonconformist and therefore suspect.

Let a headline-making murder trial appear on the dockets and the newspapers of this and most other communities will have the accused tried and condemned before the first witness takes the stand.

But let one of television's leading dramatists take a position on a 40-year-old case and those same holier-than-thou editors rise to a man to defend the sacred principle of objectivity.

It is interesting and refreshing to note that the general public's reaction to the Sacco-Vanzetti story was not nearly as violent nor concerned as the public print.

Although it is considered beside the point to mention it, I found Mr. Rose's play to be absorbing, brilliant, and provocative. It was easily one of the finest dramatic presentations of the season.

Martin Balsam was superb as Nicola Sacco but, good as he was, Steven Hill's Bartolomeo Vanzetti was one of the outstanding performances this reviewer has seen on television. Mr. Hill is certain to be nominated for the television academy award and will no doubt lose out in the final vote to a more popular and well-known dancer or singer.

Reginald Rose had an ax to grind. But he ground it exceedingly fine.

Unfair Criticism

EXTENSION OF REMARKS

OF

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, August 22, 1960

Mr. ANFUSO. Mr. Speaker, shortly after Congress recently voted to override the President's veto of the pay raise bill for postal and Federal employees, the New York Times published an editorial criticizing all Members of Congress who voted to override the veto as bowing to the pressure of the postal workers' lobby.

Some of the postal workers' leaders and members of postal workers unions in the New York area subsequently wrote letters to the editor of the New York Times protesting that the editorial was unfair and answering the criticism it contained. As far as I know, none of these letters were published.

One of those who wrote to the Times is Alwyn J. Aaron, legislative director of the Brooklyn Postal Clerks Union. His letter, too, was not published. In order that the unfair criticism of the majority of Members of both Houses of Congress should not go unanswered, I am inserting into the RECORD the editorial published in the New York Times on July 6, 1960, and the reply by Mr. Alwyn J. Aaron refuting the charges:

BOWING BEFORE ELECTION DAY

The congressional surrender last week to a high-pressure lobby of employees of the U.S. Government marked a low point in the already poor record to date of the 2d session of the 86th Congress.

The President spoke out with rare vigor, but too late, in his excellent veto message, which correctly characterized the pay-raise bill as "indefensible by any light," and violative of "every concept of fairness, every rule of reason and logic." Anyone who bothered to read his message would have seen that this measure, costing three-quarters of a billion dollars annually, throws Federal pay scales even further out of joint than they already are, ignores a Department of Labor study of the subject currently in progress, magnifies existing injustices, bears a distorted relation to the increase in living costs, provides no offsetting income, and brings the annual postal deficit close to the $1 billion mark.

In overriding the veto an overwhelming majority of Members of Congress bowed to what Mr. Eisenhower described as "intensive and unconcealed political pressure" of the postal workers' lobby. Among these Congressmen, we regret to note, were all of the Democratic presidential candidates in the Senate, seven of the eight Senators from New York, New Jersey, Pennsylvania, and Connecticut (Senator PRESCOTT BUSH, of Connecticut, was the lone and honorable exception) and every Representative from the metropolitan area except these six: BARRY and DOOLEY, of Westchester; RAY, of Richmond; ST. GEORGE, of Orange; WAINWRIGHT, of Suffolk, and FRELINGHUYSEN, of New Jersey.

BROOKLYN, *N.Y., July 6, 1960.*

To the EDITOR OF THE NEW YORK TIMES.
